Aside from the volumes previously named, Lange has also written a two-volume history of the world political labor movement from 1914 to 1936 (1936 and 1937) and a history of the Norwegian Labor party from 1887 to 1914 (1937 and 1939). Among the works he reads for recreation are modern American novels—those of Dreiser, Steinbeck, Anderson, and Sinclair—and American liberal magazines. Outdoor sports, particularly skiing (in which he has won first prize in the special Cabinet ministers' racing group) are his chief relaxations. A remnant of his pacifist convictions prevents him from hunting—he prefers boating, fishing, hiking or swimming. With his second wife, the former Aase Monsen, underground worker and daughter of the speaker of the Storting, and his two sons, Christian and

LANGE, HALVARD M.—*Continued*

Viggo, Lange sometimes spends week ends at their mountain ski lodge. (Christian is the child of Lange's first marriage, to Karen Boe, a film censor in Oslo.) A gray-haired man, Lange found that his appointment to the Cabinet solved his housing troubles. "As Foreign Minister," he jokingly remarked to a *Post* interviewer, "the Government furnishes an official residence, and I couldn't afford to overlook that."

LASKY, JESSE L(OUIS) (lăs'kī) Sept. 13, 1880- Motion picture producer

Address: b. c/o Jesse L. Lasky Productions, Inc., 780 Gower St., Hollywood 38, Calif.

A prominent figure in "the Hollywood legend" is producer Jesse L. Lasky, who, with Samuel Goldwyn⁴⁴ and Cecil B. de Mille⁴², in 1914 made Hollywood's first full-length feature film. In the decades that followed, Lasky's reputation as a motion picture producer has grown with the industry. He has gained particular renown as a specialist in biographical pictures, with *Sergeant York* (1941), *The Adventures of Mark Twain* (1943), and *Rhapsody in Blue* (1944), the life of George Gershwin. Since 1945, as head of Jesse L. Lasky Productions, Inc., the veteran Hollywood producer has offered the comedy, *Without Reservations* (1946).

JESSE L. LASKY

Of pioneer stock, his grandfather having crossed the plains in a covered wagon in 1850, Jesse Louis Lasky was born in San Jose, California, on September 13, 1880. The son of Isaac and Sarah (Platt) Lasky attended the elementary and high schools of San Jose, helping in his father's shoe store in his free

time. On Saturday nights, when business was heaviest, young Lasky guarded wares displayed on a tray in front of the store. Somewhere in this period the youth began taking lessons on the cornet, which instrument he played in a boys' band and in the San Jose High School orchestra. By the age of sixteen Lasky was good enough to substitute in a regular band; at eighteen he had a union card for his position as cornetist in a San Francisco theater (1898-1900); however, at twenty, when his father had died leaving little money, the boy found he could not support the family as a musician. Previously, in 1897-98, he had tried reporting on the San Francisco *Post*. Now it was decided that young Lasky seek his fortune in Nome, gold having been discovered in Alaska. With three thousand dollars raised by the family to finance the Gold Rush expedition, Lasky reached Nome in 1900, one of the first men from the West Coast to pan for gold in Alaska. Young Lasky lost all of his original capital. "Refusing to be licked, I landed a job as cornetist in a dive," Lasky recounted to Helen Worden, of the New York *World-Telegram*. "When the miners came in to the dance hall they used to throw sacks of gold dust and coins at the girls. I was entitled to all that fell in the pit." Thus Lasky earned his fare back to the United States and repaid fifteen hundred dollars of his family's original investment.

Shortly after he had returned home, Lasky received an offer of a job as cornetist in the Orpheum Theater in Honolulu. The show he played for closed before he could collect his salary, and again, to earn passage home, he played the cornet as the only white man in the Royal Hawaiian Band. In the meantime his sister had also been learning to play the cornet, and the two Laskys were booked at Fish's Music Hall in San Francisco as duo-buglers and quick-change "artists." In 1902, after Hermann the Great, the magician, engaged them to tour the country with him, the act grew to Lasky's Military Octet. Lasky became Hermann's manager in 1903, selling the cornet act to B. A. Rolfe. Then, as one half of the Lasky-Rolfe Company, Lasky until 1911 was engaged in producing even more ambitious lightning-change acts, musical comedies, and operettas. In that year (1911), having made a fortune as manager and theatrical producer, Lasky invested \$110,000 in a "mixed banquet hall and musical show," the Folies-Bergère in New York, which he and Henry B. Harris opened: "We brought the word 'cabaret' to America," says Lasky, who lost every cent in the venture. Starting over again, Lasky raised the funds to produce *California*, an operetta of which the book was by Cecil B. de Mille, a young playwright not very long out of school. The 1912 production was only a "moderate success."

For some time Samuel Goldwyn had been trying unsuccessfully to interest his brother-in-law Lasky in motion pictures. By the fall of 1913 the producer was ready to explore the field as organizer with Goldwyn and later as president of the Jesse L. Lasky Feature Play Company, which began operations in January

1914. The fledgling studio made the first full-length feature movie ever produced in Hollywood, only short pictures and serials having been produced there before: in 1914 de Mille directed *The Squaw Man*, which starred the current matinee idol Dustin Farnum, and which cost \$40,000. The indoor scenes were shot in a barn, which was to become the Hollywood studio (the company also had offices in the East). *The Squaw Man* was followed by *The Master Mind*, *The Only Son*, *The Virginian*, *Where the Trail Divides*, and by many of the famous David Belasco dramas. Lasky's Feature Play Company (their emphasis was on the plays) was in active competition with Adolph Zukor, whose Famous Players Film Company boasted big-name stars. The two merged their interests in July 1916 to form the Paramount-Famous-Lasky Corporation, of which Lasky was vice-president. "After *The Squaw Man*," wrote Alva Johnston in his *New Yorker* biographical sketch, "Lasky's career for eighteen years is a success story in the old tradition. Imagination, the gambling spirit, attention to details, and other virtues made him and his company bigger and bigger until it went into receivership [in 1932] . . . the time when the motion picture industry collapsed under the weight of its theater chains." When Lasky walked out of his office at Paramount (Paramount-Famous-Lasky) after he had resigned in September 1932 he had lost the \$12,000,000 he made as a pioneer movie producer in an attempt to save his bankrupt company.

In the next few years (1933-35) Lasky produced films independently, releasing through the Fox Film Corporation *Zoo in Budapest*, *Berkeley Square*, *As Husbands Go*, *Coming Out Party*, *The White Parade*, *Springtime for Henry*, *Grand Canary*, and *Redheads on Parade*. Twentieth Century-Fox released *The Gay Deception* and *Here's to Romance*, which Lasky next produced. As president of (Mary) Pickford's Lasky Productions, Inc., (elected October 1935), he had two pictures released through United Artists in 1936: *One Rainy Afternoon* and *The Gay Desperado*. Lasky also joined RKO Radio Pictures as associate producer, heading his own production unit; with this organization he made *Music for Madame* and *Hitting a New High*, both of which were released in 1937. Leaving RKO, Lasky went to Warner Brothers⁴⁵ as a producer for the years between 1940 and 1944, at first under a special financial arrangement and later as a regular staff producer. This was his "biographical" or "Americana" period, in which *Sergeant York* (Lasky's one thousand and tenth film). *The Adventures of Mark Twain*, and *Rhapsody in Blue* appeared.

Lasky wished to confine his work to themes showing democracy in action: he has called the film biography "one of the best contributions that can be made to the selling of America to the rest of the world." The life of Mark Twain he found "representative of American opportunity in the story of the famous barefoot boy of Missouri who became America's leading humorist and a man of letters to be recognized by the whole world." Making

biographies exclusively began to seem impracticable to him, however, and he also noted "the whole aspect of the world [to be] solemn," hungry for a chance to laugh. Lasky accordingly announced in 1945 that, as president of the newly formed Jesse L. Lasky Productions, Inc., he would intersperse his productions of serious biographies with essays into the field of "lightheaded" comedy. In this category was *Without Reservations*, which he produced in 1946. His plans for 1947 include a dramatization of *Miracle of the Bells*, from the book by Russell Janney⁴⁶, which is to precede the filming of the life of Enrico Caruso.

Using radio as a means for "scouting" talent, Lasky originated and produced the CBS show *Gateway to Hollywood* (1938-39 and 1939-40). Winners in the program's talent search were later featured in the motion picture, *Career*. "The studios," says Lasky, "keep a close watch on us. They are anxious to find new talent, too." As early as 1925, when Lasky was vice-president in charge of production at Paramount-Famous-Lasky, he conducted talent searches, the winners of which attended the studio's school on Long Island.

Lasky was married to Bessie Ginzberg on December 11, 1909. Their children are Jesse Louis, Jr., (now a writer for the screen), William Raymond, and Bessie Dorothy. The Hillcrest Country, Riviera Country, Beach, and Masquers are the producer's clubs. In describing Lasky in the *New York Post*, Earl Wilson wrote: "He waves his pince-nez, and there is a mirthful shimmering about his jowls. . . . He puffs the cigar explosively." The producer, who believes that opportunity is virtually unlimited, once told Helen Worden: "I never considered losing money a real loss—as long as I could think I could stage a comeback."

LASSWELL, HAROLD D(WIGHT) Feb. 13, 1902- Political scientist

Address: b. c/o Yale University, New Haven, Conn.

One of the foremost political scientists in the United States is Harold D. Lasswell, whose books on the subject are used widely by students in that field. A consultant to various Government agencies, he has directed the War Communications Research Commission of the Library of Congress since its inception (1939). Lasswell has taught some twenty years, is in 1947 a professor at the Yale School of Law.

Harold Dwight Lasswell was born February 13, 1902, in Donnellson, Illinois. His father,

Blackstone Studios

HAROLD D. LASSWELL

the Reverend Linden Downey Lasswell, a Presbyterian minister, occupied pulpits in a number of small communities in the State of Illinois. The boy's mother, the former Anna Prather, who had taught high school before her marriage, continued to teach from time to time. "I actually went to school to my mother one year," Lasswell recalls, "and I still remember with satisfaction the fact that none of the kids made any cracks about teacher's pet, in spite of the fact that I ran off with the highest marks. . . . Because of the fact that I was usually younger than my schoolmates, I was never particularly active in athletics, and usually acted as combination umpire, manager, and kibitzer." At the Decatur (Illinois) High School he was editor of the school newspaper and took part in many extracurricular activities, and upon graduation, in 1918, was valedictorian of his class.

A scholarship, won in a competitive examination in history and English, brought Lasswell to the University of Chicago in 1918. Here he was active in public speaking and won various intercollegiate debating and oratorical contests. The Tau Kappa Epsilon fraternity brother thus entered Delta Sigma Rho, the public speaking recognition society, for his three years of college debating. His high scholastic standing gained him membership in Phi Beta Kappa. In 1922 the University of Chicago awarded Lasswell his Ph.D. degree; four years later he earned his Ph.D. degree, writing as his dissertation, *Propaganda Technique in the World War* (1927). Lasswell also did graduate work at the universities of London, Geneva, Paris, and Berlin, in the summers of 1923, 1924, and 1925.

In the same year that he became an alumnus of the University of Chicago, Lasswell became a member of its faculty. (He had previously, as an undergraduate, conducted classes for

trade union groups.) Lasswell taught as an assistant in the university's department of political science from 1922 until 1924 before becoming an instructor, in which capacity he remained from 1924 until 1927. In the last year he received his appointment as assistant professor; after serving in this position from 1927 until 1932, he attained the rank of associate professor which he held until 1938. Lasswell resigned from Chicago in 1938 to teach at the Yale School of Law as visiting Sterling lecturer; he later became a professor of law there, which is his title in 1947. Other universities at which he has lectured as visiting professor are Syracuse (1926), Western Reserve (1929), California (1935) and Yenching (China, 1937). Since 1939 he has delivered lectures at the New School for Social Research, in New York, and has been invited by the New York Academy of Medicine to deliver the Thomas William Salmon Lectures in November 1947. The topic Lasswell has chosen is "Power and Personality," which he plans to have published in book form later. He has also served (in 1938-39) on the faculty of the Washington, D.C., School of Psychiatry, as the staff political scientist.

Of his determination to become a political scientist Lasswell writes: "My father was enthusiastically interested in politics. Our vacations were spent for many years at old Salem Chautauqua. Here I listened to and met William Jennings Bryan, Robert La Follette, and most of the well-known politicians of the time." Lasswell's secondary school experience was particularly significant for the development of his interest in the social sciences; one of his teachers was William Casey, who later became a professor of sociology at Columbia University. The most important intellectual influences upon him, Lasswell reports, were the philosophic orientation of Whitehead, the psychoanalytic method introduced by Freud, and the challenging perspectives of Marx, all of which were to figure in Lasswell's own writings.

The title of one of Lasswell's books has served many students of political science as a standard definition—*Politics; Who Gets What, When, How* (1936). In this book Lasswell elaborates upon the basic ideas he had been teaching his classes for several years: "Lasswell's aim is to substitute for liberal-moralistic and Marxist-deterministic criteria of scientific analysis some more comprehensive and elastic intellectual patterns. . . . What men are seeking for, he maintains, is a place as high as possible in the hierarchy of deference, income, and safety. . . . Politics is the art of getting the most." Max Ascoli in the same *Nation* review noted that Lasswell "is at home when he is studying personality; he is a first-rate psychologist." Of an earlier book by Lasswell, *Psychopathology and Politics* (1931), G. E. G. Catlin of the same magazine had written: "Here is an honest attempt to answer the root problem of politics: How to direct into healthy channels the neurotic lust for domination, which can no more be 'abolished' than any other lust."

One of Lasswell's latest publications, *World Politics Faces Economics* (1946), written for the Committee for Economic Development, was devoted to an analysis of Russo-American economic relations. "The author," wrote *Current History*, "shows some similarities (as he sees them) between Russian policy of today and the policy of the American founders. He also gives sympathetic explanation to some Russian lines of political thought." In his other writings (there were, in 1946, eleven books which Lasswell authored or co-authored) Lasswell treats the problems of propaganda, techniques of democracy, outlets of information in libraries and in the various forms of communications (newspaper, radio, etc.), and public opinion. He is an associate editor of the *Public Opinion Quarterly*, published by the School of Public Affairs at Princeton, and an advisory editor of *Ethics*. Articles signed by him have appeared in various political, sociological, psychological, and educational magazines.

In 1939 Lasswell was appointed the first director of the newly created War Communications Research Division of the Library of Congress. With the support of the Rockefeller Foundation, the group has conducted a large-scale methodological investigation into the contents of newspapers, magazines, books, radio broadcasts, films, and other media of communication. The division, in addition to collecting information for and holding consultations with various Government agencies, has trained some three hundred workers for the intelligence bureaus of the Federal Communications Commission and the Office of Facts and Figures (later the Office of War Information). Lasswell, who has conducted community studies as a consultant to the Department of Agriculture, has served as consultant to the Department of State, to the Rockefeller General Education Board, and to other public and private agencies. As consultant to Encyclopædia Britannica Films, Lasswell had direct responsibility for the preparation of the three educational films, *Democracy*, *Despotism*, and *Public Opinion*. Under the auspices of the American Council on Education, Lasswell has prepared summaries on public opinion for use by secondary school teachers.

Lasswell, who was a fellow of the Social Science Research Council of New York in 1928, also working, in the period, with the Social Science Research Commission of Chicago, served during 1944-46 on the Commission on Freedom of the Press (under the auspices of the University of Chicago). He is a member of the Research Advisory Board of the Committee for Economic Development, which committee he helped to organize; and a council member of the American Political Science Association, the American Sociological Society, and the American Economic Association. Yale University awarded Lasswell an honorary M.A. degree in 1946, the year for which he received a joint award for research in journalism from the Sigma Delta Chi professional fraternity. His clubs are the Yale and University in New York, the Graduates' in New Haven, and the Cosmos in Washington. The social scientist

is six feet tall and weighs 185 pounds, has gray eyes and graying brown hair. He is a member of the Presbyterian Church, belongs to no political party.

LAVERTY, MAURA May 15, 1907- Author

Address: h. 124 Leinster Rd., Dublin, Eire

"She may well make a fortune . . . and she will certainly make a name" was predicted for Maura Laverty, Irish writer, when Séan O'Faoláin read the manuscript of her first novel. Mrs. Laverty seems to be on the way to both, with six books to her credit, including the lately published *Liffey Lane*, "a sensitively

MAURA LAVERTY

written novel of the Dublin slums" which has been compared by some critics to *A Tree Grows in Brooklyn*. The author, according to Mr. O'Faoláin, Irish biographer and editor, is endowed with two important qualifications—"the gift of candour . . . and the great natural gift of making things rise stereoscopically from the flat page."

Maura (Kelly) Laverty was born in Rathangan, County Kildare, Ireland, on May 15, 1907, the daughter of Michael and Mary Anne (Treacy) Kelly. Part of her girlhood was spent on her grandmother's farm, the "Derrymore House" described in her novels. Later she was sent to the Brigidine Convent in Tullow, County Carlow, to study to be a teacher. Soon after leaving the school in 1925, she went to Spain as a governess in a wealthy family in Madrid. Having little liking for such occupation, she relinquished it to serve as a secretary to the Princess Bibesco. Later she be-

LAVERTY, MAURA—*Continued*

came a foreign correspondent in the Banco Calamarte, and then had a job on a Madrid daily, *El Debate*. Returning to Ireland in 1928, she wrote articles and poems, became editor of a woman's magazine, and later a broadcaster for the Irish Broadcasting Company.

It is no coincidence that Maura Laverty seasons her books with the delights of the culinary art, for she was literally born in a kitchen and has been concerned with cookery ever since. Indeed, her first book owes its existence to the memories evoked by the author's perusal of an Irish cookbook. As Mrs. Laverty scanned the recipes, she recalled the delectable dishes prepared in her grandmother's kitchen, "and, inevitably . . . memories of the people associated with these things." The resulting *Never No More* (1942), autobiographical novel dealing with life in a village in County Kildare as it revolved around "Gran," is filled with a "rich sense of life, enough humor to salt a dozen books, skill with incident, and understanding." The *New York Times* considered it "a book written as only one of Irish blood could write it; breathing a civilization that has never succumbed to industrial strain or to overexigencies of modernity."

There followed a second novel of the Irish countryside, *Touched by the Thorn* (1943), "full of Irish humor, gay, delicately acid and savage." *No More than Human* (1944) takes the heroine of *Never No More* to Spain. "Rich in observation, in sharply composed character sketches," the book is autobiographical to an extent and "indeed wears an air of reminiscence rather than of fiction." Kate O'Brien, in the *Spectator*, felt that although the story "lacked the deep perspective which the novelist must give," it was written with "verve and wit" and "decorated with the rich detail of everyday life in Madrid and in provincial Spain."

With her next book, *Gold of Glanaree* (1945), Maura Laverty departed from the novel to write a juvenile which had "the mystical atmosphere of the real Ireland of the boglands." "The wording of this adventure story of modern Ireland," wrote Mary Gould Davis in the *Saturday Review of Literature*, "has a Celtic rhythm that makes it a perfect delight to read aloud or to tell." As in her other books, Mrs. Laverty has woven into the story "the love of living things and the outdoor world, of poetry and song."

Long before she began to write books, Maura Laverty wrote about cooking, and gave weekly talks over the Irish Broadcasting Company's station in Dublin. She received hundreds of letters from all over Ireland asking for "the final word on Irish cookery." It was this challenge that induced her to write *Maura Laverty's Cookbook* (1947), in which are gathered the recipes sprinkled throughout her books, as well as many new ones. As the author says, "One cannot spend years in thinking, talking, reading and practicing cooking without learning something about it." She has prefaced each chapter with comment and "written with gusto" about the Irish and Spanish dishes that make

up the bulk of the volume. In her latest book, *Liffey Lane* (1947), Mrs. Laverty turns again to fiction, to portray a day in the life of Christy Doyle. "Into this simple happening, so typical of the shums, so outwardly inconsequential, so mystically tragic," writes Thomas Sugrue, "Maura Laverty has poured a great cunning, a wise and steady artfulness."

No More than Human, Mrs. Laverty's third novel, was the choice of the Catholic Book Club in both England and America. *Touched by the Thorn*, although banned by the Irish censors, received the Irish Women Writers' award in 1943.

In 1928 the author was married to James Laverty, a journalist. They live in Dublin with their two daughters, Maeve and Barry. The brown-haired, gray-eyed Mrs. Laverty, who is of medium height and weight, lists her secondary occupations as fishing and "trying out new recipes." She is president of the Irish Women Writers' Club, secretary of the Irish Wine and Food Society, a member of the Irish P.F.N. Club, of the National Association of Broadcasters, as well as the Irish Countrywomen's Association and various other clubs and societies.

Laverty, M. *No More than Human* (1944)

LAVERY, EMMET (GODFREY) (lăv'-ēr-ī) Nov. 8, 1902- Playwright

Address: b. c/o Screen Writers' Guild, Hollywood, Calif.

Emmet Lavery, playwright and screen writer, whose *Magnificent Yankee* was chosen by Burns Mantle as one of the ten outstanding plays of 1946, turned to playwrighting after ten years in journalism and law practice. Two of his plays, *First Legion* and *Second Spring*, the subjects of which were Roman Catholic personalities, attained, in the first case, dramatic success, and, in the second, literary recognition. During the course of his employment as a Hollywood scenarist, Lavery was thrice elected president of the Screen Writers' Guild, one of the four affiliated unions of the Authors' League. As the guild's chief executive, he has been working for the league's acceptance of the American Authors' Authority plan proposed by James M. Cain '47.

Emmet Godfrey Lavery was born in Poughkeepsie, New York, on November 8, 1902. Both his parents came of Irish families that had emigrated to the United States in the 1850's; on his mother's side, there were many teachers, on his father's, lawyers and public officials. His mother, Katherine (Gilmartin) Lavery, was musically inclined, while his father, James A. Lavery, a newspaper editor "with a great love of the theater," devoted his spare time to politics. He also served on the board of aldermen in Poughkeepsie, and as New York State Civil Service Commissioner from 1914

to 1916. His activities as a labor leader led to his being chosen the first president of the New York State Federation of Labor.

The legal and civic interests of his family early determined Emmet Lavery in his choice of law as a career. Even as a student at St. Peter's Boys' Grade School (in Poughkeepsie), from which he was graduated in 1914, he had this ambition. At Poughkeepsie High School he edited the school paper and joined the debating team. "My father was a good talker," the *Book of Catholic Authors* quotes him as saying, "and I liked to talk too." Upon his graduation at the age of fifteen, family finances did not permit his immediate entrance into college; instead he was sent by his parents to the Eastman Business School in Poughkeepsie to learn shorthand and typing. With this training he was able to secure a job as sports editor on the Poughkeepsie *Eagle-News*. A year or so later Emmet Lavery became a stenographer on the staff of the Poughkeepsie Chamber of Commerce, where he stayed for a year before accepting a position as secretary to County Judge Arnold.

Lavery returned to the staff of the *Eagle-News* in 1921 as a court reporter; at the same time, with the cooperation of his managing editor, he began his law studies at Fordham University, attending morning classes there. His day was strictly budgeted, for he left Poughkeepsie at six in the morning, returned at half-past two in the afternoon to work an eight-hour shift ending at half-past ten. "I seemed to thrive on it," Lavery has said. He was granted his LL.B. by Fordham in 1924 and passed the bar examinations in 1925. In order to supplement the income from his law practice, Lavery accepted the position of city editor of the Poughkeepsie *Sunday Courier*, where he remained until 1935. For about five years, from 1929 to 1933, he held the elective office of president of the Poughkeepsie board of aldermen. "Those were the days when we Laverys—accidentally but effectively—rather dominated the political scene in Poughkeepsie," Emmet Lavery has stated. One uncle was minority leader of the board's Democrats; another, a Republican as Emmet Lavery himself was then, served as assistant district attorney.

As a hobby Emmet Lavery acted with the Poughkeepsie Community Theatre and with the men's acting group of the Experimental Theater at Vassar College, which was then directed by Hallie Flanagan. Lavery's own work in playwriting was begun about 1927. His first play, *Crusade*, was performed by the Poughkeepsie Community Theatre, with, however, little success. Lavery continued writing plays "on every theme imaginable," among which was the *First Legion*, produced on Broadway by Bert Lytell in 1934. This drama about the Jesuits, which ran in New York for three months and on the road for six, was later translated into twelve languages, produced in London, Vienna, and Paris, and eventually was added to the permanent repertoire of the Comédie Française. "The dramatist," a Viennese reviewer wrote, "does not conceal the weaknesses and mistakes that flourish among Jesuits

Vandamm Studio

EMMET LAVERY

as among all other men. It is precisely the ability to render his individual characters human that makes Mr. Lavery a genuine dramatic artist, aware of his opportunities and not blind to his moral and educational chance."

From 1935 to 1937 Lavery worked in Hollywood as a scenario writer. While returning East in 1935 for a vacation, he stopped in Chicago, where he helped to organize the first session of the Catholic Theatre Conference. For the two years following (1937-39) Lavery served as director of the National Service Bureau of the Federal Theatre. "I went into Federal Theatre," he wrote in a 1938 issue of *Commonweal*, "because I believed in the future of a great national theater in this country and because I was convinced that a playwright without such a theater was like a fish out of water." In the same article, the playwright defended the Federal Theatre against the accusations of communist domination.

Lavery's biographical play about Cardinal Newman, *Second Spring*, was produced by the Boston College Dramatic Society early in the spring of 1938. "That this splendid play," remarked *Commonweal*, "should have to turn to an amateur organization for a production is an ironic commentary on the present state of the American theater." Lavery was able to visit Oxford, the town beloved of Cardinal Newman, on his trip to Europe in 1939; he also saw the two-hundredth performance of *First Legion* in Paris and met the author of the novel *Brother Petroc's Return*, for which he had done the stage version. Upon his return to the United States that fall, the thirty-seven-year-old dramatist joined the staff of Fordham University as visiting lecturer in drama. Out of this playwriting seminar was evolved *Who Ride on White Horses*, a student play about Edmund Campion. This and *Kamiano*, a play about Father Damien written by Lavery in

LAVERY, EMMET—*Continued*

collaboration with Grace Murphy, was published in *Theatre for Tomorrow* (1940).

With the aid of a grant from the Rockefeller Foundation, Emmet Lavery spent the year of 1940 at Vassar College as assistant director of the bureau of theater research. His work there was done in collaboration with Professor Hallie Flanagan, who was then preparing *Arena*, a history of the Federal Theatre; and with Ernst Krenek, the composer and co-author with Lavery of *Tarquin*, a new form of modern opera. The year 1940 also saw the production of Lavery's *Brief Music*, for a cast of seven women, at the Pasadena Playhouse. The writer returned to California in 1941 to work as a scenario writer for RKO productions, where he wrote the photoplays, *Hitler's Children*, and *Behind the Rising Sun*. The intention of these films, Lavery says, was to dramatize "the true nature of the enemy without arousing race hatred."

For a short while during 1942 Lavery was on the staff of Smith College as resident playwright. In 1944, two years after he had returned to Hollywood, he was signed to a year's personal contract by Walter Wanger⁴¹ for Universal Pictures. The following year Lavery was elected third vice-president of the Academy of Motion Picture Arts and Sciences. His candidacy for Congress was announced in 1946, when friends persuaded him to run in the California Democratic primaries; he was not elected.

The opening of Lavery's play, *The Magnificent Yankee*, a dramatization of the Washington years of Supreme Court Justice Oliver Wendell Holmes, took place in New York on January 22, 1946. The majority of New York critics concurred in their opinions of the biographical drama, which they considered finely written and splendidly acted, but slightly impeded in action by reason of its subject matter. A representative verdict was that of Howard Barnes of the New York *Herald Tribune*, who found that in "dealing with one of the most difficult of dramatic forms the author has set his pace slowly and then moved so surely that *The Magnificent Yankee* has a tremendous burden of meaning and feeling before the final curtain. . . . On the whole Lavery has done a masterful job." A dissenting viewpoint from that of most of the critics was expressed by *Commonweal's* Kappo Phelan: "If anything else at all is played out on the stage, it is age; everything else is discussed. There is never a question of a man being and doing: all is a kind of walking (gradually toddling) picture."

Lavery was elected president of the Screen Writers' Guild in 1944 and re-elected to that office for the two succeeding years. In that capacity he led the campaign in favor of putting into operation James M. Cain's plan for an American Authors' Authority. Lavery pointed out in the *Screen Writer* (May 1946), official organ of the Screen Writers' Guild, that with "rare exceptions" screen writers do not now control their material with the separate reissue and remake rights thereof, nor

do they have the copyrights (except in isolated cases) in their own names. Under the proposed American Authors' Authority, a governing board of seventeen members (four each from the Dramatists, Authors, Radio Writers and Screen Writers guilds plus the president of the Authors' League) would hold in trusteeship all rights voluntarily assigned to it by the participating members: these rights, with the co-signature of the author, would be subject to lease for a limited time to producers, radio chains, publishers, and television. Authors could retain the privilege of withdrawing from the organization at any time. The contents of the material submitted to the authority would not be submitted to any control or censorship. To its opponents, who considered the scheme communistic, Lavery replied in a June 1947 *Screen Writer* article: "The AAA is a highly capitalistic maneuver designed to take a little more capital from one group of capitalists—the producers, [etc.] . . . and put it into the pockets of another group of capitalists, the writers. It is not something that squares with the Communist party line. It has no compulsions. It is open to every one. It has no control of content. It works for the small writer as well as for the big writer."

In the fall of 1947 Lavery instituted a suit for damages, variously cited as one million and two million dollars against Mrs. Lela Rogers (mother of Ginger Rogers⁴², film star) for statements made over the *Town Meeting of the Air* which the playwright claimed implied that he was a Communist. These he considered detrimental to the financing of his own play *The Gentleman from Athens*, which had a seven-day run on Broadway early in December. Lavery was subpoenaed to appear before the House Un-American Activities Committee during its November 1947 investigation into communism in Hollywood. He then testified that he himself was not a Communist and that communist membership in the Screen Writers Guild was negligible.

Lavery is responsible for the dramatization of Eric Shepherd's novel, *Murder in a Nunnery* (1944); his short play, *Monsignor's Hour*, is included in several anthologies, and he edited the anthology, *Theatre for Tomorrow*. In 1946 he was assigned to write the scenario of a history of commercial radio, *Magic in the Air*. He has served as a judge on the committee of the National Catholic Theatre Conference, charged with bestowing the five-hundred-dollar Bishop Sheil Drama Award. The playwright was elected in 1947 to the first membership for life ever granted by the National Catholic Theater Conference. He belongs to the Players' and Gramercy Park clubs of New York, the Dramatists Guild of the Authors' League of America, the French Society of Authors, the Poughkeepsie Tennis Club, and the Hollywood Athletic Club.

Emmet Lavery was married to Genevieve Drislane in 1925; their two children are Emmet, Jr., and Elizabeth. The playwright's height is five feet eight inches, his weight 170 pounds; he has brown hair and gray eyes. Lavery, a Roman Catholic, has protested em-

phatically against the charge of Communist affiliations that has been leveled at him. "I am not now a Communist nor have I ever been," he has said. "I take my social conscience from the Gospels of the Apostles and the Encyclicals of the Popes."

LAWRENCE, HILDA Author

Address: h. 1527 E. North Ave., Baltimore, Md.

"Far and away the most exciting new talent in the American mystery field today" is Hilda Lawrence, according to Howard Haycraft, author of *The Art of the Mystery Story* and critic of *Ellery Queen's Mystery Magazine*, who feels that Miss Lawrence's new book, *Death of a Doll*, is another triumph of the author's flair for understated terror, "the more impressive because it is accomplished within the conventional whodunit framework."

Hilda Lawrence was born Hildegard Kronmiller, the daughter of John and Martha Bevan (Strayer) Kronmiller, in Baltimore, Maryland. Receiving her early education in her native town, she went to be "finished" at the Columbia School, "a quite small and very conservative day school for girls" in Rochester, New York, where she lived with her uncle, Paul Moore Strayer, a clergyman. After graduation, she found a job at Johns Hopkins University, reading students' examination papers to a professor of geology whose sight was poor. The salary was \$8 a week. Later she went to New York, starting her twenty years' sojourn there with a little job at the Macmillan publishing house, where she looked after the clippings. This was followed by work at *Publishers' Weekly*. Becoming interested in radio, she wrote some dramatic sketches for Jane Cowl, and eventually supplied scripts for the Rudy Vallee show, and for other variety programs.

An addict of the detective story, Miss Lawrence was drawn into writing one herself because there were not enough available to keep her supplied with four or five a week. As she

HILDA LAWRENCE

says in a witty essay, "Domesticating the Murderer," somebody has to stop reading for a while and take up writing instead. She found the writing fun, and also discovered that "everything you see can be turned into something and almost everything that happens can be used." It's fun, too, she says, to work in a little learning; makes people think you went to school longer than you did. Miss Lawrence draws upon a fund of stories and anecdotes told her by her Congressman father and other relatives years ago, and harmless incidents from her family's daily life are often developed into murders and melodramatic situations. One of the things the author tries to achieve is the "homey" quality, something "that will be understood by every woman over sixty who belongs to a lending library." She writes about a thousand words a day, in longhand, and revises on the typewriter.

Miss Lawrence's first book, *Blood upon the Snow* (1944), was accepted twenty-four hours after she submitted it to an agent in New York. It received a good press, most critics emphasizing the "horror atmosphere," which Meyer Berger of the *New York Times* found "created . . . with good skill, the hard way, with a light touch that leaves no brush marks." This impression was strengthened with the appearance of Miss Lawrence's second book, *A Time to Die* (1945), "an excellent job, well written, and with very fine small-town atmosphere," according to the *New Yorker*. A few critics found the plot involved, something that Isaac Anderson felt "was atoned for in part by the tension that the author has succeeded in maintaining." *The Pavilion* (1946), "a gothic tale, somnolent and somber," called by Virginia Kirkus a "top performance in the genre," was followed by *Death of a Doll* (1947), of which Anthony Boucher writes in the *San Francisco Chronicle*, "Delicate perception of character

LAWRENCE, HILDA—*Continued*

and quiet shudders worthy of a naturalistic M. R. James makes a distinguished book."

With "Composition for Four Hands," a two-installment story which ran in *Good Housekeeping* in the spring of 1947, Miss Lawrence entered the magazine field. Her novels have been translated into French, Czech, Swedish, Danish, and Norwegian. Two of her books, *Blood upon the Snow* and *Death of a Doll*, were reprinted in the Armed Services Editions. She has also had three of her novels taken by the Detective Book Club and one by the Unicorn Club. And there are reports that Hollywood is "nibbling."

The blonde, blue-eyed author, whose marriage to Reginald Lawrence, playwright, in 1924, ended in divorce, is "a fragile, pretty woman, who looks completely incapable of imagining the sustained violence she is able to think up." She still lives in the brownstone house where she was born, though before the war she used to make frequent trips to Europe—France, Italy, Germany. "I always wanted to see Prague and the Dalmatian coast," she says, and adds, "That's a thing I hope to remedy when travel is easier." Her favorite mystery writer is Dorothy Sayers, whose books she keeps on her bedside table, to be reread from time to time. Fan mail, of which she receives a lot from all sections of the United States and from Europe, is answered religiously.

LE CORBUSIER (lē kōr'bū'zyā') Oct. 6, 1887—Architect; city planner

Address: 35 Rue de Sèvres, Paris

Le Corbusier, the Swiss architect and artist, known as Charles-Edouard Jeanneret until his early thirties, is responsible for much of the aesthetics and philosophy of modern architecture. The antithesis of Frank Lloyd Wright⁴¹, with whom he shares the disputed title of the "world's greatest architect," Le Corbusier is an exponent of efficient urbanized existence lived in vertical skyscrapers constructed on geometric rather than organic principles—a purely intellectual concept which is modified by his insistence on "sun, space, and silence." On his various trips to the United States, Le Corbusier has lectured on his architectural and city-planning theories, besides exhibiting his paintings throughout the country.

Le Corbusier was born Charles-Edouard Jeanneret-Gris on October 6, 1887, in La Chaux-de-Fonds, in the French-speaking part of Switzerland. (He is the younger of two sons.) His family, whose watchmaking tradition was followed by his father, had long been settled in that part of the Alps. From a musical mother young Jeanneret acquired a taste for music which purportedly was responsible for his decision to settle in Paris—a city which he associated with Puccini's *La Bohème*. To learn his father's trade, he entered a school of arts and crafts at La Chaux-de-Fonds in 1900, where he remained for four years studying under Charles L'Epplatennier, an admirer of French *art nouveau* and naturalism. François de Pierrefeu says that Jeanneret's engravings made at this period of his youth "gave his teachers a sensation of extraordinary perfection."

Architecture rather than watchmaking soon claimed him, however: at the age of eighteen, the young artisan supervised a group of fifteen students entrusted with building a house for their professor. Incorporated in the gabled and balconied design, Jeanneret has claimed, were the first corner windows used on the Continent. Upon receiving his share for the construction of L'Epplatennier's house, Jeanneret traveled in Italy for a while, studying sources of early medieval art. To increase his knowledge of architecture, in 1908 he entered the studio of Joseph Hoffman in Vienna, but the dainty elegance of Hoffman's Viennese Secession style soon aroused his distaste, and he departed for Paris.

Through the French publisher Bernard Grasset, Jeanneret met Auguste Perret, a pioneer in ferroconcrete construction, who accepted the young Swiss as an apprentice and encouraged him to improve his knowledge of mathematics and physics. After two years with Perret,

Jeanneret, under commission from his former Swiss school to report on German industrial art, journeyed to Berlin to enter the workshop of Peter Behrens, but, despite the presence of Walter Gropius⁴¹ and Miës van der Rohe among Behrens' students, he found Berlin uncongenial. Asia Minor attracted him next; then, returning northward, he analyzed the Acropolis and paused to admire Michelangelo's work in Rome. The results of his seven months' tour were reported to the school at La Chaux-de-Fonds, which had financed the trip.

On his return to Switzerland in 1911, Jeanneret constructed a house for his father. Its fusion of Swiss architectural tradition and the influence of Perret revealed a transitional stage in his work—stucco walls, horizontally banded windows, and simple metal pipe railings—which was viewed with suspicion by his former associates in L'Epplatennier's workshop. When he came to Paris after three years as an interior designer in Switzerland, Jeanneret was unable to find work as an architect and was obliged to become a factory manager. Before settling in Paris permanently, he designed another house for La Chaux-de-Fonds (in 1916), which came to be known as more original than any house yet designed by Frank Lloyd Wright, because of its fluid, open use of space and plan. The previous year Jeanneret's interest in the sociological aspects of housing had been manifested in his plans for the Domino housing project. Throughout the war years he continued his research on civic planning, from which were evolved the ferroconcrete abattoirs near Bordeaux (1917) and the Citrohan housing project (1919-20).

After the Armistice, Jeanneret, in collaboration with the architect-artist Ozenfant, founded the review *L'Esprit Nouveau*, which was published under their joint editorship until 1925. The failure of the factory where he was employed brought Jeanneret back into the full-time practice of architecture in 1921; at the same time, he adopted his maternal grandfather's name, Le Corbusier, as his architectural pseudonym, reserving the name Jeanneret for his purist paintings. Pierre Jeanneret, his cousin, became his partner. Within the next few years, the cousins built many houses incorporating highly original details: sawtooth skylights, ribbon windows, exterior spiral staircases, reinforced concrete columns, and asymmetrical facades.

A growing interest in urban planning and the skyscraper diverted Le Corbusier from small house construction. His eminently practicable plan for the Palace of the League of Nations won first prize in the competition in 1927, but was not used. The architect then instituted a suit against the League which dragged on for three years. During those same years, however, Le Corbusier planned several buildings for construction in Moscow (1928-31) and the City of Refuge for the Salvation Army in Paris (1930-31). His "profligate" use of glass in these buildings aroused the criticism of both the French and the Russians, until usage proved that Le Corbusier's

LE CORBUSIER

estimation of thermal balances kept the vitreous structures warm in the winter and cool in the summer. For Swiss students at the University of Paris, Le Corbusier designed a four-story cellular structure supported by cantilevers arising out of concrete piers buried in the ground to a depth as great as the height of the building.

The architectural theories embodied in these buildings had been predicated by Le Corbusier in his book, *Towards a New Architecture*, published in 1923, in which he presented the fundamentals of his modern technique in concrete and steel. On an aggrandized scale, these were the same elements he postulated as necessary for the "city of tomorrow." Skyscrapers and cellular apartment buildings, occupying only 15 per cent of the available land area, raised from automotive traffic by stilt-like concrete piers or isolated from motor arteries by elevated highways, easily accessible from any part of the city, composed Le Corbusier's vision of what he called the "City of Radiant Joy"—"*La ville radiieuse*." An essential component of these residences and commercial structures was to be prefabricated units in order to utilize most fully the resources of the machine, and make of the house, as Le Corbusier said, "a machine to live in."

During the 1930's the acceptance of Le Corbusier's city planning theories led to his being named consultant on various projects for the reorganization of cities; among these were the plans for Algiers and Nemours (in North Africa), Antwerp, Barcelona, and Stockholm, and for the rebuilding of the sixth *arrondissement* of Paris. "I have said," remarked Le Corbusier in *The Radiant City*, "that the materials of city planning are: sky, space, trees, steel, and cement, in this order and this hierarchy." Much of his work of that decade was done in South America, where several republics retained him to plan their cities. He visited

LE CORBUSIER—*Continued*

the United States in 1935, when he deplored the absence of landscaped parks around the great American skyscrapers, and praised the American engineers who "overwhelm with their calculations our expiring architecture."

At the time of the Paris Exposition of 1937, Le Corbusier did a great deal of research on city plans; these were rejected in a competition, as was his Voisin plan for the sixth *arrondissement*. Another setback came from his native country in 1939, when he was not invited to contribute to the Swiss National Exhibition at Zurich—although his research in proportion had merited the degree of doctor, *honoris causa*, in Mathematical Philosophy from the University of Zurich six years before. The lack of understanding shown his work by French municipal authorities for several years caused him to refuse the proffered ribbon of a chevalier of the Legion of Honor.

Since 1934, Le Corbusier had been associated with a group of sociologists and engineers who were absorbed in a study of problems pervading the entire social fabric. As an offshoot of this, during the occupation of France, Le Corbusier founded an organization called Ascoral (L'assemblée de constructeurs pour une rénovation architecturale), composed not only of architects but of farmers, lawyers, economists, and laborers interested in preparing reconstruction plans for the postwar period. Le Corbusier, who had been declared ineligible for the architectural society established by the Vichy Government, undertook extensive research on urbanism, prefabrication, and modular studies for Ascoral and the Union of French Architects, a resistance group, in order to formulate a practical and aesthetic basis for reconstruction. With a group of twenty-five engineers and architects, Le Corbusier founded another cooperative concern, Atbat (L'Atelier des batisseurs), in 1945; he was also chief of a cultural relations mission to the United States that year.

The French Ministry of Reconstruction appointed Le Corbusier technical consultant to the supreme council of city planning in 1945, with the responsibility of rebuilding areas in the La Rochelle-Palisse region, the Algerian city of Nemours, and the town of Saint Dié. For Saint Dié, Le Corbusier plans communal dwellings for six thousand inhabitants and individual family houses, "of the horizontal garden city type," for four thousand; and a city center comprising all buildings "of work, public and private administration and the cathedral." The plan of Saint Dié does not entirely conform to Le Corbusier's new conception of decentralized cities, diffused over a wide area along the networks of highways and railroads, so that men and nations would be brought closer together. Nevertheless, the promulgation of international understanding falls to his lot in another respect, since he is a member of the United Nations Headquarters Commission and of the ten-man United Nations Board of Design Consultants.

Le Corbusier divides his day into three parts—the morning for painting, the afternoon for architecture, and the evening for writing. Besides the many articles he contributed to *L'Esprit Nouveau*, he has had more than ten books published, of which the most distinguished were *Vers une architecture* ("Towards a New Architecture," 1923) and *Urbanisme* ("The City of Tomorrow," 1925). *When the Cathedrals Were White*, his plan for rebuilding New York City, on being reissued in an English edition in 1947, was considered "ardent, shrewd, and witty," by one reviewer (Albert Guerard of the *Nation*). Virginia Kirkus judged it "likely to be read and studied for years to come." A criticism advanced by L. G. White of the *Saturday Review of Literature* was: "From a literary standpoint, the book suffers from diffuseness and lack of continuity." (Scheduled for April 1948 publication are "New Worlds of Space," which will contain autobiographical matter by the architect, and "Le Corbusier, Architect, Painter, and Writer," by Stamo Papadaki.)

The translation of Le Corbusier's other works have appeared in German, Russian, Japanese, and English. Similar international recognition has been shown by technical publications, which have considered the work of Le Corbusier in the languages already mentioned, as well as in Finnish, Polish, Swedish, Danish, Hungarian, and Portuguese; and by the architectural societies of various countries, for Le Corbusier is an honorary corresponding member of the Royal Institute of British Architects, and a member of the Royal Academy of Fine Arts of Sweden and of the Russian Academy of Architecture. With other architects of international repute, he attended the two-way conference on "Planning Man's Physical Environment" at Princeton University in March 1947; Le Corbusier, at this conference, conducted the discussion on "Extensive Environment."

Le Corbusier is married to the former Yvonne Gallis. At work in his studio he usually wears a velvet jacket and fur-lined straw boots, but, for interviews, his costume is more conventional—a tweed suit, black and white checked shirt and bow tie. George Nelson once wrote in *Pencil Points*: "He is a plain man, this Le Corbusier. No striking irregularity of features, nothing duly prominent except possibly a high forehead. He wore large tortoise-shell glasses whose blank stare disguised any facial expression. . . . That such ideas as the organization of traffic in Algiers on fast motor highways three hundred feet in the air, and the demolition of the center of Paris, could have originated behind this noncommittal façade seems a bit incredible until one hears him talk." Architect Le Corbusier himself explained this anomaly in a comment to a *New Yorker* interviewer: "I live like a monk and hate to show myself, but I have been called to all countries of the world to do battle."

LEFAUCHEUX, MARIE-HELENE (lě'-fô'shû' mà'rē' ā'lě'n') Feb. 2, 1904- United Nations representative

Address: b. c/o Commission on the Status of Women, United Nations, New York; Palais du Luxembourg, Paris; h. 203 bis Boulevard Saint Germain, Paris

Marie-Hélène Lefauchaux, France's delegate to the United Nations Commission on the Status of Women, is a housewife who was precipitated into public life during the resistance to the Nazi occupation of her country. The enfranchisement of French women after the liberation brought her into politics as a heroine of the underground. She was elected to both the Consultative and Constituent Assemblies of the provisional French Governments, and to the Council of the Fourth French Republic. In the United Nations she is also alternate delegate and adviser on territorial problems to the French delegation.

Marie-Hélène Lefauchaux, whose maiden name was Postel-Vinay, was born in Paris on February 2, 1904. Her parents were Madeleine (Delombre) and Marcel Postel-Vinay. A graduate of the Paris elementary schools, Madeleine Postel-Vinay took her higher studies at the Ecole des Sciences Politiques and later pursued an intensive course in music at the Ecole du Louvre. After her marriage in 1925 to Pierre-André Lefauchaux, eventually to become the president and general director of the Renault Automobile Works, she was occupied, she has said, as "a very good housewife." Music was a serious interest, to the extent that she gained recognition as a "pianist of distinction."

"In the resistance there were many things women could do, often more easily than men." This statement, made by Madame Lefauchaux to a *PM* interviewer, explained her decision to participate in underground activities after the German occupation of France in 1940. With her husband, she became active in the resistance movement, serving as vice-president of the Paris Committee of Liberation and spe-

cializing in welfare work among prisoners and deportees. Because of the exigencies of their work, she was able to see her husband only once a week. On his arrest and deportation to Germany in a sealed train, Madame Lefauchaux cycled behind it for a week in order to learn of its destination. Subsequently she was able to engineer André Lefauchaux' escape from the Weimar prison camp.

In accordance with a wartime promise made by General de Gaulle, French women received the franchise and were able to vote for the first time in 1944, immediately after the liberation. Madame Lefauchaux was not only among the newly enfranchised women; as a representative of the Organisation Civile et Militaire, she was among the twelve elected to the Consultative Assembly, the first interim parliament of the provisional French Government. In the November 1945 elections she was one of thirty-one women returned to the Constituent Assembly, where she served as a deputy from the department of the Aisne. Her political affiliation was with the MRP, the Catholic moderate party. The Municipal Council of Paris, to which she was also elected, chose her as its vice-president. Her election to the Council of the Fourth French Republic took place in November 1946, under the terms of the new constitution.

As the only woman member of the French delegation, Madame Lefauchaux attended the United Nations sessions held in London in January 1946, and in New York at the end of that year. On the recommendation of the Preparatory Commission of the United Nations, the Economic and Social Council at its first session in February 1946 established a Sub-Commission on the Status of Women, to be under the direction of the Human Rights Commission. This subcommission, to which Madame Lefauchaux was assigned, held the first of its nine public meetings on April 29, 1946. The following month saw the presentation of the subcommission's report (with addenda by the Human Rights Commission) to the Economic and Social Council, which in June raised the subcommission to the status of a full commission, with Bodil Begtrup⁴⁶ of Denmark as chairman.

The tripartite report made recommendations, in the first section, for the improvement of the political, civil, social, economic, and educational status of women. The second section proposed methods of procedure toward this objective: by an international survey of laws and practices regarding women, by sounding and stimulating public opinion, by conferences with consultative agencies, by exchange of women workers in the intellectual and manual fields, and by the convocation of a United Nations women's conference. Section three considered the composition of the Commission on the Status of Women and advised that it consist of fifteen members, including three from the Commission on Human Rights, chosen on the basis of individual ability.

At the December 1946 session of the U.N. General Assembly, a resolution was passed urging the extension of equal political rights to

Press Assn., Inc.

MARIE-HELENE LEFAUCHEUX

women in all member states. The determination of the political status of women was begun by the U.N. Secretariat, which distributed a 125-page questionnaire to member governments. The status of women as covered by public, family, and criminal law, is dependent not only upon the codification of law, but upon the actual position of women by comparison with that of men. For this reason, the questionnaire seeks information on such topics as the eligibility of women for public office, civil service, and jury duty, the educational facilities open to them, the civil liberties protecting them (such as status before the courts and free choice in marriage), and the qualifications for nationality before and after marriage.

Among Madame Lefauchaux' other objectives is that of improving the status of women in backward regions such as French Africa. "The women of France have their rights," she told a reporter from the *Christian Science Monitor*. "It is for us to see that other women in other parts of the world are helped and encouraged to the same fortunate position." Marie-Hélène Lefauchaux, who has been described by *PM* as a "sparkling and very feminine brunette," is not an advocate of women's organizations per se. "I think women have exactly the same problems as men," she has said, "and they will do their best work without the feminine point of view. After all, it is not because you are a woman that you have political ideas."

LEIGH, ROBERT D(EVORE) (lē) Sept. 13, 1890- Research council director; educator
 Address: b. c/o Social Science Research Council, 70 E. 45th St., New York 17; h. 25 E. 83d St., New York 28

Chairman and director of the Public Library Inquiry of the Social Science Research Council, a two-and-a-half-year research project, is Robert D. Leigh, who in early 1947 had completed another survey, for the Commission on Freedom of the Press. Leigh, a social scientist, organized and was the first president of Bennington College for thirteen years.

Robert Devore Leigh's father, Charles Pascal Leigh, was of English-Scotch stock, a descendant of New York farmers who had come to America early in the eighteenth century. The elder Leigh lived in Nelson, Nebraska, where his son Robert was born on September 13, 1890. In Seattle, where Robert grew up, his father owned and operated the Leigh Lumber Company for many years. Mrs. Leigh, the former Olivia Belle Thompson, was of English ancestry, seventeenth-century settlers of New England (mainly Connecticut). In her family of ministers, teachers, and farmers were Mark Hopkins, president of Williams College, and James Thompson, first president of the Worcester and the Rose polytechnic institutes. Robert D. Leigh was to be the only one of his immediate family to follow the academic pattern of Hopkins and Thompson. (His oldest brother, Charles, is in the aircraft manufacturing field and his brother, Edward, in the plastics field; Leigh has also an elder sister, Winifred).

At Broadway High School in Seattle, where Robert D. Leigh received his secondary education, the boy was president of his class, junior editor of the school paper and annual, and treasurer of the athletic association. He went out for the track squad, but reports, "I never could jump high enough to place first, second, or third in interschool or intercollegiate track meets." After graduation in 1909, Leigh enrolled as a history and literature major at Bowdoin College in Brunswick, Maine. There the Kappa Sigma fraternity member was manager of the football varsity, president of the student council, president of the dramatic society, member of the intercollegiate debating team, editor in chief of *Orient* (the college weekly), and editor of *Quill* (the literary magazine) and the college annual. His scholastic standing brought him membership in Phi Beta Kappa in his junior year; he was also elected to the Friars and the Ibis honor societies. As class valedictorian Leigh received his B.A. degree in 1914 *summa cum laude*. Among the various prizes for writing, speaking, and class standing that he won at Bowdoin were the Almon Goodwin and the Brown English prizes, the Fairbanks Medal, and the Charles Carroll Everett Fellowship for graduate work. It was the last-mentioned award that financed his advanced study in history, political science, public law, and the psychology of education at Columbia University: he received his M.A. degree in 1915. Columbia University was to

award him his Ph.D. degree in 1927 for the dissertation, *Federal Public Health Administration in the United States*. Leigh also studied at Harvard University in the summer session, and at the New School for Social Research, New York.

"I was always interested in knowing more about public institutions and events, and teaching was a way to find out," writes Leigh. In 1915 the young social scientist began his career in education as an instructor in government at Reed College in Portland, Oregon. (The college had been founded in 1911 as an experiment in progressive higher education.) Leigh continues, "It was marvelous luck to have my first job in a new college with an A-1 faculty, president, and students." In 1917 Leigh was advanced to the status of assistant professor; he retained the appointment while on leave from the university for service in World War I. During that period, from 1917 to 1919, Leigh was stationed in Washington, D.C., with the United States Public Health Service, where, as assistant education director, he established liaison with other war health activities. Leigh then returned to the Columbia University campus as a Gilder Fellow for the college year 1919-20, working in public law. From 1920 to 1922 he helped to organize the courses in contemporary civilization at Columbia College; he was director of government instruction at Barnard College (1921-22) and assistant dean of Columbia College in the same period. Leigh in 1922 became the first A. Barton Hepburn professor of government and also chairman of the department of government studies at Williams College, which positions he held for six years. His own days as an undergraduate not too far behind him, Leigh, a Kappa Sigma brother, was chosen by his Williams College students as first arbiter of their interfraternity agreement.

At the age of thirty-seven, Leigh became one of the youngest presidents of a college in the United States: he was engaged early in 1928 to organize Bennington College, a new experimental college for women, Leigh, who planned the program for the Vermont college, selected the faculty and formulated the progressive method of instruction. "I also helped raise the money—what a job!" (Leigh has written of the Bennington College plan in his chapter, "The Newest Experiment in American Higher Education" in *Higher Education Faces the Future* [1930], edited by Paul D. Schlipp.) In August 1941, at the age of fifty, Leigh announced his retirement as president of the college. He explained that his plan at Bennington provided for regular change of presidents near or at the point of their highest usefulness so that the institution need never be "shackled by executive leadership, gradually grown stale, feeble, or lacking in initiative." During his presidency at Bennington, Leigh left the college for a sabbatical leave in 1939-40. This time he was to spend (at the request of the president and trustees of Columbia University) analyzing for the university the program and possibilities of Bard College, in Annandale, New York; he served as

Blackstone Studios

ROBERT D. LEIGH

acting dean of that college concurrently, and continued as a trustee for the two years that followed (1940-42). Upon leaving Bennington in September 1941, Leigh became a temporary member of the School of Economics and Politics of the Institute for Advanced Study in Princeton, New Jersey (not connected with Princeton University), and there made a survey of the instruction of social studies in American high schools.

Leigh had served the Federal Government as special adviser to the National Resources Planning Board in 1941-42. This was followed by his directorship of the Foreign Broadcasting Intelligence Service of the Federal Communications Commission, which office he filled during 1942-44. In 1944 Leigh served as the first chairman of the United Nations Monitoring Committee, before returning to privately owned organizations. He was appointed to the directorship of the Commission on Freedom of the Press shortly after the group's organization early in 1944. Surveying the communications industries as a whole, the commission of thirteen men, chosen by Robert Hutchins⁴⁰ of the University of Chicago, was organized under the auspices of the university, financed by a grant from *Time* publisher Henry R. Luce⁴¹. The commission was concerned with the problems of "censorship, ownership, and readership" of the press, radio, and motion pictures, in order to find the answer to the question, "How public affairs are dealt with." In addition to the report of the commission, published in *Fortune* and discussed on the radio by Leigh, the director and Llewellyn White have written a detailed exposition of the international mass communications, *Peoples Speaking to Peoples* (1946). The task of the Commission on Freedom of the Press completed, Leigh was named in April 1947 as director of the Public Library Inquiry of the

LEIGH, ROBERT D.—*Continued*

Social Science Research Council. A two-year study to determine how well the nation's communities are being served by their public libraries, the survey is made possible by a Carnegie Foundation grant of \$175,000. The study was proposed by the American Library Association.

Leigh, a visiting professor of political science at the University of Chicago (1944-46), has delivered summer session lectures at the universities of Syracuse (1926) and Washington (1924). After an absence of twenty-two years, in 1946 he returned to the latter university as Walker-Ames lecturer. He was called upon to serve in 1946-47 as a consultant to the New York State Temporary Commission on the Need for a State University. Leigh has been active in other community services: While at Reed College, he had been a member of the advisory committee of the Oregon Consolidation Commission (1917); and when at Bennington, he had served as clerk and zoning administrator (1932-38) and as moderator (1938-41) of the Village of Old Bennington.

Honorary LL.D. degrees have been conferred upon the social scientist by Colgate University (1933) and Bowdoin College (1935). At the latter Leigh was a member of the alumni council in 1918-20 and in 1927-30, and he has served on the editorial board of the *Bowdoin Alumnus*. A member of the board of directors at the New School for Social Research during 1920-21, Leigh has been a leader of the American Political Science Association's Round Table discussions on psychology, politics, public opinion, and public administration (1925 and 1927), the chairman of the association's committee on awards, and a member of its committee on Congress (1942-47), and its committee on research (1942-45). In addition to his membership in the American Political Science Association, Leigh belongs to the Academy of Political Science, the National Municipal League (he was executive councilor in 1917-19), and the Progressive Education Association (he has served with its commission on the relation of school and college and as a director of the association itself). Articles by Leigh have appeared in the *American Political Science Review*, *Harper's Magazine*, the *Journal of the National Education Association*, *School and Society*, and *Survey*. He is the author of *Group Leadership* (1936), a discussion of maintaining order in groups ranging from informal college gatherings to national conventions; and the author of *Modern Rules of Parliamentary Procedure* (1937).

Mildred Adelaide Boardman, who holds the Master's degree from Teachers College (she majored in literature and education) and Robert D. Leigh were married June 23, 1916. They have two daughters, Helen Devore (Leigh) Stillman and Virginia Boardman (Leigh) Herick. Leigh, a Congregationalist, is an "independent liberal" in politics. The Century, Town Hall, and Coffee House (New York), and Cosmos (Washington, D.C.) are his clubs. The research administrator has blue eyes and

brown hair, is five feet eight and a half inches tall. He weighs 172 pounds, at which he remains by playing tennis and golf, and boating. Leigh once remarked: "The things I have done and the jobs I have held make sense to me as a pattern of study and administration related to the educational and political process. I don't know if they make sense to anyone else. It's been interesting to have such varied work."

LEVINE, PHILIP (lě-vēn') Aug. 10, 1900—Physician; serologist; bacteriologist

Address: b. c/o Ortho Research Foundation, Raritan, N. J.; h. 1068 Kenyon Ave., Plainfield, N. J.

One of the first scientific investigators to perceive the presence of a new factor in human blood, later to be identified as related to the Rh factor, is Dr. Philip Levine, serologist, bacteriologist, and specialist in immunology. Identifying this factor in fetal blood as a cause of erythroblastosis fetalis, an often fatal blood disease, Levine followed a course of inquiry that, in some respects, paralleled the work independently pursued by Karl Landsteiner, Nobel prize winner, and Alexander S. Wiener, who isolated a similar factor to which they gave the designation Rh. After this discovery, the safety of blood transfusions was increased and the infant mortality rate reduced.

Philip Levine, one of several brothers who are also professional men, was born in Kletsk, Russia, on August 10, 1900, to Morris and Fay (Zirulick) Levine. When he was eight years old he was brought to the United States and thereafter was reared in Brooklyn, New York. He attended Brooklyn Boys' High School, being graduated in 1916 with a Regents' (Uni-

versity of the State of New York) scholarship, and was a premedical and biology student at the College of the City of New York from 1916 to 1919, receiving the B.S. degree. (While in college he had been an infantry private in the Students' Army Training Corps during the war years.) His advanced medical education Levine received at Cornell University Medical School, being awarded its M.D. in 1923 and its M.A., after further graduate work in the field of allergy, in 1926. Part of his graduate studies had been financed by a University of the State of New York soldiers and sailors scholarship. Shortly after receiving his medical degree, in collaboration with J. Mabee he had published his first scientific paper, "Dangerous 'Universal Donor' Detected by Direct Matching of Bloods," in the *Journal of Immunology* (November 1923).

Among Levine's instructors at Cornell had been Professor of Immunology Arthur F. Coca, founder and editor in chief of the *Journal of Immunology*, with whom he did research on allergy. In 1925, after six months work with him, Coca sent his young researcher to Karl Landsteiner at the Rockefeller Institute for Medical Research, thus introducing Levine to the laboratories in which he was to spend his next seven years. As an assistant and later an associate at the Rockefeller Institute, he pursued studies in blood grouping, the relationship between human and chimpanzee blood, and the phenomenon of anaphylaxis. Back in 1900 Landsteiner had discovered the four blood-type differentiating characteristics designated as A, B, AB, and O, for which he had been awarded the Nobel prize in 1930. One of the projects on which Levine was now working with him grew out of Landsteiner's belief that there were still other characteristics which distinguish individual human blood, and in 1928 their researches bore fruit in the discovery of the additional blood factors M, N, and P.

In 1932 Levine left the Rockefeller Institute to accept a position as instructor in bacteriology at the University of Wisconsin Medical School. At the same time he turned to the investigation of bacteriophage (defined as specific bacteria-destroying substances common to intestinal tracts of men and animals and abundant in the presence of disease bacteria) and of the intestinal tract's bacteria *Salmonella*. The three years of work in Wisconsin which followed brought discoveries of a specific reaction of bacteriophage and specific soluble substances of bacteria as well as new relationships in *Salmonella*. But his interest in blood grouping was still strong. In 1935, before he returned to the East (at about the same time that Wiener was securing passage of a similar law in New York), he successfully sponsored a law granting to the Wisconsin courts authority to order blood tests in cases of disputed paternity. Also, together with G. A. Matson and H. F. Schrader, he was studying the distribution of the blood groups and the blood factors M and N among Blackfoot Indian tribes. (With Landsteiner he had also been engaged in studies in the racial distribution of blood groups.)

Stechhardt Studios

PHILIP LEVINE

From 1935 to 1944 Levine was a bacteriologist and immunologist at Beth Israel Hospital in Newark, New Jersey, and he was placed in charge of its blood bank when that was set up. In addition to his regular duties, in 1939 he wrote and successfully sponsored a blood test law for New Jersey, giving the courts of that State power similar to that granted in Wisconsin. During this period much of Levine's work began to run parallel to Wiener's, though the two men did not collaborate. In July 1939 Levine and R. E. Stetson published in the *Journal of the American Medical Association* a description of an unusual case of intra-group agglutination following transfusion after stillbirth, which they had studied in 1937. The reaction, they indicated, was the result of iso-immunization by a new blood factor independent of the factors M, N, and P. (Another *J.A.M.A.* article by Levine, in collaboration with E. M. Katzin and L. Burnham, declared in March 1941 that this factor appeared to parallel the "anti-Rh agglutinin of Landsteiner and Wiener," described by those two investigators in 1940.) In the 1939 paper Levine suggested that the "products of the disintegrating fetus . . . [in the specific case under study] were responsible for the iso-immunization." This was the first postulation of the idea that the red blood cells of the fetus could find their way into the maternal circulation, thus immunizing the mother: this concept opened a new field of study.

It was a short time afterward that, together with E. M. Katzin and later also L. Burnham as his chief collaborators, Levine began extended investigation of the phenomenon of iso-immunization (the development of Rh antibodies in Rh-negative blood in response to Rh sensitization) in pregnancy, publishing their first report in October 1940.

(Continued next page)

LEVINE, PHILIP—*Continued*

Erythroblastosis fetalis, the often fatal blood disease of hitherto unknown origin which, it was estimated, affected one out of every 150 infants. By December 1941 the doctors could describe, with proof, the role of iso-immunization in the pathogenesis of erythroblastosis and by 1943 exactly how this operated. (In his work on erythroblastosis fetalis, which developed out of his 1939 suggestion in the *J.A.M.A.*, Levine employed fetal blood rather than the rhesus blood used by Wiener.) To explain the development of the disease despite the biological fact of separation of the blood streams of mother and child, Levine postulated transplacental passage of the antibodies formed in the mother's blood, and of the original Rh-positive agglutinin from the fetus to the mother in cases where the mother has not been previously sensitized; and this theory has been accepted by all doctors in the field. Subsequently, Wiener's discovery of blocking antibodies and Levine's discovery of the Hr factor, so named because of its genetic relation to Rh, served to round out the pathology of erythroblastosis. Since he became director of the biological division of the Ortho Research Foundation in Raritan, New Jersey, in 1944, Levine has been especially active in the training of physicians for, and the establishment of, Rh centers and clinics; and he has lectured extensively on the subject in addition to pursuing his own research.

For his work on the Rh factor Levine received the Mead Johnson Award in 1943, shared the Ward Burdick Award of the American Society of Clinical Pathologists with Wiener and the Lasker Award of the American Public Health Association with Wiener and Landsteiner in 1946; received a gold medal from Phi Lambda Kappa medical fraternity in 1947. He is a consultant at the Jewish Memorial Hospital in New York City, Nassau Hospital in Mineola, Muhlenberg Hospital in Plainfield, and St. Michael's Hospital in Newark. He is a member of the Board of Medical Control of the Blood Transfusion Association of New York, of the American Association for the Advancement of Science, the New York Academy of Medicine, the American Genetic Association, the American Association of Immunologists, the Society for Experimental Biology and Medicine, the Medical Association of the State of New Jersey, and the Harvey Society. Since 1945 he has been on the advisory board of the *Journal of Hematology*, and he is the author of some hundred and fifty scientific articles. Levine and the former Hilda Lillian Perlmutter, a practicing attorney before their marriage on May 1, 1938, are the parents of Phyllis Ann, Mark Armin, Paul Karl, and Victor Raphael. Five feet ten inches tall and weighing two hundred pounds, the scientist has gray hair and brown eyes. He finds his recreation in music, literature, the theater, stamp collecting, and travel.

LLERAS CAMARGO, ALBERTO (lyě'räs kã-mär'gō ä'l-běr'tō) July 3, 1906- Pan American Union official; Colombian statesman

Address: b. c/o Pan American Union, Washington, D.C.

Alberto Lleras Camargo, who in March 1947 was elected director-general of the Pan American Union, began his concurrent careers as journalist and government official when he was still in his twenties: he was editor in chief of one of Colombia's most respected newspapers at the age of twenty-four, held his first Cabinet position at twenty-nine, and attended his first international conference shortly after his thirtieth birthday. Lleras Camargo assumed the directorship of the Pan American Union, the official, representative organization of the American republics, after having served in 1945-46 as interim President of Colombia. Lleras Camargo was also, in 1943, Colombian Ambassador to the United States.

The father of Alberto Lleras Camargo is Felipe Lleras Triano, son of Lorenzo María Lleras, a Colombian statesman who served as Minister of Foreign Affairs in the administration of Hilario López. Lleras Camargo's mother is the former Sofía Camargo, who is descended from General Sergio Camargo, a former president of Colombia. Born on July 3, 1906, in Bogotá, Colombia's capital city, Lleras (whose single surname is widely used) was reared, and educated, in that city. He studied at the Escuela Ricuarte, at the Colegio Mayor de Nuestra Señora del Rosario, and at the School of Law and Political Science of the National University. Lleras ended his formal education before he received a degree, although, wrote Thayer Waldo in *Inter-American*, "In [Colombia], where public life and the liberal arts are traditionally linked, it is next to unheard-of for anyone to get anywhere in either field without an academic degree."

Though Lleras later "won a goodly reputation as an able diplomat and a shrewd politician . . . he is a journalist and always has been." He began his career in that field on the staff of *La República*. Later he was employed by *El Espectador* and by *El Tiempo*, "the oldest, most influential newspaper" in Colombia, according to the *Political Handbook*. In 1926 Lleras left Bogotá for Buenos Aires, where he was on the staff of *La Nación* and other newspapers and magazines. Three years later he was special correspondent at the International Exposition of Seville, Spain, for *El Mundo*, a Buenos Aires paper. In 1930 he returned to Colombia and became editor in chief of *El Tiempo*. Later he was director of *La Tarde*, an afternoon paper associated with *El Tiempo*. When that paper suspended publication a year later, Lleras again served as editor in chief of the parent newspaper (until 1934); his specific responsibility was the edi-

torial page. From 1938 to 1942 the journalist was director of *El Liberal*, which he founded, and which has become the second largest newspaper in Bogotá. *Who's Who in Latin America* calls Lleras Camargo "one of the best-known journalists of contemporary Colombia." His writing is said to be more nearly North American in style than that of other South American writers. Early in 1947 Lleras was serving as editor of *Semana*, a magazine that he founded in 1946.

During these years, Lleras was a member of Colombia's Liberal party. In 1929 he was elected secretary-general of the party; and, in the general elections of 1930, he was chosen a member of the Chamber of Deputies. He served a period as president of the lower house—the presiding officer changed monthly. In 1933, the year Lleras' term in the legislature expired, he was secretary of the Colombian delegation (headed by Alfonso López "2", leader of the Liberal party) at the Seventh International Conference of American States, held in Montevideo. In 1934 Lleras was private secretary to López, who had been elected President, while the latter was on a good-will visit to the United States, Mexico, and several Central American republics. Subsequently Lleras became secretary-general of the executive branch of the Colombian Government, "thus initiating an association so close and constant that the two [López and Lleras] have been referred to as 'an individual entity.'" In discussing the political friendship between Lleras and López, Thayer Waldo quoted a Latin American journalist: "Alberto Lleras has identified himself [with López] in his political thinking, without subjection of his intelligence. He has reached the same conclusions as López by other roads, through other procedures."

In 1935 Lleras became Minister of Interior in the López Cabinet. It was in this year that López introduced his proposals for constitutional amendments, and a year later the constitution was revised. But López encountered difficulty in putting through other reforms (redistribution of the land, devaluation of the peso), and on May 25, 1937, Minister of Interior Lleras read to the Senate López' resignation, which was not accepted. Lleras for a brief period served as Minister of Public Instruction. He was again the Minister of Interior until the election of Eduardo Santos, publisher of *El Tiempo*, to the presidency. During his service in the López administration, Lleras had been a delegate to the Inter-American Conference for the Maintenance of Peace, at Buenos Aires (1936). There he presented a plan for the creation of a League of American Nations, a proposal which was discussed in greater detail at the Pan American Conference of 1938.

In 1941 Lleras was elected to the executive committee of the Liberal party; he was re-elected to the same office in 1943. In 1943, too, he was elected both a member of the Senate and of the Chamber of Deputies. In April 1943, López, who had again become President in 1942, appointed Lleras Ambassador to the United States, a post he held until October,

ALBERTO LLERAS CAMARGO

when he was recalled to become Minister of the Interior. The years of López' second administration were highly controversial ones: López and his followers (Lopistas) favored a program somewhat similar to the New Deal program in the United States. They wished cautious cooperation with the United States. The Right-wing Liberals (Antilopistas) thought López too radical; Liberals generally believed, however, in separation of church and state, that taxes should be more evenly distributed, and that the program of education should be broadened. Signs of unrest among these factions had developed in 1943 and 1944, and in February 1944 Lleras preferred charges of slander and libel against Laureano Gómez, leader of the Conservative party. In July 1944 *Time* wrote, "Proud of its well-earned reputation for stability, the nation was embarrassed" when the first revolutionary attempt in forty-two years was made.

Lleras remained as Minister of Interior until January 1945 when he became Minister of Foreign Affairs. In July 1945 López sent the last of several letters of resignation to the Senate. The two vice-presidents had already resigned for other reasons, and it became the duty of the congress to elect a president. Lleras Camargo was chosen, becoming at thirty-nine one of the youngest chiefs of state in the world. He was named Constitutional President instead of Provisional President. Thayer Waldo commented: "This was considered a signal honor, but it was also hinted that it was a congressional device to keep Lleras from running for the presidency in 1946" (in Colombia a Constitutional President may not succeed himself). The new executive immediately formed a coalition Cabinet with the appointment of three Conservatives. "At least one of these appointments was a political master stroke," wrote *Inter-American*: Lleras chose as his Minister of Foreign Affairs a Conser-

LLERAS CAMARGO, ALBERTO—*Cont.* vative leader who later became one of his firmest supporters. The same magazine reported that a bipartisan committee requested Lleras to resign before his term of office had expired so that he might run for a full term as President; the statesman felt, however, that such a step would be a breach of office. "It was said," *Newsweek* reported, "that 90 per cent of Colombian voters, Liberals and Conservatives alike, would have voted to re-elect him." The split in the Liberal party resulted in the election of a Conservative in 1946, but, said *United Nations World*, "Conservative President Ospina Pérez' administration in succession to Lleras Camargo's is far enough to the Left of . . . pre-Cabinet fusion conservatism to be recorded as 'Llerista' itself." In 1946 Lleras was elected a senator.

Lleras had gained international attention in April 1945 when he headed the Colombian delegation to the San Francisco Conference on International Organization. There he favored the Brazilian-Canadian proposal that a new charter convention be called five to ten years hence, and presented a formula whereby the Pan-American collective security system could be integrated with U.N.'s authority to act anywhere in the world in the interest of maintaining peace. Eager to achieve inter-American solidarity, he had urged admission of Argentina into the U.N. As a result of the reputation he had earned in his various diplomatic posts, Lleras' name was one of those submitted to the Security Council by the United States as a possible governor of the Free Territory of Trieste, a nomination which Britain also supported. But in March 1947 Alberto Lleras Camargo became the first South American to serve as director-general of the Pan American Union. He succeeded L. S. Rowe⁴⁵. Lleras, who believes that the United Nations might do well to study the structure of the Pan American Union, in November 1947 received a Maria Moors Cabot Gold Medal from Columbia University in New York. The award was for "significant contributions to international friendship among the peoples of the American continents."

In 1943 Lleras had been named Colombia's representative on the governing board of the Pan American Union. In 1945 he was largely responsible for the portions of the Act of Chapultepec which expanded the authority of the Pan American Union, the official international organization of the American republics. By this act, which brought all Latin-American republics into World War II and which, in other ways, strengthened inter-American relations, the governing board of the Pan American Union was given authority to function in any situation in the interest of Pan Americanism or for the general welfare and solidarity of the American republics. The board is composed of representatives from all member countries; each representative has the rank and staff of an Ambassador. The post (the annual salary is eighteen thousand dollars) is of ten years' duration; a former director-general is never eligible for re-election.

Several of Lleras' lectures on politics and government have been published. He is a Doctor *honoris causa*, conferred on him by Popayan University, and holds other honorary degrees (from Cauca University and the University of California). His wife, Berta Puga de Lleras Camargo, is the daughter of a former president of Chile. Their four children are Consuelo, Alberto, Ximena, and Marcela. Lleras Camargo, who has a reddish mustache, has been described as "acutely angular." One writer, in commenting on the statesman's rise to high office at an early age, observed that even now "he gives the impression of being several years younger."

LOEWE, (WALTER) S(IEGFRIED)
Aug. 19, 1884- Pharmacologist

Address: b. c/o University of Utah, Salt Lake City, Utah; h. 319 S. 11th East St., Salt Lake City, Utah

A capsule-form drug offering relief to the millions of hay fever victims, sufferers of other noninfectious nasal disorders, and of noncontact skin diseases is Anthallan, the antiallergant coal-tar derivative discovered by S. Loewe. A pioneer in narcotic theory and hormone study, Loewe became a research professor of pharmacology at the University of Utah School of Medicine early in 1946.

Walter Siegfried Loewe, the son of August and Clothilde (Blumenthal) Loewe, was born on August 19, 1884, at Fürth, in Bavaria, Germany. When the boy was nine years old, he was enrolled at Lessing College, the school at Frankfort on the Main, which he attended until 1902. From that year until 1907, Loewe studied at the universities of Fribourg, Berlin, Strasbourg, and Munich, receiving his M.D. from Strasbourg in 1908. Loewe had begun his career at that university in 1905 as a research assistant in the department of biochemistry; he left in 1910 to head the chemical laboratories at the University of Leipzig's clinical psychiatric institution, where he remained for two years. His next post was at the University of Göttingen, where he received his appointment as an instructor for 1912-13, serving as an assistant professor the following five years before reaching associate professorship in the department of pharmacology there in 1918. Two years later, in 1920, he left his position at Göttingen to assume the duties of a full professor in pharmacology and medical chemistry, and chairman of the pharmacology department at the University of Dorpat, where he remained for eight years. While there he organized the Estonian Food and Drug Administration's pharmacological section, in 1923, which he directed for the following five years.

Leaving the Estonian Food and Drug Administration in 1928, Loewe directed the chemical laboratories and the hormone research institute of the municipal hospitals for the city of Mannheim, Germany, for the ensuing six years. Meanwhile, in 1929, the University of Heidelberg had recognized the research he was doing in that field by awarding him an honorary professorship in pharmacology, which subject he continued to teach there as a professor until 1934. In August of that year President Paul von Hindenburg died and the National Socialist Party under Hitler⁴² came into absolute power; Loewe was one of many German scientists who left Germany at this time. After a year in Switzerland, Loewe took up residence in the United States (he became a citizen in 1942). From the year of his arrival in 1936 until 1946, Loewe lectured as a research guest of the Cornell University Medical College's department of pharmacology, also serving successively during those years on the laboratory staffs of the Mount Sinai and the Montefiore hospitals in New York. Loewe joined the teaching faculty of the University of Utah in time for the winter 1946 semester, at the same time continuing his research work there in the field of biochemistry.

In 1921 Loewe had begun his search for an antiallergant compound at the Berlin factory of a chemical firm, using derivatives of coal tar (also employed in the synthesis of aniline dyes and sulfa drugs). A co-chemist at the plant took home a sample of Loewe's work to his asthmatic father under the misapprehension that it was adrenalin. The father experienced not the immediate relief afforded by adrenalin, but the disappearance of breathing difficulties after three days of dosage. Why the drug, a precursor to Anthallan, produced the beneficial but delayed reaction was unknown; the effects of the later Anthallan were found measurable, but again the "why" factor remained undetermined. Loewe continued his experiments in the United States at the laboratories of the Chemico Medical Corporation, purifying the drug to eliminate its toxic effects. After two years of experimentation upon guinea pigs, rats, and mice had shown the drug to be safe, by 1938 several specialists were invited to administer it to their patients. Some six hundred private cases were thus studied before the final form of the drug, patented as Anthallan, was deemed harmless by the United States Food and Drug Administration, and approved for prescription use in November 1945.

Before knowledge of Loewe's discovery became widespread in June 1946, two other pill-form antiallergants reached the market, both in April of that year. Patented as Pyribenzamine and Benadryl, these were antihistamines, chemicals which prevent or block the release of histamine into the blood stream; this substance is believed to be the cause of urticaria (rash) and rhinorrhea (excessive nasal secretion). Anthallan, unlike them, resembles the more commonly known drug ephedrine, which shrinks the mucous membranes to relieve nasal congestion. The three drugs eliminate expen-

S. LOEWE

sive, time-consuming laboratory examination by attempting to check the basic cause of all allergies rather than treating specific allergies—that Anthallan has afforded relief lasting more than nine months has been taken by some to indicate that it attacks the cause rather than merely allaying the symptoms. Much speculation regarding Loewe's synthetic medicament is based upon two years of nasal research by Drs. Alexander D. Ghiselin, Jr., and John D. Kernan at the Vanderbilt Clinic. Ghiselin's report, in the *New York Academy of Medicine Bulletin* (June 1946), concludes: "Hypersthetic rhinitis [can] be treated simply and effectively with this drug." Dr. Bret Ratner of New York University, commenting on this, felt the studies made of Anthallan to be "so meager . . . so inconclusive as to make it impossible for a physician to gauge its effectiveness."

Loewe's early research in narcotics resulted in the development of a theory of narcosis (1912); his later investigations in this field (1938-42) were climaxed by his discovery of active principles of marijuana. He is now (in 1947) continuing with the pharmacology of marijuana-active substances, in addition to his current research in anticonvulsants and antispasmodics; he had previously gone into the field of hypnotics. As part of his activities in endocrinology, Loewe did pioneer work on the hormones of the reproductive system of the female (1925-34) and of the male (1928-34). He has made numerous contributions to general pharmacology, creating the basis for the study of synergisms and antagonisms in the combination of drugs, and clarifying some of the problems of laxatives, a field which holds his current active interest along with his present study of antiallergics. Since 1908 over two hundred and eighty of his reviews, monographs, and papers have appeared in various

LOEWE, S.—Continued

German, Estonian, Italian, Belgian, and American scientific periodicals.

One of the highest distinctions Loewe received for his contributions to science is membership in the Leopoldinian Academy in Halle, Germany (1932). The biochemist was married on November 27, 1919, to Ida A. Witte, then a nurse. Of their three children, Herman L., Susanne R., and Lucas S., Susanne has followed her mother's profession; during the shortage of nurses in World War II, Mrs. Loewe and her daughter served together at the New Rochelle (New York) Hospital. Loewe's religion is Judaism; he is an independent in politics. The gray-haired, gray-eyed scientist is five feet seven inches tall, weighs 160 pounds. A favorite relaxation is travel.

LOTHAR, ERNST Oct. 25, 1890- Author
Address: b. c/o Doubleday & Co., Inc., 14 W. 49th St., New York 20

Called the "epic witness of his era," Ernst Lothar is an author who believes that "the writer of tales is in a sense also a writer of history." His more than twenty novels are the documentary type that "mingles truth with fiction." For "every true novel," according to Dr. Lothar, "transmits and is the history of its time."

Ernst Lothar was born in Brünn, Moravia, on October 25, 1890, the son of Dr. Joseph L. Mueller, a lawyer, and Johanna (Wohlmuth) Mueller. The boy was sent to Vienna to be educated. While a student he received the second prize in a short story contest conducted by the Vienna *Neue Freie Presse*. In 1910 he began to write poems and novels, publishing his

first book at the age of twenty. His father, however, insisted that young Lothar should have a career as a jurist. Accordingly, after he had taken his Ph.D. and LL.D. at the University of Vienna in 1914, he became a public prosecutor in the Austrian Ministry of Justice, and later a councilor for the Ministry of Education. But all the while he kept on with his avocation.

The winning of the first prize in a contest for the best war novel, with *The War Lord* (1918), further stimulated his literary activities. By 1922 he had given up the law to devote himself wholly to writing, and had become drama critic and columnist for the *Neue Freie Presse*. In the next ten years he produced seventeen books: novels, essays, poems. During this time his interest in the theater increased, and he began to stage and direct classic dramas at the Vienna Burg-Theater. In 1935 he succeeded Max Reinhardt as owner and director of the Theater in der Josefstadt.

Always very outspoken in his condemnation of Hitler and National Socialism, Dr. Lothar was on the Gestapo blacklist. When the *Anschluss* became a reality in 1938, he escaped to Switzerland with a false passport. His books were banned, his house in Salzburg was looted, even his dogs were taken away. The author became, he says, "a man without a country, without a language, without money, without a future." From Switzerland he went to Paris, and then brought his wife and daughter to the United States in the spring of 1939.

Lothar already had a public in America, where three of his books had been brought out in translation in the 1930's: *The Clairvoyant* (1932), well received for its "beauty of style" and unusual plot; *Little Friend* (1933), a psychological study of a child, which one critic had compared to Henry James's *Maisie*, another had found reminiscent of *Galsworthy*; and *The Loom of Justice* (1935), "a moving drama set amid the brilliant scenes in Salzburg at the time of the annual music festival."

Encouraged by his wife, Lothar started writing again, and after a difficult time which lasted for several years, published a new novel, *A Woman Is Witness* (1941). Based on the diary of an Austrian girl whom he knew in Paris, the book presents a picture of the city under Nazi domination. In the summer of 1941 Lothar lectured on the drama at Bard College, Annandale-on-Hudson. From there he went to Colorado College, Colorado Springs, where, as professor of the history of the drama, he taught in the mornings and staged plays for the Drama Club in the afternoons and evenings. Only the nights were left for writing. It was during those nights that *Beneath Another Sun* (1943) was finished. "An intimate, revealing picture" of life under totalitarian rule, the action of this novel takes place in the South Tyrol.

There followed *The Angel with the Trumpet* (1944). "Suffused with nostalgic Viennese charm," this "requiem of a city" mirrors the history of Austria in the chronicles of the Alt family, piano makers. In *The Prisoner* (1945) the author, still preoccupied with the evils of

ERNST LOTHAR

Nazism, shows the effect of the Geneva Convention on German PW's. Critics called the book an example of "those famous qualities which are characteristic of the Viennese school of writing—that 'French variety of German language literature.'" Lothar's latest volume, *The Door Opens* (1945), is a reissue, in translation, of a series of episodes describing scenes of his own little daughters' childhood, long before the advent of Hitler. Although "it cannot make claims to literature," according to the *Saturday Review of Literature*, "it is a delicate book, told with humor and humanness."

Lothar's works have been translated into ten languages. Two of his novels, *The Clairvoyant* and *Little Friend*, have been made into motion pictures. Two others have been book club choices—*A Woman Is Witness*, selected by the Book League (1941), and *Beneath Another Sun*, by the Literary Guild (1943).

In 1933 Lothar was married to Adrienne Gessner, the actress. His two daughters by a previous marriage, Agathe and Hansi, are both deceased. The author, who is of medium height and weight, with black eyes and hair, has been a great traveler, in Europe and also in the United States. As favorite books he names the Bible, and the works of Goethe and Emerson. Now an American citizen, in the spring of 1946 he returned to Europe as United States Theater and Music Officer for Austria. While there he is working on a new novel—"The Return of the von Gelderns"—whose theme is the re-establishment of displaced people in their former homes.

LOWELL, ROBERT (TRAILL SPENCE, JR.) Mar. 1, 1917- Poet

Address: b. c/o Harcourt Brace and Company, 383 Madison Ave., New York 17

In 1947 Robert Lowell, "the year's most honored poet," was the recipient of the Pulitzer Prize for poetry, a grant from the National Institute of Arts and Letters, and a Guggenheim Fellowship. Before he had reached his thirtieth birthday, Lowell's second book of poems, *Lord Weary's Castle*, had appeared and his work had been widely discussed. Lowell uses conventional forms in composition, but protests, in his themes, against other kinds of convention that are restrictive or narrowing in effect. John Berryman's evaluation of the poet, in a *Partisan Review* criticism, was: "Robert Lowell seems to me . . . the most powerful poet who has appeared in England or America for some years." Lowell serves as adviser on poetry to the Library of Congress.

Robert Traill Spence Lowell, Jr., was born in Boston, Massachusetts, on March 1, 1917, to Robert Traill Spence and Charlotte (Winslow) Lowell. A member of the Lowell family famous in letters, Robert Lowell is a great-grandnephew of James Russell Lowell, a distant cousin of Amy Lowell, and the namesake of a noted clergyman and writer. After being

Arni

ROBERT LOWELL

graduated from St. Mark's School in Southboro, Massachusetts, young Lowell matriculated at Harvard University but later "bucked" family tradition, according to *Life*, by transferring to Kenyon College in Ohio. That college granted him a B.A. degree in 1940. In 1940 Lowell became a convert to the Roman Catholic faith. In the course of World War II Lowell, on two occasions, tried to enlist in the armed forces (his father is a retired naval commander); but by the time he was called for service, he had declared himself a conscientious objector, feeling that the bombing of civilians could in no way be justified. (His "Dead in Europe" reveals something of his feelings toward the suffering of civilians in war.) As a result, in October 1943, Lowell was sentenced to serve a year and a day in a Federal prison, was released after about six months.

While Lowell was in college, one poem of his appeared in the *Kenyon Review*. Later his work was published in the *Partisan Review*, *Nation*, *Common Sense*, *Commonweal*, *Poetry*, and other publications. Lowell's first collection, *Land of Unlikeness*, was published in 1944; it included an introduction by Allan Tate⁴⁰, who asserted, in his opening lines, "There is no other poetry today quite like this." Tate maintained that "Lowell is consciously a Catholic poet. . . . The style is bold and powerful and the symbolic language has the effect of being willed. . . . A close reader of these poems," Tate remarked, "will be able to see two general types, or extremes. . . . On the one hand, the Christian symbolism is intellectualized and frequently given a savage, satirical direction . . . on the other hand, certain shorter poems . . . are richer in immediate appearance than the explicitly religious poems." Critical opinion of the poet's work was generally favorable: John Frederick Nims (*Poetry*)

LOWELL, ROBERT—*Continued*

wrote, "It is good to discover the gnarled and oaken wainscot of Lowell's chapel. His is a mature and effective technique; tension, conflict, and strangeness are fundamental in his work." R. P. Blackmur, in *Kenyon Review*, stated, "Lowell's verse is a beautiful case of citation in any argument in support of the belief in the formal inextricability of the various elements of poetry." John Berryman (in a *Partisan Review* criticism) thought the poems in *Land of Unlikeness* "very different" from his later work: "The earlier poems writhed crunched spat against Satan, War, modern Boston, the Redcoats, Babel, Leviathan, Babylon, Sodom. The style was bold, coarse, surex-cited, so close in some respects to its models . . . that it was surprising that one had nevertheless a stormed impression of originality."

It was for his second book, *Lord Weary's Castle* (1946), that Lowell was awarded the Pulitzer Prize for poetry in 1947. Dedicated to his wife, Jean Stafford, the novelist, *Lord Weary's Castle* derives its title from an old English ballad. In reviewing it for the *Nation*, Randall Jarrell has discovered that inherent in all of the poetry of Lowell, who has been called a "thematic poet," is a struggle between two opposite forces. "One opposite is," said Jarrell, "the stasis or inertia of the complacent self, the satisfied persistence in evil that is damnation. In this realm of necessity, the poems place everything that is closed, turned inward, incestuous, that blinds or binds." The opposing force, in the critic's opinion, "is everything that is free or open, that grows or is willing to change . . . this is the realm of freedom, of the Grace that has replaced the Law, of the perfect liberator whom the poet calls Christ." According to this theory, Lowell's poems may be said to have a happy ending when the mood moves from constriction to liberation (in some cases, the poet sees death as liberation).

Lowell's subject matter includes New England, the sea, and the traditions associated with these. But to a large degree he has contempt for those traditions. (But, Lowell has said, the widespread belief that he had refused to allow himself to be included in Ferris Greenslet's study of the Lowell family, *The Lowells and Their Seven Worlds*, "is a myth.") Thus, the poet writes in "Christmas Eve Under Hooker's Statue": "I ask for bread, my father gives me mold." In another poem, "Rebellion," a son rebels against his father (or traditon) and "the world spread"; in "Between the Porch and the Altar" the son cannot win his struggle against his mother and her background. Although immanent in much of Lowell's work is his religious feeling, "Where the Rainbow Ends", "Dead in Europe", and "The Holy Innocents" have been pointed out as being particularly characteristic of that influence. John Berryman felt that "the man really sounds like a prophet" when he writes:

"Lord, from the lust and dust thy will
destroys
Raise an unblemished Adam, who will
see

*The limbs of the tormented chestnut
tree
Tingle, and hear the March-winds lift
and cry:
'The Lord of Hosts will overshadow
us.'"*

Lowell's technique has been compared to that of T. S. Eliot and W. H. Auden ("Lowell's present contains the past," Jarrell has observed). Harry Hansen (New York *World-Telegram*) believes that "Lowell speaks to a special group of intellectuals. His poems are packed symbolism and esoteric references." More conventional in matters of poetic form than many of his contemporaries, Lowell writes often in iambic pentameter and heroic couplets and "uses consistently an intricate counterpoint of form and diction, form and matter, feeling and idea." John Frederick Nims has claimed, "If the form is antique, diction and imagery can be sweetly and bluntly modern." At his best (Jarrell has judged) as "a dramatic poet," Lowell "presents people, actions, speeches, things as they feel and look to people; the poet's generalizations are there primarily because they are dramatically necessary—it is not usually the poet who means them."

Lowell is one of the seven critics who prepared a study of the poet Gerard Manley Hopkins. In addition to winning the five-hundred-dollar Pulitzer poetry prize, Lowell received in 1947 a thousand-dollar grant from the American Academy and the National Institute of Arts and Letters. He holds a twenty-five-hundred-dollar Guggenheim Fellowship. In 1947 Lowell succeeded Karl Shapiro⁴⁴ as poetry adviser to the Library of Congress. His marriage to Jean Stafford, author of the novels *Boston Adventure* (1944) and *The Mountain Lion* (1947), took place April 2, 1940. The Lowells have a home in Maine.

LOWNSBERY, ELOISE Apr. 16, 1888-
Author

Address: h. Wellington Villa, Alexandria, Va.

Eloise Lownsbey, children's author, emerged from her experiences in World War I impressed with the futility of material things, with the feeling that "nothing had lasting value, had any continuity or enduring quality except ideas . . . the mightiest power in the world." She felt that an idea of freedom or honor or beauty or integrity that had been valid for another land, another era, might be revived for the children of America today. And so it was, she says, that she dedicated herself to write for children: to "reach back into the past for ideas . . . hold them up for the minds of the present, to help mold the future."

Born on April 16, 1888, in Pawpaw, Illinois, Eloise Lownsbey—christened Ella Louise—is the daughter of Alexander W. and Martha Fisher (Thompson) Lownsbey. Her

mother's family, the Fishers, came from England in 1637, and settled in Dedham, Massachusetts. Her father was descended from the Lonsburys of England who settled in Pennsylvania and later traveled westward by covered wagon to Illinois. With her two younger brothers Eloise was brought up in Cedar Rapids, Iowa, where she attended Washington High School. "Summers were always spent in northern Minnesota in a great log house surrounded by Norway spruce and pine, with long hours of boating on the lake, blueberry parties, porcupines for pets." To Eloise, who as a child had pored over scrapbooks of Perry pictures in lieu of visits to art galleries, "the journey east to Wellesley College was an adventure into culture and into a large world of books." After taking her B.A. degree in 1911, she went to California to live with her family in Hollywood. For the next three years she was connected with the Camp Fire Girls, later going to New York City, in 1915, to pursue the same type of work. In 1917 she went to France with the Quakers to help in the rehabilitation of ruined villages along the Marne, and around the town of Reims.

Back in California in 1920, Miss Lownsbury resumed her social work, dividing her interests between European relief and the Hollywood Studio Club for Motion Picture Girls. In 1926 she went to New York where, over a period of ten years, 1927-37, she was pageant director for the Child Welfare Organization, and during part of that time, secretary of the Fine Arts School of the Roerich Museum. She was also following a literary career, and doing research in the city's many libraries. Her stories and articles began to appear in the *Portal*, *Story Parade*, and *Child Life*.

During the trying days of the war, and after, Eloise Lownsbury had found relaxation in the study of French architecture and in visiting the chateaux and Gothic churches of France. Steeped in the history of the country and in the beauty of its monuments, she began to translate the *Dictionary* of the French architect Viollet-le-Duc. It was during this project that she acquired the material for her first book, *The Boy Knight of Reims* (1927). Reviewers felt that the historical details had a convincing unity and that a great deal of information about the period was conveyed to the reader in the pleasantest possible way.

The manuscript of Miss Lownsbury's next book, *Out of the Flame* (1931), was entered in a literary contest sponsored by Longmans, Green, the New York publishers, and although it did not win the prize, was accepted for publication. "Full of fun, and information and high ideals, and—best of all—a sense of naturalness," this story of the royal children of sixteenth-century France was the October 1931 selection of the Junior Literary Guild. Another adventurous tale, *Lighting the Torch* (1934), centered about Erasmus and the early days of the printer's art. There followed *Saints and Rebels* (1937), "a vivid delineation of men and women of history"; and then *A Camel for a Throne* (1941), in which Miss Lownsbury turned from the medieval France of her earlier

ELOISE LOWNSBURY

stories to the Egypt of 2000 B.C. "Filled in with full and fascinating detail," this narrative of an Egyptian princess who runs away with a Nubian boy moves rapidly, according to Anne T. Eaton, who felt that the author had succeeded "in making her characters alive, credible and appealing."

A collaboration with R. Lal Singh produced *Gift of the Forest* (1942), a story of rural India "based on real knowledge and sympathetic understanding of Indian village life." It was one of the first thirteen books chosen by the Junior Leagues of America for their "Books Bring Adventure" series. Most recent of Eloise Lownsbury's books is *Marta the Doll* (1946). "Poignant and heart-warming . . . it catches the rhythm and color of life in a mountain village in Poland." Phyllis Fenner found the story of "this loving Polish family and of their simple, happy life (every day and on special days) . . . beautifully told."

In 1932 Eloise Lownsbury was married to Carl Stearns Clancy, motion picture director of the Forestry Service of the Department of Agriculture. They live in Wellington Villa, halfway between Alexandria and Mount Vernon, in a "clearing of the Virginia jungle looking down on the Potomac River, on land that once belonged to George Washington." The author is of medium height and weight, with white hair and brown eyes. She has been a great traveler, visiting Palestine, Egypt, Greece, and Scandinavia, as well as other countries on the Continent, and the British Isles. In addition to gardening, she has for a hobby the study of Sanskrit. Miss Lownsbury is a member of the National League of American Pen Women and the Wellesley Club of Washington.

LUCA, GIUSEPPE DE *See* De Luca, G.

LUCAS, MARTHA B. Nov. 27, 1912- College president

Address: c/o Sweet Briar College, Sweet Briar, Va.

As president of Sweet Briar College, a liberal arts college for women located in the Piedmont section of Virginia, Martha B. Lucas is attempting to meet the challenge which the atomic age presents to educators. Previously associate dean at Radcliffe College and dean of

Wendell B. Powell

MARTHA B. LUCAS

students at Westhampton College (part of the University of Richmond), she became head of Sweet Briar in 1946. "Surely at no time in human history," she said in her inaugural address, "has so much depended upon the leading of so many by so few: leading a confused and frightened race of man out of its impasse of imminent self-destruction. . . . It is to the forces of education that the world is now looking for the 'way out'."

Of English, Scotch, Irish, and German descent, Martha B. Lucas was born on November 27, 1912, to Robert H. and Gertrude W. (Lasch) Lucas. Her father, a lawyer, at one time served as United States Commissioner of Internal Revenue and also as executive director of the Republican National Committee. Martha, who has no brothers or sisters, was reared in her native city, Louisville, Kentucky. There she attended the Atherton High School for Girls, participating in the school's student government. After her graduation from Atherton in 1929 she majored in English literature at, and won her Phi Beta Kappa key from, Goucher College, in Baltimore. Some of her undergraduate courses were taken at Vassar College (Poughkeepsie, New York), where she

was enrolled for a period in 1931-32, but she received her B.A. from Goucher. Then, she studied philosophy at George Washington University, submitting as the thesis for her master's degree (which she obtained in 1935), *Clarke's Influence on Kant's Theories of Space*.

For Miss Lucas there followed, between 1935 and 1941, a period of several years abroad, during which she "was on [her] own—in search of understanding." She lived in England, France, and Italy, and traveled in Ireland, Scotland, Spain, Switzerland (all during 1935-36), Yugoslavia, Albania, Greece, Germany, Czechoslovakia, Austria, Holland, and Belgium (in 1938). In the spring of 1936 she took courses at the Alliance Française and also attended lectures at the Sorbonne. In 1937 and 1938 she was a student at the University of London, from there obtaining her doctorate in 1940, in the fields of philosophy and religion; her thesis, dealing with the British philosopher Samuel Clarke and his contemporaries, was called an admirable study. These years in Europe, Miss Lucas has declared, "spent among other people, with other interests and other viewpoints than those to which I was accustomed gave me a deeper insight and a further reach of understanding than I personally could have gotten in other ways." Studying with her in England were Hindus and Sikhs who, she has said, made the "Indian Problem" seem more like the "English Empire Problem," young Germans and Italians who pointed out fascist tendencies in American social attitudes toward minority groups, an African Negro with a fine mind and a crisp Oxford accent. Later in the spring of 1941, after her return to the United States, Miss Lucas also observed and studied at the Henry Phipps Psychiatric Clinic of Johns Hopkins University. (In addition to traveling in Europe, Miss Lucas has often visited Canada and Mexico.)

Her own predilection, as well as the inspiration of "a few great teachers in college," had led Miss Lucas to decide upon a career in the educational field. In 1936-37, between the two trips she made to Europe, she held her first teaching position as instructor in English and philosophy at Briarcliff Junior College in New York. Then, from 1941 to 1944 Miss Lucas was at the University of Richmond, in Virginia, where she was associate professor of philosophy and religion and where she also served in an administrative capacity as dean of students at the university's Westhampton College for Women. From 1944 to 1946, before she succeeded Dr. Meta Glass as president of Sweet Briar College, she was associate dean at Radcliffe College.

In selecting a new president, Sweet Briar's board of directors had sought an educator who, while in sympathy with Southern traditions, would be able "to maintain and develop Sweet Briar as national and international in its outlook," and would also maintain "the overtone of a spiritual note" in the school's academic and social life. Voicing the challenge which educators face in the atomic age, Miss Lucas, in her inaugural address, called for the development of "a true laboratory of democracy" in

the colleges to train leaders for a self-governing society; she deplored those student government bodies which are merely figureheads and those college administrations "which make policy behind closed doors." She also emphasized the importance of a large-scale program for the interchange of students and teachers among nations for the promotion of world peace. Toward this end, Sweet Briar, when observing the official birth of UNESCO (the United Nations Educational, Scientific, and Cultural Organization), established a scholarship fund to bring students from overseas to its classrooms.

The college which Miss Lucas heads, a non-sectarian institution, is accredited by the Southern Association of Colleges. It confers only the B.A. degree and has been defined by a former president as "limiting itself more rigidly than many liberal arts institutions to general education as a means of helping the student develop into the highest grade of human being she can be." The student body is composed mainly of Southern young women although students from other parts of the United States as well as a few from foreign countries are also attending. The total number of students in 1946 was 445. In her efforts to adapt Sweet Briar to the postwar world, Miss Lucas has sought criticism and suggestions from the alumnae of the school regarding educational policy. She favored the organization of an alumnae group to work with the faculty on modifications in curriculum, teaching procedures, and extracurricular activities. A discussion program preparatory to the adoption of such changes had been launched in December 1946.

In 1946 two colleges, Goucher and Alabama (in Montevallo), conferred upon Miss Lucas the LL.D. degree. The educator is an independent in politics, an Episcopalian in her church affiliation. She is a member of the American Philosophical Association and the National Association of Biblical Instructors. Brown-haired and blue-eyed, Miss Lucas is five feet seven inches tall and 135 pounds in weight. For athletic recreation she turns to tennis, riding, and sailing; she also enjoys poetry and old prints.

LUCAS, SCOTT W(IKE) Feb. 19, 1892-
United States Senator from Illinois; lawyer
Address: b. Senate Office Bldg., Washington, D.C.; h. Havana, Ill.

Senator Scott W. Lucas of Illinois holds the position of "minority whip" in the United States Senate. He is second in command to Senator Alben W. Barkley⁴¹, the floor leader of the Democratic party in Congress' upper house. While considered a New Dealer in political policy, he has often voted independently (a fact which he believes is responsible for his political strength). Lucas

Wide World Photos

SCOTT W. LUCAS

is considered a friend of the farmer and of labor. He was suggested for the Presidential nomination in 1940 and for the Vice-Presidential nomination in 1944.

The youngest of six children born to William D. and Sarah Catharine (Underbrink) Lucas was given the name Scott Wike Lucas. His date of birth is February 19, 1892. At that time the family was living near Chandlerville in Cass County, Illinois, where the elder Lucas farmed leased land as a tenant. Of Scott Lucas' two sisters, one was to become a teacher, and his three brothers were all to become professional men. "The person who influenced me most," writes Scott Lucas, "was my eldest brother, Allen T. Lucas, of Chandlerville, Illinois, an attorney, who had educated himself, and inspired me to follow in his footsteps and helped me get started."

After attending the public schools of Chandlerville and Bath, in which towns he was reared, Lucas went to Virginia High School in Virginia, Illinois, where he lived with his eldest brother. Outside of school Lucas' main activities, wrote Carol Hughes in *Coronet* magazine, were the performance of some family chores, "catfishing" on the river, and playing sand-lot baseball. For two summer sessions before his graduation in 1911 from Virginia High School, young Lucas attended Normal State Teachers' College in Normal, Illinois. He thus had several college credits when he entered Illinois Wesleyan University in Bloomington, to major in law. The Phi Alpha Delta brother was to win his letters in basketball, football, and baseball. Playing professional baseball was one of the jobs that helped support Lucas through college; he also stoked furnaces and waited on tables. In 1914 Illinois Wesleyan granted him his LL.B. (an honorary LL.D. was to be awarded him thirty years later).

LUCAS, SCOTT W.—*Continued*

Lucas was admitted to the Illinois bar in 1915, whereupon he began his legal practice in Havana, in the same State. The young lawyer's career was interrupted by World War I, when he joined the United States Army as a private. By the time of his discharge he had been commissioned a lieutenant. Lucas then served in the Officers' Reserve Corps from 1918 to 1934, in August of the latter year being appointed judge advocate in the Illinois National Guard with rank of colonel. Having resumed his legal practice after the war, Lucas was elected States' attorney for Mason County for the period 1920 to 1925. During these years he also served as an officer in his local American Legion post, so that by 1926 he had become eligible for, and was elected to, the commandership of the American Legion in the Department of Illinois. Lucas was elected unanimously to the position of national judge advocate at the Legion's 1927 convention in Paris, a post he continued to hold by re-election until 1932.

It was partially Lucas' standing with the ex-servicemen of his State that caused Governor Henry Horner to appoint him chairman of the Illinois State Tax Commission in Springfield, in January 1933. The following year when United States Representative Henry T. Rainey died, the Illinois Democratic party supported Lucas, representing the Twentieth District (Havana), as Rainey's successor in the United States lower house. He was re-elected in 1937. "In 1938 he [Lucas] started a buzz of Presidential talk by his spectacular victory over the Kelly-Nash machine, in the Senatorial primary," reported Lemuel F. Parton (New York *Sun*, July 2, 1940). Lucas won the Democratic party nomination and was elected to the Senate in November 1938. He was re-elected in November 1944, by a majority of 217,000 votes, running ahead of President Roosevelt by 77,000 votes, this time with Chicago Mayor Kelly's support.

While Lucas served as a Representative, he attracted national attention as a committee member probing the buying advantages of the country's chain stores, with a view to "trust-busting" legislation. He was regarded as a liberal, although he went on record as being opposed to the first Government Reorganization bill and the court enlargement plan. As a freshman Senator, Lucas helped establish a unified farm program, which called for an appropriation of between three and four million dollars more than Roosevelt's budget allowed. A member of the Senate Farm Committee as early as 1940, Lucas voted in 1943 in favor of deferring farm laborers from the national Selective Service draft of World War II, legislation which found support from the farm bloc, but not from the Administration.

In 1943 Lucas gave his support to the Bankhead⁴³ amendment, an unsuccessful attempt to include farm labor costs in parity; supported appropriations for crop insurance; and helped defeat the Byrd⁴² amendment which would have prevented the Farm Security Administration from making loans to small farmers. The same year the Senator from Illinois gave his

support to the National Resources Planning Board, the National Youth Administration, and (in 1944) the Tennessee Valley Authority when legislation concerning these came before the Senate. When, in 1945, former NYA official Aubrey Williams⁴⁰ encountered bitter opposition from the Senate on his proposed appointment as Rural Electrification Administration head, Scott Lucas favored his confirmation. Lucas had also supported Henry Wallace's⁴⁷ appointment as the Secretary of Commerce earlier that year. He also defended David Lilienthal⁴⁴ when the question of his confirmation as chairman of the Atomic Energy Commission was placed before the Senate. In a previous year (1943) the Illinoisan had voted against the Taber amendment which was intended to stop the salaries of Watson, Dodd, and Lovett, who had been accused of "subversive activities" by the Dies⁴⁰ Committee.

In the field of labor legislation Lucas voted against an amendment, regarded as antilabor, to limit conditions for the National Labor Board's plant elections, but voted for the Smith⁴¹-Connally⁴¹ antistrike bill, both in 1943. The following year Lucas opposed the Clark amendment calling for advance income tax reports to be filled by unions and cooperatives. It was a bill bearing Lucas' name that provided for the return of the United States Employment Service to the individual forty-eight States in 1945; the Senator from Illinois voted against a proposal by Senator Barkley to extend Federal control of the USES to cover the period of reconversion, before it reverted to State control. In the same year Lucas gave his vote to the twenty-five-dollar-twenty-six-weeks jobless pay proposal; and in 1946 Lucas voted for the antilabor Case⁴⁶ bill, as well as for the less drastic Truman proposal to outlaw strikes against the Government. The following year Lucas voted against outlawing portal-to-portal pay suits, and against prohibition of union control of health and welfare funds. As for the general labor disputes bill, which he supported, Lucas favored Senator Taft's⁴⁰ amendment to allow suits for jurisdictional strikes and secondary boycotts, but opposed another amendment outlawing union "coercion." Lucas, however, voted to sustain the President's veto of this bill.

Lucas has declared himself in favor of a permanent Fair Employment Practices Committee and has actively supported it. He voted against the Hickenlooper⁴⁴ amendment which would have rendered the FEPC unworkable by forbidding Government participation in "commercial activity" (1945). When the life of the committee was again threatened in 1946, he voted unsuccessfully to limit debate through cloture.

The issue of cloture—a parliamentary agreement to limit debate on a specific issue, requiring a two-thirds majority vote—had come up before in regard to the poll tax. At first, in 1942, Lucas opposed cloture on principle. He later (1944 and 1946) voted to limit debate, and thus avoid a filibuster which would effectively demolish the issue, in order to bring about Federal outlawing of the poll tax in

some of the Southern States. The Lucas-Green soldier vote bill, to provide a uniform Federal ballot for the servicemen of World War II had it been passed in 1944, would have effectively enfranchised one segment of the population barred by the poll tax from voting.

On the question of price control, Lucas has favored the use of Commodity Credit Corporation funds to effect a price "roll-back" (1943, 1944), and has supported the Office of Price Administration during its lifetime, giving his vote in 1946 to the Pepper "move to extend the existence of the OPA. The Senator's record on taxation has not been as consistently pro-Administration: he opposed the twenty-five-thousand-dollar salary limit championed by President Roosevelt, and supported a Federal tax bill the same year (1943) that the Administration was against it. In 1944 Lucas voted to override Roosevelt's veto of a tax bill the Chief Executive had termed "relief for the greedy." Lucas later supported Truman in his fight against a Senate resolution to cut the 1948 budget, having unsuccessfully opposed the 1947 tax bill.

The Senator from Illinois, who saw the need for and voted for rearmament before United States participation in World War II, in 1943 gave his support to the Connally resolution which barred retreat to isolationism in the future. He also supported appropriations for the United Nations Relief and Rehabilitation Administration (UNRRA) the following year, and favored the Bretton Woods agreement in 1945. He was also to support the Truman doctrine on aid to Greece and Turkey (1947). In respect to international trade, Lucas supported the reciprocal trade agreements of 1943 and 1945, helping in 1945 to defeat a motion to eliminate the President's power to cut tariffs an additional 50 per cent. The Senator had also served as a member of the three-man delegation representing the United States at the International Refugee Committee Conference in Bermuda in April 1943.

A delegate to the Democratic party national convention in 1932, in 1940 (he was chairman of the midwestern regional headquarters for the Democratic National Committee that year) and in 1944 Lucas was reported to have had "conditional endorsement" for the Vice-Presidential nomination in 1944. Earlier, in 1938, there had been a "sizeable Presidential boom" for Lucas on the grounds that his potential Legion backing would be a source of strength at the 1940 Democratic convention. As in 1944, Lucas' name is expected to figure importantly at the 1948 convention. A poll of Senate Democrats, taken by two newspapers, revealed that Lucas was favored as the Vice-Presidential candidate.

The former Edith Biggs and Scott W. Lucas, who were married in January 1923, are the parents of a son, Scott Wike Lucas, Jr. The Senator is a Baptist, and is a member of the Burning Tree Club of Bethesda, Maryland. The Lucas' Illinois home, near Havana, where he owns farm property, contains the Senator's fishing and hunting equipment. He also plays golf and follows baseball news. Lucas has dark hair and gray eyes. He weighs 200

pounds, is nearly six feet three inches tall. "He is one of the best dressed [men] in the Senate," in the opinion of a New York *Sun* writer, "and at the opening session this year [1947] turned up in morning clothes. All in all, he looks pretty much the illustrator's idea of a statesman." Under the pen name of "Senator Sorghum," Lucas has written poetry.

LUCKMAN, CHARLES May 16, 1909-Business executive

Address: b. c/o Lever Brothers Company, 50 Memorial Dr., Cambridge 39, Mass.; h. 77 Woodcliff Rd., Wellesley Hills, Mass.

President of Lever Brothers Company and one of the nation's youngest business executives, is Charles Luckman. After starting his career as a soap salesman at the age of twenty-two, Luckman rose to the helm of a concern that has been described by *Time* as "the second largest soap-selling enterprise" in the United States. In September 1947 Luckman was named by President Truman to head the twenty-six member Citizens' Food Committee, which will plan a campaign to conserve American food and aid the starving people of Europe. He held this position until November, when he resigned.

Born in a white frame house in Kansas City, Missouri, on May 16, 1909, Charles Luckman was the only child of Dora (Golden) and Albert John Luckman. At the age of nine, he sold newspapers after school, and, throughout his four years at Northeast High School (1921-25), he found odd jobs to keep himself in clothing and spending money, and to save toward the college education which would prepare him to become an architect. In June 1925 "Chuck" Luckman, as he was known to his classmates, who considered him "most likely to succeed," was graduated from high school; he had served as president of the senior class, captain of the debating team, editor of the annual, and was a member of the track team. As a reward for his high scholastic average, Luckman was offered a four-year scholarship to the University of Missouri, an honor awarded annually to the State's outstanding high school graduate. This he declined because the university did not include architectural courses in its curriculum.

After a year at Kansas City Junior College, where he studied engineering, Luckman went to Chicago to earn money to finance his expenses at the University of Illinois. The job he found in the drafting department of an engineer's office paid him thirty dollars a week and gave him the opportunity to fulfill the two years' apprenticeship requirement for the li-

CHARLES LUCKMAN

cense to practice architecture in Illinois. By September 1928 Luckman was able to register in the freshman class of the University of Illinois Architectural School (of the one hundred and ten entering students, only eight were to graduate). Luckman sought financial aid in jobs that included waiting on tables, working in a clothing store, in the school library, and, during the summer months, in an architect's office. He was married to Harriet McElroy, also a student at the university, in May 1931, ten days before he received his architectural degree, *magna cum laude*, and a certificate to practice architecture in Illinois. By the time he was graduated, Luckman had joined Tau Beta Pi, the honorary engineering fraternity, Chi Beta, Theta Tau, Kappa Pi Sigma, and had won keys from a number of other college associations.

By 1931, the year in which Luckman completed college, the depression had struck the United States, and there was little opportunity for a young architect to find a position or a commission. Eager to get any kind of work, Luckman called upon a friend's father, an executive in the Colgate-Palmolive-Peet Company. In June 1931 he was hired as a draftsman in the company's advertising department. His first assignment was to design a portfolio to be carried by the firm's salesmen. The advertising manager was skeptical of the design, but after the initial trials proved it efficient, Colgate-Palmolive-Peet adopted the portfolio. Two weeks later Luckman was transferred to the sales department at a salary of one hundred and twenty-five dollars a month. His advertising ideas and sales record brought him to the attention of his superiors and, after successfully completing a six-month assignment as "trouble shooter," at twenty-three he was placed in charge of the company's Chicago district.

In November 1933 he became district manager in Wisconsin. In this new post, said *Time*, he converted an eighty-thousand-dollar deficit into a seventy-five-thousand-dollar profit. As a result, in December 1934 he became manager of Colgate's largest district, covering six States and administered by a staff of seventy.

By this time the young salesman had abandoned all thought of becoming an architect. The owners of the long-established Pepsodent Company, which had been operating at a loss, had heard of his work at Colgate; they offered Luckman (who had, according to *Time*, added four years to his age in order to be considered) the position of sales manager with full power to reorganize the staff as he saw fit. In September 1935, when Luckman took over his new duties, the Pepsodent Company was disputing with many of the country's retail druggists over trade practices. Some druggists were using Pepsodent, unsettled in price policy, as a basis for price-cutting. Luckman asked the National Association of Retail Druggists to delay any boycott against Pepsodent until he had a chance to prove his good faith. He promised them "instant and utter reform. . . . If you aren't convinced by then [in six months], you can still crucify Pepsodent and me along with it—and do twice as good a job." The next day, he, in the name of the company, contributed twenty-five thousand dollars to the retail association toward a campaign for the establishment of a Federal fair trade act. (The result was the 1937 Miller-Tydings⁴⁵ Fair Trade Act.)

The new sales manager toured the country, met druggists in many cities and towns, and studied their individual problems. Luckman solved the price-cutting problem by establishing a definite price-level for Pepsodent and notifying all United States druggists and the public. On May 15, 1936, Luckman became vice-president in charge of sales. By November 1938 he was vice-president in charge of sales and advertising. On July 1, 1941, Luckman was named Pepsodent's executive vice-president. He became its president on June 30, 1943.

In 1937, while searching for a new radio program, Luckman saw a comedian named Bob Hope⁴¹, who was appearing in a Broadway musical, *Red, Hot and Blue*. In *Fortune's* words, the executive "thought Hope had a chance if he would only stop being the hero of his own wit and make himself the butt of it. Hope demurred, but later agreed to reverse his style—and has been plugging Pepsodent 'With Irium' successfully ever since." The exploitation of irium was another Luckman idea. Although this foaming agent (sodium alkyl sulphate) had been introduced in 1936, it was Luckman who saw its possibilities in 1940.

The increased sales of Pepsodent (by 1943, under Luckman's management, they had quintupled) brought it to the attention of Unilever, Ltd., in London. (Unilever manufactures, among other products, Lipton's Tea, Lifebuoy Soap, Lux Toilet Soap, Rinso, and Spry.) In June 1944, Lever Brothers, the American af-

affiliate of Unilever, announced that it had purchased Pepsodent and that Luckman would remain as its president and also become vice-president of Lever Brothers itself. July 1, 1946, found Charles Luckman the president of Lever Brothers. (In July 1947 Harriet Hubbard Ayer, Inc., was added to Lever's holdings.)

The American Weekly in June 1947 reported that "Luckman's main ambition right now is his personal campaign to bring about an armistice between management and labor. . . . His creed is: 'Business exists so that people may live. People do not live in order that business may exist.'" Luckman has made speeches (some are reprinted in pamphlet form) and has written an article for *Harper's*. "The public is fed up with egomaniacs," he told one audience, "who place personal power above the national welfare. . . . There are countless thousands of good union members and solid management personnel who are wearied to death of bosses—whether union bosses or company bosses—who fiddle their vain little personal tunes while Rome burns." In the *Harper's* article, Luckman asserted, "Labor unions are here to stay and, whatever our private thoughts on the matter, we are going to have to get along with them if our nation is to prosper." In a much-discussed speech before the Super Market Institute (November 1946), Luckman claimed that big business deserved its reputation for being opposed to "everything that spells greater security, well-being, or peace of mind for the little guy." He predicted, "Your business . . . can and should double during the next generation if the leadership of American business is willing to establish as its objective for 1970 a standard of living for the American wage earners which is at least 100 per cent higher than the level of today."

In September 1947 President Truman announced that, in order to supply food to the once Nazi-occupied countries in Europe and, at the same time, to stop the inflationary rise in food prices in the United States, American food must not be wasted. He appointed a Citizens' Food Committee to (in the words of the President) "advise on ways and means of carrying out the necessary conservation effort . . . to develop plans for bringing the vital problem of food conservation to the attention of every American for action." Charles Luckman was called upon to serve as chairman of the committee, to which twenty-six leading citizens were named. Interviewed after his appointment, Luckman stated, "You don't solve a crisis with namby-pamby efforts. It doesn't do much good to win a war against totalitarianism if you're going to lose against starvation."

Early in October Luckman presented to the country a three-part program to conserve food: the conservation of grain through efficient feeding of livestock, the reduction in the use of grain by industry, and less consumption of grain foods by the public. Under controversial circumstances, the distillery industry agreed to a sixty-day shutdown which began October 25 but which was ended prematurely by a court order. Luckman also enlisted the cooperation of brewers and bakers. Consumers were called

upon to observe a meatless Tuesday and a poultryless and eggless Thursday—this request too gave rise to controversy. On November 20, 1947, Luckman, judging that the existing program should yield grain in excess of the hundred-million-bushel goal, resigned; a Cabinet Food Committee (Secretaries of State, Agriculture, and Commerce) took over the conservation task, with Luckman as a part-time adviser.

Luckman received another Governmental appointment in December 1946, to the President's Committee on Civil Rights, which issued its report in October 1947. The group found, throughout the nation, many abuses of civil liberties. To remedy these, it called for anti-lynch, anti-poll tax, and anti-discrimination bills; the establishment of a permanent FEPC; the granting of the franchise to Indian citizens in the Southwest; the granting of citizenship to all who qualify, without discrimination as to race, color, or national origin; and the granting of citizenship to residents of the United States Pacific island possessions.

Luckman was cited by *Forbes Magazine* editors as one of "Today's Fifty Foremost Business Leaders" in a 1947 poll of businessmen. He is a director of the Boston YMCA, and is a member of: the National Advisory Council of Junior Achievement, Inc., the board of directors of the Advertising Federation of America, the domestic distribution department committee of the United States Chamber of Commerce, and the American Institute of Architects. His clubs include the Wellesley (Massachusetts) and the Barrington Hills (Illinois) country clubs, the Union League, the Economics Club in Chicago, the Algonquin Club in Boston, and the Beverly Hills Club. Although he has not practiced architecture, he designed his homes in Illinois and Massachusetts, and his "Lucky 5" ranch near Julian, California, where he spends much of his time horseback riding. The Luckmans have three sons—Charles Madison, James McElroy, and Stephen Albert. The executive has been described as having an old man's wisdom in handling other men, a flair for showmanship, and an impish sense of humor. A pipe smoker, "he rotates a collection of more than two hundred and yet he still cannot pass a pipe store without making a purchase."

LUJACK, JOHN. See Lujack, Johnny

LUJACK, JOHNNY Jan. 4, 1925- Athlete
Address: b. c/o University of Notre Dame,
 South Bend, Ind.; h. 609 Park St., Connells-
 ville, Pa.

As quarterback on the University of Notre Dame's championship football team, Johnny Lujack won the acclaim of sportswriters and fans throughout the country for his ability as a passer, punter, field general, and defensive player. Although he will no longer be eligible to play for Notre Dame after completing his third season on the team (1943, 1946, 1947), spectators may be able to see him in action in professional football in 1948.

JOHNNY LUJACK

Johnny (John) Lujack, who is of Polish extraction, is the fifth child in a family of six children and the youngest of four sons. He was born January 4, 1925, in Connellsville, Pennsylvania. His father, John W. Lujack, worked as a boilermaker for the railroad there. The boy was reared in Connellsville, where the name "Lujack" was a synonym for athletic prowess: from 1928 to 1941, except for two years, there was to be at least one Lujack brother on the athletic teams of Connellsville High School. (Brother Al was to be a football, basketball, and track star at Georgetown University.) At the age of fourteen the youngest boy, Johnny, then a sophomore, was assigned as running halfback on the high school football team, in addition to being a basketball star and member of the track team. In high school his batting and fielding as shortstop in the city baseball league brought him an offer from the Pittsburgh Pirates. This he declined, along with thirty-five scholarship offers from various colleges and a prospective appointment to West Point. His reason for these refusals was that he planned to enroll at the University of Notre Dame, after his

graduation from Connellsville High School in 1942. At the secondary school he was a three-letter man in football, basketball, and track, and president of the senior class.

Stories of Lujack's exploits in high school football had preceded him to Notre Dame: he had once run back two successive passes to score against Mt. Pleasant (Pennsylvania) High School, each run covering seventy yards of the field to the end zone. After watching the freshman in practice at Cartier Field at Notre Dame, coach Frank Leahy⁴¹ saw in the boy a valuable addition to his already powerful eleven. Lujack's record in his rookie season of 1943 justified Leahy's highest hopes almost completely. The then School of Commerce student, however, dropped the arts and letters course he had been pursuing at Notre Dame in order to be enrolled in the Navy V-12 program in July 1943. He studied as an apprentice seaman at Columbia University, receiving his commission as an ensign upon graduation from the Midshipmen's School at Columbia, on December 14, 1944. The next eleven months he spent as executive officer on a submarine chaser in the Atlantic sector of the European Theater of Operations in World War II. For four of those months he patrolled the English Channel. Later, while still with the Navy, Lujack took part in the 1945 football season: he played ten games with the Fort Pierce (Florida) team before receiving his honorable discharge on June 11, 1946.

After his return to Notre Dame in time for the 1946 football season, Lujack told Jimmy Cannon of the *New York Post*: "I was playing at eighteen years of age [but] I think that's a little too young for college. Being on the ship gave me more confidence." In 1943 Lujack had been given the task of substituting for star quarterback Angelo Bertelli when the latter was called into the Marines. This was the occasion of the crucial Army-Notre Dame game that year. Lujack threw two touchdown passes, scoring one other touchdown himself and intercepting at least three goal-bound thrusts by Army backs to contribute to Army's 26-0 downfall. For the entire 1943 season, during which Lujack played in ten major contests, he completed 34 out of 71 passes for a total gain of 525 yards.

In the 1946 season's opening game, Lujack's "uncanny signal-calling, passing, and kicking humiliated the Illinois team," in the words of *Liberty*. The climax of that season, however, was the Army game. Defeated nearly every year by the "Fighting Irish," Army had re-vengeed its honor by beating Notre Dame in 1944 and 1945, "Doc" Blanchard⁴⁶ and Glenn Davis⁴⁸ being responsible for the Army victories. In 1946 Lujack played the full sixty minutes of the big game, in spite of a bad ankle, facing Blanchard and Davis. At one point Lujack tackled Blanchard headfirst after the Army fullback had passed Notre Dame's other defense players. "Lujack called every Notre Dame play, threw every Notre Dame pass, kicked every Notre Dame punt," and (to quote Red Smith of the *New York Herald Tribune*) "ran the ball with speed and malevolence, and tackled with hideous violence."

That game ended in a scoreless tie. The final game in the Army-Notre Dame series was won by Lujack's team in 1947, with the score of 27 to 7, a good part of this scoring being directly creditable to field general Lujack.

Four football players from the west were chosen for the Associated Press All-American Team of 1946. If the mythical team had ever actually been assembled on a field, Johnny Lujack would have been its quarterback. Lujack was also to take third place honors in the James E. Sullivan Memorial Trophy as the outstanding athlete of 1946. On December 10, 1947, the Notre Dame quarterback received the thirteenth annual Heisman Trophy as the outstanding football player of the year, an award that had previously been bestowed upon Les Horvath of Ohio State, Bertelli of Notre Dame, and Army's Blanchard and Davis. The choice was made by sportswriters and broadcasters. At the end of 1947 Lujack was named an All-American quarterback on the teams chosen by the American Football Coaches Association, the Associated Press, and *Collier's*. At that time it was also reported that he would accept a contract to play football for the Chicago Bears after his graduation.

The Pennsylvanian is Notre Dame's first four-letter athlete in more than a quarter of a century: Lujack, the "hot shot" in football, baseball, track and field, and basketball, at the end of June 1944 "capped an intensive sophomore year by winning his fourth major letter—a feat unprecedented in the Notre Dame sports tradition." *Newsweek* gave some of the background of this achievement. "A week after the end of the 1943 football season . . . [Lujack] turned to the hoops, practiced four days, and became a regular guard on [coach] Moose Krause's basketball team." In the spring of 1944 Lujack chose to devote his extracurricular time to track and field rather than baseball. "So he hurled the javelin and leaped bars for Doc Handy," continued *Newsweek*. At that time Notre Dame's baseball team was in serious straits. After losing five successive games, "Coach Jake Kline plumped Lujack into a baseball suit. In his final game, the youngster walloped three hits to help win a 3-1 victory. . . . Between innings, he competed in the Depauw track meet, winning the javelin throw but losing the high jump; his baggy baseball trousers brushed the bar off at five feet ten inches."

Writer Cannon of the New York *Post* has described Lujack as "a handsome kid, solid without seeming heavy, [with] his flat dry hair hanging over his forehead in a loose trembling curl." Lujack's hair is brown, as are his eyes; he weighs 180 pounds, has a six-foot-tall frame. Reading and playing bridge are his favorite diversions. According to Tommy Devine, writing in *Sportfolio*, "All-American quarterback Johnny Lujack is the Ely Culbertson⁴⁰ of the Irish squad." In 1944 *Newsweek* reported that Lujack planned to become a football coach some day. However, to quote H. B. Brown, Jr., in *Liberty*, "It appears certain that he will sign a professional football contract soon after the Irish close

their [1947] grid season." The same article described motion pictures as "interested" in a picture showing "what makes Johnny run."

LUSK, MRS. GEORGIA L(EE) May 12, 1893- United States Representative from New Mexico; educator

Address: b. House Office Bldg., Washington, D.C.; h. Santa Fe, N.M.

One of the seven women serving in the House of Representatives in the Eightieth Congress, Mrs. Georgia L. Lusk, Democratic Congresswoman at large from New Mexico, began her freshman term in the House in January 1947. She is the first woman elected to that office by the voters of her State, after she had been chosen to serve several terms in State education posts.

Georgia L. Lusk was born Georgia Lee Witt on May 12, 1893, in Carlsbad, New Mexico, to George and Mary Isabel (Gilreath) Witt. After her graduation from Carlsbad High School, she attended three colleges: New Mexico State Teachers College (Silver City), Highlands University (Las Vegas, New Mexico), and the Colorado State Teachers College (Greeley). She taught school for a period before she was married to Dolph Lusk, a cattleman and banker, in August 1915. A few years after their marriage, her husband died, leaving Mrs. Lusk with three sons.

Mrs. Lusk, in addition to managing her husband's ranch, resumed teaching. In 1924 she was elected school superintendent of Lea County; later she was rural school superintendent in Guadalupe County. In 1930 she was elected State Superintendent of Public Instruction, and was chosen again in 1942 to serve in the same capacity until 1947 (in 1934, when her second term expired, Mrs. Lusk was, by law, unable to succeed herself immediately). During her two administrations, the school law was recodified; supervision of both elementary and secondary schools was expanded; physical education and an arts-and-crafts program were promoted; free textbooks, a teacher-retirement program, and an equalization fund were instituted. A 1932 issue of the *National Education Association Journal* reported that Mrs. Lusk raised the standards of teaching and eliminated the examination as a requirement for certification.

In October 1944, Mrs. Lusk was invited to participate in the White House Conference on Rural Education. The study undertaken by this group of two hundred and thirty specialists revealed that the poor attendance rate in rural schools could be blamed on low salaries for teachers, and that a minimum expenditure of one million dollars would be necessary to remedy this. The group drew up a Charter for Rural Education which recommended adequate educational facilities for all those living in rural areas, a community life that would pro-

Harris & Ewing

MRS. GEORGIA L. LUSK

mote democracy, the uniting of all community forces in an educational program, well-prepared teachers.

In June 1946 Georgia Lee Lusk defeated six opponents in the Democratic primary to win nomination to the House of Representatives. Her election in November made her the first woman to be sent to Congress by the State of New Mexico. Like her one colleague, she represents the State at large. Mrs. Lusk ran for election on a platform promising improved educational facilities. "It's just as important for the Government to look over the business of education as it is to look over farming or railroading or anything else," she told a New York *Herald Tribune* interviewer. In the same interview Mrs. Lusk stated that New Mexico was trying to eliminate its all-Negro schools in favor of those that would admit all races. She is said to favor the creation of a Cabinet office of education.

In her first term in Congress, Mrs. Lusk voted for the April 1947 House version of what was later to become the Taft⁴⁰-Hartley⁴¹ Act. When President Truman vetoed the measure, Mrs. Lusk voted to override his decision. Mrs. Lusk's vote on the March 1947 income tax reduction bill was in opposition to it; she also voted to sustain the Presidential veto of these measures. Another negative vote by Congresswoman Lusk was on the proposed Constitutional amendment to limit the tenure of office of the President to two consecutive terms. She also opposed the enabling act which would allow Hawaii to call a constitutional convention and to become the forty-ninth State of the United States. On foreign policy, Mrs. Lusk supported the Administration; she voted against the House measure to reduce the general appropriation for relief to foreign countries and was in favor of the Truman request for funds to give military and financial aid to Greece and

Turkey. Mrs. Lusk has expressed herself in favor of universal military training. Her first committee assignment is the Veterans Affairs Committee.

Mrs. Lusk is a life member of the Parent-Teacher Congress. She also participates in the activities of the American Legion Auxiliary, the National Education Association, the New Mexico Education Association, the National Federation of Business and Professional Women's Clubs, the General Federation of Women's Clubs. She assisted in the founding, in her State, of the Delta Kappa Gamma fraternity. While holding her education posts, she continued to manage her ranch, remains a member of the New Mexico Cattle Growers' Association.

Mrs. Lusk's eldest son, Virgil Witt, was killed in World War II. The two surviving boys are Morgan Dolph and Thomas Eugene. The *Christian Science Monitor* has described the Congresswoman as being "motherly in appearance, and reserved." Her recreations are riding, hunting, and fishing.

Congressional Directory (1st ed., 1947)

MCCARRAN, PATRICK A(NTHONY)
Aug. 8, 1876- United States Senator from Nevada; lawyer

Address: b. Senate Office Bldg., Washington, D.C.; h. 401 Court St., Reno, Nev.

Patrick A. McCarran, a member of the Eightieth Congress whose term of office will expire in 1951, has been a Senator from the State of Nevada since 1933. In his State he was known for the cases he won as a defense attorney, and as counsel in several suits involving water rights and mining interests. In the United States Senate his name has been associated with the silver bloc and with its repeated attempts to achieve the remonetization of silver. During World War II the Nevada Senator became an advocate of an all-American flagship air line for postwar transoceanic traffic.

Patrick Anthony McCarran was born in Reno, Nevada, on August 8, 1876. Both his parents were Irish: his father, also named Patrick, came from County Derry, and his mother, Margaret (Shea) McCarran, from Cork. Educated in Nevada, young McCarran was graduated with a B.A. degree from the State university in 1901. For several years following he was engaged in farming, stock raising, and the spare-time study of law. His debut in politics took place in 1903, when he was elected a member of the Nevada legislature and sent as the Nevada delegate to the National Irrigation Congress. Two years later he was admitted to the Nevada bar and began his practice in the boom towns of Tonopah and Goldfield.

From 1906 to 1908 McCarran was district attorney for Nye County. Three years after opening his offices in Reno in 1909, he was elected an Associate Justice of the Supreme Court of Nevada. He remained a member of

that tribunal until 1919 (as Chief Justice for the last two years), when he resumed the private practice of law. Among McCarran's clients, who came from Nevada and several other Southwestern States, was Mary Pickford⁴⁵, whom he represented in her 1920 divorce suit and in the ensuing litigation in the higher courts. As president and chief counsel of the Truckee River Water Users Association in 1920 and 1921, the former stockman conducted its legal battle for definition of the western Nevada water rights of one thousand users.

The decisions in which he participated as superior court justice established two standard points of reference for future cases: in a mining suit, an opinion partially prepared by McCarran established the rule of apex, allowing a miner to pursue a surface vein to its utmost projection, even if that should lie under another proprietor's land. The opinion written by McCarran in the case of the State of Nevada versus Kuhl established palm-print identification on a par with fingerprint identification and was later cited by the courts of the United States, England, and New Zealand. At Scotland Yard and in various American identification bureaus, this decision is used as a text.

In his first attempt to enter the United States Senate, as a candidate in the Democratic primary in 1926, McCarran was defeated by the local machine. Not until six years later, in 1932, was he elected. Although a Democrat, and thus of the Administration's party, McCarran did not consistently support Administration-sponsored measures. Originally a supporter of the National Industrial Recovery Act, McCarran demanded an investigation of charges of abuses committed under the act when President Roosevelt⁴² requested its extension. He also attacked the Administration's economy bill in 1934. During the 1938 electoral campaign, McCarran was one of the Senators who had only token support from President Roosevelt, but this did not appreciably affect his chances for re-election.

As representative of a silver mining State, McCarran has been a prominent leader of the silver bloc in the Senate, which had been agitating for the remonetization of silver since 1873. A member of the Senate Special Silver Committee, McCarran at the beginning of World War II advocated raising the price of silver in order to stimulate the production of its by-products, and limiting the use of the Treasury's supply of silver as reserves for the issuance of silver certificates rather than for non-monetary purposes. He was responsible for the leasing of one million ounces a month to Great Britain in 1942, to be returned to the United States after the war. In view of rising inflation abroad and the emphasis on hard money, McCarran urged the recognition of silver as a world monetary metal at Bretton Woods in 1945. His objective, the remonetization of silver, was in sight in 1946, when he sponsored an amendment to the Treasury-Post Office Appropriations bill (passed in July of that year) which would, in time, re-establish the full monetary price of silver.

Underwood & Underwood

PATRICK A. MCCARRAN

Credited with the legislation establishing the Civil Aeronautics Authority in 1938, McCarran (a member of the Committee on Commerce) subsequently sponsored various measures affecting aviation. Besides calling for a separate air arm in the national defense forces, McCarran midway through the war proposed a one-billion-dollar American air line which would pool the facilities and skills of the various intracontinental air lines and be used in postwar international commerce. The bill also would provide for the re-establishment of the CAA (which had been made a dependent unit of the Department of Commerce), the appointment of a sole executive officer, and the founding of a new air safety board. Because of the opposition of the officials of seventeen air lines (other than Pan American and United), who charged that the proposed transoceanic line would tend to be a monopoly, the bill was rejected by both the Senate Commerce Committee and its Subcommittee on Aviation in 1945. Shortly afterward, another McCarran bill, which allotted five hundred million dollars of Federal funds for the construction of municipal airports throughout the country, was approved by President Truman⁴⁶ and passed by the Senate.

Miscellaneous bills sponsored by McCarran were the 1944 anti-poll tax bill, the Alcohol Tax bill of 1944, the District of Columbia housing bill in 1945, the bill reducing Governmental red tape in 1946, and the ten-million-dollar school lunch and public lands bills of 1947. Of these, the red-tape and housing bills were passed, as well as his bill making it a criminal offense to accept money for helping an applicant to obtain a Government office (1947). The Nevada Senator, who had succeeded to the chairmanship of the Senate Judiciary Committee on the death of Senator Van Nuys, condemned the military seizure of the

MCCARRAN, PATRICK A.—*Continued*

Montgomery Ward plant in 1944; a subcommittee of the Judiciary Committee later revealed, in its report, that Attorney General Biddle's⁴¹ suit against Montgomery Ward was based on a technical illegality.

Out of a survey he conducted as chairman of the Senate Subcommittee on the Administration and Use of Public Lands, McCarran developed his bill on public lands, which, if passed, would drastically reduce Federal powers in that domain. The report of a special committee of which he was chairman in 1944, the committee to investigate the effect of the centralization of heavy industry, had an adverse effect on the 1944 electoral campaign. In an attempt to retain the war-born industries on the West Coast, McCarran advocated freezing all Government-owned industries in the East and Northeast, so that the natural resources of the West could be developed and industry fostered there.

Ordinarily, McCarran has supported Administration measures such as OPA continuation and the continuation of the President's emergency wartime powers, when they were put to a vote; but on several occasions he joined the opposition. In 1943 he voted for the discontinuance of the National Resources Planning Board, against Secretary of Agriculture Wallace's⁴² crop program, and against the continuation of the NYA; in 1944 for the McKellar⁴³ amendment curtailing the independence of TVA; in 1945 for the move to block Henry A. Wallace's nomination as Secretary of Commerce. In international issues, McCarran voted against the British loan of 1941, the reciprocal trade agreements of 1943, and for the Bretton Woods Agreement.

When the Republican-sponsored income tax reduction bill was presented to Congress for the second time in July 1947 and was threatened once again with the Presidential veto, McCarran announced his intention to support the bill. "It seems to me to be only just and fair that we extend encouragement and assistance to the people of our own country," he said, "by reducing their tax burden while they produce by their industry the assistance and subsistence for the peoples of other countries." The Senator from Nevada opposed the investigation of vote frauds in Missouri primaries, which was debated on the Senate floor that July. A rider introduced by Senator McCarran was made a part of the State Department Appropriation bill in 1947; this empowered the Department to discharge any employee "whenever it is deemed necessary or advisable in the interest of the United States."

Other Senate committees on which McCarran has served are those on Irrigation and Reclamation, the District of Columbia, and the Special Committee for the Conservation of Wildlife Resources. During the early part of his political career, he was a member of Nevada State Pardon Board and the State Board of Parole Commissioners (1913-19). In 1931 and 1932 he was chairman of the State Board of Bar Examiners, and at other times he has served the legal profession as vice-president of

the American Bar Association (1922-23) and president of the Nevada Bar Association (1920-21). His opinions from the bench were published in *Nevada Reports* (volumes 35 to 42). An LL.B. degree was given him by the University of Nevada in 1945; two years previously, he had received one from Georgetown University.

By his marriage in 1903 to Martha Harriet Weeks, Senator McCarran has five children: Mary, Margaret, Norine, Patricia, and Samuel. According to *Collier's*, the Senator is "short and heavily built. . . . He doesn't care for the usual recreations and has no hobbies." Another source describes him as "silver-haired, silver-tongued, and silver-minded."

MCCLOY, JOHN J(AY) Mar. 31, 1895-
World Bank official; lawyer

Address: b. c/o International Bank for Reconstruction and Development, Washington 6, D.C.; h. 1430 33d St., N.W., Washington, D.C.

John J. McCloy, the New York attorney who "as Assistant Secretary of War ranked as one of the important military policy-makers" during World War II, is the president of the International Bank for Reconstruction and Development. Created at Bretton Woods in July 1944, along with the International Monetary Fund, as an economic instrument for the building of world security, the bank will aid its war-ravaged member nations and those countries with undeveloped resources.

John Jay McCloy was born in Philadelphia, Pennsylvania, on March 31, 1895. He was only a boy when the senior John Jay McCloy died, leaving Anna May (Snader) McCloy a widow. To provide for young John's education, Mrs. McCloy—"a remarkable woman" in her son's estimation—went to work. John attended the Peddie School, in Highstown, New Jersey, where he began to develop the athletic skill which made him captain of a champion tennis team at Amherst College (in Massachusetts). Obtaining his B.A. degree *cum laude* from Amherst in 1916, he enrolled at Harvard University to study law. But with the entrance of the United States into World War I, the twenty-two-year-old McCloy in May 1917 interrupted his studies to enter the Army. After a period of training at the Plattsburg Training Camp (New York), he was commissioned a provisional second lieutenant and stationed at Fort Ethan Allen (Vermont) with the Nineteenth Cavalry, which was subsequently reorganized into the Seventy-seventh Field Artillery, a component of the Fourth Division. He sailed for France, where, in the AEF, he was promoted to captain of field artillery, and afterward became

operations officer for the 160th Field Artillery Brigade of the Second Army. With that Army he served at the front between the Moselle River and Verdun until the Armistice, when he was transferred to advance general headquarters at Treves. Before resigning his commission, he also served in the German occupation forces with the Third Army at Coblenz.

Back in the United States by the fall of 1919, McCloy returned to Harvard Law School and in 1921 obtained his LL.B. degree. In the same year he entered the law office of Cadwalader, Wickersham, and Taft, in New York City, where he remained until November 1924. (He had been admitted to the New York bar on July 21, 1922.) He then joined the New York firm of Cravath, De Gersdorff, Swaine, and Wood, of which he was to become a member in July 1929. From June 1927 to September 1928 he traveled in France, Italy, and other parts of Europe; he was in charge of the firm's Paris office for a period of fourteen months in 1930-31, and thereafter continued to make frequent business trips to Europe. From 1930 to 1939 McCloy was connected with the litigation over the "Black Tom" case of 1916, presented before the Mixed Claims Commission at The Hague. It was ultimately settled in 1939 by the affirmation of German responsibility for the 1916 munitions plant explosion.

By 1940 McCloy had thus been a practicing lawyer with two New York firms for a total of nineteen years, handling many cases connected with Wall Street, and becoming a specialist in corporation law. In the meantime, he had kept abreast of military affairs and, for relaxation, had studied military history. In October 1940, thirteen months after Europe had become a battleground in World War II, the attorney, a Republican in his political affiliation, left his "flourishing law practice" to accept the position of expert consultant to Republican Secretary of War Henry L. Stimson⁴⁰. (Stimson had just entered the Roosevelt Cabinet.) Shortly afterward McCloy was appointed special assistant to the Secretary of War and in April 1941, eight months before Pearl Harbor, he became the Assistant Secretary of War.

McCloy's duties during the next four years "included everything from handling administrative details of the Army training program" to attending the San Francisco United Nations Conference on International Organization in the spring of 1945 and assisting in the formulation of plans for the war crimes trials. The War Department's liaison man with the State Department, he dealt with various political problems and questions of policy arising from war exigencies. (According to Kermit Roosevelt, writing in the *Saturday Evening Post*, the credit for "the formation of Nisei units in the American Army" is attributable to McCloy.) To smooth relations between the United States and the factional French forces, McCloy in the spring of 1943 visited North Africa: the American's suggestions were among the factors which finally

U.S. Army Signal Corps
JOHN J. MCCLOY

led to the formation of the French Committee of National Liberation, with the rival French generals, Giraud⁴² and De Gaulle⁴⁰, sharing its presidency. When preparations were being concluded for the Allied invasion of occupied France in 1944, McCloy became chairman of the Combined Civil Affairs Committee, the committee responsible for making recommendations to the Combined Chiefs of Staff regarding the civil administration of liberated areas. An important aspect of this task involved the "locating, registering, housing, feeding, and repatriating of millions of displaced persons." As one of the men who shaped policy for the German occupation, McCloy took issue with reports which charged the Army with laxness in carrying out its denazification policies.

In the fall of 1945 the War Department official visited American zones of occupation in Europe and in the Pacific area on a worldwide tour. Addressing the nation by radio upon his return, he stressed the importance of reaching an understanding with the Soviet Union and gave his impression of "the terrifying, high prestige of the United States throughout the world": Many nations look to the United States for leadership in winning the peace, he reported, and regard the maintenance of American troops in liberated areas as proof that the United States is interested in restoring world stability. McCloy called for a continuation of the draft, with inductees replacing occupation troops abroad. Maintaining that in the future "geography [would be] no barrier to an attack on the United States first," he contended that the adoption of a universal military training program by the United States was essential for national security as well as for the discharging of its obligations to the United Nations. "The effectiveness of any international peace organization," he wrote, "will depend upon the mili-

MCCLOY, JOHN J.—*Continued*

tary capabilities of the peace-loving nations to render military aggression unprofitable." McCloy was also a proponent of the unification of the armed services and an advocate of a civilian-controlled atomic energy commission with a minority representation of the military.

The "affable and efficient" McCloy (thus *Time* described him) resigned from the War Department office in November 1945 with high praise from President Truman for the services he had rendered. He was offered various Government posts, but he chose, however, to join the law firm of Milbank, Tweed, Hope, Hadley, and McCloy. He served, however, on the 1946 State Department Committee on Atomic Energy, which evaluated the Lilienthal⁴⁴ report, submitting it to Secretary of State Byrnes⁴⁵ as "a definitely hopeful approach to the solution of the entire problem" of the international control of atomic energy. McCloy also became the national chairman of the American Aid to France, Inc., a nongovernmental relief and rehabilitation agency.

When Eugene Meyer resigned from the presidency of the International Bank for Reconstruction and Development (commonly referred to as the World Bank) in December 1946, McCloy was among those approached to head the eight-billion-dollar institution. (The figure represents its potential capital.) Since its foundation in July 1944 the bank, which had a forty-four nation membership in mid-1947, had received applications for loans totaling several billion dollars. Observers speculated that Meyer had resigned because of differences with the bank's directors, particularly with the American director Emilio Collado, with whom his authority overlapped. The World Bank had been set up with a twelve-nation executive directorship; the American director, who casts the block of votes for the United States, the largest shareholder, is supported by the National Advisory Council, a body which, according to George A. Mooney of the *New York Times*, was "deliberately established by Congress to safeguard United States interests as against the bank's president, an 'international' official." Thus, while held responsible for the bank's operations, the president has powers considered largely nominal.

McCloy at first refused the tax-free thirty-thousand-dollar bank presidency, but later agreed to reconsider it. For some six weeks he consulted with the bank officials, Government officials, and private financiers, reportedly seeking terms requisite to his acceptance of the post—specifically, wrote the journalists, support from the American business community, the only potential market (excepting Canada) for the bank's debentures—as well as changes to assure better relationships between president and directors. On February 28, 1947, the headlines announced that McCloy would head the World Bank "on his own terms." At his request, Eugene R. Black, vice-chairman of the Chase National Bank, succeeded Emilio Collado as United States executive director, and Robert L. Garner, a vice-president of the General Foods Corpora-

tion, became the bank's vice-president. With these developments, observed one reporter, a new feeling was immediately evident that the World Bank, which had been losing prestige, "was in business." The new appointees "enjoy the confidence of the banking community," stated a *New York Herald Tribune* editorial, and the replacement of Collado by Black was interpreted as meaning that the bank's loan policy would be more conservative.

By mid-August 1947 the World Bank had made four loans to European nations: one hundred ninety-five million dollars to the Netherlands, forty million to Denmark, two hundred fifty million to France, and twelve million to Luxembourg. The initial sale of World Bank debentures on the New York Stock Exchange in the previous month had been marked by heavy oversubscription. The possibility of extending another loan to Britain (for industrial and agricultural equipment) was mentioned by the bank president before his departure for England in September to attend the annual meeting of the bank's governors. The fact that the bank was not empowered to conduct a "stopgap business" was emphasized by McCloy in his forty-page report to the governors. The bank's policy for the forthcoming year would include cooperation with the Marshall Plan and a program of aid for eliminating the three bottlenecks of food, fuel, and manpower from the European economy. To determine the eligibility of various nations for loans and to see what opportunities were available for floating World Bank bonds, McCloy and Camille Gutt, director of the International Monetary Fund, planned to visit several European capitals in the fall of 1947. About that time the quarterly financial statement of the bank was issued; it showed a deficit of slightly more than eight hundred thousand dollars for the preceding quarter. A subsequent and final report, submitted by McCloy to the U.N. in December, remarked that the bank's accomplishments during the year had "helped to create a climate of confidence in which the United Nations could [solidify] the economic foundations of the peace."

After leaving the War Department, McCloy, a director of the Foreign Policy Association and a trustee of Lenox Hill Hospital (New York), was elected to a number of other trusteeships and directorships. He became a director of the Empire Trust Company and the Union Pacific Railroad Company as well as a trustee of the Rockefeller Foundation, the American Museum of Natural History, and Brookings Institution. He severed his connection with the firm of Milbank, Tweed, Hope, Hadley, and McCloy upon assuming the World Bank presidency. A member of the American Bar Association, the Bar Association of the City of New York, and Beta Theta Phi, he also holds membership in the Century, University, Anglers, and Grolier clubs in New York, and in Washington he belongs to the Metropolitan, Army, Navy, and Chevy Chase clubs. He is a recipient of the Distinguished Service Medal and has been honored by France with election as a Grand

Officer in the Legion of Honor. The degree of Doctor of Laws has been conferred upon him by Amherst College and Syracuse University.

The bank official is married to the former Ellen Zinsser; they have a son, John Jay, and a daughter, Ellen Zinsser. A tennis player and fisherman, the five-foot-nine-inch McCloy is described as having "an athlete's air of energy and resourcefulness. . . . Only an expanding bald area and an increasing saltiness of side hair show the advance of years." "At the end of a long day," wrote Oliver Pilat in a New York *Post* "close-up," McCloy "turns usually to the rhythmical relaxation of poetry"—his favorite anthology is Field Marshal Wavell's *Other Men's Flowers*.

MCCORMICK, FOWLER Nov. 15, 1898-Industrialist

Address: b. c/o International Harvester Co., 180 N. Michigan Ave., Chicago 1; h. Barrington, Ill.

As chairman of the board of the International Harvester Company, Fowler McCormick heads the largest agricultural implement manufactory in the world, which supplies the United States and foreign markets with machines for the farm and for industry. Before succeeding in 1946 to the board chairmanship of the company founded by his grandfather, Cyrus Hall McCormick, the inventor of the reaper, Fowler McCormick had served as president since 1941.

Born in Chicago on November 15, 1898, Fowler McCormick was, as phrased by *Fortune*, the "Prince of Wales in two economic dynasties." His father was Harold Fowler McCormick, younger son of Cyrus Hall McCormick and heir to the McCormick reaper fortune; and his mother was the former Edith Rockefeller, daughter of John D. Rockefeller and an heiress to the Standard Oil fortune. Part of the Scottish clan McCormick, whose family motto is *Sine Timore* (Without Fear), had emigrated from Scotland to Ireland some time before 1570, and thence to America in 1735. (John Tebbell gives the genealogy in *An American Dynasty* [1947], along with a detailed account of the McCormick family.)

Reared in his native Chicago, McCormick was enrolled at the Francis W. Parker School, a progressive institution, from 1905 until 1913. Of this period McCormick says, "I don't know how I attended school, since we took so many

trips East, but I did." In 1913 young Fowler McCormick's mother went to Zurich to study with the noted psychologist Jung⁴³, and the boy entered the Groton School in Massachusetts. "The change from the Parker School's progressiveness . . . to Groton's old English classicism," observed *Fortune*, "was the cause, in McCormick's opinion, of the bump he then took to the bottom of his class. . . . When he left Groton in 1916 and went abroad, he was about ready for a thoroughgoing psychoanalysis." After three months with the American Field Service in France, in the winter of 1917-18 McCormick went to see Jung, whom he visited often to discuss psychology, philosophy, and religion.

McCormick followed family tradition in matriculating at Princeton University (1917). There the Chicagoan, an art major who specialized in architecture, went out for the freshman crew and made it when, to quote him, "someone got sick"; joined the Ivy and Triangle clubs, and, said *Fortune*, "passed through a vicarious socialist phase." Receiving his B.A. degree in 1921, McCormick weighed the possibilities of a career in Standard Oil, in the International Harvester Company (his father was president at the time), or in a small business of his own. He tried the brokerage business and studied accounting for a while at night. Twice, in 1924 and in 1925, he joined International, and twice "retreated." The article in *Fortune* is illustrated by a photograph of him (taken later in 1925) as a twenty-five-cent-an-hour student (incognito) at Harvester's Milwaukee plant; from 1925 until 1929 McCormick studied manufacturing, engineering, and selling. One Harvester assignment took him through the United States to work experimentally, under different farm conditions, with a variety of farm machinery. His first sales experience came in 1929 as a "blockman" or outpost agent in direct contact with the dealer. The following year found him in his first administrative position as manager of a new branch in Nebraska; and during 1931-32, as a district sales manager in Chicago, he had supervision of twenty branches. In 1933 he became an assistant sales manager.

As vice-president in charge of foreign sales, McCormick traveled (1935-38) in Europe and South America "reorganizing the Harvester globe into districts and divisions, establishing formal organization in place of the personal methods . . . handed down from old Cyrus [Hall McCormick]." From 1938 to 1941 he served as the vice-president in charge of manufacturing, thus assuming charge of industrial relations, construction, and engineering. A director of the company since 1936, Fowler McCormick was elected president in 1941 and became chairman of the board of directors in 1946.

Fowler McCormick's grandfather, Cyrus Hall McCormick, invented the first successful mechanical reaper in 1831, offered reapers for sale at fifty dollars each in 1833, and sold three in 1840. Business prospered steadily—seven reapers were sold in 1842 at one hundred dollars each—and by 1884, the year the inventor

Blackstone Studios

FOWLER MCCORMICK

died, the McCormick Harvesting Machine Company was the largest industry of its kind in the world. Several years after the company effected a merger to avoid what one McCormick called the "unbusinesslike methods of competition." Joining the Deering Harvester Company, the Warder, Bushnell, Glessner, and Company, and the Milwaukee Harvester and the Plano companies, the McCormick Harvesting Machine firm became the International Harvester Company in 1902. The initial capital stock of International Harvester was \$120,000,000. International Harvester, which was to expand both in the United States and abroad its production of trucks, tractors, and other farm machinery, was also to be the subject of "trust-busting" pressure from the Government. (In 1947 Allis Chalmers, Deere, and Ford were the company's leading competitors.) Under Fowler McCormick's leadership, Harvester experienced a considerable expansion in the farm equipment market, a complete reorganization necessitated by an overcentralized operations structure, a managerial shake-up in favor of younger men, and "the painful birth" of large-scale collective bargaining. Of the last-mentioned, *Fortune* said in 1946: "McCormick is at once guiding company policy and wondering how the caricatured capitalism of his forebears can be transmogrified into a harmonious and lasting way of life."

The company whose past labor record is marked by the bloody Haymarket Square riot of May Day 1886, now, according to *Fortune's* report, has one of the first research divisions for labor-management in the United States and one of the most antidiscriminatory race policies in American labor relations. In his dealings with the CIO, which has organized the industry, McCormick holds to his theory that the task of big business is the "balancing of the tripod of stockholders, consumers, and em-

ployees." In March 1947, announcing a twenty-million-dollar anti-inflation-policy cut in prices for the coming year (*Time* called this almost 5 per cent of International Harvester's gross sales), McCormick said: "We have done something for our stockholders . . . and we have done something for our employees. Now we must try to be equitable in our treatment of the third group—our customers." This action drew the praise of President Truman. After the passage of the Taft-Hartley Act, an agreement was reached between the International Harvester Company and the United Automobile Workers, to the effect that the company would refrain from suing the union for breach of contract, while the union was enjoined to end wildcat strikes as quickly as possible. According to McCormick, the new labor act would not in any way alter his company's policy of cooperating with the union. A threatened strike in October 1947 at eleven International Harvester plants was averted by the decision of the union to continue negotiations for new wage rates. Harvester sales for the 1946-47 fiscal year totaled seven hundred million dollars, the largest volume of sales ever recorded for the company.

During World War II, Army procurement officers gave the International Harvester Company a top rating for defense production, and, wrote *Forbes Magazine*, credited much of this success to McCormick himself. The head of the company has served on an ordnance advisory committee and on the War Department Manpower Board. In civic affairs, McCormick has participated in the activities of the Community and War Fund, the United Negro College Fund Campaign, and the Committee on Race Relations. He is a member of the Farm Equipment Institute, the National Planning Association, and the Committee for Economic Development. Oglethorpe University has awarded him an honorary doctorate in business. His name was cited among those of the "Fifty Foremost Business Leaders" of the United States, named by *Forbes Magazine* in the fall of 1947.

Fowler McCormick and Anne Potter Stillman were married on June 4, 1931. He records no church affiliation or political preference. Among his clubs are the Commercial, Chicago, Tavern, and Casino in Chicago, and the Racquet and Tennis in New York. The gray-eyed, brown-haired, 175-pound executive (he is five ten in height) likes to ride, fish, swim, and play golf—*Forbes*, basing its report on observations made of McCormick at company outings, states that he plays golf not too well, rarely breaking 100. The "athletic-appearing" McCormick is described as studious in habit, serious in mood. *Fortune* thought it interesting to learn Jung's opinion of McCormick: "I knew McCormick when he was a young boy. Later we traveled together all over India, where he showed the deepest interest in sociological and religious matters. . . . What I like most about him is his deep sincerity and love of truth."

MCGILL, RALPH (EMERSON) Feb. 5,
 1898- Newspaper editor

Address: b. c/o The Constitution Publishing
 Co., Atlanta, Ga.; h. 3399 Piedmont Rd., At-
 lanta, Ga.

One of the most important voices of liberal-
 ism in the South is the signed editorial column
 of the Atlanta (Georgia) *Constitution*. The
 author of these opinions, editor Ralph McGill,
 has worked for the social and economic ad-
 vancement of the South through civic organi-
 zations and through political activity—he man-
 aged Ellis Arnall's⁴⁵ gubernatorial campaign
 in 1942, and James Carmichael's in 1946. In
 1947 he is also an adviser to the Federal Gov-
 ernment's Department of State.

Of Scotch and Welsh descent, Ralph Emerson
 McGill was born February 5, 1898, on a farm
 near the Tennessee town of Soddy. He is the
 son of Lou (Skillern) and Benjamin Franklin
 McGill. After attending the McCallie
 School, a private school in Chattanooga, for
 the years 1913-17, young Ralph entered Van-
 derbilt University in the fall of 1917. While
 working his way through college, the student
 joined Sigma Chi, "played star tackle, and be-
 longed to the famed literary group of 'Fugi-
 tives.'"

During 1918-19 McGill served in the World
 War I Marine Corps. Subsequently he re-
 turned to Vanderbilt, but found himself at
 "political odds" with the chancellor. He left
 college in 1922, shortly before graduation, and
 became a reporter and sports editor for the
 Nashville *Banner*, of which a former class-
 mate, James G. Stahlman, was city editor.
 Later McGill wrote a *Banner* column of "folk-
 sy" humor called *I'm the Gink*, which came
 to include political comment. He left that
 newspaper in 1923. By 1929, when he was
 thirty-one, the Tennessean was in Georgia as
 assistant sports editor of the Atlanta *Con-
 stitution*; after two years he was advanced to
 the desk of sports editor. (McGill's ideal of
 sportswriting is the work of the late W. O.
 McGeehan of the New York *Herald Tribune*.)

The politically active sportswriter was asked
 to write a platform for the Democratic State
 Convention in 1936. Awarded a Julius Rosen-
 wald Fund fellowship for travel in Europe the
 next year, McGill arrived in Austria one day
 after the occupation of that country by Ger-
 man troops, in March 1938. "Never until I
 saw there in Austria the physical disappearance
 of [freedom of the press] . . . did it become
 something vital," McGill has written. "Not
 until then did . . . I become coldly angry to
 see it abused and prostituted" in the United

Press Assn., Inc.

RALPH MCGILL

States. He traveled in Austria, and in France
 and England, for a year.

On his return to the United States in 1938,
 McGill was made executive editor of the
Constitution. He was named editor in 1942.
 That September, commenting on the seventy-
 fifth anniversary edition of the *Constitution*,
Time remarked, "Though the *Constitution* has
 one of the South's best photographers, it has
 no picture editor . . . no police reporter [Mc-
 Gill has said that newspaper staffs "could be
 a lot smaller and a lot better."]. . . Nobody
 seems to care that the rival *Journal* beats it in
 circulation and news coverage." Under McGill
 the circulation rose from a daily 104,595 and
 113,463 on Sundays in 1937 to a daily 177,932
 and 209,304 on Sundays in 1947, and the *Con-
 stitution* became "one of the most influential
 newspapers on the Atlantic seaboard" (*Atlantic
 Monthly*, September 1944). Maintaining the tra-
 dition of an outspoken signed editorial column,
 a policy established by editor Henry Woodfin
 Grady in the 1880's, McGill became "famous
 for his tolerance and depth of understanding of
 Southern problems" (*Life*, May 15, 1944).

To preserve freedom of the press, McGill
 has written, "Newspapers must come down and
 live with the people . . . fight with them and
 for them . . . their health, their housing, their
 living conditions, their children, and their whole
 panorama of interests." While fighting "white
 supremacy" and the other policies of Governor
 Eugene Talmadge⁴¹, the editor reminded
 his readers (*Survey Graphic*, September
 1941): "Before the dictator can strut his not
 always brief hour upon the stage, someone
 must build the stage. Among the ghostly hands
 which pulled the rope at the lynching were
 those that had written the freight rates and the
 tariffs which were to keep the South a trib-
 utary section . . . helped create the lacks and
 wants which make up the soil in which fas-

MCGILL, RALPH—*Continued*

cism flourishes." McGill sees economic fear as the basic cause of Southern problems, but he has also warned the readers of his column that the South cannot expect the Federal grants it needs in some fields while decrying Federal "interference" in other fields. McGill continued to publish Westbrook Pegler's⁴⁰ syndicated column, despite his disagreement with Pegler's views—McGill maintained that people wished to know "what dangerous things Pegler was thinking."

When the United States instituted military training in 1940, Ralph McGill became chairman of the local Selective Service Board, a post he held until 1944. After Pearl Harbor, in 1942 he was appointed to the War Labor Board's advisory committee for Georgia, and to the advisory board of the Children's Bureau, Department of Labor. In 1942, also, he managed the successful gubernatorial campaign of his friend, Attorney General Ellis Arnall, to "restore decency and democracy in Georgia." McGill defied the Ku Klux Klan, which marched around his building threatening violence—he continued to speak on Southern problems before Roman Catholic organizations, to uphold the New Deal, to speak in behalf of the Negro and of labor unions. Of the Taft-Hartley⁴¹ Labor Act five years later (1947), McGill said, "Generally it certainly is as fair as the present Wagner bill, which assuredly contains elements of inequity."

In July 1943 editor McGill became chairman of a committee of more than a hundred prominent Southerners who worked to improve the status of Negroes "in an atmosphere of understanding, cooperation, and mutual respect." The Southern Council for Regional Development, which it set up and for which McGill helped to write a program, had as co-chairmen sociologist Howard W. Odum and Charles S. Johnson⁴², director of the Rosenwald Fund's race relations program. *Time* called it "one of the most hopeful steps ever to be taken in the United States toward better race relations." McGill's first short story, "She'll Talk Later," published in the October 1947 issue of *Harper's*, presented a picture of the discouragement felt by Southern Negroes and white liberals.

Shortly afterward, McGill and a Pittsburgh editor, as guests of the Ministry of Information, were flown to England to inspect the war effort. While there he made a radio speech praising British postwar planning. The next year (1944), as chairman of the ASNE committee on world freedom of the press, McGill obtained from both houses of Congress and from Republican and Democratic platform-makers a declaration for world-wide equality of access to news and transmission facilities for all accredited reporters. He and two others were then appointed by ASNE's president John S. Knight⁴³ to travel to all capitals, except those of enemy countries, in behalf of this program; the committee was given letters of introduction from President Roosevelt⁴², Secretary of State Stettinius⁴⁰, and the chairmen of

the House and Senate Foreign Relations committees.

From January to April 1945 the three Americans traveled forty thousand miles in Army transport planes, conferring with officials and editors in Great Britain, France, Belgium, Italy, the Vatican, Greece, Egypt, Turkey, Iran, the Soviet Union, India, China, and Australia. (They also visited a number of battlefronts.) Their fifty-thousand-word report, issued in June 1945, was published as a special supplement of the periodical *Editor and Publisher*. Four months later McGill was named special adviser and consultant to the State Department on wire services and the press, working under Assistant Secretary Benton⁴⁵ and International Information Service director Ferdinand Kuhn.

In January 1946, before taking off on a flight to Europe and the Middle East to write syndicated articles on the occupation and displaced persons problem in relation to Palestine, McGill wired President Truman⁴⁶ to urge that the State Department's overseas information services be retained. In May, at a Congressional committee hearing, he described as "utterly ridiculous" the grounds on which the A.P. and U.P. refused to sell their services to the Government. Such an attitude, he said, "might make a silent giant of this country when every other giant and pigmy in the world is broadcasting its own interpretation of American news events and politics." In a radio forum in May 1947, McGill was to reiterate the need for "a program of information, not propaganda" to counteract the impression of the United States spread by "the Russian propaganda service daily . . . [to] Europe and South America."

Ralph McGill managed the primary campaign of James V. Carmichael, Governor Arnall's choice as successor, in the spring of 1946. Carmichael won a plurality of the votes, but the nomination went to Eugene Talmadge under Georgia's county-unit electoral system. McGill and the *Constitution* took little part in the nationally discussed situation that followed Governor-elect Talmadge's death, when Herman E. Talmadge⁴⁷ and M. E. Thompson⁴⁷ both claimed the governorship. McGill, wrote Wenzell Brown in the *American Mercury*, is said to consider Thompson "only a slightly lesser evil than young Talmadge." Of the editor's influence in Georgia, Brown wrote, "Southern hatemongers and demagogues frequently list McGill as enemy Number One, placing his influence above that of Ellis Arnall."

Meanwhile, McGill was crusading against the Columbians, Inc., a uniformed anti-Negro and anti-Jewish organization, which sent two "storm troopers" to his office to threaten him. At a time when the Columbians were faced with police action and public condemnation, the *New York Post's* special correspondent said that the "heaviest single blow" to the Columbians was McGill's charge that the group was made up of "failures . . . chronic soreheads . . . hoodlums, and toughs who have no faith in themselves."

In the summer of 1947 Ralph McGill came into national notice as chairman of a new com-

mittee of educators, editors, publishers, and civic leaders, formed to further legislation for the State Department's overseas cultural-relations program. Among his newspaper editorials that spring was one declaring that those who "cry out against Federal interference and outside meddling when lynch murder is done . . . should examine their own false hearts." He was one of the fourteen American editors and publishers who were invited by Army occupation forces to make a month's tour of Europe.

Ralph Emerson McGill is considered an effective speaker. The 230-pound editor is credited with "prodigious energy" by *Time*, which also mentioned his "inefficient [office] routine." The *Atlantic Monthly* has called him "vigilant, four-square, and fearless." A Mason (Scottish Rite) and a member of the Georgia Academy of Social Sciences, McGill was in 1938 awarded an honorary LL.B. degree by the Atlanta Law School. Since September 1929 McGill has been married to Mary Elizabeth Leonard; they have a son, Ralph E., Jr. (The McGills' two daughters are deceased.) According to *Time*, Mrs. McGill first saw her future husband "whaling a bully who had pushed a little fellow around in a Nashville hot-dog stand."

Who's Who in America, 1946-47

MCHALE, KATHRYN July 22, 1890-
Psychologist; educator; administrator

Address: b. c/o American Association of University Women, 1634 I St., Washington, D.C.;
h. 3601 Connecticut Ave., Washington, D.C.

Kathryn McHale, general director of the American Association of University Women, is the educator and psychologist who formulated the McHale Vocational Interest Test. She has seen the membership of her organization and its activities greatly expand since 1929, when she first assumed her duties as director.

The only daughter of Margaret (Farrell) and Martin McHale of Logansport, Indiana, Kathryn McHale was born on July 22, 1890. Both she and her brother Frank, who became a prominent lawyer and Democratic national committeeman, attended public schools in Logansport. In 1910 twenty-year-old Miss McHale became a teacher in those schools, and, at various times during the next seven years, took charge of kindergarten, elementary, and secondary school classes. Having left her home town in 1917, she studied at Columbia University in New York, and received a Bachelor of Science degree from that institution in 1919 and a Master of Arts in 1920. In that same year she was appointed an instructor in education at Goucher College in Baltimore, Maryland. During her association with Goucher, she continued to teach in the summer sessions of Columbia University (a practice which she had begun in 1918) until 1926, when she fulfilled the requirements for a Ph.D. She subsequently taught in the 1928 summer session of the Uni-

versity of Minnesota. At Goucher she rose from an instructorship to an assistant professorship in 1922; in 1926 she became an associate professor, and, a year later, a professor. She remains on the faculty of Goucher as a nonresident professor.

Having become interested in progressive and practical teaching methods, Miss McHale had studied vocational guidance and testing. At the suggestion of Dr. Agnes L. Rogers, a co-professor of education at Goucher, she adapted parts of the Thorndike Intelligence Tests to make them more suitable for women. This work attracted the interest of Dr. Edward L. Thorndike⁴¹, who advised Miss McHale in her work, and who subsequently developed new forms of his own tests. In January 1922 the first form of the McHale Vocational Interest Test was given to 133 Goucher College juniors; by 1933 a revised form, published by the American Association of University Women, was being used by twenty colleges. To determine vocational interest, the student is asked to recognize 247 words familiar to those interested in one of seven different fields. Having been derived from specialized books and periodicals, the list of several hundred questions was submitted to a group of judges who selected the most representative.

In 1929 Dr. McHale was called from Goucher College to serve as executive and educational secretary of the American Association of University Women, and in 1931 her title was changed to that of general director. The educator herself defined her duty, which had not been changed with the title, as the "continuous examination as to the direction in which the organization is proceeding and the degree of success so far reached." Terming adult education "the touchstone" of A.A.U.W.'s work, the director has guided her organization through a program which has included participation in national social and economic affairs, the awarding of fellowships, the encouragement of art and education in the community, work with children, and extensive wartime service. Organized in 1882, the group limited its membership to graduates of colleges of which 60 per cent of the courses were in the liberal arts and which recognized the equality of women with men on the student body and the faculty. By 1946 A.A.U.W. had almost 80,000 members. In addition to the fellowships for graduate study regularly given to women—one of which is the Kathryn McHale fellowship in psychology and philosophy with a \$40,000 endowment by the Indiana State Division—in 1946 the group awarded thirty-three emergency grants to European women whose education had been interrupted by the German occupation of their countries.

Since 1929, the year Miss McHale became director, the organization has maintained a research and information bureau in international education. As a group it has worked for the renewal of the Reciprocal Trade Agreements Act in 1940, helped to establish the Women's Action Committee for Victory and Lasting Peace (from which it withdrew in 1945 because of procedure disagreements), was instrumental

Underwood & Underwood

KATHRYN MCHALE

in securing the appointment of women to the San Francisco Conference in 1945, endorsed a proposed constitutional amendment which would require the ratification of treaties by both Houses of Congress, and in 1946 was in favor of the loan to Great Britain. As director of A.A.U.W., Dr. McHale has written to the President, Senators, and Congressmen to oppose the removal of grade labeling, to urge the early formation of the United Nations (this in 1943), and to criticize one aspect of the Federal housing program because it did not provide for homes at a price within the reach of a large number of veterans.

Kathryn McHale is the author of three books, numerous pamphlets, and articles in technical magazines. Most of these have dealt with various studies made in connection with the American Association of University Women. Among her subjects have been curricular trends in colleges, vocational opportunities for women, and problems of child development. On one occasion she averred: "Every woman, regardless of her occupation, is forced by the crowding impact of events to feel a greater responsibility for taking part in community, national, international affairs, and for understanding economic and social forces." Her books are *Comparative Psychology and Hygiene of the Overweight Child* (1926), *Current Changes and Experiments in Liberal Arts Education* (1932), which was voted the best study of that year by the National Society for the Study of Education, and *Housing College Students* (1934).

Holding three honorary L.H.D. degrees (from Brown University, Russell Sage College, and MacMurray College for Women), Dr. McHale in 1946 completed her third three-year term as the only woman member of the board of trustees of Purdue University. Since her duties as general director of A.A.U.W.

involve cooperation with other educational organizations, she is a member of numerous Government committees and private groups. Among these are the Citizens' Federal Committee of the United States Office of Education, the Women's Interest Section of the Advisory Council of the War Department, and the Executive Committee of the United States National Commission for UNESCO. She is also a member of the executive council of the American Association of Adult Education, the board of educational advisers to the National Foundation for Education in American Citizenship, the Association of American Colleges, and the American Association of University Professors. Dr. McHale has also been a member of the Alfred I. Du Pont Radio Awards Committee, the Radio Advisory Committee of *America's Town Meeting of the Air*, the advisory committee to the *Herald Tribune* forums, and advisory editor to *Parents' Magazine*. Chief among the national and international conferences she has attended was the Women's Conference on Post-War Planning in 1944, where she was "a moving spirit," according to Delos W. Lovelace of the *New York Sun*.

Blue-eyed Kathryn McHale has brown hair and a pleasing voice. "She always knows what she is going to do and does it," a magazine once wrote. The educator is fond of motor travel—she is familiar with the cross-continental highways of both the United States and Europe.

MCINTOSH, (MARGARET) MILLICENT CAREY Nov. 30, 1898- College dean

Address: b. c/o Barnard College, New York 27; h. 514 East 87th St., New York 28

When Mrs. Millicent Carey McIntosh, then headmistress of the Brearley School, was named in November 1946 to succeed Miss Virginia Gildersleeve "as dean of Barnard College (the women's undergraduate college of Columbia University), newspapers commented upon the choice of Mrs. McIntosh for one of the most important New York educational posts as a "singularly happy" one. As head of the Brearley School since 1930, she had, according to a *New York Herald Tribune* editorial, won a "high place for herself and her school in the field of secondary education." The new dean, who began her deanship in September 1947 and was installed in October, is an advocate of better salaries and conditions for teachers and of recognition of a woman's right to the dual career of marriage and a profession.

The daughter of Anthony Morris and Margaret Cheston (Thomas) Carey, Margaret Millicent Carey was born November 30, 1898, in Baltimore, Maryland. She has four brothers; and she is also the niece of the late M.

(Martha) Carey Thomas, distinguished educator and one of the former presidents of Bryn Mawr College. After she completed her secondary school education at the Bryn Mawr School (Baltimore) from which she was graduated in 1916, she entered Bryn Mawr College. There she specialized in English; was a member of the basketball and water polo teams, captained the hockey team. She received her B.A. degree *magna cum laude* in 1920. Afterward she spent some time in England pursuing graduate studies at Newnham College, affiliated with Cambridge University. Upon her return to the United States, she went to teach at Rosemary Hall, in Greenwich, Connecticut. Her instructorship lasted for the 1922-23 school year and was followed by several additional years of study in English at Johns Hopkins University in her native city. In 1926 that university awarded Miss Carey a Ph.D. degree, for which she had written the thesis *The Wakefield Group in the Towneley Cycle*, concerning fourteenth century English mystery dramas. It was published in Germany in its original language. In the meantime, during the summer of 1923 Miss Carey had taught at the Bryn Mawr Summer School for Women Workers in Industry. Subsequently she was an organizer of clubs for the factory girls of Baltimore, and "at one time thought seriously of entering the field of worker education."

Miss Carey's first professional experience in advanced education began in 1926: she was granted the post of instructor in English at Bryn Mawr College. She taught her subject for three years. Meanwhile, in 1928 she had been appointed dean of freshmen, and in the following year, assistant in English and acting dean of the college itself. Her administrative ability thus recognized, it was to gain further prestige when, in 1930, she was offered and she accepted the position of headmistress of the Brearley School in New York, a college preparatory school for girls. At this work she was to remain for the succeeding sixteen years.

In 1932, two years after she was made Brearley's headmistress, Miss Carey was married to Dr. Rustin McIntosh, a pediatrician, who was Carpenter Professor of Pediatrics at Columbia University's College of Physicians and Surgeons and was to become the director of New York's Babies Hospital. (In April 1947 Dr. Rustin McIntosh was decorated by the Belgian Government for helping, with two other Americans, to curb a 1945 epidemic of poliomyelitis in Belgium.) The next several years of Mrs. McIntosh's life were devoted not only to directing Brearley school activities and to teaching but also to rearing a family. Dr. and Mrs. McIntosh are the parents of five children: James Henry and Rustin Carey (twins), Susan Margaret, Kenneth, and John Richard, all of whom at the end of 1946 ranged in ages from seven to thirteen.

After deliberating for about a year on the qualifications of more than sixty possible candidates for the position of dean of Barnard College, the trustees of the institution, late in November 1946, selected Mrs. McIntosh to succeed Dean Gildersleeve in July 1947 as fourth

Arthur Avedon

MILLICENT CAREY MCINTOSH

dean of the women's college (founded in 1889). Its student register in 1947 is slightly more than twelve hundred. (Dean Gildersleeve herself had wished to retire in 1941 but was prevailed upon by Nicholas Murray Butler⁴⁰, president of Columbia University, and by university officials, to remain until the end of World War II.) Remarked Miss Gildersleeve when she announced the name of Barnard's new dean to the faculty: "I am greatly pleased about Mrs. McIntosh's appointment. I have known her for many years and have followed her career with interest and admiration." Among the achievements and qualities which gained Mrs. McIntosh her new position are included her record as administrator, during her tenure leading "the school into new educational areas" (*New York Times*, September 21, 1947). "She believes that personality development is as important as examination marks . . . [and] made Brearley conscious of the emotional life of the pupil. Brearley now does not hesitate to recommend psychiatric treatment for girls who show signs of developing into maladjusted women." She helped initiate aptitude tests and "a program of remedial work" for pupils needing aid in reading, writing, spelling. The other factor in her selection is her "knowledge of the people, the procedures and the cultural resources which go to make up" the City of New York. In her capacity as dean of Barnard—her duties began officially in September—she will serve on the administrative board of Columbia's new School for General Studies, an undergraduate-graduate extension division.

Declaring that her first concern at Barnard College is to become acclimated to its administration, she has revealed some of her views on higher education. Less emphasis on pre-professional and vocational courses and more on the humanistic studies, Mrs. McIntosh has

MCINTOSH, MILLICENT CAREY—
Continued

stated, would prepare collegians more adequately to assume their place in the modern world and would give them a basic philosophy of life. In addition, so that students be given the opportunity to develop their individuality, all college courses, she believes, should be based on a curriculum combination of core (prescribed) and optional subjects. At the Smith College conference (April 1947) on the role of women in contemporary society, Mrs. McIntosh deplored the lack of liaison between secondary schools and colleges, stating that narrow, restrictive college entrance requirements hamper the use of broad preparatory school curricula designed to prepare students for life as well as for college. The educator was to declare that she would like to arrange a conference between Barnard faculty members who instruct freshmen and New York secondary school teachers. This conference would have for its goal cooperation between colleges and secondary schools in the matter of planning academic courses.

One of her major interests in the field of education is the alleviation of the present plight of the teaching profession—she considers the problems which have caused teacher shortages and salary strikes to be a "major failure" of American civilization. Said the dean-elect (*Christian Science Monitor*, January 11, 1947): "The teacher's problem is a historic one. The attitude has been that teachers are 'dedicated' souls." This is traditional. It is never going to be solved just by raising salaries. We need a complete change in the thinking of American people about the teaching profession . . . and about the place accorded the teacher in the community. . . . But I think a start has been made by taking up the worst aspect—that of low salaries." College students, she maintains, must be shown that teaching is a "superior" profession; in order to accomplish this, "segregation, isolation and exploitation," and the prejudice against married women that is encountered in the profession must be abolished.

The installation of Mrs. McIntosh as dean of Barnard College took place late in October 1947. To an assemblage of faculty members, students, trustees, and educators from other universities, Dean McIntosh stated, "We must make our educational process increasingly effective. We must somehow find the magical link that should exist between thought and action, between teaching and a creative use of knowledge, between moral principle and practice. That will be the creed of my administration." Emphasizing the responsibility of all higher educational institutions to "prepare women for happiness in their personal lives," she added that "women have a different biological make-up from that of men and consequently have certain emotional needs which should be carefully taken into account in their education." Barnard, she believed, should "maintain and extend" the "scholarly tradition in which it was founded and nurtured." Dean McIntosh also stated in her address that "po-

litically, most women have not taken responsibility."

As a supporter of a career and marriage for women who can make a success of the two simultaneously, Mrs. McIntosh deplores the tendency of many educated women to "settle down into domesticity and never raise a peep again." Mrs. McIntosh asserted (*New York Herald Tribune*, November 28, 1946): "It is the great problem of the college graduate to find in her personal life the fullest expression of her powers. This may or may not lie in a career. I should never insist that the only way to happiness lay in a career, for I have seen many dismal failures in both the marriage and the career when this was attempted. What is important is for each individual to order her life so that she becomes a happy, creative person. . . . This is equally true of men. It is just as disastrous for a man to be chained to the drudgery of earning a living in a position he dislikes as for a woman to be chained to dishwashing and vacuum cleaners." This matter of a career for married women is a question which must be settled by men and women together and by the community; as yet "it has not been solved for many women." In order to make it easier for professional women to continue with their jobs and to have a family, Mrs. McIntosh has suggested that child care be promoted to a dignified profession as it is in England so that working mothers could leave their children in responsible hands.

Mrs. McIntosh's combination of marriage and a career has been facilitated, she admitted in several interviews, by her husband's keen interest in her work. By delegating the hours between five o'clock in the afternoon and half-past nine in the evening (when her children retire) to her family of five, she is able to be with her children, she avers, "as much as many mothers." Mrs. McIntosh says she has always planned the "activities for the whole house by writing things out. I wouldn't be willing to let anyone else do it." A "good governess," a cook, and two daily helpers from outside relieve Mrs. McIntosh of many of the household details. In the summer the family vacations at its Berkshires farm in Tyringham, Massachusetts.

Dean McIntosh of Barnard is a trustee and director of Bryn Mawr College and a member of the board of managers of the Bryn Mawr School; her clubs are the Bryn Mawr (New York) and the Cosmopolitan. From 1941 to 1943 she served as president of New York's Guild of Independent Schools. She is the recipient of the honorary LL.D. and L.H.D. degrees from Smith College (1940) and New York University (1947), respectively. As to religion, she professes the faith of the Society of Friends. "She regrets not taking a more active part in politics and describes herself as a liberal" (*New York Times*, September 21, 1947). A small, trim woman, with bobbed reddish-gold hair that is arranged back from her face, Mrs. McIntosh has been praised as a woman of "warmth, sympathy, great understanding, and a tolerant and unbiased judgment."

MADDOX, WILLIAM P(ERCY) Nov. 21, 1901— United States Government official
 Address: b. c/o Department of State, Washington, D.C.; h. 2923 Foxhall Rd., N.W., Washington 16, D.C.

The Foreign Service Institute of the United States Department of State is under the direction of William P. Maddox, a former professor who has been a member of the faculty of several American universities, including Harvard and Princeton. "The first major step in expanding, strengthening and developing the Foreign Service," Maddox wrote in the January 1947 issue of *Foreign Affairs*, "was taken when Congress passed the Foreign Service Act of 1946." Among its provisions was the authorization of the Foreign Service Institute. As director of the Foreign Service Institute, Maddox is responsible for the instruction and "refresher" training of both Foreign Service and Department of State officers. With both academic and journalistic experience—he was once on the Baltimore *Evening Sun's* and the New York *Herald Tribune's* staffs—he was able to put his skill in research and coordination at the disposal of the Office of Strategic Services, with which he served during World War II, as well as of the Department of State.

William Percy Maddox was born November 21, 1901, in Princess Anne, Maryland, a town about ten miles from the land grant held by the Maddox family for more than two hundred years, beginning in 1684. This holding, which had been bestowed upon the son of Alexander Maddox, who had come to Virginia from London in 1635, remained under the ownership of the Maddoxes up until the time of William Percy's father, Robert Franklin Maddox, an official of Somerset County and once a member of the State legislature. Robert Maddox's wife was the former Ella Virginia Hoblitzell. Another son, H. Randolph Maddox, eventually became the president of the Chesapeake and Potomac Telephone Company.

At Washington High School in Princess Anne, William Maddox edited the school paper and played on the baseball team, which he also managed one year. After being graduated in 1917, he entered the 1921 class at St. John's College in Annapolis, Maryland, where he participated in diverse extracurricular activities: managing the college football team, editing the college weekly, presiding over the literary society. Maddox acted as chairman for the "hop" committee, joined Phi Sigma Kappa fraternity, and reached the rank of cadet captain and battalion adjutant in the college ROTC. During summer vacations he worked: one summer was spent in the Baltimore and Ohio Railroad office in Baltimore, another selling magazines from house to house in Virginia and North Carolina. For a third summer he remained in Princess Anne, working in the local canning factory. At the St. John's commencement in 1921 he received an award for being the best all-round man in his class, taking into account scholarship, athletics, and other college activities.

For a year subsequent to his graduation, Maddox was attached to the staff of the Baltimore *Evening Sun* as a reporter, covering police courts and general assignments. In 1922 he was awarded a Rhodes Scholarship for the State of Maryland, which enabled him to attend Oxford University. At Oxford, where he was to receive a B.A. degree in philosophy, politics, and economics in 1925, he acted as a newspaper correspondent, an occupation which was repeated during a summer vacation, when he was employed as the New York *Herald Tribune's* Geneva correspondent. From among the foreign students at Oxford Maddox was chosen general secretary of the Oxford International Assembly.

On his return to the United States in 1925, he joined the faculty of the University of Oregon as an instructor in political science. By the end of his three years there he had become an assistant professor. From 1928 into the following year he was an acting associate professor of government at the University of Virginia. In 1931 Maddox obtained his M.A. degree from Harvard University, and two years later, his Ph.D. degree, for which he submitted a thesis entitled *Foreign Relations in British Labor Politics*. Meanwhile, with the rank of instructor, he taught on the staff of the departments of government of the university and its affiliated women's college, Radcliffe, from 1930 until 1936. From Harvard Maddox went to Princeton, where he remained for two years as assistant professor of politics. He next became attached to the political science faculty of the University of Pennsylvania as an associate professor, his main field of instruction during his four years there being international politics. For some time in 1941-42 the Council on Foreign Relations in New York City retained him as a part-time special assistant. In the course of 1942 Maddox also served as assistant to the president of the Foreign Policy Association.

Dept. of State

WILLIAM P. MADDOX

During World War II Maddox served with the Office of Strategic Services. Originally part of the Office of the Coordinator of Information (established by Presidential Order on July 11, 1941), the Office of Strategic Services, devoted to the collection, analysis, and correlation of information affecting the national security, was placed under the jurisdiction of the Joint Chiefs of Staff of the United States in the midsummer of 1942. With the cooperation of the British, an office was opened in London, to which Maddox was assigned for two years (1942-44) as chief of the intelligence branch. (The intelligence activities of the OSS, described by Stewart Alsop and Thomas Braden in *Sub Rosa* [1946], ranged from scholarly research work to the accumulation of material obtained by agents dropped by parachute behind enemy lines.) Maddox, who was commissioned a major in the United States Army in 1943, spent the last year and a half of the war with the OSS in the Mediterranean theater. At the time of his discharge in 1946, he held the rank of colonel.

Maddox immediately afterward received a position with the Department of State as chief of the Division of Training Services. After the passage of the Foreign Service Act of 1946, he was appointed director of the projected Foreign Service Institute. The objectives of the Foreign Service Institute were summarized by Maddox in *Foreign Affairs* (January 1947) and in *Higher Education* (October 15, 1947). The institute, succeeding the Division of Training Services of the State Department, will have "the responsibility for providing comprehensive as well as specialized in-service training for personnel of the Foreign Service and of the Department of State at successive stages throughout their careers. . . . For instance, a Foreign Service officer will, upon successfully completing the examination set by the board of examiners, receive a three months' period of

instruction to prepare him for the performance of his duties. At subsequent intervals in his career . . . he will be assigned to the institute for a program in instruction in such subjects as diplomacy, economics, area studies, principles of staff work . . . or in any one of the thirty languages offered at present." The reorganization of the training for Foreign Service was instituted, wrote Maddox, because the State Department "now faces tasks abroad more exacting, vast and various than any it has performed before."

Foreign Affairs is one of several scholarly publications to which Maddox has contributed: he has also written for the *Political Science Quarterly*, the *American Scholar*, the *American Political Science Review*, the *American Foreign Service Journal*, and *Foreign Policy Reports*. In collaboration with De Witt C. Poole, he wrote *Syllabus on an Introduction to International Politics* (1938). Maddox is also the editor of *European Plans for World Order* (1940) and of the America and Japan issue (May 1941) of the *Annals of the American Academy of Political and Social Science*. His World War II military awards include the Legion of Merit with Oak Leaf Cluster, the Order of the British Empire, French Legion of Honor, and Croix de Guerre with Palm. Apart from his teaching and journalistic work (the latter has included the writing of numerous book reviews and newspaper articles), he has also acted, during 1938-40, as a lecturer for the extension program for county agents established by the Department of Agriculture and as a consultant for the United States Department of State (1942).

Maddox is a member of the Council on Foreign Relations, the American Political Science Association, and the Harvard Club (New York). On June 15, 1945, Maddox was married to Louise Shaw Hepburn. Five feet eight inches in height, he weighs 160 pounds, and has blue eyes and gray-black hair. He is a Democrat and a Presbyterian. Of his three hobbies—cards, tennis, and travel—travel has been the most absorbing, for he has visited western and central Europe, Africa, the Orient, Canada, and South America.

MAHMOUD HASSAN See Hassan, M.

MAIER, WALTER A(RTHUR), REV. (mī'ēr) Oct. 4, 1893- Lutheran clergyman; radio speaker

Address: b. c/o Concordia Theological Seminary, 801 De Mun St., St. Louis 5; h. 11 Seminary Terr. N., Clayton 5, Mo.

When the idea of religious radio broadcasts was first broached in 1923, skeptics doubted that religion could draw an audience. Today such programs are heard in all parts of the world, and more than ten million Americans listen to them weekly. One program is the *International Lutheran Hour*, which the Reverend Walter A. Maier of St. Louis began to conduct in 1935. His gospel message and counsel help to solve the problems of thousands in his unseen congregation.

Walter Arthur Maier was born in Boston, Massachusetts, on October 4, 1893, the son of Emil William Maier, an organ builder, and Anna Katherine (Schad) Maier. His earliest memory, he has said, is of his father at prayer; and "the most influential human factor" in his life has been "the devotion, prayers, support, and outstanding example" of his parents. He received his elementary education at the Cotton Mather public school in the Dorchester section of Boston, and from his thirteenth to his nineteenth years (1906-12) attended the Concordia Collegiate Institute, a Lutheran high school and junior college, in Bronxville, New York. It was at the latter that a professor's call for Christian workers influenced him to devote his life to the ministry; Dr. Henry Stein of the Bronxville school, he recalls, had the profoundest influence on him scholastically. In 1913 Maier completed his undergraduate collegiate education at Boston University and was awarded its B.A. degree. That same year he entered Concordia Theological Seminary in St. Louis, Missouri, for further study, remaining until 1916. In the later years of his schooling in Bronxville and Boston he had been earning his expenses by washing dishes, doing mimeographing, and selling typewriters and books. His one extracurricular activity at the seminary was a year's presidency of the Concordia student association (1915-16).

From 1916 to 1920 Maier continued his preparation for the ministry on a four-year fellowship at Harvard University, until 1918 studying in the university's Divinity School, and from 1918 to 1920 preparing for his M.A. in the Harvard Graduate School of Arts and Sciences. His specialty was the Semitic languages, literatures, and history, with emphasis upon the Assyrian and Babylonian. To fulfill the conditions of his fellowship, he assisted Professor James Richard Jewett in the Arabic department, during the winter months when Professor Jewett was absent in California by taking over one of his classes in Arabic. He received his M.A. in 1920, soon after he had won Harvard's Billings Prize in oratory. His postgraduate education was completed in 1929, when he was awarded one of the few doctorate degrees ever given by Harvard in the Semitic field after having spent an additional year in residence (1926-27); he submitted a thesis entitled *Slavery in the First Babylonian Dynasty*. From 1917 to 1919, while continuing his work at Harvard, Maier was also acting as Lutheran pastor to the German internees quartered on Gallup's Island in Boston Harbor and to the German prisoners of war at War Prison Camp No. 1 at Still River, Massachusetts. In the summer of 1918 he was the representative of his Church at the United States Army's Camp Gordon near Atlanta, Georgia.

The young clergyman's first full-time position, with the Missouri Synod of the Lutheran Church, was in 1920 as executive secretary of its young people's organization, the International Walther League, and editor of the *Walther League Messenger*. When, in 1922, he became professor of Semitic languages and Old Testament interpretation at the Concordia

Edwyn Portraits

REV. WALTER A. MAIER

Theological Seminary in St. Louis, he retained the editorship of this magazine, the circulation of which increased from seven thousand to approximately seventy-five thousand under his direction. Until 1944 Maier remained in both his posts. In that year he was granted a leave of absence to devote his full time to the radio program the *International Lutheran Hour*, with the Seminary and the *Messenger* continuing his salary because his voluntary services on the radio hour afforded him no remuneration. In September 1945 he resigned as editor of the *Messenger*, while his leave of absence from Concordia Seminary, he reported in 1947, is likely to be extended indefinitely by the Missouri Lutheran Synod. Beginning at the end of April 1947, he also reported, there would be a new phase in his activities, when he would go to Europe as a special consultant on educational and religious matters to the United States Army.

Maier began his radio career over the Columbia Broadcasting System during the 1930-31 broadcast year, but the depression cut short that series. The current *International Lutheran Hour* was inaugurated in 1935 over a Detroit station of the Mutual Broadcasting System (with the backing of William S. Knudsen⁴⁰). In 1947 the sponsor is the Lutheran Layman's League, and the cost, about \$24,000 a week (that is, at full commercial rates), is met by voluntary contributions inspired by the program itself. It is heard over approximately 250 local outlets of the Mutual network and about another 250 local stations in the United States alone; and almost as many stations again carry it to countries ranging from Canada, and all except two countries in South America, to Europe, Africa, and Australia. Maier speaks for twenty minutes on each broadcast and, when necessary, his words are relayed

MAIER, WALTER A., REV.—*Continued* through native language recordings or by short wave. It has been estimated that each Sunday, from October to June, he reaches twenty million persons.

A fundamentalist, the radio pastor is, in his delivery, an old-time evangelist. According to William F. McDermott in a feature article in the *Christian Herald*, he spares no one in his denunciations as he urges all to repentance and confession. Although the clergyman usually broadcasts from within the locked confines of Station KFUO on the Concordia campus, without the presence of a studio audience, his delivery is impassioned and accompanied with emphatic gestures. McDermott in the *Christian Herald* describes him thus: "The words pour out of his mouth—and soul—in a perfect torrent. A manuscript is before him, but often he forgets it as, with eyes closed, he climbs a mountain peak of inspiration." The radio engineers do not try to modulate his voice: once when a cold forced him to soften his style, his mail dropped off as many as a thousand letters a day, and solicitous followers called to learn if he were ill.

In 1947 it was estimated that he had received about four million letters in the twelve years that he had been on the air, often as many as twenty-five thousand a week and eight thousand a day. (He employs a staff of seventy clerks to handle the influx.) A large percentage of the letters deal with the writers' personal problems, sometimes asking for advice, sometimes so worded that advice is imperative even though not requested. These Maier answers personally. Many of the responses to Dr. Maier's broadcasts and his solutions of problems have been spectacular. A Chinese Buddhist in Ciudad Trujillo, Dominican Republic, a cabaret singer in Quito, Ecuador, an atheist in Los Angeles, and many others have been converted to Christianity. One Negro woman's wish to have her children baptized resulted in the establishment of an entire new church congregation. Maier has also received letters telling him of crimes and suicides he has prevented by his preaching.

Not all of Dr. Maier's broadcasts originate in Station KFUO. When he goes on a speaking tour he will fill the Chicago Stadium, the Cleveland Auditorium, the St. Louis Arena, or the Detroit Coliseum to overflowing. On such occasions the broadcasts originate there. His November 1947 address to 8,000 Cleveland Lutherans emphasized the danger of communism in the United States. The communists, said Maier, "want to win over youth for revolution or to turn the rising generation from Jesus." The Lutheran pastor has preached before audiences at Harvard University, the University of Chicago, and several State universities, and once addressed the Institute of Public Affairs of the University of Virginia on Thomas Jefferson's ideals of religious liberty. He was one of the founders

of the collegiate religious society Gamma Delta and of the Hebrew honor society Aleph Beth Gimel. He is the author of many tracts and pamphlets and about fifteen books, most of them compilations of his weekly sermons. His *For Better, Not For Worse*, on marriage, is a best seller, running into several editions. A collection of his radio messages, called *Let Us Return Unto the Lord*, appeared in 1947. Said to have a newspaperman's sense of the timeliness of a subject, he writes each sermon with a possible change of introduction in mind. Maier is also a recognized scholar; in 1947 he is concluding "one of the most exhaustive tasks of the generation," a commentary on the Prophet Nahum, which has occupied him for more than ten years.

Walter A. Maier and Hulda Eickhoff, a former Indiana schoolteacher, were married on June 14, 1924, and are the parents of two sons, Walter Arthur, Jr., and Paul Luther, both interested in the ministry as a career. The senior Maier is a man of light complexion, blue-eyed and gray-haired. He is five feet six inches tall, and he has often been described as athletic. Among his favorite recreations he lists fishing, hunting, and swimming, collecting rare books and stamps, and railroading—with train models.

MARDIKIAN, GEORGE M(AGAR)
(mār-dīk'yān) Nov. 7, 1902- Restaurateur

Address: b. 262 O'Farrell St., San Francisco 2, Calif.; h. 850 Powell St., San Francisco 8, Calif.

As consultant on foods to the Quartermaster General of the United States Army, George M. Mardikian in 1947 completed a five-month tour of the Army kitchens in the American-occupied zones of Europe. The purpose of this assignment was to find ways in which the soldier's food could be made more relishing. Previously, Mardikian had been voluntary host to the delegates at the San Francisco Conference on United Nations Organization. The food expert is the proprietor of the San Francisco restaurant known as Omar Khayyam's, where he specializes in introducing his native Armenian dishes to American palates.

Born in Papert, Armenia, on November 7, 1902, George Magar Mardikian is the son of Magar and Haiganoush (Amirian) Mardikian. Among his ancestors are soldiers, teachers, and revolutionary leaders. His mother was the daughter of the head of an Armenian tribe, many members of which were massacred by the Turks in 1895. Reared for the most part in Constantinople, the boy was sent to secondary school in Scutari. At the age of fifteen he ran away from school to join an Armenian guerrilla force engaged in fighting the Turks.

When Armenia's independence was recognized, he returned to Constantinople and spent a peaceful interlude organizing Boy Scout troops. But in 1920 war again broke out, and Mardikian returned to the Army. He was captured by the Turks and nearly died of starvation before he effected his escape with the aid of an American who lent him a Near East Relief uniform as a disguise.

After a brief visit to his mother in Constantinople, the youth decided that his future lay in the United States, where a brother and a sister were already established. He left for that country one hour before the Turks arrived at his home to recapture him. Mardikian joined his only brother Archie, already in the United States, sailing into New York harbor in July 1922. He had almost no money and literally no knowledge of the English language. With a railroad ticket supplied by his brother, George Mardikian traveled to the West Coast with a tag pinned to his lapel, bearing his name and destination. "For eight days I ate nothing but potato salad," he has said, "because I knew how that looked on the menu and was afraid to point to anything else." In San Francisco he got a job as a dishwasher in a restaurant called Coffee Dan's at a salary of twelve dollars a week. Later he became a bus boy and a counter man, then a restaurant manager.

In 1928 the young Armenian received his citizenship papers. Shortly afterward he signed as a steward on a round-the-world cruise ship. During his travels Mardikian would stop off and take any kind of job in the kitchens of restaurants under famous chefs so that he might cull the finest recipes. In the Armenian monastery on San Lazzaro Island, which possesses a large collection of ancient manuscripts, he traced the history of Armenian cooking back several thousand years.

On June 1, 1930, Mardikian was married to Nazenig Ruzvanian, and two years later they realized their ambition when they opened their own restaurant in Fresno, California, which has a large Armenian colony. The new enterprise was called Omar Khayyam's, after the Persian epicure and poet who wrote the *Rubaiyat*. Their restaurant soon began to show a profit; by 1937, according to the *Saturday Evening Post*, it "had become a fixture of Fresno society." Mardikian, discovering that the site of Coffee Dan's, where he had begun his career, was available, there established the San Francisco Omar Khayyam's in 1938. The new restaurant, too, soon became successful; Mardikian in 1946 grossed about \$2,600,000 from his restaurants, owns a chain of sandwich shops (Chestnut Tree Sandwich Shops), and has a weekly radio program (in 1947 Mardikian is president of radio Station KEEN in San Jose and is NBC's authority on cookery on the West Coast).

During World War II Mardikian served all wounded servicemen and all servicemen of Armenian parentage free of charge; he is continuing this practice. He instituted a food-saving program: to every guest who returned a clean plate to the kitchen, he refunded 10 per

Leon Lazarian

GEORGE M. MARDIKIAN

cent of the check in War Savings Stamps. In 1945 he volunteered to supervise the commissary at the United Nations Conference in San Francisco. Lunches and teas for the fifteen hundred delegates were served, under the direction of Mardikian (who received no salary), five days a week in the San Francisco Opera House. *Life* noted that to the delegates Mardikian was "the most favorably known man in America." Mardikian himself said, "Peace in our time can well depend upon whether we soothe or insult the gastronomic tastes of our guests."

Continuing his self-imposed task of spreading the gospel of good eating, Mardikian turned his attention to Army food. Brigadier General Milton O. Boone, chief of the Quartermaster Corps in the European theater, asked for Mardikian's services as Expert Food Consultant to the United States Army. Mardikian spent four and a half months making a tour of the United States occupied zones in Europe. He ate in Army messes, lectured to Army cooks and mess sergeants, criticizing them for not using "eye appeal" in dishes and telling them they stood in the role of mothers to American soldiers. Supplementing his informal talks, he gave a weekly radio broadcast over the Allied Forces network, and wrote for *Stars and Stripes* a weekly column, called *George Mardikian's Cook's Tour*. He again refused payment for his services. Returning to the United States in March 1947, Mardikian issued his report to the Army. An Army cook, he believed, should be made to feel that his position is an honor and not a chore. He also suggested that all West Point cadets be given a short course in foods.

The author of several articles, he has also written a cookbook, *Dinner at Omar Khayyam's* (1944). It is dedicated to the principle that Mardikian's exotic-sounding Armenian dishes

MARDIKIAN, GEORGE M.—Continued

can be prepared by the American housewife without recourse to rare ingredients. The cookbook received the favorable attention of several critics, one of them describing the author and his work, respectively—"Mardikian is a rambunctious, amusing showman. . . His book is charming, and full of the best smell and taste of life" (*Chicago Sun*).

Mardikian is a member of the California Writers' Club, the Boy Scouts of America, the San Francisco Opera Association, and the Save the Children Federation. He is president of the American National Committee to Aid Homeless Armenians. Mardikian's church is the Old Armenian Gregorian. The restaurateur, who weighs 235 pounds, has been described as "the big man with the bright face" by William Saroyan, who wrote the foreword to Mardikian's book. Mardikian's brown hair is graying and thinning. His height is a half an inch under eight feet when he is wearing his two-foot chef's cap. He names his hobbies as photography, fishing, and helping Armenian students to obtain an education in the United States.

MARSHALL, GEORGE C(ATLETT)

Dec. 31, 1880- United States Secretary of State; Army officer

Address: b. c/o Department of State, Washington, D.C.

NOTE: This biography supersedes the article which appeared in *Current Biography* in 1940.

When General George C. Marshall became United States Secretary of State in January 1947, having been named to the Cabinet position earlier in the month by President Truman⁴⁶, he was the first career soldier to assume that post. This appointment climaxed forty-five years of service in the United States Army, during which period he advanced from the rank of second lieutenant to become Chief of Staff of the Army of World War II and General of the Army (now permanently), the highest American military rank. Marshall's previous work of a diplomatic nature included meetings with leaders of Allied Governments during the war and his mission as American special envoy to civil war-torn China. As the Secretary of State, the General, who, it is said, preferred to retire but accepted the position solely out of a sense of public responsibility, has formulated a foreign policy (the Marshall Plan or the European Recovery Program) which includes economic aid to im-

poverished European nations and aid of a military nature to those combating "foreign aggressions." In United Nations conferences he has introduced measures designed to help the organization toward the achievement of world peace.

George Catlett Marshall was born December 31, 1880, in Uniontown, Pennsylvania, to George Catlett and Laura (Bradford) Marshall. He is the descendant of a long line of Americans primarily of Southern stock, his parents themselves being Kentuckians who had settled in Pennsylvania. He is related to Chief Justice John Marshall, one of the most eminent of American jurists, through one of his forebears, the Reverend William Marshall, an uncle of the chief justice. The elder George Catlett was a prosperous businessman engaged in the operation of coal and coke industries in the southwestern region of his adopted State. In the Marshall family there were two other sons, William (who died in infancy) and Stuart, and a daughter, Marie.

Although from his earliest years he had planned to become a soldier, young George Marshall, when he entered the Virginia Military Institute in 1897, is said to have shown little of his future promise—he was a "long, a lean, and a gawky cadet, sensitive and shy." During his free hours Cadet Marshall studied the terrain of the old Civil War battlefields, in the neighborhood of the school. Despite his unpretentious beginning at the college, Marshall was graduated in 1901 as Senior First Captain of the Corps of Cadets, being voted to the highest cadet rank at the institute by his classmates; scholastically he was fifteenth in his class. In his final year at V.M.I., Marshall also became an outstanding player on the college's football team and later a tackle on the All-Southern Eleven.

In February of 1902 the twenty-two-year-old V.M.I. alumnus was commissioned a second lieutenant in the United States Army. Attached to the Thirtieth Infantry stationed in the Philippine Islands, the second lieutenant remained there until November 1903, returning with his regiment to quarters in Oklahoma Territory. Then, after several years' duty in the West and on the Pacific Coast, Marshall was selected as one of the trainees to be sent to the Infantry-Cavalry School at Fort Leavenworth (Kansas), of which he was a senior honor graduate in 1907. In March of the same year he was promoted to the rank of first lieutenant. It was a decided handicap in that era for a career soldier not to have been a product of West Point. (Before the youth had entered the institute his father had attempted to obtain an appointment for him to West Point but failed because he was a Kentucky Democrat in a Republican Pennsylvania district.) Because of his V.M.I. education, because promotions were few in peacetime, and because of rigid army seniority laws, future advancements in grade were to come slowly to him.

Lieutenant Marshall was next assigned to study at the Army Staff College, also in Fort Leavenworth, an institution which, patterned after European counterparts, was founded by

the War Department in 1903 to train staff officers. At the Army Staff College, wrote Don Cook in *Fighting Americans of Today*, Marshall's "love of military theory, as well as his sixth sense about strategy, served him well." The brilliant student—he headed his class—was instructor there for two years after he was graduated (1908), teaching men whose rank usually was above his. Marshall's work following this position consisted of practical field duty as inspector-instructor of the Massachusetts National Guard (1911-12) and as officer with the Fourth Infantry in Arkansas and Texas until the summer of 1913.

For a second time, from the middle of 1913 until the spring of 1916, Marshall saw duty in the Philippines, in the last year as aide-de-camp to General Hunter Liggett. It was during the period when maneuvers involving Manila's defense were being held that Marshall's ability as tactician brought him the acclaim of his superior officers. Ushered hurriedly into command of the defending Field Force when its chief of staff fell ill, Marshall dictated a field order, providing for protection of Corregidor and Bataan Peninsula, which won the day for Marshall's Field Force. General James Franklin Bell, the departmental commander (formerly Chief of Staff of the Army), announced later to his staff that the lieutenant's plan was the best he had ever seen. Calling Marshall "one of those rare men who live and dream in their profession—a soldier who is not satisfied with daily duty superbly done," General Bell ended with these words: "Keep your eyes on George Marshall. He is the greatest military genius of America since Stonewall Jackson."

On his return to the United States in May 1916 (he became captain in July) Marshall's numerous assignments included those of aide-de-camp in San Francisco to General Bell, of executive officer in a Civilian Training Camp at Fort Douglas (Utah), and again of officer on General Bell's staff at Governor's Island (New York). His ability to obtain the utmost in efficiency from soldiers in his charge was recognized—they did not, it is said, resent his disciplinary efforts. When the United States was drawn into World War I, Marshall, as a member of the General Staff, in July 1917 accompanied the first convoy of the First Division to France. In the sector east of Lunéville (fall of 1917), at the St. Mihiel front (January to March 1918), and at the Picardy and Cantigny battle areas (March to July of the same year), the captain's tasks were those of a G-3 or operations officer to that division, the American section earliest involved in important combat. By August 1918 Marshall had attained the rank of a colonel, having become a major in August 1917 and a lieutenant colonel (all three were temporary ranks) in 1918.

Not long before General John J. Pershing organized, early in August 1918, "the first great American Army and took personal command," Marshall had been sent to General Headquarters at Chaumont where he was ordered to formulate plans for the St. Mihiel offensive. Still occupied with drafting these he was de-

Press Assn., Inc.

GEORGE C. MARSHALL

tailed to the First Army (in August) where his added assignment consisted of "transferring some 500,000 troops and 2,700 guns"—within two weeks and at night—to their new position at the Argonne front in preparation for the Meuse-Argonne offensive. In his diary Pershing, in praising Marshall's well-prepared plans, reveals that the enemy detected nothing of these large-scale movements. In October Marshall was released from his post at GHQ to become chief of operations of the First Army, then still in action in the Meuse-Argonne sector; and in the succeeding months until the spring of 1919, when he was recalled to General Headquarters to aid in outlining the projected advance of the American Army into Germany, he served as Chief of Staff of the Eighth Army Corps.

Shortly after the Armistice was declared he had an opportunity to retire as a soldier to accept a lucrative position in private business. Marshall, nevertheless, preferred the Army: in May 1919 he had become aide-de-camp to Pershing (both returned to the United States in September). The General and Marshall (Pershing's opinion of him—"He's a man who understands military"—was the General's highest form of praise), worked together in Washington, D.C., to obtain legislative support for their national defense measures. Their recommendations, designed to eliminate the conditions of unpreparedness responsible for many World War I military blunders, were incorporated in the National Defense Act (June 1920), which provided for a trained army of 450,000 men. Congress, however, in the wave of postwar isolationism, continually neglected to allocate the funds needed and the Act remained merely a paper act. In June of 1920, too, Marshall's rank reverted to that of captain, but he became a major one month afterward.

(Continued next page)

MARSHALL, GEORGE C.—Continued

Lieutenant Colonel Marshall (he was advanced in 1923) was aide to Pershing until 1924. For the next three years he was attached to the Fifteenth United States Infantry stationed in Tientsin, China. By 1927 he was again in the United States acting as instructor at the Army War College (Washington, D.C.) and in that year was selected Assistant Commandant of the Infantry School at Fort Benning (Georgia). During his five-year tenure he transformed the infantry college "from a mere school of technique into an important school of command for junior officers" and "developed new tactical methods and fathered a plan by which within a few hours foot troops can be taught" all that is required about close-order drill. From 1932 until his initial association with the office of the Army General Staff in July 1938 Marshall served successively as Commander of the Eighth Infantry at Fort Screven (Georgia) and at Fort Moultrie (South Carolina) during 1932-33, as senior instructor of the Illinois National Guard in the years 1933 to 1936, and as commander (August 1936) of the "Red" forces in the Second Army Maneuvers in Michigan and (August 1937) of the "Red" forces in the Fourth Army Maneuvers at American Lake, Washington. Meanwhile, in 1936, he was made a brigadier general, having been a colonel since 1933, and was then given charge of the Fifth Infantry Brigade at Vancouver Barracks (Washington).

When Brigadier General Marshall assumed his General Staff post in July 1938 his title was that of Assistant Chief of Staff in the War Plans Division in the American capital. General Malin L. Craig⁴¹, then Chief of Staff, and Louis Johnson⁴², Assistant Secretary of War, who were primarily responsible for Marshall's appointment, found in him all the qualities, including physical ruggedness, which they, in the light of explosive international events, deemed requisite in an officer working with an alert and newly energized War Department and General Staff. In October Marshall became Deputy Chief of Staff; nine months later (July 1939) he was designated Acting Chief of Staff, a post which he held until September (1939) when he was chosen Chief of Staff, acquiring the rank of general. Thirty-four officers (twenty major and fourteen brigadier generals) preceded Marshall in order of degree; but President Roosevelt⁴², after a conference with General Pershing, decided that the Pennsylvanian was the most capable man for the job. In December 1944 Marshall became General of the Army, the recently created five-star (highest) rank.

The long-time advocate of military readiness, once again, while on the General Staff, had the opportunity to influence legislation providing for expansion of the armed services, for training and mobilization of peacetime forces, and for additional defenses both at home and in the American possessions. Despite warnings by press, radio, etc., Marshall and his co-workers received little support for their measures from Congress or the American people. Only with the debacle of France and the British evacua-

tion at Dunkirk did Americans in official quarters take action. At that time—the summer of 1940—Marshall "urged the establishment of Selective Service and the federalization of the National Guard for a year of training," which program Congress adopted in the fall. So as to alleviate the grave national emergency which the Chief of Staff, five months before the United States entered the war, declared existed, he obtained an eighteen-month extension of training for the two classes of recruits; and in the autumn (1941) the Army detailed about one million men to maneuvers—the largest peacetime operations in American history—the handling of which was evidence that "great progress . . . had been made in the training of the Army higher commanders, staffs, supply services, and troops during the year which preceded." Unlike many of his predecessors and contemporaries in War and Navy Department bureaus, Marshall as Chief of Staff was to maintain friendly relations with legislators and the press and to impress all questioners at military affairs committee meetings and elsewhere with his knowledge of the subject under discussion.

As "professional head of the nation's military establishment and commander of the field forces" responsible by Executive Order (March 1942) only to the President, Marshall directed the building and arming of a wartime force which reached the proportions of eight and a quarter million men by May 1945 and the construction of far-flung battle and supply lines. In that same period of time the air force (Marshall is known to be air-minded) grew to 69,000 planes of all types, the officer corps alone reached 764,000 men. His staff and field officers—Eisenhower⁴², McNair⁴², Arnold⁴², Somervell⁴², etc.—were men he had tested in every way possible to ascertain their fitness for command; officers who by right of seniority should have held high posts were disregarded in favor of younger, more able soldiers who were appointed by Marshall without regard to personal favoritism. The reorganization of the Army (1942) into Ground, Air, and Service Forces under the Chief of Staff and an Operations Division under the General Staff, the co-ordination of military and naval strategy by the United States Joint Chiefs of Staff, and close cooperation with civilian and war production agencies also were to contribute their share to the eventual winning of the war. From 1941 when work on the atomic bomb was begun, supervised by the Office of Scientific Research and Development, General Marshall was one of the members of the policy committee guiding the atomic studies of American and British scientists.

A member also of the Combined Chiefs of Staff of the United States and Great Britain (the group maintained liaison "with the Soviet Union through an Allied Military Mission to Moscow, and with China by the Allied Military Council at Chungking"), Marshall exercised an important influence on United Nations strategy. He recognized the necessity of supplying equipment to all anti-Axis nations and guided the distribution. Many of his tasks were partially

diplomatic: he accompanied Roosevelt to meetings of leaders of the other Allied countries. In August 1941 he was present at the conference at sea between the President and Churchill⁴², which resulted in the adoption of the Atlantic Charter. Between December 1941 and January 1942 he assisted with Roosevelt, Churchill, and the Combined Chiefs of Staff at a meeting which set up "principles of unity of command in the Far East." Other conferences, some attended by Stalin⁴³ and Chiang Kai-shek⁴⁴, were those at Casablanca (January 1943), Quebec (August), Cairo-Teheran (November-December 1943), Yalta (February 1945), and with President Truman at the Big Three meeting in Potsdam (August 1945). Marshall's plan for conquering Germany by invading Western Europe instead of Churchill's, which arranged for troops to enter the Continent by way of the Balkans, was accepted by the Combined Chiefs of Staff in April 1942. Although Marshall, whose character and capabilities had impressed foreign leaders, was mentioned in the press (in 1943) as the possible choice for Supreme Commander of the Anglo-American forces in the West, he continued to direct the over-all strategy and General Dwight D. Eisenhower was given the post of Supreme Commander in the European theater.

In November 1945, at his request, Marshall secured his release from duty as Chief of Staff and was succeeded by General Eisenhower. Later the same month Truman appointed Marshall "Special Representative of the President to China, with the personal rank of Ambassador." Before he left for his new assignment, he was called to testify before a Congressional committee seeking cause for the lack of suitable warning to American forces at Hawaii in December 1941 of the coming break with Japan. The earlier conclusion of the Army report (printed in the *New York Times*, August 30, 1945) stated, in respect to Marshall, that he "failed in his relations with the Hawaiian Department to keep it fully advised of the tenseness of the situation" and "to investigate the readiness of General [Walter C.] Short's⁴⁵ command" on the island. During the course of the hearings (November-December 1945) Marshall asserted that he considered the Army commander in Hawaii to have been sufficiently alerted to possible attacks, that he had no recollection of having seen Short's reply to his warning—it was seen by subordinates and other officials none of whom had been aware from the reply of insufficient precautions, and that he had not visualized any attack upon Pearl Harbor, believing that it would constitute too much of a risk for Japan.

For some months after Marshall replaced Patrick J. Hurley⁴⁶ as special envoy to China, the divided Asiatic nation appeared capable of unification. Marshall on his brief return to Washington in March 1946 reported that American Marines were aiding the Chinese Government to deport to their homeland the remnants of Japanese forces. Through Marshall's mediation a number of tripartite teams composed of Americans, Chinese Communists, and National-

ists (Kuomintang) were to be sent to Manchuria to keep the peace between the two major opposing Chinese forces in that section when Soviet Russia withdrew. As a means of preventing famine, creating employment, and helping to institute a democratic Government, he urged a loan to China. Little had been accomplished by his mission when he was recalled to Washington in January 1947 to assume the Cabinet post of Secretary of State. In a statement issued to the public in the same month he reviewed the complexities which had prevented settlement of China's problems (*The Department of State Bulletin*, January 19, 1947). A dominant party of reactionaries in the Kuomintang and extremists among the Communists were responsible for obstructing unification, he alleged; those liberal democratic groups among Communists drawn to the party primarily because of the corruption in local governments, those progressive members of the Kuomintang and other factions must be encouraged under the leadership of Chiang. He deplored also "the dominating influence of the military" which "accentuates the weakness of civil Government in China." As a means of enabling the two opponents to come to terms, Marshall late in January withdrew all but a handful of Marines from China. "War," he had once said, "is the most terrible tragedy of the human race and it should not be prolonged an hour longer than is absolutely necessary."

Although different newspapers criticized the increase in the number of professional soldiers being appointed to civilian diplomatic posts of many varieties, most observers of American domestic affairs lauded the choice of the soldier and statesman Marshall, for the State Department secretaryship, vacated by James F. Byrnes⁴⁷ because of illness. To interrogators who sought to learn whether or not Marshall would be a 1948 Presidential candidate, he replied that he considered his new office to be a nonpolitical one, for himself, and that he refused to be considered a candidate for any political office. (Like many Army officers, Marshall has never voted.) At his first press conference in February 1947 he declared that the international control of atomic energy and the general issues involved in preserving the peace must be solved before any discussions on world wide disarmament would be valid. Among the other subjects mentioned was that of universal military training. In his biennial report of 1945 (appearing in the *New York Times*, October 10, 1945) Marshall, then Chief of Staff, had injected into his history of the final two years of the war a plea for postwar preparedness, of which universal military training was one phase. (All of Marshall's official war reports, along with those of General Arnold and Admiral King⁴⁸, have been published in *The War Reports* [1947]. In *Selected Speeches and Statements of General of the Army George C. Marshall* [1945], edited by H. A. DeWeerd, is to be found also his "expositions of military needs and policies.") For reasons of defense expediency Marshall, too, has supported unifying all departments for national defense under one department, with a civilian head. (While

MARSHALL, GEORGE C.—*Continued*

still Army Chief of Staff he had helped to found in 1946 the National War College.)

Other early actions of the new Secretary of State were reorganization of the State Department's intelligence unit and recommendations for aid to European displaced persons, continuance of relief abroad after termination of UNRRA, and for a publicly chartered corporation to control the short-wave foreign broadcasts, hitherto managed by the State Department. In addition, his recommendations to Congress included proposals to permit United States membership in the United Nations International Refugee Organization; and to ratify the peace treaties with Italy, Bulgaria, Rumania, and Hungary.

During March-April 1947 Secretary of State Marshall attended the meetings in Moscow of the Big Four Council of Foreign Ministers. Before he left for Moscow he had received a note from the British Foreign Office informing the United States Government that after March 31 Britain would withdraw her support from Greece and cease aid to Turkey. This announcement resulted in the formulation of what has been called the "Truman Doctrine," presented in an address by the President to Congress on March 12. Truman recommended \$400,000,000 of aid to Greece and Turkey, and the authorization of the "detail of American civilian and military personnel" to be advisers and supervisors of the investment. Marshall was described as the shaper, with Eisenhower, Dean Acheson, and others, of this "simple, declarative statement of new United States policy" to prevent the imposition of totalitarian regimes on European nations. In May the President signed the \$400,000,000 Greek-Turkish aid bill.

On March 10, 1947, the Council of Foreign Ministers convened in Moscow to discuss primarily the drafting of the German and Austrian peace treaties. (Marshall in February had revealed that the United States policy toward Germany was basically the same as that proposed in the Potsdam agreement [1945] and in James F. Byrnes's Stuttgart address [1946].) The Ministers' discussions, however, made little progress, one of the main hindrances being Russia's demand for reparations from current German production. Although observers had hoped that Marshall's call on Premier Stalin on April 15 would break the East-West impasse, there were no "concrete results," the matters talked about by Marshall and Stalin remaining a secret (*United States News*, April 25, 1947). The forty-six-day meeting of the council adjourned on April 24. During the conference a number of agreements—concerning Ruhr and Saar coal shipments to France, repatriation of German prisoners, etc.—were concluded.

On June 5, 1947, at the Harvard University commencement exercises, the Secretary delivered an address which developed into the so-called Marshall Plan, later officially named the European Recovery Program (ERP). The speech, on the European economic plight, stated in part: "Our policy is directed not against

any country or doctrine but against hunger, poverty, desperation, and chaos. Its purpose should be the revival of a working economy in the world so as to permit the emergence of political and social conditions in which free institutions can exist." He called upon all European nations desiring economic aid to submit to the United States a program of economic construction outlining the "part those countries themselves will take in order to give proper effect to whatever action might be undertaken by this Government." Upon Marshall's invitation, Bevin, Molotov, and Bidault met in Paris to discuss the Secretary's suggestions. In July, sixteen European nations, including Britain and France (Russia and her "satellite nations" boycotted the meetings), met at the Paris Economic Conference on the ERP and established the Committee of European Economic Cooperation (and four sub-committees), whose report in September stated that during 1948-51 member nations and Western Germany would require aid to the amount of \$22,440,000,000. Because of the need also for interim aid to prevent privation and communism, especially in France, Italy, and Austria, Marshall later in 1947 asked Congress for an allotment of \$597,000,000 for the purpose; in December a special session of Congress, in the Foreign Aid Act of 1947, voted \$522,000,000 for interim assistance. Marshall averred that action on the long-range ERP must be taken by March 1948. Earlier, in November, Marshall gave to the Senate Foreign Relations Committee an estimate of \$300,000,000 for proposed aid to China during 1948-49.

Secretary Marshall was present at the Inter-American Defense Conference (meeting in August-September in Petropolis, Brazil, near Rio de Janeiro) to draw up a mutual Western Hemisphere defense pact implementing the 1945 Act of Chapultepec. On September 2 the Inter-American Treaty of Reciprocal Assistance (also called the Treaty of Rio de Janeiro) was signed. It includes provisions for the peaceful settlement of all disputes between the nations of the Western Hemisphere and for united defense against outside aggression.

September 1947 saw Secretary Marshall's first appearance before the U.N. General Assembly. To prevent abuse of the veto he proposed that it not be used in peaceful settlement of disputes and in the admission of new members (the veto on "use of force to maintain peace" would be kept). He also proposed the establishment of a continuous-session, all-nation interim committee on peace security which would "consider disputes at the request of Security Council or individual states", "recommend special General Assembly sessions it deemed necessary", "determine whether this 'little assembly' should be made permanent." Other points included were the referring of the Korean independence question to the Assembly, and support of the partition plan for Palestine. The United States plan for the "Little Assembly" was accepted later by General Assembly delegates with some modifications.

On November 25 the four-power Council of Foreign Ministers met in London. The dis-

cussions reached another stalemate. Before Marshall's return to the United States (December 19), he concluded with Britain a bi-zonal pact under which his country was to assume financial and economic charge of the Anglo-American zone, political control to be handled equally by both nations. Charging Russia with responsibility for the failure of the London Conference, Marshall, in his radio address to the American nation, declared that whereas Soviet leaders and the Communist parties predict that the Western European civilization will not prove strong enough "to rise above the destructive effects of the war and restore a healthy society", "we, on the other hand, are confident in the rehabilitation of Western European civilization with its freedoms."

Among other of Secretary Marshall's actions in 1947 were his added changes in State Department organization: the creation of a policy planning staff, headed by George F. Kennan⁴⁷, to decide upon the Department's long-range foreign policy plans. Marshall also persistently urged greater appropriations, some of which he obtained, when the existence of the Department's Office of Information and Cultural Relations (of which the *Voice of America* foreign broadcasts are part) was threatened by Congressional budget cuts. Other actions were his appeal for legislation to create the St. Lawrence seaway, in conjunction with Canada (May); support of "discretionary authority" for the President "to send American military missions, consonant with American interests, to any country that asked for them" (June); and support of the Stratton bill to admit four hundred thousand European displaced persons into the United States (July).

For his service in World War I Marshall was the recipient of the Distinguished Service Medal (its Oak Leaf Cluster for World War II duty), the Silver Star, and the Victory Medal and German Occupation Ribbons, and for service in World War II, of the three theater ribbons without stars, and the National Defense Ribbons; he holds, too, the Philippine Campaign Medal. His foreign decorations include the Croix de Guerre with Palm and Legion of Honor, Grand Croix (France), Knight Grand Cross, Order of the Bath, Military Division (Great Britain), the Order of Suvarov, First Degree (Soviet Russia), and a number from Italy, Morocco, and various Latin-American republics. The D.Sc., D.M.Sc., LL.D., and D.C.L. are the honorary degrees awarded him. Among the clubs and organizations with which he is affiliated are the Army and Navy Club (Washington) and the Society of the National Shrine of the Bill of Rights (life member). His church is the Episcopal.

Marshall's marriage to his college sweetheart Elizabeth Carter Coles, a physician's daughter, took place in February 1902. Three years after her death in 1927, he was married (October 1930) to Katherine Boyce (Tupper) Brown, daughter of a clergyman and widow of Clifton S. Brown, a lawyer. Marshall's stepchildren are Molly Pender Brown Winn, and Clifton Stevenson Brown. (Allan Tupper Brown was killed in action in Italy in 1944.)

Together: Annals of an Army Wife (1946), written by Katherine Tupper Marshall, presents an informal biography of General Marshall and herself since their courtship.

A tall, lean, vigorous man with blue eyes, and graying sandy-brown hair, Marshall has been described as an "intellectual with something of the artist in his sense of language," and as a good-humored, equanimous individual with "force behind his quietness." His wife finds him neither "retiring nor overly modest" but possessing "a sense of humility and selflessness." An avid reader who considers Benjamin Franklin and Robert E. Lee his heroes, Marshall, for his occasional physical relaxation from his many duties, prefers walking, horseback riding, surf casting, or gardening at his Leesburg (Virginia) home, Dodona Manor.

MASON, JAMES May 15, 1909- Actor
Address: b. c/o London Films Ltd., 350 5th Ave., New York 1; h. Olleberrie Farm, Sar-ratt, Hertfordshire, England

Since his first appearance in motion pictures in 1935, actor James Mason, publicized in the American press as "Britain's popular screen menace," has gained a following which in 1946 won for him Britain's first national motion picture award. American movie-goers, impressed by his performance in *The Seventh Veil*, joined English fans in applauding him and "stirred up a trans-Atlantic postal storm."

The son of a wool merchant, James Neville Mason grew up in the mill town of Huddersfield, in Yorkshire, England, where he had been born to John and Mabel Hattersley (Gaunt) Mason on May 15, 1909. One interviewer, to whom he gave the facts, wrote of him as "an ordinary, rather dull little boy." On graduation from Marlborough College, he studied architecture at Peterhouse, Cambridge, obtaining his B.A. degree from the university in 1931 (in 1943 Cambridge awarded him the M.A. degree.) His amateur interest in acting made young Mason reconsider his choice of career. At the university he had taken part in stu-

JAMES MASON

dent stage productions, and he now resolved to become an actor.

Answering an advertisement in *The Stage*, he secured an engagement with a touring company in 1931 for the part of the melodramatic Grand Duke in *The Rascal*. He returned to London almost penniless after paying his railroad fare from the Midlands town where the company had been stranded, but with his brief training behind him, which enabled him to secure a series of engagements with repertory companies. In 1932 he toured with Brandon Thomas, the Noel Coward Company, and Hull Repertory, and in 1933 he was with Croydon Repertory. That year he made his London debut in the *Gallows Glorious* at the Shaftesbury Theatre and joined the Old Vic Company, playing with Charles Laughton, Flora Robson, and Roger Livesey. He had a role in the 1934 production, *The Queen of the Scots*, and in the same year was a member of the Dublin Gate Theatre Company.

British movie audiences first saw Mason in a part in *Late Extra*, which was filmed in 1935. He also appeared in several other low-budget films that year: *Troubled Waters*, *Twice Branded*, and *Prison Breakers*. Bit parts in such films as Alexander Korda's *Fire over England* and *The Return of the Scarlet Pimpernel*, Mason told C. A. Lejeune (motion picture editor of the *London Observer*), kept him eating during 1936 and 1937. In those years he was also seen on the screen in *Blind Man's Buff*, *The Secret of Stamboul*, *The Mill on the Floss*, *The High Command*, and *Catch as Catch Can*. On the London stage in 1936, in *Parnell*, Mason "accurately produced the effect that was intended for Captain O'Shea," although, added Derek Verschoyle, the *Spectator* reviewer, "his performance became a little monotonous." The actor's portrayal of Hannibal in Robert Sherwood's *Road to Rome* in 1937 was, according to Philip Stockil of the

English Review, "noble and convincing." In *Bonnet over the Windmill* (1937), however, in which Mason took the male lead, his acting was described as "anemic and slovenly."

Other of his stage engagements in 1937 included roles in *Pride and Prejudice* (in Dublin), *Miserable Sinners*, *A Man Who Has Nothing*, and *Flying Blind*. He was co-author of the latter, collaborating with Pamela Kellino, whom he had met while making the movie *Troubled Waters* in 1935 and to whom he was married six years later. In 1938 they also wrote, and appeared opposite each other, in the film *I Met a Murderer*. Describing this venture in a *Screen Guide* article (November 1946), Miss Lejeune told readers that Mason, together with Pamela Kellino and Roy Kellino (then her husband), "decided to prove a good picture could be made with a capital consisting chiefly of imagination and enthusiasm." Their production, which cost sixteen thousand dollars, was not a commercial success—in the opinion of Basil Wright (*Spectator* March 24, 1939), it "failed to make the grade"; in general agreement with other reviewers, however, he praised its photography and called it "a refreshing change from the usual cinematic fare, and. . . emphatically a film to be seen."

In 1939 Mason acted in several television broadcasts and toured with Entertainments National Service Association's first drama company in *Eight Bells* and *I Killed the Count*. (E.N.S.A. is the British USO.) For his performance as the young rake in *Sixth Floor* that year, he was cited by one reviewer (in the *New Statesman and Nation*) as "an actor to watch, a Gable in the making." In 1940 Mason appeared in the film, *The Patient Vanishes*, and toured in two stage productions, *Divorce for Christobel* and A. J. Cronin's *Jupiter Laughs*. He received his best London notices, reported John Osborne in *Life*, for his role as the lead in *Jupiter Laughs*, of which he was also the director.

Appearing in 1941-42 in a series of motion pictures which included *Hatter's Castle*, *The Night Has Eyes*, *Alibi*, *Thunder Rock*, *Secret Mission*, and *The Bells Go Down*, Mason's "first big hit," wrote a critic, was as the surly Marquis of Rohan in *The Man in Grey*, "a bad part," in the actor's own opinion. Such films as *Fanny by Gaslight* and *Candlelight in Algeria* (both in 1943), and *They Were Sisters* (1944) heightened Mason's popularity with the British public and made him sought after by producers both in England and Hollywood. In 1943 Mason had also made *They Met in the Dark* and *Hotel Reserve*.

It was the "handsomely produced, admirably acted" film, *The Seventh Veil*, which "established [Mason] as a star on both sides of the Atlantic." In it he played the part of the exacting guardian who dominates his ward; the forceful character was considered "an excellent vehicle for his talent." Next appearing in *Wicked Lady*, which was described as a poor costume drama, Mason was labeled in American newspapers and magazines as "England's cultured version of Humphrey Bogart," "glowering cinematic glamour boy," and the like.

Catering to popular demand, American motion picture houses presented revivals of a number of his early pictures (nine according to *Variety*) and billed his name in letters "out of proportion to the size of the roles he played in some of them"—a form of commercialism of which the actor has expressed his disapproval. In 1946 Mason, whose appeal to women audiences is well known, drew the most votes in a poll of 547,767 British movie fans (the actor was similarly acclaimed in 1947), and was the winner of the first national motion picture award for British films, a silver statuette, comparable to the Hollywood "Oscar." He is reputedly Britain's greatest film box-office draw and its highest paid screen star.

A severe critic of himself, Mason does not think highly of many of his films, wrote John Osborne (*Life*, January 6, 1947); Mason selects only four of the thirty-five in which he has appeared as having any real merit: *I Met a Murderer*, *The Seventh Veil*, *A Place of One's Own* (1944), and *Odd Man Out*. (His portrayal of the hunted Irish underground leader in *Odd Man Out* was highly praised upon the picture's release in 1947.) Too much publicity has been given him as the villain type, the actor has remarked, emphasizing that he has played the outright villain in only about three roles. But allowed a choice between a mediocre hero's part and a mediocre villain's, he added, he would always select the unsympathetic characterization as the more effective of the two. As for stage roles, Mason, objecting to revivals of classics, declared he has no desire to portray Hamlet: "It seems to me that it is a far more interesting contribution to our culture to do something that is at least progressive, something that will be in a small way a reflection of modern thought, than to be the seventeen hundredth person to play Hamlet." American journalists have described the actor as outspoken, particularly in his criticism of British film production.

On March 26, 1947, Mason made his Broadway debut in Jacques Deval's *Bathsheba*, in which his wife, Pamela Kellino, appeared opposite him in the title role. The Biblical play, intended as a drama but interpreted as a comedy upon Mason's insistence, was called tedious and ungainly. It closed after twenty-nine performances. Mason received mild praise from the New York critics: he was a competent King David, they generally agreed, though "not very grand or Biblical." During his stay in the United States the actor was also heard on the radio in a *Theatre Guild on the Air* presentation of *Bill of Divorcement*. *The Upturned Glass*, which Mason made in 1946, was released in England in 1947 and was termed "a fictional film with a documentary background." The scenario was by the actor's wife and John Monaghan, an American whom the Masons met while touring British Army camps with E.N.S.A. in 1944. In accordance with his contract with J. Arthur Rank, a print of the film was dispatched to the United

States for Mason's approval. When it opened in New York in November, a *PM* reviewer commented: "Though they have done it nicely and tied it up trickily, they have boxed him into a small package denying him scope and vista for his unique personality." To the New York *Post* reviewer it appeared that Mason "gives a notable performance, adding the unquestionable authority of his personality to a picture which would be little better than thrilling fiction without him." Meanwhile, Mason had not been able to appear in any American film because of a breach of contract suit instituted against him by producer David Rose. Despite the fact that no new Mason pictures were released that year, the trade paper, *The Motion Picture Herald*, found that he still led all other British stars in popularity for the year 1947.

Mason has called himself "American-minded," finding himself in harmony with the American emphasis on modern culture as opposed to the British regard for tradition. Arriving in New York with his wife in November 1946 on his first trip to the United States, he was enthusiastic in his praise of New York and the American radio, bands, and musicals. He prefers jazz to classical music and is especially an admirer of Duke Ellington and Erskine Hawkins. Among film stars, his favorites are Spencer Tracy, Jean Gabin, Lena Horne, Carmen Miranda, and Veronica Lake. Both Mason and his wife are lovers of cats—they brought their collection of five with them to the United States. Mrs. Mason is the daughter of Isidor Ostrer, a British economist and onetime film producer. Her first marriage to movie cameraman Roy Kellino ended in divorce. She is the author of several books, among them *Ignoramus Ignoramus*; this contains line drawings by Mason, who paints, draws caricatures, and also writes in his free time. He is "incessantly worried," reported John Osborne, by the thought that his talents may not be of superlative quality. The actor is actually taller than he appears on the screen: he is six feet in height, weighs 165 pounds. According to a *PM* writer, who saw in him "the dreamy artist type," he also gives a much less severe impression in person. He lives a sort of "recluse private life" in his own house and garden, Mason has stated, and avoids personal appearances and formal functions whenever possible. "He likes simplicity," added this writer, "exactitude, technique, integrity, honest partisanship, and the right word in the right place."

MEHTA, HANSA (mā'tā) July 3, 1897-
United Nations delegate; legislator

Address: b. c/o United Nations, New York;
h. 16 Altamont Rd., Cumballa Hill, Bombay 26,
India

Obtaining political and economic rights for women is part of the broader purpose of insuring a complete "Bill of Rights" to all citizens of the world by action and by legislation. In view of the interrelation between these two objectives, Hansa Mehta, the Indian delegate to the United Nations Commission on the Status of Women, also serves on the U.N. Commission on Human Rights. Drawing upon her experience as an educator, justice of the peace, legislator, and nonviolent revolutionist, Mrs. Mehta in February 1947 submitted a tentative international "Bill of Rights" to the Human Rights Commission.

HANSA MEHTA

Hansa Mehta, who in marriage was again to have the surname Mehta, was born into a Brahman family, in the town of Surat (the first British settlement in India), in the northern division of Bombay on July 3, 1897. Her grandfather, Ras Bahadur Nandshankar Mehta, teacher and administrator, was the first author of novels in the Gujarati language; and her father, Sir Manubhai Mehta, served as Prime Minister of the States of Baroda and Bikaner, and as a Cabinet minister in Gwalior. Her mother was the former Harshad Kumari M. Desai. With the encouragement of her father Hansa Mehta, as well as her four brothers and four sisters, sought a complete and well-rounded education. After her graduation from the Maharani High School in Baroda, she won the Chatfield Prize and Gangabhai Bhat Scholarship to the University of Bombay. One of only three girls in the 1918 class of Baroda College, she obtained her degree with high

honors in philosophy. The next year was spent in England, where she attended the London School of Economics.

In the course of her European travels during the post-World War I years, Hansa Mehta was present at the Women's International Conference held in 1920 at Geneva. Her itinerary later included the United States—she arrived in America in 1922 with the intention of touring the country widely. During the midsummer of 1923 she attended the First Educational World Conference at San Francisco. On her return to India by way of Japan, she was caught in the earthquake that devastated that country in the fall of 1923. Within six months after returning to India, Hansa Mehta married a non-Brahman, Dr. Jivraj Narayan Mehta, a London-educated physician who was then chief medical officer of the State of Baroda. The couple settled in Bombay, where their two children, Anjani, a daughter, and Harshraj, a son, were born.

Her activity in education continuing, the young mother became a member of the schools committee of the municipality of Bombay in 1927, and remained in that post until 1931. It was in 1927, too, that she was a member of the first session of the All-India Women's Conference; subsequently she organized its Bombay division, acted as its vice-president and committeeman, and was elected its president in 1945. For a year (1930-31) she was secretary of the National Council of Women in India. Previously, in 1929, she had been made president of the Gujarati Stri Sahakari Mandal (the Gujarati Women's Cooperative Society), for which she organized three exhibitions: the Women's Arts and Crafts Exhibition (1934), the Art in the Home Exhibition (1937), and the Child in the Home Exhibition (1939).

At the inception of the Congress movement in 1930 (under the leadership of Mohandas K. Gandhi⁴²), Hansa Mehta resigned the post of justice of the peace, which she had held since 1928. For her participation in the civil disobedience campaign of 1930, she was sentenced to three months in prison. Her second arrest took place in 1932, but she was not detained again until the end of 1940 and the beginning of 1941, when she spent five months in the Yeravada prison for civil disobedience. At this time Mrs. Mehta was a member of the Bombay Legislative Council, to which she had been elected in 1937 and re-elected in 1940. From 1937 until 1939 she had been parliamentary secretary to the Minister of Education and Health. Another of her civic activities was serving as president of the Bombay Provincial Primary Education Board for the three years from 1939 to 1942. "I do not think that American women can realize what it is like to live in a country where only 2 per cent of the women are literate," Mrs. Mehta has said to a *Christian Science Monitor* interviewer. "There is a very great deal to be done in India, even to teach the majority of our people to know the enlightenment and joy that may come from the ability to read."

At the London Conference in February 1946, a subcommission to the United Nations Com-

mission on Human Rights was established. The first meeting of this Subcommittee on the Status of Women, held in New York two months later, was attended by women delegates from seven countries, among whom Mrs. Mehta was India's representative. A report on the aims of the subcommission was formulated during the New York session. Its first purpose was the extension of political rights, considered the *sine qua non* for advancement of women. (This was later presented as a resolution to the General Assembly of the U.N. and passed unanimously on December 11, 1946.) The remainder of the report considered the various fields of progress for women: economic, social, civil, and educational. Changes in discriminatory legislation concerning marriage, custody of children, right to nationality and to property were recommended.

When the subcommission proved impracticable, at the second session of the Economic and Social Council, in June 1946, it was raised to the standing of a full commission, one of those under the Economic and Social Council. The membership was to be composed of delegates from the Human Rights Commission and additional delegates from the participating nations, selected according to individual capacity from a nomination list submitted by the respective governments. It was then decided to make a survey of laws pertaining to the status of women, using an earlier study made by the League of Nations as a basis. In its second report, submitted to Social and Economic Council on February 14, 1947, the Commission on the Status of Women presented as its method of proceeding, the stimulation of world public opinion "in favor of raising the status of women" and the collaboration of the commission "with United Nations organs, governments, specialized agencies, nongovernmental organizations, and any experts deemed necessary." Since its powers were limited to study and advisory functions, the commission resolved to form relations with nongovernmental organizations (such as women's clubs) in order to secure implementation of their recommendations. By way of collaboration with other U.N. agencies, the commission requested a report on the status of women in trust territories from the Trusteeship Council, declared its willingness to work with the Housing and Town Planning Service proposed by the Social Commission, and instructed the U.N. Secretariat to prepare information and publications for newly enfranchised women. The establishment of crèches and kindergartens for the care of children was a point stressed in the commission's report, as was the installation of labor-saving devices in homes in order to allow the housewife more time to take part in public affairs.

To Mrs. Mehta, "equal opportunity" for women is not synonymous with their "identification" with men. "There is a genuine difference," she has observed. "While the women of the world must have, if we are to move forward, an equal standing with men in all phases of life and endeavor, they must also maintain their essential differences; for it is these very differences, each offered to the other

in a spirit of active cooperation and understanding, that will make for a more comprehensive, more sensitively and finely balanced cultural and economic life for every man and woman on the earth."

Mrs. Mehta was also assigned as a delegate to the Commission on Human Rights, to which she presented in February 1947 a draft resolution on human rights. Her recommendations for an international "Bill of Rights" included "the right to access to the United Nations without risk of reprisal whenever there is an actual or threatened infringement of human rights . . . the right of equality without distinction of nationality or political belief . . . the right to education . . . the right to property." Mrs. Mehta also urged the inclusion of a definition of the relationship between the individual, the community, the state, and the international organization, as well as the establishment of means of enforcing the "Bill of Rights" in the event of its violation.

As a member of the Constituent Assembly of India, Mrs. Mehta serves on its advisory committee and on its subcommittee on fundamental rights. Her writings have been concerned with the status of women, and with other political rights as well: she is the author of the studies "Women Under the Hindu Law of Marriage and Succession," of "Civil Liberties," and of "Postwar Education with Special Reference to Women's Education." Mrs. Mehta has also written several story books for children in Gujarati, besides translating *Hamlet* and *The Merchant of Venice* into that language. Since 1931 she has been a fellow of the University of Bombay; she is also a fellow and a member of the syndicate of the Shri Nathibai Damodar Thakarsy Women's University, of which she was elected vice-chancellor in 1946. That year she was chosen vice-president of the International Alliance of Women for Suffrage and Equal Citizenship. Five feet two inches tall, 120 pounds in weight, Hansa Mehta has brown eyes and hair, and possesses an air "of tranquillity hardly ever realized by the average woman of the West." Of her recreations she has said: "In my school and college days I was fond of games, especially badminton and riding. My chief hobby, however, was reading, which still persists."

MENOTTI, GIAN-CARLO (mā-nôt'tē jän-kär'lō) July 7, 1911- Composer; dramatist; director

Address: b. c/o Metro-Goldwyn-Mayer, Hollywood, Calif.; h. Mt. Kisco, N.Y.

Gian-Carlo Menotti, composer-librettist whose operas *The Medium* and *The Telephone* were first presented in 1946, has also won acclaim as a dramatist and director. In addition to other operatic works, all of which have been sung in English, Menotti has composed ballet and chamber music.

Cadeigliano, on Lake Lugano near Milan, is the birthplace of Gian-Carlo Menotti. He was

GIAN-CARLO MENOTTI

born there July 7, 1911, and lived there for the first eleven years of his life. He was the sixth child to be born in a family of ten children. His father was a retired importer and his mother acted as Gian-Carlo's first music teacher. All the young Menottis were musical: they played in their own chamber music group every evening, and seated in the family box at La Scala, young Menotti listened to opera regularly, hearing Toscanini⁴² conduct the works of the great composers. The boy, who had started to compose music at the age of six, wrote an opera, *The Death of Pierrot*, when he was eleven. Young Gian-Carlo Menotti was also enrolled at the Milan Conservatory. By the time he had reached seventeen, wrote Howard Taubman in the *New York Times Magazine*, Menotti had become a somewhat spoiled prodigy, a pianist who was lionized in the salons of the most distinguished families. "He treated his studies cavalierly and learned little," explained Taubman. It was his mother who took action to end this state of affairs.

Brought to America by his mother in 1928, young Menotti was enrolled at the Curtis Institute of Music in Philadelphia. "Shy, lonely, unable to speak English, he was thrown on his own resources." He studied on a scholarship with Rosario Scalero at Curtis and wrote small pieces for string orchestra and piano, a group of childrens' piano selections, fugues, canons, variations, and sonatinas, as part of his work in composition at the school. Then, in 1933, at the age of twenty-two, he conceived an idea for an opera. Completed two and a half years later, *Amelia al Ballo* was based upon Menotti's own Italian libretto, which was later translated by George Mead as *Amelia Goes to the Ball*. It was presented by the Curtis Institute at the Philadelphia Academy of Music on April 1, 1937, and conducted by Fritz Reiner⁴¹. The work was well received. "Menotti has not

attempted to achieve originality merely through discord. . . . He has simply spoken his heart and the result is gratifying," wrote a critic in *Musician*. "From start to finish [the music] reflected youth, refreshingly unstilted, and cleverly interwoven with a humorous vein." The story of the flighty female who must go to the ball at any cost was presented at the Metropolitan Opera House six times in the 1937-38 and 1938-39 seasons; it was scheduled for revival in 1947-48.

Heralded as American opera's most promising composer, Menotti was urged to write another opera, this time for radio. Commissioned by the National Broadcasting System, he composed *The Old Maid and the Thief*, first heard on the *Toscanini Hour* on April 22, 1939. *Newsweek's* judgment (May 8, 1939 issue) was: "[Menotti] frequently topped his previous effort with a pert sense of characterization that poked its impish head from every loudspeaker. . . . Many forgot they were merely listening; they felt they were looking." Composer David Diamond, in *Modern Music* (June 1939), praised the "witty, ebullient score," but warned Menotti of "a tendency toward over-lushness in every musical phrase and toward pouring into the necessary harmonic texture an overdose of 'sweet' notes." *The Old Maid and the Thief* was later adapted for the stage, and subsequently saw more than one hundred performances. Since it required only four singers and forty pounds of stage properties, the opera was transported easily by amateur groups to Army camps and hospitals during World War II.

The second of Menotti's operas to become a part of the Metropolitan Opera repertory was *The Island God*, the libretto of which was written in Italian by the composer and translated into English by Fleming McLeish. Received with "cordiality" by the audience, the opera won less praise from critics. The characters of the one-act philosophical tragedy, wrote Samuel Barlow in *Modern Music*, "unfortunately remained types, and the music never quite gave them a stature commensurate with their immobility." Wrote the *Musical Courier's* reviewer, "It is much too heavily scored and the *tessitura* of the vocal parts and weight of the orchestral writing are such that much of the text is wholly unintelligible." The same critic also wrote, "There is no question of Mr. Menotti's talent."

Commissioned by the Ballet Society, Menotti's new work, *The Telephone*, was first presented at the Heckscher Playhouse in New York City on February 20, 1947, as a curtain raiser for his other new opera, *The Medium*. The short *divertissement* was called "trivial," "pretentious," "precocious," but still "delightful." The opera it preceded, *The Medium*, had been produced previously at Brander Matthews Hall of Columbia University, on May 8, 1946. (The work was commissioned by the Alice M. Ditson Fund.) In its original form the opera was given five performances, before Menotti revised it. In the opinion of *Newsweek* (March 3, 1947), the "revised edition justified his [Menotti's] faith in the opera's potentialities." So enthusiastic was the recep-

tion given *The Telephone* and *The Medium* at the Heckscher Playhouse that Menotti and the Ballet Society decided to take the two operas to a Broadway theater.

At the Heckscher Playhouse the two Menotti works had been reviewed as music by music critics; at the Barrymore Theatre on May 1, 1947, the task of reviewing the bill was assigned to the dramatic critics. The "amalgamation of beautiful music and frightening melodrama" stated *Life* (June 9, 1947), established Menotti as a dramatist: "The medium's great scene, in which she grapples with her fear, is one of the most powerful conjured on the current stage," thought the *Catholic World*. "*The Medium* and *The Telephone* combine words, music, and storytelling with consummate artistry and great distinction. These works are good theater in any Broadway terms" (Howard Barnes of the New York *Herald Tribune*). John Chapman of the New York *Daily News* wrote: "An exciting stage novelty. Not often in any generation are a sense of theater and a sense of music born in the same individual. Such a happily gifted person is Gian-Carlo Menotti." Dissenting opinions, which were in the minority, doubted the "theatrical effectiveness" of the pieces. "For all his ambitions and musical gifts, [Menotti] has been pretty far from successful," wrote Richard Watts, Jr., in the New York *Post*. Record summer audiences, however, caused the repeated extension of the run in New York; after closing November 1, 1947, the bill was sent on tour of the principal cities of the United States and was reported in demand for production abroad.

Broadcast on the radio and available on Columbia records, *The Medium* and its short companion piece, *The Telephone*, have been scheduled for filming, the composer-librettist having been signed to make the adaptation for motion pictures. Menotti was also reported, in July 1947, to be signed by Metro-Goldwyn-Mayer as a writer-director, his direction of the two works at the Barrymore Theatre having established his reputation as a stage director. Previously, Menotti had been named to succeed his former teacher, Rosario Scalero, as director of the composition department of the Curtis Institute, in the fall of 1948.

Among Menotti's other musical works is the ballet *Sebastian*. Again the libretto is his (the choreography is designed by Edward Caton). "Modern and melodic," the score was also recorded by Columbia Records. In 1947 Menotti was completing a second ballet, for Antony Tudor⁴⁵ and the Ballet Theater, based upon Marcel Proust's *Remembrance of Things Past*. Menotti's other work in the realm of the dance is *Errand Into the Maze*, first presented at the end of February 1947 by Martha Graham⁴⁶. This *Time* dismissed as "more maze than message." Menotti's Piano Concerto, first played in 1945, has been performed by the Boston Symphony; his Pastorale, for string orchestra and piano, was first heard in 1935; and *Variations on a Theme of Robert Schumann*, for piano, won the Carl F. Lauber Musical Award for 1931. The composer in 1947 is working on *The Last Super-*

man, a comic opera, financed by a twenty-five-hundred-dollar Guggenheim Fellowship (1946). He has also received a one-thousand-dollar grant from the American Academy and the National Institute of Arts and Letters (1945).

Prominent among Menotti's nonmusical works is *A Copy of Madame Aupic*, the dramatist's first "straight" play, which he directed at the New Milford (Connecticut) tryout in the summer of 1947. It is, however, with another drama, *The Consul*, that Menotti may be represented as a playwright on Broadway sometime in the course of 1948. In musical circles, nevertheless, Menotti is considered a composer for the opera. Discussing this medium he has said, "Opera should be taken out of the museum atmosphere. Companies that stick to the traditional operatic stage tradition are killing the art of opera. Margaret Webster⁴⁰ or Orson Welles⁴¹ in his early days could give opera the kind of direction it needs."

Like Toscanini, Menotti is an Italian citizen "out of loyalty and affection to his native country." He refused to align himself with the Fascist party, thus causing his works virtually to be banned in Italy during the Mussolini⁴² regime. In World War II the composer broadcast to Italy in his native tongue for the Office of War Information. Tall, thin Menotti works at a draftsman's board, writing words and music at the same time. He is a dark man "with a truly Lombard profile, his eyes deep sunk under thick eyebrows." The bachelor shares a home in Mt. Kisco (the house is designed by Lescaze⁴³) with composer Samuel Barber⁴⁴ and poet Robert Horan. If any one of them should marry their agreement is that the "miscreant" must forfeit his third of their mutual holdings (three grand pianos, several Modiglianis, Braques, Picassos⁴⁵ and Bermans) to the others "without payment and without removing anything but his clothes." Menotti is in the habit of listening to premières of his productions as a standee. From a group of standees, he reported in *Musical America*, "you get unbiased opinion. They may not invariably be complimentary, but they are apt to be sincere."

MERRIAM, CHARLES E(DWARD) Nov. 15, 1874- Political scientist; university professor

Address: b. c/o Department of Political Science, University of Chicago, Chicago 37, Ill.; h. 6041 University Ave., Chicago 37, Ill.

Through his writings, his many years of teaching, and his active participation in Gov-

Ernest Martin

CHARLES E. MERRIAM

ernment, Charles E. Merriam has gained a prominent position in the field of political science. He has been called "one of its wisest contemporary students," and those who have studied under him at the University of Chicago have expressed tribute to him for giving them greater confidence in the future of mankind. Neither the experience of two world wars nor the menace of the atomic bomb has shaken the political scientist's faith in his own belief that man's power to will and reason will eventually triumph.

Charles Edward Merriam was born on November 15, 1874, in the small town of Hopkinton, Iowa, where the Merriams lived just across from the Lenox College campus. In an autobiographical essay, "The Education of Charles E. Merriam" (contained in *The Future of Government in the United States*) he writes about his parents, brother, and sister: "Assume Margaret Campbell Kirkwood, a school teacher fresh from Scotland. Assume the Yankee, Charles E. Merriam, Sr., from Massachusetts—Corporal Merriam, postmaster Merriam, merchant Merriam, banker Merriam, Presbyterian elder Merriam. Assume John Campbell Merriam, natural scientist, geologist, paleontologist . . . alternately fought and followed by his younger brother. Assume Merriam's younger sister, the sad-faced Sue, who cared more about poetry than politics. . . ."

The senior Merriam envisioned his son Charles a lawyer who would rise to fame in the political world, but by 1895 this plan, in which young Charles had concurred, had been changed. After studying economics and politics at the State University of Iowa, from which he received a B.A. degree in 1895, twenty-year-old Merriam decided upon "what

seemed to him the high road and, as it turned out, the hard road." A year's teaching (1893-94) in Iowa's country schools, at \$22.50 a month, already behind him, he returned to Lenox College to teach the classics and mathematics. (He had received a B.A. degree from this three-year college in 1893.) During most of the period from 1896 to 1900 he was at Columbia University, earning his M.A. (1897) and Ph.D. (1900) degrees, and lecturing on political theory for a year as a substitute for a professor on sabbatical leave; another year, 1899-1900, was also spent at the universities of Berlin and Paris in further study of political theory with "many a lingering glance at economics, sociology, and history." Merriam's thesis, published in 1900, was the *History of the Theory of Sovereignty since Rousseau*.

The "education" of Merriam was then continued in Chicago. Beginning as a docent (1900-1902), he rose in the Department of Political Science at the University of Chicago—from associate (1902-3) to instructor (1903-5), to assistant professor (1905-7), to associate professor (1907-11), to professor—until he became chairman of the department in 1923. His writings during his early years at the university included *A History of American Political Theories* (1903), and *Primary Elections* (1909), which the historian Charles A. Beard "called 'of the highest practical importance' for both citizen and student.

In 1905 Merriam decided to enter the Chicago political arena. He became a member of the Charter Convention created that year to draft a new charter for the city, investigated Chicago's revenues for the City Club (*Report of an Investigation of the Municipal Revenues of Chicago*), and served as secretary of the harbor commission. As alderman from the seventh ward (the ward where the university was located) in 1909-11, he was instrumental in creating a commission which, under his chairmanship, investigated municipal finances and exposed large-scale graft within the city Government. An advocate of the direct primary as well as other reforms, the professor was persuaded to become a candidate in the 1911 Chicago mayoralty race. He won the Republican nomination in the primaries with a high plurality but lost the election by a narrow margin. From 1913 to 1917 he served again on the Chicago City Council as alderman from the seventh ward and was responsible for the establishment of the Bureau of Public Efficiency.

During these years, Merriam was offered positions with important law firms as well as high posts in Washington in the Taft and Wilson administrations, but he preferred to remain in Chicago, where he felt he could best gain insight into "the persistent problems of political behavior." What he learned as a "participant-observer" in the city's struggles for better Government is told in *Chicago: A More Intimate View of Urban Politics* (1929). Merriam also added to the earlier volumes which he had written such works as *American Political Ideas: 1865-1917* (1920), *The American Party System* (1922), *New Aspects of*

Politics (1925), and *Four American Party Leaders* (1926). Concerned with the problem of finding more adequate research facilities and sounder methods of analysis in political science, Merriam also acted as chairman of a special committee on research for the American Political Science Association. From 1923 to 1927 he was president of the Social Science Research Council, which was established for the aid of social science workers as a result of the committee's recommendations. In addition, Professor Merriam, in collaboration with colleagues and students and aided by Local Community Research, through the Laura Spelman Rockefeller Foundation, launched studies on such significant aspects of his field as nonvoting, propaganda, leadership, and political psychology. Certain of the functions of that foundation, which was merged with the Rockefeller Foundation in 1928, devolved upon the Spelman Fund, its successor. After 1935, as a member and later chairman of the Spelman Fund, Merriam was concerned with the development of administrative standards and practices through the agencies of responsible officials organized for that purpose, such as the Public Administration Clearing House in Chicago. The last-mentioned organization, as well as ten or twelve societies affiliated with it, including the American Municipal Association and the Council of State Governments, received grants from the Spelman Fund.

Between the years 1919 and 1932, the political scientist visited many European cities, "restlessly [trying] to catch the inner meaning of a troubled world." He particularly sought answers to questions involving the development of citizenship, for he had been commissioned to organize and edit a series of studies on this subject. These were published in 1931 under the title *The Making of Citizens: A Comparative Study of Methods of Civic Training*. In June 1932, in the midst of brewing political tumult in Berlin, Merriam wrote *Political Power: Its Composition and Incidence* (1934). Later, in *The Role of Politics in Social Change* (1936), wherein he "undertook to shear through the struggle between individualism and collectivism by attacking the doctrine of economic fatalism upon which both of them rested," he further expanded his ideas on political power. Again, in *Prologue to Politics* (1939), he emphasized the importance of man's reason and will as opposed to pessimism and violence in working toward the ideal state.

By this time Merriam's personality was (in his own words) being "swallowed up in an unending series of facts and figures, findings and conclusions, prepared by various boards of which he was usually an unwilling member." As vice-chairman of President Hoover's Research Committee on Social Trends (created in 1929) and as a member for ten years of the planning boards established during the Roosevelt Administration (the National Planning Board formed in 1933 was succeeded in 1934 by the National Resources Board and in 1939 by the National Resources Planning Board), Merriam was active in the effort to

substitute a policy of long-range national planning for a policy of drift. "Democracy must have not merely a past, but a future; not merely traditions but inventions," wrote Merriam in 1940, believing that unless plans to solve the problems of production, unemployment, and social security were adopted within the framework of representative Government and free enterprise, the United States would drift into totalitarianism.

The work of the planners, generally supported by Progressives although regarded as not radical enough in some quarters, was sharply attacked: In publications such as *Newsweek* and *Nation's Business*, proposals for Government participation in industry contained in the 1943 NRPB report were assailed as meaning "the end of the American system." Despite such criticism and the liquidation of the NRPB after 1943, Merriam, pointing to the increased activities of State and city planning boards as well as other signs, felt that progress was being made toward the acceptance of planning as a basic element in the democratic pattern. One of the suggestions made by the NRPB led to the establishment of the President's Committee on Administrative Management of which Merriam became a member. (This, together with his membership on the Commission of Inquiry on Public Service Personnel, was among the few explorations which he made in the field of administration.)

After his retirement from the University of Chicago in 1940, Merriam, now becoming professor emeritus, scheduled himself for breakfast in bed and time for pictures, music, and bowling, but World War II disturbed his plans for leisurely living. In addition to continuing his work on the National Resources Planning Board, which proposed a new "bill of rights" for postwar America, he wrote *What Is Democracy?* (1941), *On the Agenda of Democracy* (1941), *Public and Private Government* (1944) and *Systematic Politics* (1945). He was concerned in these works, as well as in articles published in various magazines, with such significant subjects as the basic principles of democracy, the need for establishing "a system of jural order in the world, by force if necessary," the resolution of the conflict between national sovereignty and international organization, and the effect of the atom bomb on politics. While admitting the possibility that the bomb might wipe out civilization, he preferred to believe in the other alternative, that the mind which had unleashed the atom giant, not the atom, would prove victorious. "Patience" was his watchword.

Merriam's books have been generally recognized as encouraging and valuable treatises, dealing with the fundamental aspects of Government as directly related to human needs and behavior; his prose has been described as lucid, entertaining, and, at times, inspired. Not all his readers, however, have found his views convincing, and some members of his profession have not approved his tendency to loosen the traditional ties between political science and the fields of law and history and to relate the study of Government more closely with

MERRIAM, CHARLES E.—*Continued*
biology, anthropology, psychology, sociology, economics, and medicine.

A group of Merriam's former students have written a series of essays in his honor which were published in 1942 under the title *The Future of Government in the United States*. (It contains a bibliography of his books.) In 1946 Merriam was also honored by the universities of Washington and Princeton, which conferred upon him the degree of Doctor of Laws; in 1920 he had also received this degree from the University of Colorado and in 1935 from the University of Michigan. In recognition of his services as commissioner from America on Public Information in Italy in 1918, the Italian Government in 1921 made him a commander of its Order of the Crown. Merriam also served as commanding captain of the aviation section of the Signal Reserve Corps in 1917 following the United States entry into the war.

Charles E. Merriam's memberships include the Social Science Research Council, the American Political Science Association (of which he was president in 1924-25), the American Academy of Political and Social Science (he was its vice-president in 1924), and the American Philosophical Society, as well as the Quadrangle, City, and University clubs of Chicago. Merriam was a member of the Commission on Freedom of the Press. Organized under the auspices of the University of Chicago, from 1944 to 1947 the commission considered the problems of "censorship, ownership, and readership" of the various mass communications media and published its major findings.

In 1901 Merriam was married to Elizabeth Hilda Doyle of Constableville, New York; they have four children: Charles James, John Francis, Elizabeth, and Robert Edward. The political scientist declares that men have taught him more than books. He compares his mind to his boyhood dog Carlo, which always persisted in following him to school, and writes of his Carlo mind as "restless, irrepressible, irritating, dogged in his methods and baffling with his irrepressible doggish smile." And in referring to his "brown-gray-white" hair, he calls himself "baldescent."

MILLER, ARTHUR 1915- Playwright; author

Address: b. c/o James D. Proctor, 545 5th Ave., New York 9

The second play by Arthur Miller to appear on Broadway, *All My Sons*, won, in 1947, the New York Drama Critics' Circle Award, and was sold to Universal-International for film production. By his thirty-second year Miller had written a well-received novel, *Focus*, and a book based on his observations of Army life.

A native New Yorker, Arthur Miller was born in the upper East Side of Manhattan in 1915 to Isadore and Augusta (Barnett) Miller. He attended a Manhattan elementary school, going for his secondary education to James Madison and Abraham Lincoln high schools in Brooklyn. Graduated from the latter in 1932, young Miller could not afford the expense of a college education at that time. He therefore found a job as a stock clerk in an automobile-parts warehouse. According to a New York *Post* biographical account, he saved thirteen dollars weekly out of his fifteen-dollar-a-week salary. Two and a half years after leaving high school, he had enough money to pay for his first year at the University of Michigan. He finished college with the financial aid of the National Youth Administration supplemented by his salary as night editor of the *Michigan Daily*. While he was in college, Miller wrote a number of plays. He twice won the five-hundred-dollar Avery Hopwood Award: once in 1936 for *The Grass Still Grows*, and again in 1937. He won a second honor for *The Grass Still Grows* in 1938, when he was awarded the Theatre Guild National Award of twelve hundred and fifty dollars.

Miller received his Bachelor of Arts degree from the University of Michigan in 1938, and in that year he returned to New York and joined the Federal Theatre Project. Before his first play had been produced, however, the activities of the project were curtailed. Thereafter Miller wrote for radio; his scripts were heard on the *Columbia Workshop* (CBS), the *Calvacade of America* (NBC), and other similar programs. In a 1947 interview, Miller said (*New York Times*), "Every emotion in a radio script has to have a tag. It's like playing a scene in a dark closet."

In 1944, on the recommendation of Herman Shumlin⁴¹, Miller was engaged by Lester Cowan, the motion picture producer, to visit Army camps throughout the country for the purpose of collecting background material for the filming of Ernie Pyle's⁴² *Story of GI Joe*. (Miller himself was excluded from Army service because of a high school football injury.) In touring camps throughout the United States, Miller, as he later wrote, "wanted to know and tell Hollywood what really does happen on maneuvers, how the Army gets so many men going on in one direction together, how a soldier gets his shoes fixed, how they pick the man who delivers the mail. . . I wanted the truth because it seemed silly to write a false picture about something that was going on right under my nose and could be observed." In addition to supplying the background for the film, Miller's findings formed the basis for a book, *Situation Normal*, published in 1944, in the opinion of a *Saturday Review of Liter-*

ature critic, "one of the most important books about the war."

A second book by Arthur Miller appeared in 1945. This was *Focus*, a novel about anti-Semitism. Wrote Sterling North, book reviewer of the *New York Post*: "In words that burn like carbolic acid, that flash like tracer bullets through the midnight of bigotry, he has pictured the agonizing fear and revulsion and finally the courage of a little man named Newman." Described by Richard Wright (in a *PM* review) as being "cleverer than it is profound, and more coincidentally contrived than passionately felt," *Focus*, in the opinion of Charles Poore of the *New York Times*, was "too pat. The trouble seems to be that Mr. Miller does not give his characters sufficient free play. . . . [But] he can write eloquently. If he never convinces you of the reality of Lawrence Newman, he leaves you in no doubt of the existence of the rancorous, fear-born prejudices Newman had to face." In the words of Maxwell Geismar (on the staff of the *New York Herald Tribune*), "The point is that Mr. Miller's fatal spectacles [the fact that the hero began to wear eyeglasses is important to the plot] are a symbol, not a trick, and Mr. Miller's hero becomes increasingly real as he becomes increasingly tortured. . . . Maybe *Focus* is still something of a tour de force; it lacks a final solidity and complexity. But it is good." *Focus*, which sold ninety thousand copies, has been published also in Denmark and France. In 1947 a screen version was in preparation.

Miller had not abandoned playwrighting for fiction writing. In November 1944 his *The Man Who Had All The Luck* opened on Broadway, "lasted about long enough for the performers to get into their make-up," and "perished of fiscal anemia." Although most critics found the writing "didactic" and "inexpert," *Variety*, after viewing the out-of-New York opening of the play, believed it might be a "moderate hit"; and Burton Rascoe, then on the *New York World-Telegram* staff, asserted that the drama was "faultlessly convincing" and noted, "When I get out an anthology of the best plays of the last twenty-five years, *The Man Who Had All The Luck* will be in it."

Miller's second Broadway trial was eminently more successful. *All My Sons*, produced in February 1947, won the New York Drama Critics' Circle Award in its first season. The citation read: "To *All My Sons*—because of the frank and uncompromising presentation of a timely and important theme, because of the honesty of the writing and the cumulative power of the scenes, and because it reveals a genuine instinct for the theater in an intelligent and thoughtful new playwright." Some reservations were expressed by Richard Watts, Jr. (*New York Post*), who wrote, "It seems to me too overwrought, hysterical and overburdened with plot and too uneven in its workmanship. . . . There were occasions when its symbolism reminded me of a minor-league Ibsen in rather uncomfortable fashion." Another dissenter was Howard Barnes (*New York Herald Tribune*), who felt that "the play has a tendency to become incoherent when it should

Black Star

ARTHUR MILLER

have been dramatically engrossing." While *PM*'s Louis Kronenberger noted that *All My Sons* had "more plot than it can safely handle, uneven writing, imperfect characterizations, overheated atmosphere," he also thought that "Arthur Miller is the only one of our new playwrights who has given me something like an experience in the theater." Brooks Atkinson (the *New York Times*), found Miller "a forceful dramatist. . . . Three terse acts are hardly enough for what he wants to say." *All My Sons* also won the Antoinette Perry Award, and the Donaldson Award (voted upon by *Billboard* subscribers). French and Dutch productions were planned, but the play may not be presented in United States occupied zones in Europe as a result of a charge that it contained Communist propaganda; the criticism has been rejected by Brooks Atkinson and by other theatergoers. *All My Sons* closed in New York after some three hundred performances; it was, thereafter, performed on tour. Universal-International will produce the screen version. In the meantime, Miller was at work on a new play, "Plenty Good Times," planned for production in 1948 (reportedly this play has no specific social theme). "Death of a Salesman," another Miller play, may also appear in 1948.

In answer to a statement made by a drama critic that no potential great playwrights have appeared in recent years, Miller wrote, "The truth is that we do have potential playwrights by the score, and playwrights who are at this moment capable of creating among them many a brilliant season. . . . What we don't have is a Theater. . . . A Theater is people; a collection of talented people, including playwrights, directors, actors, and scene designers, who share a common outlook upon art and life, and are permanently joined together for the purpose of producing dramatic art. A Theater is an or-

MILLER, ARTHUR—*Continued*

ganization to which new talent may apprentice itself and grow to maturity." Miller has asserted, "The stage has become a stud farm for the big Western track." He has also said, "Hollywood is full of men who might have given something important to the theater, but most of them are working on things out there that have no connection with life or what they are as writers. I wouldn't want to write a thing I wouldn't go see myself." In a New York *Times* interview he stated that his favorite American plays were the *Silver Cord* (Sidney Howard) and *Anna Christie* (Eugene O'Neill), which, he said, "will give you an idea of the kind of theater I believe in."

Miller was one of the writers on the American Federation of Labor radio programs to rally opposition to passage of the Taft "Hartley" bill. He was also mentioned as a member of an advisory council which is preparing a musical comedy for fall 1947 production by the department store joint board of the CIO. In 1947, too, Miller was one of the seventy signatories to a message to French political leaders asserting that Henry Wallace's visit to France "set a pattern in this One World for the free interchange of opinions between the leaders and the people of all nations of good will."

Arthur Miller and his wife, the former Mary Grace Slattery, to whom he was married August 5, 1940, have one daughter, Jane Ellen. Miller, who is Jewish, has classified himself as "an inadvertent chameleon" because his "strong features, dark wavy hair, and brown eyes" are characteristic of a number of national groups. "As one Italian to another," he has said, "I have been regaled with tales of Irish perfidy. Strictly between us Jews, I have been made the confidential hearer of the latest 'wop' story. As one American to another, I have been told why foreigners act the way they do." Miller "is a lanky six feet two [he weighs 170 pounds] with a bony face that reminds people of Abraham Lincoln. He has a habit of wrapping his long legs around nearby furniture as he talks."

MILLER, JUSTIN Nov. 17, 1888- Broadcasters' association executive

Address: b. 1760 N St., N.W., Washington, D.C.; h. 550 Paseo Miramar, Los Angeles, Calif.

Upon becoming the president of the National Association of Broadcasters in 1945, Justin Miller declared he was accepting a challenge to render public service: "I see in broadcasting, with its promising developments for postwar expansion into frequency modulation, television and facsimile, a vital organ for carrying for-

ward our traditional American policy of free speech and for protecting and strengthening our system of free enterprise." As head of the trade association of the broadcasting industry which reportedly represents seven hundred radio stations and networks, he has vigorously defended these principles when he felt they were being threatened by the Federal Communications Commission. Miller has been lawyer and judge as well as a professor of law. A member of a number of legal organizations, he has taken a special interest in criminological research.

Justin Miller was born to Robert Willis and Matilda (Morrison) Miller in Crescent City, California, on November 17, 1888. After attending the Santa Rosa and Hanford elementary and high schools, he enrolled at Leland Stanford University in Palo Alto, from which he received his B.A. degree in 1911. During his senior year he was an assistant in economics and, following his graduation, remained at the university as an assistant in history. The twenty-three-year-old Miller then became a law student at the University of Montana, at the same time holding the position of assistant instructor in law. Upon receiving his LL.B. degree in 1913, he returned to Stanford for an instructorship in English and a year of further study leading to the J.D. degree (1914). (Later, in 1934, he obtained his D.C.L. degree from Yale University, and in 1941 his LL.D. degree from the University of Montana.)

Admitted to the Montana bar in 1911 and to the California bar in 1913 (he also became a member of the Minnesota bar in 1924 and of the North Carolina bar in 1931), Miller was a clerk in the San Francisco law office of McCutcheon, Olney, and Willard in 1914. For the next seven years he engaged in the general practice of law in California, in Hanford, Fresno, and San Francisco. (He was a member of the firm of Harris and Harris in Fresno in 1919.) From 1915 to 1918 he held his first public post, as district attorney for Kings County, California, and from 1919 to 1921 he was the attorney and executive officer of the California State Commission of Immigration and Housing. Miller now returned to the teaching profession, lecturing in sociology at the University of California in the summer of 1921, and subsequently becoming professor of law at the University of Oregon (1921-23), at the University of Minnesota (1923-26), at Stanford University (summer 1926), at the University of California (1926-27), and at Columbia University (visiting professor in the summer of 1929). For three years, 1927-30, he was dean of the School of Law at the University of Southern California, and from 1930 to 1935 he held that position at Duke University's law school (Durham, North Carolina). As a teacher of law, Miller believed in the need for an adequate prelegal education and for a legal training which would give students a knowledge of the law well integrated with economics, politics, and other social sciences. He also felt that a full-time law teacher participating in organizations devoted to social research was bet-

ter equipped to train law students than the practicing lawyer.

Miller's activities during these years reflect a special interest in criminal procedure and the sociological aspects of the law. In 1926 he was secretary of the Minnesota Crime Commission, and from 1927 to 1930 he was a member of the California Crime Commission, which formulated suggestions for changes in criminal procedure. President of the Southern California Academy of Criminology (1929), of the California State Conference on Social Work (1929-30), and of the North Carolina Conference of Social Service (1933-34), he was also chairman of the Association of American Law Schools' committee on the survey of criminal law and procedure as well as chairman of its Round Table on Remedies (1925-1926) and of its Round Table on Wrongs (1932). Miller called for an informed public opinion and the use of scientific methods for solving the crime problem, which he declared was "not a lawyer's problem . . . not a policeman's problem" but a problem whose solution requires the counsel of all groups concerned with it. In such publications as the *North American Review* and the *Annals of the American Academy of Political and Social Science*, he wrote of the difficulties besetting the poor man before the law. To protect him from the practices of shyster lawyers, crooked interpreters, bail bond sharks, and other abuses, Miller advocated a public defender system, whereby a public officer would handle the case of a person unable to employ counsel, from the time of his arrest, not merely when he was ready for trial.

In 1934, a year before he left Duke University, Miller became a special assistant to Homer S. Cummings, then United States Attorney General, continuing in this capacity until 1936. From 1935 to 1937 he was also chairman of the Attorney General's advisory committee on crime as well as administrative director of the Attorney General's survey of convict release procedures. Then, in 1937 he was a member of the United States Board of Tax Appeals. Of President Roosevelt's court enlargement bill, which created vehement opposition that year, Miller was a firm supporter, agreeing with the Administration that aged men might not have the mental and physical vigor required for the bench. According to a *New York Sun* item, Miller, admitted to the Supreme Court bar in 1934, was in 1941 a "sideline entry" for a vacancy on the Supreme Court. He had put on the judicial robes in 1937 when he became an associate justice of the United States Court of Appeals, the nation's second highest court, where he served for eight years.

The Judge, who had learned the problems of radio broadcasting as a member of the appellate bench which hears all appeals on decisions of the Federal Communications Commission, began his duties as president of the NAB (reportedly a fifty-thousand-dollar-a-year position) on October 1, 1945. In the summer of that year, at the request of the War Department, he had headed a delegation of radio executives

Harris & Ewing

JUSTIN MILLER

studying broadcasting problems and techniques on a tour of the European Theater of Operations. One of Miller's first concerns upon entering the radio field, stated an NAB release, was to plan for a department within the NAB which would work toward the improvement of radio programing—this was being established in December 1946.

He was a severe critic, however, of the much discussed FCC report, in which the commission criticized "advertising excesses" and the lack of a well-balanced program structure and proposed the improvement of program quality by giving "particular consideration" to the carrying of sustaining broadcasts and broadcasts concerning public issues. Miller saw in the report the "subtle encroachment upon freedom of speech in radio, through the commission's assertion of power to control broadcast programs." In support of the FCC proposals (which were also backed by the American Civil Liberties Union) *Variety* asserted that "the Constitution requires a broader reading today than it did a century and a half ago in order to encompass this new field of expression—radio." Later, in June 1947, Miller challenged proposed Congressional legislation which would authorize the FCC to withhold licences if broadcasts were not in the public interest. He also proposed that the NAB fight to reverse a 1941 FCC ruling that broadcasters must not editorialize, a move of "special significance," said *Billboard*, "in view of radio's strong trend lately to keep liberal commentators off the air."

Urging self-regulation of radio programing on the part of broadcast licensees, Miller also consulted with United States Assistant Attorney General Wendell Berge⁴⁶ in the fall of 1946 regarding the adoption of a code of program standards and methods of enforcing it. (In August the NAB board of directors were

MILLER, JUSTIN—*Continued*

reported to have amended the bylaws of the association to permit it to initiate this.) Miller, as president of the NAB, also sought to improve relations between the broadcast industry and its employees, but at the same time was a strong supporter of the controversial Lea⁴⁶-sponsored "anti-Petrillo"⁴⁰ bill, a bill regarded as antilabor.

At the twenty-fifth annual meeting of the NAB, held in Atlantic City in September 1947, there was a discussion of establishing new standards of practice for the industry. Speaking for the board of directors, Miller said, "The board will not rush, nor will it adopt standards immediately." In a press conference he told reporters that FCC authority over programing was unconstitutional. A change in the Federal Communications Act was necessary, he said, to insure to radio "the same Constitutional guarantees as newspapers, subject only to criminal laws and certain technical restrictions, such as assignment of frequencies." The NAB board of directors endorsed the proposed "standards of practice" unanimously, to become effective on February 8, 1948.

The radio executive has been active in many associations besides those already mentioned. He has been a member of the board of directors of the National Probation Association (1929-30) as well as its vice-president (1930-36), chairman of the committee on cooperation with law schools of the National Association of Legal Aid Organizations (1930), and vice-chairman of the Government Division of Community Chests, Washington, D.C. (1936-37). He belongs to numerous bar associations, among them, the American Bar Association (he was chairman of its section on criminal law from 1927 to 1937), the Federal Bar Association (he was its president in 1935-37 and chairman of its war work committee in 1942-44), the Federal Communications Bar Association. A life member of the American Law Institute (he is chairman of its advisory committee on criminal law), and an honorary member of the International Association of Chiefs of Police, he also holds membership in the Human Betterment Foundation (vice-president, 1930-32), in the American Judicature Society (vice-president, 1932), and in the California State Society of Washington, D.C. (president, 1939 and 1940). In the Federal Government he was named chairman in 1947 of the Advisory Committee on Citizenship, a citizens committee working with the Department of Justice to "stress the significance of American citizenship" for aliens. The Attorney General's national conference on prevention and control of juvenile delinquency and the American Society of International Law are two other of Miller's associations.

Justin Miller was appointed by President Truman to represent the broadcasting industry on the Famine Emergency Committee, and in August 1946 was invited by the State Department to join the National Commission on Educational, Scientific, and Cultural Cooperation of UNESCO, subsequently becoming a member of the organization's executive committee

and chairman of its Round Table on Media of Mass Communication. In the field of radio his affiliations include chairmanship of Broadcast Music, Incorporated, and membership on the executive committee of the Federal Radio Education Committee, as well as on the board of directors (representing the NAB) of Brand Names Foundation, Inc., and of the Advertising Council, Inc. Phi Beta Kappa, Delta Chi, and Delta Sigma Rho are among the many Greek letter societies to which he belongs.

In 1916 Miller served as a private on the Mexican border in the California National Guard. He is the author of *Miller on Criminal Law* (1934), has contributed to legal as well as other periodicals, and is also known as a public speaker. While teaching at the University of Oregon, he was editor in chief of the *Oregon Law Review*, and while at the University of Minnesota he was associate editor of the *Minnesota Law Review*. His wife, the former May Merrill, to whom he was married in 1915, has also written two books: *First the Blade*, a novel about pioneers, and *House of Cedar*. The Millers' children are Jean Marian (Mrs. Edwin Ball Abbott) and Merrill Justin. According to a New York *Sun* writer, the NAB president "has been aroused by the readiness with which surgeons snip an appendix and the ill-treatment of psychiatrists by old-line medics, and he has diligently advocated special parks for spooners."

MILLER, WATSON B(AHAN) Apr. 1, 1878- United States Government official

Address: b. c/o Immigration and Naturalization Service, Department of Justice, Washington 25, D.C.; h. 4704 Yuma St., N.W., Washington, D.C.

Commissioner of the Immigration and Naturalization Service is Watson B. Miller, who by virtue of this post is an official of the United States Department of Justice. Miller for a year and a half previous to this appointment, confirmed in December 1947, had served as administrator of the Federal Security Agency, which has jurisdiction over the Government's education, health, and welfare programs.

Watson Bahan Miller was born April 1, 1878, to Daniel and Martha (Kirk) Miller. His birthplace is Rensselaer, Indiana. As a boy, young Miller traveled in the far western sections of the United States and in Latin American countries with his three brothers and his father, whose occupation as a civil engineer made these trips necessary. When Miller was about sixteen, his father fell ill, and, as the eldest son, the youth was forced to quit school and go to work. His first job was with a

mercantile establishment. In 1898 Miller, then in Washington, D.C., enlisted in the District of Columbia National Guard and saw action in the Spanish-American War. Returning to the capital, Miller became interested in, and associated with, the development of motor transportation. His World War I assignment, as a captain, was in the Motor Transport Corps.

On his return to civilian life Miller was active in the development of the American Legion: he was the third department commander elected in the District of Columbia and in 1922 was a national vice-commander. While holding the latter office, he contributed proposals to the Federal Government's program for the care of wounded and disabled war veterans. In 1923 Miller was named chairman of the Legion's national rehabilitation committee. In the first year of his administration his group directed the activities of the service division of the American Legion in assisting the widows, orphans, and parents of World War I veterans and in aiding sick and disabled veterans. In that year (1923) the national rehabilitation committee completed plans for a national hospital program, secured the admission of ex-servicemen to the National Soldiers' Homes, and cooperated with the United States Veterans' Bureau. During subsequent years the American Legion committee aided veterans in their applications for pensions and bonuses. In its early years, the Legion's service was available to all veterans, but in 1938 it announced a policy of giving priority to its members. The national rehabilitation committee, under Miller's leadership, worked toward the passage of legislation awarding pensions to disabled veterans and appropriating money for enlarging the nation's hospital facilities. In 1933, when the National Economy Act removed most of the legislation providing veterans benefits, Miller was confronted by a larger problem. His committee was, in part, responsible for the restoration of those benefits.

Also concerned with questions of public health, in 1936 Miller supported Thomas Parran⁴⁰, Surgeon General of the United States, in his campaign to publicize information about venereal diseases. Miller was responsible for the article on the subject carried by the American Legion magazine. The legionnaire also joined Government officials in advocating the passage of a venereal disease control bill.

In March 1941 Watson B. Miller was appointed assistant administrator of the Federal Security Agency (FSA). Four and a half years later, in October 1945, Miller became administrator of that Government body. Since the formation of FSA in 1939, a series of reorganizations have brought under its jurisdiction "those agencies of the Government the major purposes of which are to promote social and economic security, educational opportunity, and the health of the citizens of the nation." By consolidating a number of groups under one administration, Congress hoped to reduce expenditures, avoid duplication, and increase efficiency.

As chief of FSA, Miller was responsible for all Federal activities in education, health and

WATSON B. MILLER

medical care, for the Social Security administration, and special services, such as the food and drug administration, the office of vocational rehabilitation, and employees' compensation. Thus, under Miller's direction was the United States Office of Education, which collects statistics on the various phases of education, makes studies and reports for the purpose of improving educational methods, advises State and local college and school officials and representatives of foreign countries, and administers Federal grants-in-aid to education. Also in connection with education, the administrator of FSA supervised the Columbia Institution for the Deaf, which educates deaf mutes of all school ages and whose advanced department (Gallaudet College) offers the only college course in the world designed especially for deaf students. Other educational activities of FSA are the administration of Howard University, and the maintenance of the American Printing House for the Blind.

Another Federal body over which Miller had jurisdiction was the United States Public Health Service. Originally organized to establish marine hospitals, the Public Health Service now assists the States in creating and maintaining adequate public health services, coordinates research into the causes and prevention of all diseases, administers the national tuberculosis control program. It also maintains a National Office of Vital Statistics. During 1946 Miller urged the passage of three measures which would expand or continue phases of United States public health work: the Hospital Survey and Construction Act, passed in August 1946, which allotted Federal funds to the States for the construction of hospitals and related facilities, the National Mental Health Act, enacted in July 1946, by which a National Mental Health Institute was established, and a measure which would allow the Social Protection Division to aid the States in their efforts

MILLER, WATSON B.—*Continued*

to control the spread of venereal disease. Of the last, Miller has said, "Experience has proven that this cannot be handled alone as a health program, a law enforcement program, a welfare or an education program. It can be handled as a coordinate program of all four led by the executive of the State or local government and supported by business, labor, religious, educational, professional and trade groups." The United States Public Health Service also organized and directed the wartime Cadet Nurse Corps. Freedmen's Hospital, a District of Columbia general hospital affiliated with Howard University Medical School, and Saint Elizabeth's Hospital, for mental cases, also are supervised by FSA.

The Social Security Administration is a branch of FSA. Under the Social Security Act, this Federal agency's activities include review of State unemployment compensation laws and State plans for old-age assistance, recommendation of grants to States for maternal and child care, studies for possible improvements in State and Federal social security legislation, and administration of the Federal old-age and survivors' insurance laws. By 1946 thirty-five million workers were insured under the provisions of the Social Security Act; over eight million were receiving benefits from the old-age and survivors' program. But twenty-three million persons were excluded from social security, and Miller strongly urged a law to include these. He advocated passage of the Wagner⁴¹-Murray⁴⁵-Dingell bill, which provides not only for expansion of social security but also for the establishment of a national health insurance program.

In August 1947 Miller left FSA to assume another Federal post, that of Commissioner of the Immigration and Naturalization Service. (His appointment was confirmed by the Senate in December.) This division of the Department of Justice was created in 1891 to administer "the immigration and naturalization laws relating to the admission, exclusion, and deportation of aliens, and the naturalization of aliens lawfully resident in the United States." During time of war the service becomes responsible for the internment of enemy aliens. Other duties Miller's office performs are to supervise naturalization work in Federal courts and register all aliens. Shortly after entering his new post, Miller announced that the service would trace the whereabouts of immigrant (specifically Russian) visitors to the United States who had entered the country for the purpose of industrial training.

Miller is a member of the Menninger Foundation, the Coordinating Board of the Washington Metropolitan Health Council, and the Forty and Eight and National Press clubs. He was married October 13, 1933, to Inez Hale; their son is "Mickey" (Watson, Jr.). Miller, who has blue eyes, weighs 190 pounds, is five feet eleven inches in height; his hair is thinning. As a youth Miller was an enthusiastic student of the piano, but his amateur baseball playing (he was first baseman on a team of

World War I veterans) proved too great a strain on his hands. It was only in later years that he returned to music, joining his young son in taking piano instruction.

Who's Who in America, 1946-47

MITCHELL, H(ARRY) L(ELAND) June 14, 1906- Farm labor leader

Address: b. c/o National Farm Labor Union, 166 Monroe Ave., Memphis, Tenn.; h. 3524 Bowen Ave., Memphis, Tenn.

The National Farm Labor Union, formerly the Southern Tenant Farmers Union, in 1946 affiliated itself with the American Federation of Labor and looked forward to the nationwide organization of agricultural workers. H. L. Mitchell, president of the union, which in 1946 had over thirty thousand members, was one of the founders of this labor movement, which was organized in 1934 and has since grown in the face of both internal disagreement and outside opposition.

Harry Leland Mitchell was born on a farm near Halls, Tennessee, on June 14, 1906. As a boy he became familiar with Arkansas, Mississippi, and Alabama, as well as his home State. With his mother, the former Maude Ella Standfield, and father, James Y. Mitchell, he moved about those sections of the country, where his father was at different times a tenant farmer, barber, or Baptist preacher. Young Harry started to work at the age of nine, and in the course of nine years, while going to school, he was hired as a farm hand in season, a newspaper boy, a clerk in a store, and a laborer in a sawmill and a cannery. At eighteen Mitchell was graduated from Halls High School (1924). Then, for a year (1925-26) he worked for the Tennessee Highway Department as a rodman with an engineering crew. In 1927 he raised a share crop on a farm near Ripley, Tennessee, but within another year he had moved to Tyronza, Arkansas, where he established a dry cleaning business.

Since the end of the Civil War, when many large plantations were split into small farms and leased to those who could not afford to buy land, or fell into the hands of absentee owners, the problems of the nation's tenant farmers, sharecroppers, and day farm laborers have become increasingly serious. In 1934 the passage of the Agricultural Adjustment Act intensified the situation, for the 40 per cent reduction in crop meant that many sharecroppers and tenant farmers were forced off their land or compelled to work by the day at lower wages. "Out of the suffering of the multitude of tenants," wrote Mitchell and J. R. Butler (once president of the union), the Southern Tenant Farmers Union was organized on July 23, 1934. A few men, one of them Mitchell, met in Tyronza (where Mitchell's dry cleaning business was still in existence) and planned to prevent further reduction of tenants and sharecroppers to the status of day laborers, and to see that the labor sections of the cotton acreage-reduc-

tion contracts under the AAA were enforced. One of their first steps was to seek an injunction against a Tyronza planter who wished to evict twenty-three families. Their action was based on Section 7 of the contract, which stipulated that landlords "shall permit all tenants to continue in the occupancy of this farm, rent-free, for the years 1934 and 1935." The grounds for the injunction were removed by a new interpretation of Section 7, the history of which, by Mitchell and Butler, appeared in the September 18, 1935, issue of the *Nation*. The court case was consequently dropped.

After that, Mitchell and Butler reported in the same *Nation* article, "cruel terror closed down on the Arkansas countryside." Union members and sympathizers were shot and beaten, which resulted in some deaths. By September 1935, nevertheless, there were 125 locals of the new union, which was then ready to call its first strike, in Arkansas. The demand was for pay of one dollar a hundred pounds of cotton; the cotton pickers generally were then getting less than half that amount. Over five thousand pickers stopped work. Within a week the minimum offer from the planters was fifty cents, and at the beginning of October the pickers returned to work at the minimum rate of sixty-five cents a hundred pounds, with the average at seventy-five cents. The *Sharecropper's Voice* (the official STFU publication) gave particular credit to Mitchell, who had been serving as executive secretary since the founding of STFU.

By the time the second convention was held in Little Rock, STFU had twenty-five thousand members and had been endorsed by the American Federation of Labor. At the meetings, which were characterized by religious singing, Biblical phraseology, and prayer, spontaneous accord between Negro and white members prevailed. At the second convention, equality was accorded women. In the course of the third convention, Mitchell, who was still executive secretary (he served in that capacity from 1934 to 1943, exclusive of 1940) gave his report on the second strike (1936), this time of cotton choppers, who asked one dollar and fifty cents for a ten-hour day: the night before the strike, planters began to take action against union leaders and members, both through legal means (arrests for vagrancy and consequent forced labor and calling upon the National and State Guards) and through actual, illegal force. Although a minor victory was achieved for the choppers in areas where one dollar a day was offered, dry weather, which had enabled the planters to hold out longer than had been expected, and the methods used by the opposition had greatly reduced the practical value of the strike. A March of Time film on the walkout, *King Cotton's Slaves*, gave publicity to both the union and the situation of the Southern agricultural laborers.

In 1937 STFU sought affiliation with the CIO. Since the larger organization was unwilling to accept them as an individual union, Mitchell's group assisted, later becoming an autonomous section, in the formation of the United Cannery, Agricultural, Packing, and

H. L. MITCHELL

Allied Workers of America of the CIO. After two years of growing tension, in 1939 Donald Henderson, president of United Cannery, suspended the officers of STFU on charges, which, *Nation* (March 18, 1939) reported, "boiled down to refusal of the union to surrender its autonomy." A referendum among the members of the Southern organization resulted in that union breaking away from the United Cannery, Agricultural, Packing, and Allied Workers.

Between 1936 and 1946 STFU has worked toward bettering the general conditions of tenant farmers, farm day laborers, and sharecroppers. The union has maintained an education program for their members, helped them to defend their legal rights, distributed food and clothing to evicted families, made recommendations for housing, education, soil conservation, and relief legislation, and has brought about Governmental investigation of abuse of legal rights. It has also obtained some recognition for the sharecropper on various policy-making bodies of the Department of Agriculture. To help prevent members from becoming debtors STFU maintains cooperative farms and stores. Since 1935, when the first convention proceedings were published, these records reveal an increasing expertness in the management of the organization. In November 1943 Mitchell was elected president of the Southern Tenant Farmers Union. Three years later, the group was chartered by the A.F. of L. as the National Farm Labor Union. Their plans are mainly centered on recruiting a potential membership of two million agricultural workers in the United States.

For a brief period, Mitchell's association with STFU was interrupted. From July 1939 to August 1940 he was special assistant on rural problems for the National Youth Administration, where he undertook educational work and projects designed for farm youth. For several months he served as an organizer for the Inter-

MITCHELL, H. L.—*Continued*

national Ladies' Garment Workers Union. When he returned to STFU in 1941, he was again elected executive secretary. The union executive has also served on the National Emergency Council, which in July 1938 prepared a report to the President of the United States on economic conditions in the South, and as an investigator for the Interstate Migration Commission. Mitchell has written articles on his union for the *New Republic* as well as the *Nation*.

H. L. Mitchell and the former Lyndell Carmack, a teacher to whom he was married on December 26, 1926, are the parents of Harry Leland, Jr., Joyce, and Samuel. The labor leader has gray eyes and brown hair and is a little less than six feet tall. Claiming no club, church, or political membership, he has, however, been interested in the Socialist party, and credits Norman Thomas⁴⁴, who has been a strong supporter of the union, with having had some influence on his ideas.

MONNET, JEAN (mô"ně' zhăN) 1888-French economist and financier

Address: b. c/o Commissariat Général du Plan de Modernisation et d'Équipement, 16 & 18 rue de Martignac, Paris; h. Bazoches, France

The formulation of a five-year program for reconstruction in postwar France has been under the direction of Jean Monnet, Commissioner of the National Economic Council, and an expert in financial and organizational problems. Both of the World Wars in which France was involved had found Monnet in prominent positions on interallied supply and shipping boards. In drafting the plan, Monnet has drawn upon his experience as a coordinator of war efforts, as well as upon his peacetime experience as a financier, businessman, and League of Nations official.

Jean Monnet was born in Cognac, a town in the southwestern French department of Charente, in 1888. It was in this wine-growing district that his grandfather had established the brandy house which was in time to be inherited by Monnet, his brother, and two of their cousins. (It is now the J. & G. Monnet Company.) Until he was sixteen, young Monnet attended school in Cognac, but his education

was terminated, before he received his baccalaureate, by his father's decision to place him in the family business. His brother, Gaston (there are also two sisters), handled the domestic transactions of the concern, while Jean Monnet was sent abroad frequently to take care of its foreign business. These voyages took him to England, the United States, and to Canada, where he persuaded the Hudson Bay Company to place Monnet brandy on the Canadian market. Subsequently, a long illness forced him to remain in Egypt for several years.

As a result of his ill health, Monnet was rejected by the French Army when World War I broke out. He then secured a position with the supply division of the Army, with which he remained until the latter part of that year, when he was sent to London as a liaison man for the Ministry of Commerce. Because of his earlier relations with the Hudson Bay Company, he was able to secure from that organization an advance of a hundred million gold francs for the French Government, which advance served as an assurance that all French purchases in Canada for the duration of the war would be made through that concern. This contract was renewed several times. Monnet, who had proposed the creation of an interallied pool for the purchase of grains and other foodstuffs, served on several of the committees that were responsible for securing food supplies, armaments, raw materials, and shipping facilities for the Allies. Informally constituted at first, these committees gradually developed into the Interallied Executive Committees, which were officially sanctioned at the Paris Conference of December 1917. Named permanent representative to the preliminary committees in 1916, Monnet contributed largely to their development, a fact which was brought to the attention of Premier Clemenceau and which resulted in Monnet's appointment to the Supreme Economic Council.

In 1919 Monnet, at the request of Sir Eric Drummond, was designated Deputy Secretary-General of the League of Nations, on Monnet's stipulation that the nonadministrative fact-finding functions of the interallied economic committees be retained in the technical secretariats of the League. During his four years with the League, *Fortune* reported, he was instrumental in securing a one-hundred-and-thirty-million-dollar loan from the great powers for the reconstruction of Austria and in establishing a temporary Silesian frontier between Poland and Germany. In 1923 he resigned from his position in the League in order to devote himself to the affairs of the family brandy concern, which was in a precarious position financially, because of lowered postwar prices and the death of Monnet's brother, the manager. Within two years, Monnet had reorganized the business on a sound financial basis to such an extent that the company showed a one-hundred-thousand-dollar profit in several subsequent fiscal years.

Monnet next became associated with the Paris branch of the American investment firm, Blair and Company, which was then sponsor-

ing the refinancing of Poland and Rumania. That company was later absorbed by A. P. Giannini's⁴⁷ Bank of America, renamed the Bancamerica-Blair Corporation, and drawn into the orbit of the Transamerica Corporation, a holding company. A stock market decline lowered the shares of both Bancamerica-Blair and Transamerica, leading to an attempt at the reorganization of the holding company by Monnet and his employer, Elisha Walker (later to be an executive of Kuhn, Loeb and Company). When Bancamerica-Blair took part in the recapitalization of the Diamond Match Company in 1930, Monnet was brought into contact with the Swedish match monopoly of Kreuger and Toll, which held several hundred thousand shares of the American concern. Through this connection, Monnet was appointed a liquidator of the bankrupt Swedish company by the Government of that country in 1932 (an appointment that required his resignation from the directorate he held in Diamond Match).

Toward the end of 1933, Monnet traveled to China. Later, following Monnet's advice, the Chinese Government founded the China Development Finance Corporation for the purpose of obtaining both domestic and foreign capital for various industrial projects. Loans for the Chinese Corporation were floated on the European and United States markets by Monnet, Murnane, and Company, a New York partnership formed by Monnet on his return from China, and by Monnet, Murnane, Ltd., its European affiliate. Reorganizing corporations was the chief activity of the American company, with which Monnet was associated from 1935 until 1943.

At the request of Premier Daladier⁴⁰, Monnet returned to Paris in 1938, only to embark for the United States as a member of the first French purchasing commission. Monnet placed orders with American aviation companies during that visit and during a second, in the spring of 1940. He had by that time already been appointed to the chairmanship of the Anglo-French Coordinating Committee that was, like the Interallied Executive Committees of World War I, implementing the purchase and production of raw materials and maritime transports for the two countries. As an exponent of Franco-British unity, Monnet urged the adoption of the plan of union presented to Premier Reynaud⁴⁰ in the spring of 1940; this effort came to no successful conclusion because of Reynaud's resignation. Consequently, after the capitulation of France that June, Monnet returned to the United States on a British passport countersigned by Winston Churchill.

With Churchill's aid, Monnet was also able to obtain a position with the British Supply Council in Washington, for which he began to estimate the total amount of material needed to prosecute the war beyond the total of the French and British contracts already placed in the United States. The entrance of the United States into the war brought Monnet into membership on several Anglo-American joint production boards—he was the only French representative on these bodies. Soon the insuffi-

French Press & Inf. Service

JEAN MONNET

ciency of American production became noticeable; with other experts, Monnet drew up a "Victory Program" that was presented to President Roosevelt⁴² shortly before Pearl Harbor, with the result that 1942 production figures for planes, tanks, and shipping actually exceeded the estimates projected by the program.

The spring of 1943 found Monnet in Algiers on a mission for the United States and British Munitions Assignments Board. While discussing the problem of rearming the French armies in Algeria, then led by General Giraud⁴², the financial expert became an adviser to the French commander. Largely through him the Giraudist and De Gaullist groups of Free French were merged. Monnet was one of the two Giraudist members appointed by Giraud in June 1943 to the seven-man French Committee of National Liberation, on which he held the position of commissioner of armaments, supply, and reconstruction. Temporarily, until the arrival of Henri Bonnet⁴⁶ from the United States, he also held the portfolio of Minister of Information. By October 1943, Monnet found the problems of relief and rehabilitation so pressing that he asked to be relieved of his duties as commissioner of armaments, thus retaining only the supply and reconstruction offices. These duties required his presence at the UNRRA conferences held in Washington and Atlantic City during November 1943, at the former of which he signed the UNRRA agreement.

By the beginning of June 1944 the liberation of France was begun with the Allied landings in Normandy. Almost three months later, the French provisional Government was formed, with De Gaulle⁴⁰ as head. Monnet, named a commissioner without portfolio, was in charge of sending supplies to the liberated regions of France, a task which entailed his departure for

MONNET, JEAN—*Continued*

London and Washington in order to seek shipping space and a billion dollars worth of goods on a lend-lease or reciprocal aid basis. With the shipping problem resolved by the allocation of ships to France on a month-to-month basis, negotiations were concluded by the agreement that France would pay five hundred million dollars, partly in cash and partly in credit, for the civilian and military supplies received, of which the latter were sufficient to equip eight divisions.

Monnet spent much of 1945 concluding Lend-Lease agreements in the United States. In December, while in France, he was appointed by General De Gaulle as Commissioner of the National Economic Council, entrusted with drafting a program for the modernization and re-equipment of French industry. During the months of preliminary research on the plan, more than a thousand nonpartisan representatives of labor, management, and Government investigated all phases of French industry. When completely formulated, the plan called for the establishment of flexible four-year programs for the six basic industries (coal, electricity, steel, cement, agricultural machinery, and transportation), with the objective of reaching, in 1947, France's 1938 production levels, and then of attaining the all-time high level of productivity of 1929.

Operation of the Monnet plan was to be under the direction of an economic council. By the immigration of a million foreign workers to France, the return of fifty thousand Government employees to civilian industry, and the increase of the working week to forty-eight hours, it was hoped to alleviate the manpower shortage; to some extent, this was also to be accomplished by the acceleration of professional training, which would bring more skilled workers into the labor market. The modernization of French agriculture was to be attained by placing new equipment at the disposal of the farmers, by the expropriation of large estates, and by Government supervision in the form of national and departmental advisory committees. When adopted unanimously by the French planning council in January 1947, the Monnet plan was put into execution by interim Premier Blum⁴⁰; its operation was aided by a two-hundred-and-fifty-million-dollar loan from the World Bank, of which J. J. McCloy⁴⁷ was president, and by the extension of six hundred and fifty million dollars in credits by the United States. Although progress of the plan was somewhat retarded by the wheat shortage of 1947, which required the expenditure of dollar credits for cereal, thus upsetting the balance of the French budget, Monnet considered it only a temporary setback to the plan. It was expected that the 1947 targets of increased production and of reconstruction (which was to start with work on the Donzère-Mondragon Dam) would be met.

The Monnet plan was considered one of the moves toward solvency that would enable France to participate in the Marshall Plan, which United States Secretary of the Treasury John W. Snyder⁴⁵ discussed with Monnet and

other French Government officials late in September, toward the close of the 1947 European economic conference. A further step toward France's sharing in the Marshall Plan was taken in October when Premier Ramadier appointed a special "balance sheet commission," with Monnet as its chairman, to study the resources, needs, and currency of France for the coming year, possibly with a view toward curtailing certain requirements of the Monnet plan because of the decline in production and dollar credits. To enable France to purchase coal and industrial supplies, the United States Export-Import Bank allotted \$93,000,000 to France on October 13, 1947, as insurance against further declension in the level of industry. (By then, however, certain French industries had reached a point of production exceeding the prewar output, according to Monnet's assistant, Robert Marjolin.) In mid-December another report, drawn by Monnet and adopted unanimously by his economic advisory group, predicted that 1948 would see French industry operating at a billion-franc deficit a day (New York *Herald Tribune*) because of "monetary instability and inequitable systems of distribution."

With his wife, the former Silvia Bondini, and their two daughters, Marianne and Anna, Monnet lives on a modernized farm at Bazoches, near Paris. *La Française*, a French women's magazine, described Mme. Monnet as one of her husband's advisers. "Often," said that publication, "he discusses his projects with her." Before the war Monnet found pleasure in walks in the mountains—in the Alps, the Alleghanies, or the Blue Ridge; now he is limited to short strolls around his country property each morning before breakfast. A small, dark, precise man, Monnet has been described in the French review, *Réalités*, as "amiable, conciliatory, patient, but also rather peremptory at times. He often cuts discussions short when they appear pointless to him."

Obituary

- N Y Times p17 My 3 '47 por

MOORE, DOUGLAS (STUART) Aug. 10, 1893- Musician; educator; author

Address: b. c/o Columbia University, New York 27; h. 464 Riverside Dr., New York 27; Cutchogue, Long Island, N.Y.

The president of the National Institute of Arts and Letters is the composer Douglas Moore, whose vocal and orchestral works have been heard on the concert stage for more than two decades. After joining the faculty of Columbia University in 1926, he rose to the chairmanship of the department of music there in 1940, a position he holds in 1947 as MacDowell Professor of Music. Moore is also the author of two scholarly texts on music.

Born August 10, 1893, in Cutchogue, Long Island, Douglas Stuart Moore is the son of Stuart Hull and Myra (Drake) Moore. The elder Moore, publisher of one of the earliest magazines for women, the *Ladies' World*, was a descendant of Thomas Moore, who in 1640 settled in Southold, New York. In the Drake branch of the family Douglas Moore is descended from Miles Standish and John Alden. One of Moore's two brothers (one is deceased), Arthur Standish, is vice-president of the Hearst Magazines; there is also a sister.

Moore grew up in a well-to-do Brooklyn household. According to his biographer, Willard Rhodes, in the *Columbia University Quarterly*, the boy was "subjected" to private piano lessons at an early age. This was before he was sent to the Hotchkiss School in Lakeville, Connecticut, where he was active in that preparatory school's musical and dramatic associations. After being graduated in 1911, he enrolled at Yale College, at which Moore maintained the same extracurricular interests. "During his student days at Yale," wrote Rhodes, "he established himself as a popular personality and successor to Cole Porter⁴⁰ with his highly successful victory song, 'Good Night, Harvard' (1913)." This was one of the many "pop" songs the Psi Upsilon brother was to compose as a charter member of the Chaos Club and Wolf's Head. Moore completed his major in music and philosophy to receive his B.A. degree in 1915. Continuing the study of music he had begun under David Stanley Smith and Horatio Parker, Moore did graduate work at the Yale School of Music, receiving his degree of Bachelor of Music from Yale University in 1917.

In World War I, Moore, as a lieutenant (j.g.), spent 1917-19 in the United States Navy. The two years following his discharge were lived in Paris, where he studied at the Schola Cantorum under Vincent D'Indy (1919-21). (Moore was later to study under Tournemire, and under Nadia Boulanger in Paris [1925-26].) Back in the United States, Moore studied for an additional two years with Ernest Bloch in Cleveland (1921-22). It was in this city that Moore had been engaged as assistant curator, in 1921, of the Cleveland Museum of Art. From 1922 until 1925 he was curator, in which post he also served as organist and lecturer; afterward he was to lecture at the Metropolitan Museum of Art in

DOUGLAS MOORE

New York for a time in 1925-26. While in Cleveland, Moore was also organist at Adelbert College, Western Reserve University, from 1923 to 1925. The following year Moore joined the staff of Columbia University as an associate in the department of music (1926). He rose from assistant professor (1927) to associate professor (1928), before attaining full professorship in 1940, the year he succeeded Daniel Gregory Mason as executive officer of the university's department of music. In 1943 he received his appointment as MacDowell Professor of Music at Columbia University. Conductor of Columbia's orchestra, Moore has also appeared as guest conductor of the Cleveland Orchestra, the Manhattan Symphony, and the New York Philharmonic at the Schelling concerts, given under the auspices of the university.

Douglas Moore began composing music before he had begun his study of composition. His style, as it later crystallized, was to be termed "classical" by David Ewen in *Composers of Today* (1936). "Moore's touch," wrote Ewen, "is light and deft; his music has sparkle and sting; it is of a wide popular appeal without resorting to cheapness." Willard Rhodes has called Moore's music "neither conservative nor *avant-garde*." "An independent spirit, distinctly individual, reflects Moore's original and genial personality and serves as a unifying motive in his creative work," he said. "In consistently refusing to ally himself with any musical school or tendency, Moore has respected his own genius and followed the dictates of his nature." Among Moore's orchestral works is *Four Museum Pieces* (1922)—originally written for organ, the work was transcribed for symphony orchestra, in which form it later won a Pulitzer Scholarship in 1925. His orchestral compositions are: *Pageant of P. T. Barnum* (1924), *Moby Dick* (a sym-

MOORE, DOUGLAS—*Continued*

phonic poem, 1928), *A Symphony of Autumn* (1930), *Overture on an American Tune* (1931), and *In Memoriam* (1944). In this period he also wrote *Village Music* for small orchestra, designed particularly for school groups. Moore has composed two symphonies, the second of which received honorable mention by the New York Music Critics Circle for the 1946-47 season. This recognition was to Olin Downes's taste—he described the work as an “unpretentious, clearly formed, genuinely felt symphony.” Its performance at Columbia University's third annual festival evoked this judgment from Miles Kastendieck of the *Christian Science Monitor*: “Here was musical substance. . . . While some might object to its romantic tendencies, others might recognize the genuine quality of its personal expression.”

His chamber music works include: *The Balade of William Sycamore* (1926), Sonata for Violin and Piano (1929), Quartet for Strings (1933), and Quintet for Winds and Horn (1942). For violin and piano he has written his *Down East Suite*, and for organ, the *Pas-sacaglia* (1939). One of Moore's choral works is scored for orchestral accompaniment: *Prayer for the United Nations*. The composer's earlier choral works are based on modern writings: *Simon Legree*, set to a poem by Vachel Lindsay, *Perhaps to Dream*, with words by Stephen Vincent Benét, and *Dedication*, from the text of Archibald MacLeish⁴⁰, all three of which were first heard in 1937. Among the first songs Moore wrote were three with poem-lyrics by his Hotchkiss and Yale schoolmate, MacLeish: “The Song of the Canoe” (1910), and “Dreams” and “The Reed Player” (1911), which were unpublished, at MacLeish's request. More famous are Moore's operas: *White Wings* (text by Philip Barry, 1935), *The Headless Horseman* (text by Benét, 1936), and *The Devil and Daniel Webster* (also by Benét, 1938). For the American Laboratory Theatre in 1926, Moore wrote a musical comedy, incidental music for *Much Ado About Nothing* and *Twelfth Night*, and collaborated with John Mason Brown⁴² on *Jesse James*, a pantomime with music. The music for the documentary films *Youth Get a Break* and *Power and the Land* is also by Moore.

In recognition of his contributions to serious music, Moore was elected to membership in the National Institute of Arts and Letters in 1941. Founded in 1898 and patterned after the French Institute, the National Institute of Arts and Letters (parent body of the American Academy of Arts and Letters) has a roster limited to two hundred fifty persons “qualified by notable achievement in art, music, and literature,” who are life members. Among the earliest of them have been Mark Twain, Henry James, Theodore Roosevelt, and Woodrow Wilson. Douglas Moore served two years as vice-president (1944-46) before assuming the presidency in January 1946, succeeding Arthur Train, the author, who had died in office.

His book *Listening to Music* (1932) brought Moore the favorable notices of critics, one of whom (Richard Aldrich, of the New York

Times) stated: “An eminent sanity and appreciation of realities mark the author's treatment. . . . The book is an unusually interesting and stimulating one, not only for the untaught music lover, but also for many who think they know a thing or two.” G. S. Dickenson of the *Saturday Review of Literature* expressed the majority verdict of the literary critics for Moore's *From Madrigal to Modern Music; a Guide to Musical Style*: “Professor Moore's writing is direct and energetic, tinged occasionally with an agreeable raciness. With this effective style as an instrument, he has filled his book with a remarkable amount of accurate and useful information, presented both economically and arrestingly. . . . [The treatment of the material] is sufficiently technical to be sound, but it is never forbiddingly technical.”

Moore is co-editor of a collection of songs. In 1929 ex-servicemen John J. “Jack” Niles, Douglas S. “Doug” Moore, and A. A. “Wally” Wallgren (they used this form of their names on the title page) published *The Songs My Mother Never Taught Me*, their compilation of songs of the enlisted men in World War I. Some of the lyrics were omitted, explained the editors, because the linotype lead kept melting as the lines were being put into type. Moore, who has also contributed reviews and articles to magazines, was guest editor of the *Saturday Review of Literature* for the 1946 annual music issue.

A child's introduction to music, Moore believes, should be made with songs in infancy. “There's no lovelier nor more lasting human relationship,” Moore has said, according to *Pathfinder*. During childhood and adolescence, interest in simple, but not artless, music can be fostered through playing an instrument or listening to phonographs and the radio. Moore, who feels that children early form standards of good music that are not affected by meretricious jazz or swing tunes on the radio, considers such music “a normal part of their growing up,” and less censorable than “dear little nursery rhymes written by dreary hacks with no divine spark.”

In addition to an Eastman School publication award, Moore has been honored by various institutions. He had been granted a Pulitzer Scholarship in music for 1925 (this accounted for his year in Paris with Boulanger), a Guggenheim Fellowship in 1934 (he left Columbia for a sabbatical year and went abroad to work on *White Wings*), and a Doctorate in Music from the Cincinnati Conservatory of Music in 1946 and the University of Rochester in 1947. Moore is a member of the board of directors of the Edward MacDowell Association, of the executive board of the League of Composers, and of the executive committee of the American Composers Alliance. He also holds membership in the American Society of Composers, Authors, and Publishers (ASCAP), the American Musicological Society, and the American Academy in Rome.

The president of the National Institute of Arts and Letters and Emily (Bailey) Moore, who were married on September 16, 1920, are the parents of Sarah Moore and Mary

Moore (Mrs. Bradford Kelleher). Moore is a Congregationalist. An independent in politics, the composer-educator was one of those elected to the executive board of the music division of the Progressive Citizens of America. His clubs are the Century, and Faculty of Columbia in New York. Moore has brown eyes and gray hair, weighs 165 pounds and stands five feet eleven. He has acted in the amateur theatricals of the Tucson (Arizona) Little Theater and the Cleveland Playhouse, a semi-professional stock company of which Moore was formerly vice-president. Cleveland audiences saw him play the leading roles in *Pygmalion*, *March Hares*, and *Rollo's Wild Oats*.

MORGAN, HENRY Mar. 31, 1915- Radio comedian

Address: b. c/o American Broadcasting System, 30 Rockefeller Plaza, New York 20

When the words "Good evening, anybody, here's Morgan" emanate from a radio, listeners, who, according to one reporter, are divided into Morganophiles, Morganophobes, and Morganatics, either lean forward eagerly, switch to another program, or retire to an attic where there is no radio. Originally "discovered" by listeners to local New York stations, Henry Morgan's name, within four months of his first appearance, in 1946, on a regular network program, was given prominence as a satirist by the radio columns of national periodicals.

Henry Morgan, né Henry Lerner von Ost, Jr., tells that he "was born of mixed parentage—man and woman—on the day before April Fool's Day 1915" in New York City. His parents are Eva (Lerner) and Henry von Ost; his father was vice-president of a New York bank. After the birth of his brother, Roger, in 1920, his parents were separated and Henry remained with his mother and attended school in New York. A *PM* interviewer stated that

"the facts of his childhood belong to that part of Morgan which is . . . wrapped in his cloak of privacy," concluding that this explained why he once gave a *Saturday Evening Post* writer imaginary biographical facts. In 1929, after a short and unsuccessful period of study at New York's High School of Commerce, Henry was enrolled at Harrisburg Academy, a Pennsylvania preparatory school, where he was remembered as "a lonely boy, very bright in class" and where he edited the yearbook, debated, and played football. At school and at the summer camps he attended during this period, he had "exactly the same sardonic sense of humor he has now."

After graduation from Harrisburg in 1931, young Von Ost was hired as a page boy at WMCA, a New York radio station. By 1933 he was announcing at WMCA and then for a short time at WABC, now WCBS, the New York outlet for the Columbia Broadcasting System. (He had changed his name to Henry Morgan the year before.) Having been chosen at a mass audition at CBS, in 1933 Morgan was hired as an announcer at WCAU, the network's Philadelphia station. Only eighteen, he thus became the youngest announcer in radio. Discharged from this job when he included the name of the station manager on a list of missing persons, he was later employed as chief announcer and program director for WEBC (Duluth, Minnesota) where he conducted his own program, *Strictly Masculine*. Subsequently he was an announcer at Boston's WNAC, part of the Yankee network and an NBC affiliate. There he conducted *House Party*. While in Boston Morgan took a few courses at Suffolk Law School; his insistence that he be allowed to take a law examination held during working hours led to his discharge from WNAC.

Henry Morgan returned to New York in 1940 as a staff announcer for WOR. A short time afterward, Morgan was heard on a Saturday morning program of his own, *Meet Mr. Morgan*. By April 1942 he was assigned a spot in the evening, first for three nights a week and then for six; this time the program was called *Here's Morgan*. "A Morgan cult cropped up," reported *Liberty*, "an astonishing collection ranging from professional humorists and show people—James Thurber, Will Cuppy, Fanny Brice, Olsen and Johnson, Herman Shumlin—to clergymen, children, taxi drivers, and an admiring clique in an insane asylum."

Morgan, whose program was sponsored by several advertisers, each entitled to a one-minute commercial announcement, early began his practice of "negative advertising." When his sponsor of many years, the Adler Shoe Company, introduced their "elevator shoes" with the assertion that these made the wearer appear two inches taller, Morgan observed, "That claim is correct—you can be two inches taller if you're able to stand up in them." Other advertisers did not respond so kindly to having their claims for their products minutely examined. After mulling over the problem of the hole in the middle of Life Savers candy, Morgan decided that he would buy the holes and sell them as "Morgan's Mint Middles."

HENRY MORGAN

One hour afterward, his Life Saver contract was canceled.

Norman Corwin once called Morgan "the first radiogenic comedian of stature. . . . His technique is too intimate, too sleight-of-mike for anything but radio"; his program, this script writer saw as "a daily dose of concentrated anarchy." One characteristic of the fifteen-minute-show was "weird" music, recordings in foreign languages, or novelty recordings. Permitting no audience in the studio, Morgan would interview his mother on her birthday, send parents away from their radio so he could incite their children to insurrection, or advise listeners to switch their dials to a competing program. Before the war the comedian ended his program with a weather report: "Muggy—followed by Tuegy, Wegy, Thurgy, and Frigy", "snow—followed by little boys with sleds", "dark clouds—followed by silver linings, followed by the Treasurer of the United States."

One Monday in January 1943 Morgan told his listeners that he was about to enter the United States Army. Having enlisted in the Ferry Command and completed basic flying school, for three months he was the master of ceremonies for *Gloom-Dodgers*, a weekday program heard over a local New York station, while awaiting assignment to secondary flying school. Later ordered to gunnery school, he spent some time in Laredo, Texas, and was then transferred in 1944 to an Air Force recorder unit in Santa Ana, California. There, according to the *Hollywood Reporter*, he had "something to do with almost every Santa Ana airshow." In the fall of 1945 Morgan was discharged from the Air Force and six weeks later he had resumed his *Here's Morgan* show, this time over the American Broadcasting Company stations.

The form and content of this show were much the same as the old one. Morgan con-

tinued to satirize his commercials and anything else that bothered him, without regard for possible legal consequences. On one program, however, he apologized to a group of listeners when he discovered that his sarcasm was unjustified. He told a *Time* interviewer that he derived ideas for his quips from eight magazines, ranging in opinion from *New Masses* to *Fortune*.

Early in the fall of 1946 ABC assigned a weekly half-hour network sustaining spot to Morgan. In October his program, at a new time, became commercial. Although he began one of these half-hours with the apology, "This program was written under the influence of—I am sorry to say—money," the contract with the Eversharp Company which was concluded after five weeks of negotiation, allowed Morgan to continue to "josh" his sponsor; and Eversharp was given the right at any time to cancel this five-year agreement. The new program employed actors for the first time—previously Morgan, whose repertory of dialects and characters is large, had filled every role. In 1947 he is still heard as a lecturing scientist, an intermission commentator at concerts, the "Question Man"; he also narrates his "science" programs, his "Coming Attractions Theater," his "Morgan Digest," or appears as any other character he cares to invent. Although he employs one assistant, Morgan himself writes the majority of his scripts. While *PM* reported, "There are many of his old fans who claim he was better in the old days when he was doing a very informal fifteen-minute show," *Look* magazine predicted that "Morgan will lead the radio field in popularity poll gains in 1947." The epithets applied to Henry Morgan and his wit run the gamut of opinions: he has been called, "savagely," "sophomoric," "a smart aleck," "uneven," "brash," "bumptious," "neurotic," "insulting," "wild," an "enfant terrible," "sharp-tongued," "witty," "fabulous," "magnificent," and a "satirist for the ages." At the end of 1946, *Motion Picture Daily* named him "Most Promising Star of Tomorrow." The results of *Billboard's* annual poll of radio editors placed Morgan as the "outstanding star of the year," and his program as runner-up in the "favorite program" and "favorite comedy show" classifications. His contribution to radio drama was cited by the George Foster Peabody Award committee; Morgan was named by *Vogue* as one of four young men who had changed "trends within their fields."

Nevertheless, Morgan, during Walter Winchell's Sunday broadcast in the fall of 1947, announced: "Situation wanted, male. Young comedian will be unemployed after December 3. Prospective sponsors please contact Henry Morgan." Morgan's sponsor had dropped their option on the comedian. According to *Time*, the reasons were a low Hooper rating, scripts which "have lacked their old-time bounce," and a decrease in razor blade sales. Shortly afterward, Morgan began negotiations with Rayve Creme Shampoo.

Although in his programs Morgan shows little mercy toward radio and films, in April 1946 he wrote an article for the New York *Times* magazine in which he laid a large part

of the blame for the ills in radio to the audience. "There are many neurotics in radio who are suffering because they are people of great talent pitifully frustrated in their work," he asserted, addressing the radio listener, "not because the sponsor won't pay for 'good' programs but because you won't listen to them. . . . For every bad program you can think of that's been on the air for years, I can name five good ones that nobody listened to and that had to be taken off." To a New York *Times Magazine* interviewer, Morgan gave his definition of art: "Art is what a guy does so he can eat. Any guy who works only for himself and locks himself in a garret and starves is a hopeless neurotic. No guy can be right by himself." A humorist, to Morgan, "is a man who not only makes people laugh but also think" (the words are the interviewer's).

Since the first *Here's Morgan* broadcast, Morgan has made numerous guest appearances on other programs. In August 1941 he played the role of Nick in the *Descent of the Gods*, one of the *Twenty-Six by Corwin* series. For Adler, his former sponsor, Morgan has appeared in four television shows. He has been master of ceremonies for a number of organizational entertainments and banquets including the "Stars Entertain for Republican Spain" and a dinner of the Committee for a Democratic Foreign Policy in the East. He was narrator for Prokofiev's "11 *Peter and the Wolf*" at a symphony concert for young people. He has given a number of benefit performances, was one of the stars of the variety show sponsored by the American Federation of Labor, and was one of the lecturers at the third annual radio and business conference sponsored by the City College (New York) School of Business. During the summer of 1947 Morgan made his first stage appearance, playing the leading role in *The Man Who Came to Dinner*. Another acting venture (Morgan himself admitted that his stage appearance fell far short of success) was Morgan's screen appearance in *So This Is New York*, completed in Hollywood at the end of 1947. He will also collaborate in New York on the scenario for "So This Is Hollywood."

In the summer of 1946 Morgan told his listeners about his vacation, which had started in Bermuda and ended in California—by listening to the fifteen-minute show, fans became familiar with "Morganized" versions of many events in the comedian's life including "squabbles" with the radio station, his Army career, and his search for an apartment. Assuring the audience that nothing of interest had occurred during his absence, he closed the program by announcing his marriage. His "girl" (whom his fans knew through his many references to her) was Isobel Gibbs, an actress; the date of their marriage was August 17, 1946. Their hotel apartment is filled with books on widely diversified subjects: among his collection are a book on psychoanalysis, a semantics dictionary, Trotsky's biography of Stalin, Henry George's *Progress and Poverty*, a biography of Alexander Hamilton, a study of American jazz, and a bound volume of Japanese floral prints.

"Curly-haired, not quite handsome," Morgan is almost six feet tall. His known sensitivity to humor directed at himself was discussed by a *Saturday Evening Post* writer who has quoted Morgan as having "with rare honesty" said, "I can dish it out, but I can't take it." Having maintained a deep interest in politics (some newspaper accounts state that his real ambition is a political career), Morgan in 1947 was elected vice-chairman of the New York State chapter of the Progressive Citizens of America.

MOTT, JOHN R(ALEIGH) May 25, 1865-Evangelist

Address: b. c/o National Council of the Young Men's Christian Association, 347 Madison Ave., New York; h. 528 E. Washington St., Orlando, Fla.

The co-winner of the Nobel peace prize in 1946 is John R. Mott, world-famed evangelist and past president of the World's Alliance of Young Men's Christian Associations. Honored as a potent force for peace in the world, he has, in the words of the *National Cyclopaedia of American Biography*, "been credited with being the chief instrument in modernizing missionary work and is regarded as one of the most constructive religious geniuses since John Wesley. As a leading force in aggressive Christianity he has probably influenced more young men at home and abroad than any other evangelist of his time, and as an executive he effected a unification and coordination of mission forces which resulted in saving large sums of money, elimination of overlapping, and the minimizing of friction."

John Raleigh Mott was born to John Stitt and Elmira (Dodge) Mott on May 25, 1865, in the farming community of Livingston Manor, New York. Two years later his farmer father moved with the family to Postville, Iowa, where he entered the lumber business, soon becoming the leading dealer in the town. The influences surrounding Mott in his childhood were profoundly Christian and cultural. He himself regularly read *The Youth's Companion* and *Harper's Weekly* in addition to the books in the relatively large family library. His mother, who told him much of European history and affairs, was an earnest Methodist and subscriber to such magazines as *The Christian Advocate*, *The Guide to Holiness*, and *The Heathen Woman's Friend*. Of her, Mott's official biographer, Basil Joseph Mathews, has written: "She radiated in her home the blend of kindness, decision, untiring industry, and quietness of spirit to which her son has owed so much of his power." At the age of thirteen the boy came under the influence of the Iowa evangelist J. W. Dean, and with his father and

Press Assn., Inc.

JOHN R. MOTT

one of his sisters professed Methodism. Thereafter, the local Methodist pastor guided his reading and fired his ambition for a college education.

At sixteen young Mott enrolled at Upper Iowa University, a small Methodist preparatory school and college in near-by Fayette. According to Professor Chauncey Colegrove, his mentor and later president of the institution, English literature, history, and philosophy, with emphasis upon politics, constitutional law, historical analysis, and logical reasoning were his main interests. He joined the Philomathean Society, one of the two rival debating clubs, whose purpose was to develop its members' "moral, social, and intellectual faculties" so that they would become "active participants in the great battle of life." He interested himself in the state papers of early American history, securing copies of many of them one summer when he was given the responsibility of enriching the Philomathean library; and he won prizes in historical and political oration and debate. One of his examination papers in advanced English language and literature Professor Colegrove kept as a prized possession for thirty years; and that he had dramatic talent, and "remarkable insight into the motives of Shylock and comprehension of Macbeth," he showed in the Shakespeare Club sessions conducted by Colegrove.

At this time, however, although he was a member of the YMCA, Mott was not strongly religious and, as a matter of fact, as Mathews phrased it, began to recognize in religion "the most subtle and persistent foe to his ambition"—a legal and political career as urged upon him by Governor William Larrabee of Iowa. Consequently, and because he wanted a wider horizon than Upper Iowa provided, in 1885 he transferred to the sophomore class of Cornell University, which was unaffiliated with any re-

ligious body. During his first year at Cornell he devoted himself primarily to his studies and to athletics; but on January 14, 1886, occurred the event which, he says, proved to be the turning point in his life. He had planned to attend a lecture by the noted Cambridge cricketeer J. Kynaston Studd, who was touring American colleges at the invitation of the evangelist D. L. Moody. Arriving late, he entered the hall just as Studd thundered out the words: "Seekest thou great things for thyself? Seek them not. Seek ye first the Kingdom of God." "On these few words," Mott wrote later, "hinged my life-investment decision. I went back to my room that night not to sleep but to fight."

Following an interview with Studd the next day, Mott entered upon a period of intense study of the Bible which he later supplemented by doing religious work among the prisoners in the county jail; as a result of this service he acquired a clear and firm faith. He became vice-president of the Cornell YMCA and in the summer of 1886 he was chosen to represent Cornell at the first Christian Student Conference, a gathering of 251 young men from 89 American and Canadian colleges under the direction of Moody, and was one of a group pledging that they were "willing and desirous, God permitting, to become foreign missionaries." Shortly thereafter, he was elected president of the Cornell YMCA. While he held the office he was instrumental, it is said, in increasing the membership threefold, and it was due to his efforts that the money for a YMCA building at the university was raised. He was graduated from Cornell in 1888, receiving the degrees of Bachelor of Philosophy and Bachelor of History and Political Science and being elected to membership in Phi Beta Kappa.

In September 1888, having agreed to a trial of one year, Mott became student secretary of the International Committee of the YMCA. After this there was never any doubt in his mind about his lifework. The work of a student secretary consisted of traveling among the colleges and devising in collaboration with student Christian leaders complete programs of activity. This Mott was to do for twenty-seven years, until 1915. At the same time, on a suggestion from Charles K. Ober, who had persuaded him to accept the secretaryship, he was given the additional responsibility of revitalizing the Student Volunteer Movement for Foreign Missions which was in danger of disintegration through lack of leadership and continuity. With representatives of the Intercollegiate YMCA, the YWCA, and the Interseminary Missionary Alliance, therefore, Mott formed an executive committee for the movement and himself became its chairman—a post he held until 1928. He began sending out special secretaries to direct and inspire the student groups on the various campuses and evolved a "disciplined, dependable movement related to the colleges, the churches, and the mission boards, which by 1925 had recruited over ten thousand American and Canadian student volunteers."

Mott has defined the purpose of all his work as the weaving together of Christian forces all over the world. Thus, in 1893 he organized the Foreign Missions Conference of North America to unite the missionary units of the North American continent. Thereafter he was repeatedly elected as a member of its executive committee of reference and council and was made an honorary life member in 1942. In 1895, with Karl Fries of Sweden, he organized the World's Student Christian Federation, with delegates from five movements representing ten countries present at its first meeting in Vadstena, Sweden. Two years later, largely as a result of a world tour which Mott as its general secretary took from 1895 to 1897, the Federation embraced twice that number. Mott was able to organize national student movements in India, China, Japan, Australia, New Zealand, and parts of Europe and the Near East as well as to establish seventy local Christian unions. In 1925, five years after he had relinquished the chairmanship of the executive committee and three years before he was to resign as general chairman (for which he had been chosen in 1920), the World's Student Christian Federation was estimated as having a membership of three hundred thousand young men and women in more than three thousand educational institutions in twenty-seven countries.

In June 1910 Mott, who by this time had become an acknowledged evangelical leader, was chosen presiding officer of the World Missionary Conference attended by twelve hundred delegates in Edinburgh, Scotland, and when that body established a continuation committee to carry on its work between conferences Mott was also given the chair of the latter. In 1912-13, as head of this committee, he toured the Far East holding regional missionary conferences, twenty-one of them in India, China, Japan, and Korea, spending his days organizing the work and his evenings speaking to huge audiences of native students. From these conferences national missionary councils grew in India, China, and Japan, and these in turn developed into national Christian councils largely guided by native Christian leaders, uniting indigenous and foreign elements in Christianity and these to the continuation committee. Over the years the missionary conferences attracted more and more delegates from the younger churches established by missionary work throughout the world, and for this Mott deserves much of the credit, being one of the few who took an active part in the leadership of all the gatherings. When the continuation committee was succeeded by the International Missionary Council in 1921, Mott was made chairman of this body; and in 1942, having retired from the post, he was made honorary chairman.

Mott held the student secretaryship, and after 1891 also the foreign secretaryship, of the international committee of the YMCA until 1915, when he assumed its general secretaryship, holding that until 1928, and the presidency of the YMCA's world committee from 1926 to 1937. There are many who believe that Mott's greatest contribution has been his work

in the YMCA movement, as the Oxford University student magazine *Isis* wrote, in "bringing home to university and college students a fuller sense of the meaning of their life." In 1915 statistics showed 778 student associations with 75,000 members, 120 paid secretaries, an enrollment of 38,000 in Bible study classes, and 3,000 in annual attendance at summer conferences. In the foreign field, to which Mott is said to have given the chief initial stimulus, self-supporting and self-propagating Christian associations took root rapidly. When World War I began, the YMCA undertook a vast program of welfare work, both spiritual and material, among all the allied armies and among the prisoners of war on both sides. When the United States entered the conflict, its services were offered to President Wilson and from then on a greatly expanded war service was directed by Mott as general secretary of the National War Work Council and leader of the United War Work Campaign, which raised \$192,000,000 for this work of the YMCA and six other associations. At the August 1947 conference of the World's Alliance of Young Men's Christian Associations, Mott resigned his presidency "to make room for a younger man."

Mott's work has taken him across the Atlantic over one hundred times, across the Pacific fourteen times, and on several world tours. For fifty years, he has estimated, he has averaged thirty-four days annually on the ocean, and the total of his land and sea travels was said in 1945 to exceed two million miles. He is the author of sixteen books on missionary, evangelistic, and apologetic subjects, all of which have had large circulation and some of which have been translated into from one to six foreign languages. Some of these are: *Strategic Points in the World's Conquest* (1897), *Evangelization of the World in This Generation* (1900), *The Future Leadership of the Church* (1909), *The Present World Situation* (1914), *The Moslem World of Today* (1924), *Liberating the Lay Forces of Christianity* (1932), *Five Decades and a Forward View* (1939), *The Larger Evangelism* (1944). He has received many honors. Although he declined President Wilson's offer to become United States Minister to China, he served on the Mexican Commission in 1916 and the Special Diplomatic Mission to Russia in 1917, and was awarded the Distinguished Service Medal for his work during the war. He has also received seven honorary degrees, the Imperial Order of Meiji from Japan, the Order of Polonia Restituta from Poland, the Order of the Saviour from Greece, the Order of the Holy Sepulchre from Jerusalem, the Second Order of the Crown from Siam, the Prince Carl Medal from Sweden, and is a chevalier of the French Legion of Honor and of the Order of the Italian Crown. At a dinner on December 19, 1946, in his honor as co-winner of the 1946 Nobel peace prize (which he shared with Emily Greene Balch⁴¹), he received messages from seven chiefs of state and other world leaders.

This "world citizen," as he has often been called, lists his favorite recreations as fishing

MOTT, JOHN R.—*Continued*

and wilderness tramping, and is a Republican in politics. He was married on November 26, 1891, to Leila Compton, a teacher by profession and also a member of Phi Beta Kappa; there are four children: John Livingston, Irene, Frederick Dodge, and Eleanor. Mott is six feet tall, says his weight has ranged from one hundred and sixty to one hundred and ninety pounds, has brown eyes and hair. One of the truest things ever said about him, say his associates, was written by Henry Nelson Wieman of the University of Chicago in the *Christian Century*: "There is something like the mountains and the sea in John R. Mott. He will always be the same, very simple and a bit sublime."

MOUTET, MARIUS (mōō'tā' mā'ryūs')
 Apr. 18, 1876- French Government official
Address: b. 19 Boulevard de Courcelles, Paris

The projected French Union, a parliamentary organization created under the constitution of the Fourth French Republic, would provide for legislative equality of all overseas territories with the mother country. The Cabinet minister charged with its implementation and administration is Marius Moutet, the Minister of France Overseas, whose office replaces that of the Minister of Colonies. Under the Third Republic, Moutet, member of the Socialist party for more than fifty years, lawyer, and deputy to the National Assembly, served as Minister of Colonies in several Cabinets.

Marius Moutet was born in the Provençal city of Nîmes on April 18, 1876. He was educated at the lycée of Mâcon and later at the Lycée Henri IV, in Paris. At Lyon, where he attended the university, he was admitted to the bar, but subsequently he also took and passed the examinations for the Paris bar. A member of the central committee of the Socialist party since 1895, Moutet did not enter public office until 1906, when he became councilor general of the department of the Rhône and of the city

of Lyon, a post he retained for twenty-two years. During this period, as an advocate at the Court of Appeals, Moutet in 1920 was counsel for the defense of Joseph Caillaux, the former Premier of France brought to trial after World War I on charges of having sought a dishonorable peace and of conspiring with the enemy. (Caillaux was convicted and sentenced to a three-year prison term on the less serious charge of corresponding with the enemy.)

Moutet was elected to the National Assembly in 1914 as a deputy for the department of the Rhône and was returned to that body for fourteen years as the Rhône delegate. From 1928 until the fall of France in 1940, however, he represented the Drôme department. It was in June 1936 that Moutet became a Cabinet minister, entering the Popular Front Cabinet of Léon Blum⁴⁰ as Minister of Colonies. The succeeding Premier, Camille Chautemps, retained Moutet in that post during the life of his Cabinet, between June 1937 and January 1938. With the return of Blum to the premiership in 1938, Moutet once again held the portfolio of the colonial ministry, but only for two months, relinquishing it in April 1938. The following year Moutet served as joint vice-president of the French-British Parliamentary Committee. Moutet was numbered among the eighty deputies who refused to vote for Pétain⁴⁰ in 1940 and, as a consequence, was prosecuted by the Vichy Government.

Upon the liberation of France from the Nazis in 1944, Moutet, elected to the Constituent Assembly of the Provisional Government, returned to political life as minister of a newly created Cabinet post, that of Minister for France Overseas. Instead of the old title of Minister of Colonies, the new designation had been chosen in order to indicate the new program of incorporating the various parts of the French empire into the French Union. The draft of the French Union statute, placed before the Council of Ministers in September 1946 (nine months after Moutet entered the Gouin⁴⁶ Cabinet), insured French citizenship to all members of the Union, representation in the National Assembly, and the establishment of local assemblies in each of the member states. This plan was formulated with the purpose of reaffirming and strengthening France's ties with her colonies, in which French prestige had diminished during World War II.

The Ministry of France Overseas was held by Moutet in the Cabinets of Gouin, Bidault⁴⁶, and Blum, and in the first Cabinet of the Fourth French Republic, under Premier Paul Ramadier⁴⁷. The major problem facing him in this post was that of Indo-China, where a strong independence movement was stimulated by absence of French authority in 1945. The Viet Nameese, natives of the province of Annam, sometimes fought alongside French resistance groups against the Japanese (who were aided by the Vichy French colonial officials); both before and after their defeat, the Japanese encouraged the Viet Nameese in their movement against the French. The return of the French to the Indo-Chinese part of their empire, after the war, was accom-

plished with the aid of the British who established a beach head at Saigon. The reacquisition of Indo-China by the French was opposed by the Viet Nameese under the leadership of Dr. Ho Chih-Minh, head of the Viet Minh party for Annamese independence.

The recognition of the Viet Nam Republic, to include the provinces of Annam and Tonkin, was granted in a provisional agreement reached after four months of discussion at Fontainebleau, during the summer of 1946. Both Moutet and Dr. Ho were signatories to the document, which did not, as desired by the Viet Nameese, establish Viet Nam as an autonomous nation, nor did it include the rich agricultural province of Cochin China demanded by the Viet Nameese. The French then promised to hold a referendum in Cochin China. By the time that warfare broke out at Haiphong between the French and Viet Nameese in mid-December 1946, no referendum had yet been held. Neither side accepted the responsibility for the new outbreak of hostility: each charged the other with betrayal and violations of agreements.

To determine the causes for the resumption of warfare and to avoid long-lasting hostilities, Moutet visited Indo-China late in December. It was felt in French official circles that France must decide whether or not to undertake repossession of Indo-China in order to prevent the dissolution of the entire French empire, menaced as it was in North Africa by the nationalist agitation of the Arab League. While visiting Cambodia and Laos, two non-combatant provinces of Indo-China, Moutet assured the inhabitants that France intended to grant autonomy to the members of the Indo-Chinese Union and to protect the smaller states from encroachment by the Viet Nameese. The French Minister was unable to establish contact with Dr. Ho for negotiations, and his plane was fired upon during his tour of the various Indo-Chinese provinces. Moutet concluded, after investigating the situation for a week, "There is nothing left but military action. . . . The premeditation of their actions has been established beyond doubt."

Shortly after Moutet's return to France, the High Commissioner for Indo-China, Admiral D'Argenlieu, was replaced by a civil service career man. This appointment was made at the same Cabinet meeting that closed with Moutet's statement that "the Government has unanimously reaffirmed its firm intention to maintain the continuity of French presence and authority in Indo-China by every means available." When a vote of confidence for increased military credits to pursue the Indo-Chinese campaign was placed before the French Assembly late in March 1947, it was certified by all the French parties except the Communist. Meanwhile, nationalist agitation in other of the French colonies created additional problems for Moutet. In Madagascar a revolt was organized by the Malagasy Renovation party early in April. In Tunisia, Arab leaders advocated total independence of their state and af-

French Press & Inf. Service

MARIUS MOUTET

filiation with the Arab League. In Algeria, considered a part of metropolitan France and composed of three departments sending twenty-six deputies to the National Assembly, a nationalist movement had been started, which demanded severance of Algeria's ties with France.

A settlement of one of France's colonial problems was evolved when, in August 1947, the 196 square miles of French India were permitted to enter the French union as free cities, to be ruled by a governmental council of six locally elected members. Three of the latter would represent the five cities of Pondichery, Karikal, Chandernagor, Mahe, and Yanaon in the French National Assembly. The following month Moutet tried to effect a settlement of the Indo-Chinese conflict by offering the Indo-Chinese dominion status in the French Union, with France retaining the right to certain strategic military bases. This, claimed Moutet, was similar to the offer made by the United States to the Philippines, and by Great Britain, to India.

Moutet is vice-president of the central committee of the League for the Rights of Man, president of the French group of the Inter-Parliamentary Union and of the Franco-Chinese Educational Society, as well as vice-president of the Franco-British Inter-Parliamentary Committee and of the France-China Association. In 1945 he was president of the Commission for Territories Overseas. At the Paris Peace Conference, he represented France on the political and territorial commission for Italy. Mme. Moutet was known as Dr. Anna Matoussevitch, a physician and Chevalier of the Legion of Honor.

MULLER, H(ERMANN) J(OSEPH) (mül'ēr) Dec. 21, 1890- Biologist

Address: b. c/o Indiana University, Bloomington, Ind.; h. 1001 E. 1st St., Bloomington, Ind.

Long recognized as a specialist in genetics, in the field of zoological biology, H. J. Muller is the discoverer of artificial evolution by the use of X-rays to produce mutations. The work in artificial transmutation of the gene, with its far-reaching implications, brought him the Nobel Award of 1946 in physiology and medicine. Muller is (in 1947) a professor of zoology at the University of Indiana.

Hermann Joseph Muller was born December 21, 1890, in New York City, where his father, Hermann Joseph Muller, and his grandfather, Nicholas Muller, manufactured objects of art in metal. Emigrating from Koblenz, Germany, to New York in 1848, Nicholas Muller founded the first foundry for art works in the United States (1849) in which he reproduced many designs by his brother, Karl Muller, the sculptor. Young Muller's mother, the former Frances Louise Lyons, was of English parentage, tracing her ancestry chiefly to Spanish and Portuguese Jews. The boy and his sister Ada (deceased), an English teacher in the New York high schools until her marriage and retirement, were reared in New York, where Muller attended grammar school in Harlem before enrolling at Morris High School in the Bronx. There, with Lester Thompson and Edgar Altenburg, he established what is believed to be the first science club in an American secondary school. Founder and editor of the class weekly paper, he was vice-president of the senior class, an editorial board member of the *Morris Annual* (1907), and, upon his graduation in 1907, he delivered one of the commencement addresses.

A Cooper Hewitt Scholarship (1907-10) and work at a bank, at a summer hotel, and as a tutor helped to finance Muller's undergraduate years at Columbia University, where he majored in zoology. Along with Altenburg, he founded the biology club there; he was also a member of the Peithologian Literary Society (Peitho was the Greek goddess of persuasion, an attendant of Aphrodite). Muller's high scholastic standing brought him *cum laude* honors when he received his B.A. degree in 1910, as well as membership in Phi Beta Kappa; he was elected to Sigma Xi, the science research honor society, four years later. A graduate science scholarship in physiology (1910-11) kept him at Columbia another year for his M.A. in physiology, which he received with his thesis, *The Nature of the Nerve Impulse*. His postgraduate studies continued at the Medical School of Cornell University, which he attended on a fellowship in physiology (1911-12); he returned to Columbia with an assistantship in zoology (1912-15), completing his Ph.D. with a major in zoology, a first minor in physiology, and a second minor in biochemistry. *The Mechanism of Crossing Over* (1916) was his doctorate thesis for the degree he received at Columbia in 1915; he was to earn a D.Sc.

in genetics twenty-five years later at the University of Edinburgh.

Muller's first teaching assignment outside New York State was at Rice Institute in Texas, where he was an instructor of biology (1915-18) before succeeding to the chairmanship of the department of biology (1916-18). After two years back at Columbia as an instructor of zoology (1918-20), Muller went again to Texas, to the State university, where he taught as an associate professor (1920-25), full professor (1925-36), and research professor (1928-29) in zoology. (He taught that subject also in 1925, as a summer associate professor at the University of Chicago.) While at the University of Texas, Muller received a Guggenheim Memorial Foundation Fellowship to work at the Kaiser Wilhelm Institute for Brain Investigation in Berlin (1932-33); he served (1932-36) on the board of directors of that institution, which was raided and forced to close in the course of the Hitler '42 regime. Muller spent the following years from 1933 to 1937 in Moscow as senior geneticist at the Soviet Academy of Sciences' Institute of Genetics and as a consultant on the staff of the Medicobiological Institute there. His next post abroad was that of research associate and lecturer at the Institute of Animal Genetics at the University of Edinburgh (1937-40); after the outbreak of hostilities in Europe, he returned home as a research associate (1941-42) and visiting professor (1942-45) in biology at Amherst College. His appointment as professor of zoology at the University of Indiana came in 1945.

While Muller's interest in genetics began early, when, as a boy, he saw models of the horse's development through the geological periods, he was later inspired to investigate the field by the work and personalities of his teachers, the Columbia geneticists Edmund Beecher Wilson and Thomas Hunt Morgan. Muller began his research in 1910 or 1911, under these men, with breeding experiments upon the fruit fly, *drosophila*, which has a life span of about nine days in warm weather. By tracing inherited characteristics of the flies through many generations, Muller was thus able to analyze the arrangement and method of recombination of the heredity units or genes: with A. H. Sturtevant and C. B. Bridges he established the principle of linear linkage of the genes in heredity; working together with Altenburg, Muller went on to study mutations or changes in the gene which lead to permanently altered characteristics inherited by subsequent generations.

In crossbreeding mutations, Professor Morgan, who won the Nobel Award of 1933 in physiology and medicine, found the natural rate to be 400 mutations in 20,000,000 fruit flies. In 1926 Muller exposed the fruit flies to X-rays to produce 150 times as many mutants as occur naturally. Muller was thus able to "break the news of one of the most sensational researches ever conducted in biology"—the artificial transmutation of genes by X-ray—at the International Genetics Congress in Berlin (1927). In the same year he won the first

of the major honors, the annual one-thousand-dollar award of the American Association for the Advancement of Science for his paper, *The Effect of X-radiation on Genes and Chromosomes*. Muller was elected to membership in the National Academy of Sciences (1931), to correspondent membership in the Academy of Sciences of the Union of Soviet Socialist Republics (1933), and to foreign membership in the Royal Swedish Academy of Science (May 1946). Earlier, in 1945, he had been chosen the Pilgrim Trust lecturer before the Royal Society in London—the London Royal College of Surgeons also called a special session for his lecture on genetics. Also in 1945, the Rockefeller Foundation made a ninety-five-thousand-dollar grant to the University of Indiana for a six-year research project in genetics, Muller being one of the three scientists carrying out the program; in October 1946 the American Cancer Society allotted Muller forty-five hundred dollars for a study to be conducted on cancer, and in February 1947 allotted him an additional twelve thousand six hundred dollars for this purpose.

Perhaps the greatest honor any man of science can receive was bestowed upon Muller on October 31, 1946, when the Stockholm Faculty of Medicine chose him the recipient of the 1946 Nobel Award in physiology and medicine (a cash award of \$35,205) for his discovery that X-rays may be used to produce mutations. King Gustav V⁴² of Sweden presented the medal, check, and diploma to Muller, one of five Americans to receive the awards in science, on December 10, 1946, the fiftieth anniversary of Alfred B. Nobel's death. While artificial mutation of livestock and vegetables may benefit mankind in the development of superior species of animals and higher-yielding foodstuffs when developed commercially, the discovery may perform a far greater service by warning of another terrifying aspect of the atom bomb. Atomic fission produces X-rays capable of causing mutations; it is Muller's opinion that some of the Japanese exposed to the rays from A-bomb explosions of World War II may transmit such hereditary effects (mutational freaks) to their descendants for generations, as to make death from the bomb more attractive than mere exposure. In August 1947 Muller was chosen as one of the leading geneticists to study medical and biological effects of the bomb upon survivors, under the auspices of the United States Atomic Energy Commission. A month later, in an article in the *Bulletin of the Atomic Scientists*, Muller warned that there were destructive possibilities in the peacetime, as well as the wartime, use of atomic energy, since mutations in germ plasma caused by atomic means could terminate the human species.

"My father, who died when I was nine and a half years old," writes Muller, "interested me in science . . . and in efforts to raise the condition of mankind"; appealing to fellow scientists to assume an active role of social responsibility, Muller has said, "Scientists have the responsibility of seeing to it that their ef-

H. J. MULLER

forts are used for the benefit, not disadvantage, of their fellow humans." However, Muller, who left Moscow after theoretical disagreements with the Lysenko group of plant scientists there, does not regard himself as a Marxist or dialectical materialist because he does not accept some of the interpretations adopted by orthodox advocates of these doctrines today. Muller expressed his ideas in *Out of the Night; A Biologist's View of the Future* (1935, 1936, French edition 1938).

Reviewing *Out of the Night*, J. L. Stocks of the *Manchester Guardian* called it "a daring, lively, provocative essay in eugenics; but whether what it promises would take us altogether 'out of the night' may be doubted." Wrote Waldemar Kaempffert in the *New York Times*: "His [Muller's] is the long-time view of the biologist who deals with eons rather than a lifetime, with evolution rather than a single generation. What he gives is something like a religion which has no God, which deals entirely with human destiny, and which expects a new kind of sacrifice and reaps a new kind of joy." Muller's position on the use of genetical principles to improve the human species in evolution (parts of which position he expressed before the Peithologian Society as early as 1909) is based upon the Marxian concept that practices of mankind in any age are conditioned by the economic system and material techniques then existing: Muller believes that the true ends of eugenics cannot be realized under a social system in which economic considerations govern human reproduction, environmental differentials obscure genetic worth, predatory characteristics are exalted as the genetic ideal, and antirationalistic taboos oppose the eugenic method.

In addition to preparing papers on biological and genetic subjects, Muller is co-author of *The Mechanics of Mendelian Hered-*

MULLER, H. J.—*Continued*

ity (1915, revised 1923) and *Genetics, Medicine, and Man* (1947). Some of his lesser known researches include pioneer work in blood transfusions made during the Spanish Civil War (1937) and the first psychological measurements of identical twins who had been reared in different homes. A fellow of the American Association for the Advancement of Science (he was chairman of the genetics section in 1928), he is a member of the American Academy of Arts and Sciences, the Society for Experimental Biology and Medicine, the American Society of Naturalists (he was vice-president in 1932 and president in 1943), the American Society of Zoologists, the American Genetic Association, the Genetics Society of America (he is president in 1947), the Genetical Society of Great Britain, the American Association of University Professors (he was a council member in 1931), and the American Philosophical Society.

The scientist was married to Dorothea Johanna Kantorowicz, M.D., of Bonn, Germany, on May 20, 1939; they have a daughter, Helen Juliette. Muller has a son, David Eugene, by his first marriage, in 1923, to Jessie Marie Jacobs. The evolution of his hair, Muller has said, has been from brown to gray, to bald; he has gray eyes, stands five feet three inches tall, weighs 135 pounds. Outdoor sports and a long-standing appreciation of literature are his favorite means of recreation. The political independent's interest in world politics is matched by an interest in world travel.

MUNCH, CHARLES (münsh shàrl) Sept. 1891- Orchestra conductor

Address: h. 8 Rue Alfred Dehodencq, Paris

Charles Münch, called by *Time* "France's greatest conductor," made his first appearance in the United States early in 1947. His conducting has been widely discussed by the music critics in the cities in which he has appeared; he introduced some contemporary compositions to American audiences, and gave new and well-received, interpretations of other works. Münch for eight years was conductor of the Orchestre du Conservatoire in Paris. Since his debut as conductor in 1932, after a career as a violinist, Münch has become known as an exponent of modern music.

Strasbourg, Alsace-Lorraine, then a province of Germany, is the birthplace of Charles Münch, who was born in September 1891. His mother, the former Celestine Simon, was the daughter of a French clergyman; Charles's

father was Ernest Münch, the organist who founded the choir of St. Guillaume. A brother of Charles, Fritz Münch, was also to become a noted musician. Young Charles studied violin at the conservatory in Strasbourg, with Carl Flesch in Berlin, and with Lucien Caput in Paris. In 1919 Münch returned to Strasbourg to become a professor at the conservatory and concertmaster of the city's orchestra.

Later Münch went to Leipzig, where he studied conducting under Furtwängler, head of the Gewandhaus. In 1926 Münch became leader of the Leipzig orchestra. His debut in France as a conductor took place in 1932; a year later he gave his first performance in Paris. During his early years in Paris he conducted the Staram Orchestra, the Orchestre Lamoureux, and the Orchestre Symphonique de Paris in programs of Bach, Beethoven, Mendelssohn, Roussel, Honegger⁴¹. In March 1933 Münch led the Orchestre de la Société Philharmonique de Paris (often abbreviated to O.S.P.) in the first performance of Albert Roussel's *Bacchus et Ariadne*; in December of the same year Paris for the first time heard a performance of the Bach-Schoenberg Prelude and Fugue; this was also under Münch's baton. In 1935 Charles Münch was appointed director of the Orchestre de la Société Philharmonique. A critic wrote in December 1936, "This orchestra, at present under the direction of its leader M. Charles Münch, ranks among the topmost orchestras." A year later another critic stated, "Charles Münch is established more and more as one of the best conductors, communicating an intense aliveness to all scores." The orchestra director began to include a larger proportion of modern and contemporary music in his programs. In June 1937 he was the principal conductor at the annual festival of the International Society for Contemporary Music; this series of programs was performed at the Paris Exposition of 1937.

Münch was named in 1938 to direct Paris' oldest orchestra, the Orchestre du Conservatoire. In June of that year he was the conductor of a special centenary performance of Berlioz' *Requiem*. On at least one occasion after he had become a conductor, Münch performed on the violin, at a presentation of Bach's Concerto for Two Violins. At the invitation of the American Embassy in France, Münch in 1939 conducted a program of American music. When, from 1940 to 1944 the Nazis occupied Paris, Münch continued to conduct the orchestra; his alternative was either to disband the group or to be himself replaced by a German successor. During World War II Münch gave his fees to the French resistance movement; he has also stated that he was able to prevent removal (by the Nazis) of members of his orchestra because of race or religion. The Orchestre du Conservatoire gave Saturday and Sunday afternoon performances of contemporary French music (he refused to conduct German works other than the classics). Münch later said, "The youth of France were our most enthusiastic listeners. We had concerts devised especially for them, with an admittance fee of less than ten cents in American

money. Their interest has not waned. They keep coming and are now good critics. They will be the great music lovers of tomorrow." In November 1945 Virgil Thompson, New York *Herald Tribune* music critic, wrote from Paris that the Orchestre du Conservatoire "is still one of the great orchestras of the world." Münch resigned his leadership in 1946, because, according to *Time*, he was ordered by the directors to play better-known compositions.

After the Germans had been driven from France, Münch was the first French conductor invited to come to England. During 1944-45 he made three trips to conduct the orchestras of the British Broadcasting Company (he had appeared with this group in 1938) and the London Philharmonic. In 1945-46 he again conducted in England and, during that year, traveled to Switzerland, Holland, and Belgium. Münch was one of the conductors at the International Festival of Music in Zurich in 1946. In both 1946 and 1947 Charles Münch performed at the Prague International Music Festival. Also, in the summer of 1947, the French musician conducted the Brandenburg Concertos at a festival of music composed by Bach, held in Münch's native Strasbourg.

In the words of Miles Kastendieck (*Christian Science Monitor*), Münch "came [to the United States] unheralded, he left triumphant." Münch's first American performance was in January 1947 with the Philharmonic-Symphony Society of New York, where "his guest conducting became the sensation of the season." Among the performances for which Münch received special praise was his interpretation of Berlioz' *Fantastique*. "You have probably heard Berlioz' 'Fantastic' Symphony many times," *PM's* Robert Hague asserted, "but, unless you were lucky enough to hear the performance Charles Münch and the Philharmonic gave it this week [early in February] you have never really heard it at all." Olin Downes (*New York Times*), who had, before he heard Münch's interpretation, considered the symphony a "museum piece," observed: "Back of his qualities as a conductor—his masterly treatment of phrase, his exceptional range of sonorities, from the nearly inaudible pianissimo to the fortissimo that is so brilliant yet not too hard, the complete flexibility of beat and capacity, when that is desirable for romantic rhetoric—are Mr. Münch's temperament and imagination."

Münch's presentation of Debussy's *La Mer* was also particularly acclaimed by the critics, who thought the performance "brilliantly conceived and completely realized." Olin Downes had one reservation: "We thought in passing that the first movement of Debussy's cycle was a little too much italicized in its detail." Of Münch's conducting of Handel's *Water Music*, a critic wrote, "This was conducting and more—it was music." In appraising an entire program, the New York *Times* critic said, "In a few places in more modern scores . . . Mr. Münch's zest got the better of him, and he overdrove the orchestra so that there were a dozen blazing climaxes instead of several, and

Harcourt, Paris

CHARLES MÜNCH

by so much was the final climax lessened in effect. But here perhaps was a pardonable extravagance, due to the leader's delight in the capacities of the orchestra and the intoxication of its response to him." Most audiences of the New York Philharmonic in the winter of 1947 remarked upon that response. When Münch left New York, the members of the orchestra honored their guest conductor with a surprise cocktail party—a tribute they had paid to no other person since their farewell party to Arturo Toscanini⁴². When Artur Rodzinski⁴⁰ resigned his directorship of the New York orchestra, Münch's name was mentioned as a possible successor.

The musician continued his American appearances in the 1947-48 season. In his November 1947 New York appearance he again won the praise of critics, with, however, some unfavorable comments on his interpretation of Brahms's Fourth Symphony. During this two-week period, he introduced to New York Honegger's Second Symphony for Strings, which had had its American première the summer before at Tanglewood. Early in January 1948 Münch will lead the first American performance of Honegger's *Jeanne d'Arc du Bucher* in New York. Münch, who in the course of his first American tour had appeared in Boston, Chicago, and Montreal, planned to return to these cities as well as others in 1947-48.

In France the conductor has recorded the music of Bloch, Ravel, Saint-Saëns, and Honegger. Münch, who adopted French citizenship in 1918, has been decorated a Chevalier in the Legion of Honor. Mme. Münch is of Swiss birth. "Long, strong, shy" (so *Vogue* has described him), he has blue eyes and gray hair. On the podium Münch conducts with extraordinary movements—he cues his musicians with rapid, angular gestures of the head, arms,

MUNCH, CHARLES—*Continued*

shoulders, trunk, or legs, and exhorts them, at times, with shouts and hisses.

MYER, DILLON S(EYMOUR) Sept. 4, 1891- United States Government official

Address: b. c/o Institute of Inter-American Affairs, 499 Pennsylvania Ave., N.W., Washington, D.C.; h. 116 Great Falls St., Falls Church, Va.

To Dillon S. Myer, appointed Federal Public Housing Authority commissioner by President Truman in August 1946, was given the task of administering all public housing projects throughout the United States and of coordinating the plans for future housing. Much of Myer's career in public service had been spent in administrative posts, with the Agricultural Adjustment Administration, the Soil Conservation Service, and the War Relocation Authority. When the Housing and Home Finance Agency, to coordinate the facilities of all the Federal Government's previous housing authorities, was formed in August 1947, Myer was placed at the head of the Federal Public Housing Authority, one of its administrative subdivisions, from which he resigned four months later in order to accept the presidency of the Institute of Inter-American Affairs, a United States Government corporation.

The son of John Hyson and Harriett Estella (Seymour) Myer, Dillon Seymour Myer was born at Hebron, Ohio, on September 4, 1891. At the age of twenty-two, in 1914, he received his Bachelor of Science degree from Ohio State University. For the two years following his graduation he taught agronomy (the theory and practice of crop production and soil management) at Kentucky Agricultural College. The young agronomist entered Government service in 1916 as agricultural agent for Vanderburgh County, Indiana. From 1917 until 1920 he remained in Indiana as assistant county agent leader for the extension service of Purdue University, but returned to Ohio at the end of the period.

After two years in Franklin, Ohio, as county agricultural agent, Myer became district supervisor of the agricultural extension service of Ohio State University, where (except for a year's interval in 1925-26 when he obtained his M.A. from Columbia University) he remained for the next twelve years. In April 1934 the soil expert joined the staff of the Agricultural Adjustment Administration in Washington. From there, he went to the Soil Conservation Service in September 1935, to serve first as a division chief and later as assistant chief of the service until December 1941. For the first half of 1942, Myer was assistant administrator, and subsequently, acting administrator of all

agricultural and conservation work in the Department of Agriculture.

War duties, however, ended temporarily Myer's services in the Agriculture Department, for upon Milton S. Eisenhower's⁴⁶ resignation from the War Relocation Authority in June 1942, Myer succeeded him as director of that organization. The WRA, a civilian agency, had been formed to administer the evacuation of Japanese-Americans from the strategically important West Coast areas. In collaboration with the Army, the WRA established the *évacués* (two-thirds of whom were American citizens) in ten new communities, where they were provided with food, shelter, and medical care, and where school, church, and employment facilities were made available to them. Only one of the relocation centers, at Tule Lake, California, was maintained for the segregation of disloyal citizens and enemy aliens. Rioting broke out at Tule Lake late in October 1943, which resulted in the camp being placed under Army control; the WRA, however, continued as the administrative authority. Aside from this incident, Myer pointed out, "not one disloyal act" had been committed by the thousands of Japanese-Americans released from the camps under the "permanent leave" system inaugurated by the WRA.

The WRA in its entirety was brought under the jurisdiction of the Department of the Interior in February 1944. Although supervision of the agency was nominally transferred to Secretary Ickes⁴¹, Myer remained the actual director of the agency. The Cabinet officer announced his intention of adhering to the policies initiated by Myer (who had been strongly criticized by two members of the three-man Dies subcommittee). In accordance with Myer's plan to relocate gradually the *évacués* before the end of the war when conditions might render impracticable the resettlement of so many people, the exodus of Nisei citizens from the WRA camps began in early 1945. Under the guidance of staff members in WRA field offices, the relocation of Japanese-Americans throughout the country (many preferred not to return to the West Coast) was accomplished. To solve the housing problem, privately financed, temporary hostels were constructed in many Western cities, while financial aid was furnished by local social welfare agencies and short-term assistance grants from the WRA. Despite occasional terrorist activities and antagonism directed against the returning Japanese, most of them were absorbed into normal community life without incident by the end of 1945. The explanation for this was given by Myer in an article in *Common Ground*. "The prejudices which can grow bitter and intense against a racial stereotype," he wrote, "are harder to maintain against a neighbor."

During the summer of 1944, another group of displaced persons, nearly a thousand refugees from Europe, came under the authority of the WRA. On behalf of Secretary Ickes, Myer welcomed them to the emergency shelter at Fort Ontario, New York, where small apartments were provided for families and dormitories for unmarried men and women. Unlike

the Japanese-Americans, the European refugees were not permitted to leave the camp or accept outside employment, but were given a modest sum of money monthly for such necessities as soap, clothing and toothpaste.

After the WRA's program of liquidation was completed in July 1946, Myer remained for six weeks with the Department of the Interior as the executive director of its Coordination Committee. In the second week of August 1946 President Truman⁴⁵ named him interim appointee, subject to Congressional approval, as Commissioner of the Federal Public Housing Authority, a major unit of the National Housing Agency. Streamlining of the NHA in order to meet the critical housing shortage had resulted in an organization consisting of the Administrator's office and three main constituent units: the Federal Home Loan Bank Board, the Federal Housing Administration, and the Federal Public Housing Authority. The FPHA coordinates the activities of several earlier agencies which were established under the Lanham Act of 1940 to provide and administer housing and community services for war workers.

During the reconversion period, the FPHA is managing public housing for distressed families of veterans, servicemen, Government employees, and for private industries completing war contracts. It also administers low-rent housing and slum clearance projects. Reactivation of projects planned before the war comes under the authority of the FPHA. According to a statement made by Myer before the National Association of Housing Officials, the major task of the FPHA's central office will be the provision of financial aid and technical assistance to implement the local agencies' programs of development. In the same speech, the new housing commissioner also endorsed the Wagner⁴¹-Ellender⁴⁶-Taft⁴⁰ bill as "a necessary and logical development of what we have done so far in slum clearance and housing of low-income families."

After the reorganization of the National Housing Agency, completed in August 1947, Myer became interim chief of the Federal Public Housing Authority, part of the new Housing and Home Finance Agency. Shortly after being appointed to this post by President Truman, Myer appeared before the House Small Business Subcommittee in defense of the cooperative stores operating under exclusive contract at the Government-owned community of Greenbelt, Maryland. In a speech delivered to the annual conference of the Middle-Atlantic States Regional Council of the National Association of Housing Officials in September 1947, Myer charged that the Government's low-priced housing plans had been impeded by a well-integrated, well-financed group of real estate men. He cited, as offenders and as instigators of a campaign against public housing, several nation-wide real estate firms, loan associations, and building concerns.

Myer submitted his resignation from the FPHA in November 1947, in order, he ex-

Wide World Photos

DILLON S. MYER

plained, to be free to accept another Government post. This, it soon developed, was the presidency of the Institute of Inter-American Affairs, a United States Government corporation under State Department supervision, which is responsible for working out cooperative programs with the other countries of the Western Hemisphere in the fields of education, agriculture, and health.

In 1915 Myer collaborated with A. S. Gilbert on a book called *Clover Root Rot*; he has also contributed articles to the *New Republic* and *Common Ground*. His agricultural activities are now chiefly devoted to the garden around his house in Falls Church, Virginia. In 1946 Myer was awarded the Medal for Merit in recognition of his administration of the relocation of the Japanese-American citizens. The Government official was married to Jenness Wirt in 1921, and now has three daughters, Mary Jenness, Elizabeth Ann, and Margaret Wirt. Six feet tall, he has gray-green eyes and gray hair.

NENNI, PIETRO (nân'nē pyâ'trō) Feb. 9, 1891- Italian political leader

Address: b. c/o Socialist Party Headquarters, Rome

Pietro Nenni, as leader of the Italian Socialist Party, filled posts in several Italian Governments during the Allied occupation of Italy. When the Socialist signed an agreement with the Communist Party in which the two groups joined political forces to strengthen the Leftist bloc, a Right wing of the Socialist Party seceded from the main body in January 1947. Nenni continued to lead the Left Socialists.

PIETRO NENNI

Pietro Nenni was born in Faenza, a town in Northern Italy, on February 9, 1891, to Giuseppe and Angela (Castellani) Nenni. From the time he was seven years old until 1909, when he reached the age of eighteen, he was reared in an orphanage. By 1911 he had become a Socialist, and in that year he was imprisoned at Forlì with a group of Socialists (including Benito Mussolini⁴²) for protesting against the Italian Government's part in the Turco-Italian war. From 1911 to 1914 he was editor in chief of *Lucifero*, a periodical published at Ancona. After the Italian entrance into World War I, Nenni enlisted in the Italian army, in 1915, and served until 1918. Returning to his journalistic work, in 1918 he became director of *Giornale del Mattino*, a democratic periodical published in Bologna. Two years later he was editor in chief of Milan's *Secolo*; within another year he had assumed the editorship of *Avanti*, the official organ of the Italian Socialists.

Mussolini's "March on Rome" and the subsequent establishment of Fascism in Italy took place in 1922, but it was not until 1926 that *Avanti* was suppressed and Nenni forced to flee to France. He continued to make use of his

journalistic skill as correspondent for the French newspapers *Quotidien*, *Populaire*, and *Peuple*. For eight years (1931-39) he was the Paris director of the Italian *Nuovo Avanti*; during this period he also served as secretary of the Italian Socialist Party. When the Spanish Civil War broke out in 1936, Nenni and a colleague Randolfo Pacciardi, became political commissars for the Garibaldi Brigade of the International Brigade fighting with the Spanish Republicans. (This group of Italians defeated, at Guadalajara, the motorized divisions sent by Mussolini to aid Franco⁴².) In 1939 Nenni, by this time back in France, resigned from the Second International (the Labor and Socialist International) because of its "vacillating position on the Spanish issue." Still in Paris at the beginning of World War II, the Socialist tried to organize a Free Italian legion, but, according to *Nation*, "his efforts were sabotaged by the traitors and appeasers at Quai d'Orsay." In February 1942 Nenni was confined in Saint-Flour on the orders of Pierre Laval⁴⁰, Vice-Premier of the Vichy Government. The following year he was brought by the Germans to Italy and a few months later was imprisoned in Rome.

When Premier Badoglio⁴⁰ took over the almost defunct Italian dictatorship in August 1943, Nenni was released because the Socialists threatened to call a general strike unless he and other political prisoners were freed; shortly afterward he was chosen secretary-general of his party. The Socialists were one of the seven groups comprising the Committee of National Liberation (CNL) which was formed early in the Allied occupation to cooperate with the Allied Military Government. When the Bonomi⁴⁴ Government (which succeeded the Badoglio Cabinet) failed to execute anti-Fascist purges to the satisfaction of Leftist groups, the Socialist and Action parties withdrew from participation in that coalition Cabinet. (Nenni himself did not hold a post in this because he considered it a "stop-gap" Government.) In June 1945 the CNL agreed on Ferruccio Parri⁴⁵, founder of the Actionist party, as Premier. Nenni became Vice-Premier, vice-president of the Council, high commissioner for Sanctions Against Fascism, and Minister of the Constituent Assembly, which was drafting the new Italian democratic government. In the latter capacity, Nenni was charged with responsibility for arranging the election of the National Assembly and the referendum on the monarchy. When members of three Rightist parties resigned from the Parri Cabinet in protest against the strong measures taken by Nenni against Italian Fascists the Government was put in the hands of Alcide de Gasperi⁴⁶, the leader of the Christian Democrats, "a moderate party slightly left of center." In the new cabinet, Nenni was again Vice-Premier and "again specifically entrusted with planning and gathering the means by which the political future of the nation will be determined."

On June 2, 1946, the Italians voted to establish a republic, and in July De Gasperi, as leader of the party which had polled the greatest number of votes in the general election,

formed a coalition Cabinet; this time only five of the six parties which had sat in former Cabinets were represented with the number of members, depending on the party's strength. De Gasperi retained for himself the title of Foreign Minister with the agreement that this post would be given to Nenni, who was named Minister without portfolio, when the Italian peace treaty, then under discussion, was concluded. When the Paris Conference adjourned in October, Nenni was installed as Foreign Minister. At the suggestion of Nenni, the Italian delegation approached the Yugoslav delegates at the Peace Conference, which had reconvened in New York, to discuss the possibility of the two countries working out a solution to the controversial question of the possession of Trieste. Little progress was made toward calling a conference, but the matter was not completely closed. In October Nenni promised the British, United States, French, and Russian Ambassadors that Italy would comply with whatever action was taken against Spain by the U.N., although Italy, which was seeking admission to the international organization, was not yet under such obligation. While holding the post of Foreign Minister, Nenni often acted for De Gasperi when the Premier was absent from Rome. In January 1947, after De Gasperi's return from United States Nenni resigned from the Cabinet to avoid the impending split in the Socialist party. His last official act was to submit a note to the Big Four requesting the establishment of machinery for revisions of the treaty on the basis of future bilateral agreements; the New York *Herald Tribune* interpreted this as an indication that Nenni still hoped for a Yugoslav-Italian agreement on Trieste. When the treaty was signed, Italy's first Republican Government without Allied supervision was formed by De Gasperi. Nenni was not named to the Cabinet.

A new election was held in Italy in September 1947. One of the chief issues, seen by Nenni, was alleged United States influence on the De Gasperi Government. When the votes were counted the Premier's Christian Democrats were victorious, polling a larger number of votes than in the previous election; *PM*, however, declared that since the clergy and Government employees comprised half the number of those voting to retain De Gasperi, the election was not as marked an indication of Rightist strength as many observers thought it. Nenni told *Avanti* readers in a postelection editorial that Italy could not "stay in the middle." It must go "either one way or the other." Nenni believed that the choice would have to be made in the national elections in April 1948. Therefore, Nenni has proposed that Left-wing parties form a "People's Bloc" to combat anti-Marxist forces. According to a New York *Times* account, Nenni favors the calling of a general strike to protest the De Gasperi Government, but has urged the end of the sporadic demonstrations which occurred in Italy late in 1947. The leader of the Left-wing parliamentary attack on the Government, Nenni warned that what he termed "isolation" of the

Leftist parties would "force the working class to abandon the lawful methods it has followed."

American newspapers saw another reason for Nenni's resignation: this was the cleavage of the Right and Left wings of the Socialist Party. Nenni had long favored an alliance with the Communist Party to gain the majority that neither group could win separately. In 1944 an informal alliance with Palmiro Togliatti, Communist leader, had given these parties of the Left greater strength than the Christian Democrats, usually the leading group. By the fall of 1946 a formal pact was announced: each party was to retain full autonomy but was to join with the other in working toward the common aims of nationalization of monopolistic industries, liquidation of large estates, increase in the number of cooperative farms, improved working conditions, and social legislation. Of this move, Nenni wrote, "This does not signify that there is an identical viewpoint on every issue, that similar emphasis is placed by Socialists and Communists on every single problem; but there is a natural tendency toward similar objectives" (a *Labour Monthly* reprint of an *Avanti* editorial). When the Socialist convention was called in January 1947, a Right wing of the party under the leadership of Giuseppe Saragat refused to accept the alliance and seceded from the party.

Several of Nenni's articles published in *Avanti* (of which he was editor from the time of his return to Italy in 1943 to January 1946), have been translated and reprinted in British and American publications. The Socialist has written several books: *Sei anni di guerra civile in Italia*, *Storia di quattro anni*, *Storia della lotta di classe in Italia*. His *Ten Years of Tyranny in Italy* was translated into English in 1932.

The Italian political leader is "baldish and graying, and of medium height." He is described as a "dramatic man of amazing energy for his years." Nenni was married on March 9, 1911, to Carmen Emiliani; one of their daughters, Vittoria, was killed in a German concentration camp. Their three other daughters are Giuliana, Eva, and Luciana. Nenni's only sport is what he terms the "sport of the poor"—bicycling. He does not smoke, limits his drinking to one glass of chianti before dinner.

NEUTRA, RICHARD J(OSEPH) (noi'-trā) Apr. 8, 1892- Architect; city planner
Address: b. and h. 2300 Silverlake Blvd., Los Angeles 26, Calif.

The adaptation of the contemporary, cosmopolitan principles of architecture to American usage has largely been accomplished by the efforts of Richard J. Neutra, an Austrian-born California architect. In his designs he has utilized the resources and potentialities of the new materials which modern industry has

RICHARD J. NEUTRA

put at the disposal of the architect: steel, plywood, aluminum—and slabs of fossilized earth. Small houses with built-in features in the \$3,000-\$3,500 range are a Neutra innovation. To community design he has brought the conception of central recreational areas, radiating like outspread fingers between residential strips, from which traffic is deflected to peripheral roads.

Richard Joseph Neutra was born in Vienna, on April 8, 1892. His parents, Samuel and Elizabeth (Glaser) Neutra, had three other children: one of Richard's brothers became a physician, the other a patent lawyer, and the sister a graphic artist. As a student at the Archduchess Sophie School in Vienna, Richard Neutra became interested in mechanics, expressed either in engineering or in the experimental architecture of Otto Wagner. When it was time, after his graduation in 1912, to choose a career, Neutra entered Vienna's Polytechnical College. There he edited the students' paper, won a competition, and in 1917 received his degree, *summa cum laude*, as an architect-engineer. A part of his training had consisted of five study trips to Italy. For a short time afterward he worked in the atelier of Adolph Loos, a follower of Wagner's, and then spent a year at the University of Zurich in Switzerland, where in 1918 he received a diploma, with distinction. Neutra was a resident of Switzerland until 1923, working as a landscape architect with Gustav Amman. His architectural assignments took him out of Switzerland occasionally.

Neutra's first commission, which he received in 1915, while he was serving as a field artillery officer in the Balkans with the Austrian army, had been to construct a teahouse in the Herzegovinian fortress of Trebinje. After the war, in collaboration with Erich Mendelsohn, Neutra designed the *Berliner Tageblatt* build-

ing (1921). The construction of a group of four houses for a Berlin suburb occupied Neutra in 1922. That year Neutra and Mendelsohn won first prize in an international competition for a plan suitable for the business center of Haifa, Palestine.

Upon coming to the United States in 1923, Neutra worked in several New York architectural offices before going on to Chicago. He was on the staff of Holabird and Roche (now Holabird and Root) while they were building the Palmer House in that city; among his other associates were Louis Sullivan, who is regarded as the father of modern architecture, and Frank Lloyd Wright⁴¹, with whom he spent several months at "Taliesin." About this time Neutra made his first studies of the Diatom house, a prefabricated structure made from slabs of diatomaceous earth, composed of deposits of microscopic infusorial sea shells, which were combined with cement or other adhesives.

Work on Neutra's first book, *Wie baut Amerika* ("How America Builds"), an explanation of American attitudes and procedures in planning and in building, was completed in 1924; after its publication in Stuttgart in 1926, it became known as the "most widely published data on America that Europe has." An idealized city plan, "Rush City Reformed," was evolved by Neutra in several years' work and included in *Wie baut Amerika*. Neutra's decision to establish himself in Los Angeles was reached in 1926. For the Los Angeles and San Francisco areas, he designed office buildings, schools, and dwellings. His garden apartments constructed in Los Angeles in 1927 exemplified the first application of modern technical principles to design, in the international style, that had yet been built on the North American continent. The international style, which developed simultaneously in several countries during the twentieth century, is characterized by the use of a steel or steel-reinforced concrete framework, a factor that allows the interior to be planned independently of the skeleton. By the use of sliding or otherwise movable partitions, rooms can be used for multiple purposes. The unornamented façades of the buildings are most often of stucco, tile, aluminum, glass or steel sheeting; these exteriors tend to be asymmetrical, and are dictated by the function of the interior.

A project for the Palace of the League of Nations, prepared by Neutra in collaboration with R. M. Schindler, was displayed throughout Europe by the *Deutscher Werkbund*, as was that of Le Corbusier⁴². In the Lovell house, a home in Los Angeles demonstrating one of the first examples of the incorporation of health factors in design, built between 1927 and 1929, Neutra introduced the use of a shop-fabricated steel chassis and of gunite, a dense concreted compound applied under pressure with a specially made air gun. A structural novelty designed by Neutra in 1927 was his mast house, of which the ceiling, floors, and walls were suspended from five sparlike masts placed along its central axis. For the series, *Neues Bauen in der Welt*

("New Building in the World"), issued in Vienna, Neutra in 1929 wrote the volume on America. In this same year, he was elected the first American delegate to the Congrès International de l'Architecture Moderne, an association of which he was later (in 1944) to be president of its committee for postwar reconstruction.

Fourteen months of Neutra's time in 1930 and 1931 were spent in lecture tours. While in Japan, Southern Asia, North Africa, and Europe, he was able to survey urban planning and housing in those regions. During 1931 Neutra lectured at various universities (including Harvard, Columbia, and Princeton) and museums in the East and Middle West of the United States. As the recipient of numerous commissions from municipal, State, and the Federal governments, he designed schools, housing projects, and NYA youth centers. The schools he built for the Los Angeles Board of Education between 1935 and 1939 were experimental (classes could be held in a combined indoor and outdoor area) and emphasized active participation by the students instead of passive learning. For the Federal Housing Authority, Neutra from 1939 to 1941 designed five projects, to accommodate 2,100 families, for construction in California and Texas. The centers planned for the NYA in 1940 and 1941 were built by apprentices selected from within the organization itself—an offshoot of Neutra's theory that the best men for structural work are trained, not in colleges, but on the job.

Defense housing designed by Neutra included the Avion Village, a 300-family unit near Dallas, Texas, which illustrates the advantages of a peripheral road plan; and the Channel Heights project, in San Pedro, a self-sufficient community with child-care center, business and market center, firehouse, and a utility and storage building. Communal facilities are often found in Neutra's work: his model school, illustrated in the *Architectural Record* in 1944, is a neighborhood center, where clinics, libraries, nurseries, agricultural instruction, and recreational areas, as well as classrooms, are available to the community. The Ring Plan School, designed by Neutra for his "Rush City" plan in 1924, was used as the model for a community school constructed at the Portland (Oregon) Kaiser Shipyards in 1944.

Under Neutra's direction, the Government of Puerto Rico inaugurated a long range building program, with the purpose of raising the standard of living on the island. For them the California architect designed a complete new system of 150 schools, hospitals, and 128 health centers, which was approved in 1945, and which is scheduled to be built at a cost of fifty million dollars. Reconstruction, whether of a war-devastated or poverty-blighted area, is an enthusiasm of Neutra's. Writing in *Arts and Architecture* in 1944, he suggested that one of the destroyed European cities, such as Rotterdam or Warsaw, be selected as a laboratory area for postwar reconstruction experiments in architecture and city planning, and placed un-

der the supervision of an unbiased international commission of expert technicians. Neutra has also indicated, in *Pencil Points*, that he considers the reconversion of war industries to the fabrication of dwellings an insurance against mass unemployment. "Housing," he wrote, "is the recognized peacetime work reserve." Neutra found, while traveling in South America in 1946, that the lack of imported building materials on that continent has stimulated the production of new native materials and that local building ordinances, in some cases, had been adjusted to accommodate the new materials and methods.

As chairman of the California State Planning Board, Neutra was the first architect to be charged with such a responsibility. The Governor of California had also appointed him a member of the State Board of Architectural Examiners. On leaving for his assignments in Puerto Rico, however, the architect was legally required to resign from both of his State offices. By the Administrator of the United States Housing Authority, Neutra was named one of its national consultants. He has also served as a consultant to the committee for national competitions for United States Post Office buildings, and as a member of the schoolhouse advisory board of the United States Office of Education. In 1947 he was invited to serve as a judge in the nation-wide competition held to determine the best design submitted for the expansion of the Jefferson National Memorial.

Aside from his studies on city planning and housing already mentioned, Neutra has been co-author of *Circle*, and *The Problems of Housing* (1935), *House and Home* (1936), and *Preface to a Master Plan* (1942). To *National Planning Methods of Mass Housing*, Neutra has contributed "Routes of Housing Advance." He is a co-editor of the *American Dictionary of Arts and Architecture*, and a contributor to *New Architecture and City Planning* (1944), to numerous architectural publications in the Americas and in Europe, and to the *Encyclopædia Britannica* (1939 and 1946). For the New York *Herald Tribune* magazine, *This Week*, Neutra designed a house for the series, "Parade of Homes," which was published with an explanatory article by the architect. Monographs of which he is the subject have appeared in Denmark, Belgium, France, Italy, South Africa, Mexico, Argentina, and Japan.

Recognition of Neutra's work has been shown by the number of honors bestowed upon him. He has received prizes and medals in competitions held by *House Beautiful*, *Better Homes in America*, the General Electric Company, and *Ladies' Home Journal*; and honor awards in contests sponsored by the Pittsburgh Plate Glass Company, *House and Garden*, Wheaton College, the Smithsonian Institution, the Republic of Uruguay, and the Southern California chapter of the American Institute of Architects. His name was enrolled in the Hall of Fame at the New York World's Fair. Two samples of his work were chosen in 1944 by the Museum of Modern Art as being among

NEUTRA, RICHARD J.—*Continued*

the most significant examples of American architecture in the last decade; and the Office of War Information sent exhibits of his work to Scandinavia, France, England, and Austria. He is also represented by model exhibits in the Museum of Modern Art and the Museum of Science and Industry, in New York City, and the Rhode Island School of Design. Low-cost furniture patented by Neutra has been manufactured for use in his housing projects.

A member of the American Institute of Architects since 1924, Neutra was advanced to a fellowship in that group in 1947. The national associations of architects of Mexico, Cuba, and Bolivia, have each chosen him as an honorary member. In Puerto Rico he is a member of the Colegio de Ingenieros. The architect's Los Angeles club is the Severance; his political affiliation is Democratic. Five feet eleven inches tall, Neutra has blue-gray eyes, gray hair, and weighs 180 pounds. His wife, who was Dione Niedermann until their marriage in 1923, has frequently collaborated with him in his work. The Neutras and their three sons, Frank (named for Frank Lloyd Wright), Dion, and Raymond Richard, live in a Neutra-designed combination workshop and home in Los Angeles. The architect often does the paper work on his ideas during the early dawn.

NICHOLS, HERBERT B(ISHOP) Oct. 21, 1907- Journalist

Address: b. c/o The Christian Science Monitor, 1 Norway St., Boston 15, Mass.; h. Farm Lane, Westwood, Mass.

The president of the National Association of Science Writers is Herbert B. Nichols, who became natural science editor of the *Christian Science Monitor* in 1932. He was co-winner of the 1946 Westinghouse Medal, awarded by the American Association for the Advancement of Science in recognition of his contributions to the physical sciences as a writer and editor.

Herbert Bishop Nichols was born on October 21, 1907, in South Norwalk, Connecticut, the son of Chester Encell and Ethel Blanche (Bishop) Nichols. His father, a manufacturer of women's and children's wear, owned the Nichols Manufacturing Company of Bridgeport, Connecticut, the city in which young Nichols was brought up. The ancestry on his father's side is traced back to the Nichols who settled near Salem, Massachusetts, in about 1630; it is through the Dann family of New Canaan, Connecticut, however, that Herbert B. Nichols was to establish his membership in the Sons of the American Revolution. By his father's second marriage, to Dorothea Seeth, Nichols has five half sisters.

It was at the Maplewood School in Bridgeport that Nichols received the greater part of his grammar school education. He then spent two years at the Suffield Preparatory School (now the Suffield Academy), from 1921 to 1923, before leaving to enlist in the United States Army. In September 1923 the sixteen-year-old Nichols joined the Thirteenth United States Infantry, and in his three years of service was raised to the rank of sergeant in the regimental supply section. After his separation from the Army in 1926, he returned to high school: he was editor of *Pen*, the Bridgeport Central High School paper, and participated in the school's dramatics and football. It was Aretus A. Saunders, his biology teacher, who, he says, aroused an interest in natural history in him: "The teacher made me curious about the world in which I live, and encouraged me in high school biology research projects." Nichols, however, left that high school when he went to Boston to work as a messenger for Lee Higginson and Company; after work he attended the Boston Evening High School, at which he completed the credits for a night school diploma in 1928. In that year he took the college entrance examination for, and was subsequently admitted to, Harvard College.

To help finance his freshman year at Harvard, Nichols worked as a waiter at the college; and in the following three years Nichols, a biology major, earned part of his expenses by writing articles on science and by reporting college and general news for the *Christian Science Monitor*. President of the Christian Science Society of Harvard in 1932, Nichols was also active in other extracurricular activities: he rowed for his class crew and was on the winning Winthrop House Crew of 1932. The previous year (1931) he had won an intercollegiate oratorical contest, "Overcoming Race Prejudice," and in his senior year (1932) he received a one-hundred-dollar prize for high scholastic standing. Harvard College awarded Nichols his Bachelor of Science degree in 1932; a year of postgraduate work in education followed at Boston University in 1934.

Soon after being graduated from Harvard in 1932, Nichols joined the staff of the *Christian Science Monitor*, full time, as the newspaper's natural science editor. (His three years as a reporter in college he has considered his period of apprenticeship, and he also credits much of his knowledge of journalism to Paul Deland, managing editor of the *Christian Science Monitor*.) In the years Nichols was to spend writing news and opinions of events in the natural science and engineering fields, his assignments have taken him to construction sites, to proving grounds, and into laboratories throughout North America. In 1936 he joined the Carnegie Expedition at Chichen Itzá, Yucatán, which research made possible Nichols' series of articles on American archaeology. (The same year he attended the Tercentenary Conference at Harvard.) In 1939 he was one of six journalists invited to join the group of one hundred astronomers who took part in the dedication exercises of the Mc-

Donald Observatory in Texas. Nichols, who was to spend the years of World War II on active duty in the United States Army, went on leave of absence from the staff in 1941 to which he was to return in 1945. In 1946, when he reported the Bikini Atom Bomb Tests for the *Christian Science Monitor*, he was one of the eight science writers invited by the Government to join Joint Task Force One. The reports that Nichols wrote of the tests appeared in British as well as in American newspapers, Nichols having served as a correspondent for the London *Daily Telegraph* and *Morning Post*.

The five years of Nichols' service with the United States Army in World War II constitute a part of the more than twenty years he has been an active and a reserve member of the military forces. In the early years, after his separation from the Regular Army in 1926, he served as a reserve corporal with the First Corp of Cadets in Boston. Later, at Harvard, he enrolled in the military science courses and was subsequently commissioned a second lieutenant in the Field Artillery of the Reserve Officers Training Corps. Then, because of his three years in the Regular Army, he was assigned to the Seventh Field Artillery, which reserve officership he held until 1939. In 1940 he received his promotion to reserve captain. Called to active duty in the following year, he served as battery commander and reconnaissance officer of the Eighty-seventh Field Artillery Battalion (Armed), stationed in the Panama Canal Zone. He later served with the First Special Service Force, a joint Canadian-American paratroop, ski-troop, and mountain-troop outfit. Then, with the Thirty-sixth Corps at Fort Riley, Kansas, in 1944-45 he examined artillery battalions prior to their movement overseas for the battle of Germany. In 1945 Nichols was sent to China as a press intelligence officer at the headquarters of the United States Forces in Chungking. While on General Albert C. Wedemeyer's⁴⁵ staff, Major Nichols kept the staff informed of Chinese public opinion concerning the American military action there, opinion reflected in reports and editorials appearing in Chinese newspapers. His promotion to lieutenant colonel came just after his return to the United States from China in November 1945, shortly before he was relieved from active duty.

After returning to the *Christian Science Monitor*, in 1947 Nichols was elected president of the National Association of Science Writers. Founded in 1932 through the efforts of science writers of the press wire services—the Associated Press, the United Press, the International News Service, and the Science Service—and the science editors of several of the larger metropolitan newspapers in the United States, the National Association of Science Writers is composed of some 150 men and women engaged in the dissemination of natural science news through the media of the newspapers, magazines, and radio. The organization, which is affiliated with the American Association for the Advancement of Science, installed Nichols on April 29, 1947, as president for 1947-48 at

HERBERT B. NICHOLS

its Washington, D.C., convention. Previously, the American Association for the Advancement of Science had selected Nichols as a co-winner of the George Westinghouse Award for 1946, "for distinguished service to science in the field of journalism."

Nichols' writings consist of: reports to the layman, published in the *Christian Science Monitor* and other newspapers, and in magazines, including *Forum*, the *Reader's Digest*, the *Science Digest*, and *Scholastic*; technical articles for a more specialized audience—"Xerophytes in Relation to Varying Habitat," "Early American Horticulture as Exemplified by Species Extant near Abandoned Cellar-holes", "Solar Planetary Satellites," and "Marco Polo and Early Maps of North America." (Nichols has found several old maps in the Library of Congress which indicate that Marco Polo visited the northwest coast of North America in his travels.) Nichols has discussed the distinction between writing for the specialist and for the layman. He once ended a humorous article in *Forum*, in which he ridiculed the use of needlessly technical jargon, with the following: "And now in luctual resipiscence I offer subdolous exomologesis for my ignavia and scelestic laches in comperendinating my scommatic pollicitation of an idoneous but infrunite bam or mycterism. . . . In short, I apologize."

A member of the American Association for the Advancement of Science, Nichols belongs to the following scientific societies: the American Polar, the Bond Astronomical, the Massachusetts Horticultural, the Vermont Botanical, the Josselyn Botanical, and the Academy of Natural Sciences of Philadelphia. The *Christian Science Monitor* editor is also a member of the American Academy of Political and Social Sciences. Nichols, whose club is the Harvard University Club, is a member of the Masonic Order: he belongs to the

NICHOLS, HERBERT B.—Continued

Nehoiden Lodge (Needham, Massachusetts), the Consistory (Boston, Massachusetts), St. John's Council (Keene, New Hampshire), the Masonic chapter of Muskogee (Oklahoma), and the Commandry in Norwood (Massachusetts).

The journalist and Ruth Mildred Christie were married August 20, 1932; their children are Chester Encell 2d and Nancy Evelyn. Nichols attends The First Church of Christ, Scientist. "In politics I am essentially Republican, but I reserve opinion until election day." He has blue eyes, and dark hair which is now slightly gray, weighs 210 pounds, and is six feet two inches tall. Hiking and gardening are his favorite recreations—he has not rowed since 1939—and geology claims much of his "outside" interest.

NOLDE, O(TTO) FREDERICK (nöl'dē")
June 30, 1899- Theological seminary professor
and dean

Address: b. c/o Graduate School, Lutheran
Theological Seminary, 7301 Germantown Ave.,
Philadelphia 19; h. 7602 East Lane, Wynd-
moor, Philadelphia 18

An eminent authority in the Protestant church "on problems of religious liberty and world order," the Reverend Doctor O. Frederick Nolde, dean of the Graduate School of the Lutheran Theological Seminary in Philadelphia, Pennsylvania, has served on a number of international commissions for peace and world cooperation, including the United Nations, where his familiarity with world affairs and ecumenical trends have been valuable aids. The professor of religious education has also stressed the necessity for the churches, in their teachings, to support "a world Christian movement of peace and good will."

Otto Frederick Nolde, the son of Antone Harry and Ida (Fuchs) Nolde, was born June 30, 1899, in Philadelphia, Pennsylvania. About two years later, in 1901, the Nolde family moved to New Jersey. Young Otto Frederick attended Palmyra (New Jersey) High School, completing his secondary school education in 1916. In the same year he matriculated at Muhlenberg College in Allentown, Pennsylvania, where his studies, in accordance with the college's system at that period, were concerned primarily with English and other languages. Nolde's extracurricular activities while he attended Muhlenberg included participation in football, basketball, and baseball games, and membership in the college's glee club and string orchestra; he joined, too, the Phi Kappa Tau fraternity. In 1920 he was graduated with his B.A. degree. (Twelve years later Nolde was awarded a Doctor of Divinity degree from his college, and fourteen years following that [1946], the LL.D.)

Shortly after, Nolde entered the Lutheran Theological Seminary in Philadelphia, from which he received his Bachelor of Divinity degree in 1923. Then, beginning in 1923, for two years he held a fellowship at the seminary, followed during the 1925-28 college years by a position as instructor in religious pedagogy at the same institution. During these three years (1925-28) the student of religion was also pastor of the Grace Evangelical Lutheran Church in Wyndmoor, a suburb of Philadelphia; and in 1944-45 he was a member of the parish and school board of the same church. Nolde in 1928 was made assistant professor of religious education in the Lutheran Theological Seminary, a position which he retained for three years. Advanced to a full professorship in 1931, Nolde has continued since in that capacity, becoming, in addition, in 1943, the dean of the seminary's graduate school.

Meanwhile, concurrent with his work at the seminary, Nolde pursued his graduate studies further at the University of Pennsylvania, also in the City of Brotherly Love. There, from 1925 until 1928 he was instructor in religious education. For his Ph.D. degree in the latter year from the university Nolde wrote a thesis (printed in 1929) entitled *Department of Christian Education in the Theological Seminary*. In the next year (1929) he was appointed assistant professor at Pennsylvania, in which post he remained until 1935, serving during the period from 1936 to 1943 as a university lecturer.

During World War II, among the primary problems facing the churches were those pertaining to postwar spiritual brotherhood of man in connection with the proposed international security organization and with religious groups of all nations. The Lutheran clergyman and educator was to have a prominent role in world ecclesiastical activities and in the planning for freedom of faith. In the Protestant organization, the Federal Council of the Churches of Christ in America, Nolde has been, for some time, a member of its Department of International Justice and Good Will as well as of its Commission on a Just and Durable Peace, one of whose aims is to promote inter-nation collaboration. When the Princeton International Round Table sessions were in progress in July of 1943 and were attended by church leaders representing fourteen countries, Nolde acted as secretary of the conference. "National isolationism", "monopolization of power by a few nations," and similar policies were considered by the clergymen to be among the obstacles to the preservation of peace, and they advocated "reconciliation on the basis of justice" with the Axis nations after the termination of World War II.

In 1944 Nolde was appointed to the post of executive secretary of the Joint Committee on Religious Liberty, in which he continues to serve. This committee operates under the sponsorship of the Federal Council of Churches and of the Foreign Missions of North America. Early in January 1945, in the capacity of executive secretary, Nolde assisted at the National Study Conference on the Churches and

a Just and Durable Peace held in Cleveland. The conference, favoring "church action toward seeking a peace settlement based on Christian ideals of world justice and designed to prevent a third world war," stressed specifically "adherence to the principles of the Atlantic Charter, proper postwar regulation of Germany and Japan without vindictiveness"; it approved the Dumbarton Oaks Conference plan for an international security organization, while recommending nine improvements in the plan's structure—in rights of dependent peoples and smaller nations, reduction of national armaments, and in international law, among others. Nolde presents the nine articles of improvement and describes their ultimate effect on the charter of the United Nations in the *International Journal of Religion* for October 1945.

The forty-five-year-old professor's reputation as expert in ecumenical affairs and in world order was "signally recognized" when he was selected as an associate consultant to the United States delegation to the United Nations Conference on International Organization, convened in San Francisco in April of 1945. Wrote John Foster Dulles⁴⁴, prominent Protestant layman and one of Nolde's associates at the meetings, in *The Lutheran* for November 6, 1946: "He [Nolde] was outstanding among the American consultants at the San Francisco Conference. His suggestions to the American delegation were always sound and many of them bore important practical results." Before this, however, Nolde had an opportunity to employ his abilities toward the eventual establishment of the U.N.: he was a member of the Committee on Human Rights of the Commission to Study the Organization of Peace. This commission was founded shortly after the outbreak of war in 1939 by Clark M. Eichelberger⁴⁵ and James T. Shotwell⁴⁶ to help authorities on international relations interested in founding a new world security organization to replace the League of Nations. It was Nolde's association with the Committee on Human Rights and with the Joint Committee on Religious Liberty that gave rise to his proposals for the projected U.N. Commission on Human Rights embodied in the article "Possible Functions of the Commission on Human Rights" appearing in the *Annals of the American Academy of Political and Social Science* (January 1946).

At the meeting in August 1946 at Girton College, Cambridge, England, of the International Conference of the Church Leaders on the Problem of World Order which was called by the World Council of Churches and the International Missionary Society (groups composed of Protestant and Greek Orthodox Catholic ecclesiastical bodies), Nolde took an important part in the proceedings. He was made associate director of the newly formed Commission of the Churches on International Affairs, afterward was named to the directorship. In explaining his support of the suggestion made at Cambridge "that a plan be evolved for joint action on world problems" among the major Christian denominations, including the Roman Catholic, Nolde stated, as reported in *Time* (August 12, 1946), that "since

O. FREDERICK NOLDE

Christians are a minority in the world," they must become organized so that their influence be felt in international councils. Nolde was also to declare to the delegates (*Christian Science Monitor*, August 5, 1946): "It is imperative that the churches of the world seek in every legitimate way to bring moral pressure to bear on the leaders of the world. . . . If it is appropriate for labor and business to put pressure on the United Nations organization, it is necessary for the churches to do the same thing."

Two months later Nolde addressed a convention of the United Lutheran Church in America, to which synod he belongs, on the responsibility of the Lutheran Church to aid the U.N. "The church," Nolde asserted, "will not be in a position to condemn war in the future unless it gives appropriate support to those political agencies designed to keep the peace." Previously, in a broadcast from the same Cleveland convention, Nolde had said in part: "Tensions must be eased between the Soviet Union and the United States without the abandonment of basic convictions. . . . The future as we see it offers no grounds for easy optimism. . . . For the solution of our problems nothing less than the full release of spiritual and moral power will prove adequate. Only the Christian vision offers encouragement and hope amid the perplexities of a chaotic world."

Nolde was also to state in April 1947 at a meeting of the Associated Church Press in New York City that Christians must be willing to work hard to prevent a future war and that the churches must study and take action on "the issues in international affairs which are of concern to Christians," such as the "problem of human rights in peace treaties now being drafted and America's projected aid to Greece and Turkey." Previously Nolde was one of seven churchmen from the Federal

NOLDE, O. FREDERICK—*Continued*

Council of Churches who conferred with Premier Alcide de Gasperi⁴⁶ of Italy, on the latter's visit to the United States, on the subject of guaranteeing religious freedom to all faiths, under the new Italian constitution. In June the religious educator was a member of a Geneva (Switzerland) study commission which made preparations for the 1948 Amsterdam Assembly of the World Council of Churches. Later that month he was a delegate at the Lutheran World Federation, convening in Lund, Sweden; in July he attended the International Missionary Council in Toronto, Canada. Nolde was afterward to express, at the North American Interseminary Conference (Oxford, Ohio), the belief that churches were employing too much of their funds "on remedial relief and not enough on prevention of world disorders." Nolde, in November and December, attended a meeting in Geneva of the U.N. Commission on Human Rights which was to discuss the drafting of a world charter of liberty; the religious educator was admitted to the sessions as a consultant. "The most important issue in which the churches are directly concerned," he declared, "hinges on the manner in which religious freedom is interpreted."

Among Nolde's writings are *Guidebook in Catechetical Instruction* (1932—later revised and enlarged), *Yesterday, Today, and Tomorrow* (1933), *The Church Worker*—eight volumes in all—written in conjunction with Paul J. Hoh (1934), *Truth and Life* (1937), *Christian World Action* (1942), *Christian Messages to the Peoples of the World* (1943), and *Power for Peace*, a book dealing with the U.N. and which, John Foster Dulles wrote in commenting upon the author's competence to discuss the security organization, "ought to have a wide circulation among Christian people." In 1946, too, Nolde edited the book *Toward World-Wide Christianity*, to which he contributed the chapter, "Christian Community and World Order." The professor's numerous articles have appeared in religious, educational, and scholarly journals.

The dean of the Graduate School of the Lutheran Theological Seminary in Philadelphia is a member, too, of the Phi Kappa Tau, Phi Delta Kappa, and the Kappa Phi Kappa fraternities. His clubs are the Philadelphia Cricket and the Mantoloking Yacht (Mantoloking, New Jersey). In June 1927 the educator was married to the former Ellen Jarden, a schoolteacher. Dr. and Mrs. Nolde are the parents of four children—Anthony Derf, Susanne von Loehr, Fredericka Jane, and Walter Hahn. The tall (five feet eleven inches), blue-eyed dean, whose fair hair is graying, prefers to find relaxation and recreation in a game of tennis.

NORTHROP, JOHN HOWARD July 5, 1891—Biochemist

Address: b. c/o Rockefeller Institute for Medical Research, Princeton, N.J.

One of the winners of the Nobel chemistry prize in 1946 is biochemist John Howard Northrop, a member of the Rockefeller Institute for Medical Research, who received the award for his important contribution to the knowledge of enzymes. The scientist's researches, covering a span of thirty-one years, are regarded as having "opened an important road to the investigation of protein constitution and the chemistry of digestion."

Scientific language must have been a part of John Howard Northrop's earliest environment, for both his parents worked in the field of the natural sciences: his father, John I. Northrop, was a member of Columbia University's department of zoology; his mother, Alice Belle (Rich) Northrop, taught botany at Hunter College in New York. The boy John Howard was born on July 5, 1891, in Yonkers, New York, not far from Milford, Connecticut, to which his ancestor, Joseph Northrop, had come in 1632. From Columbia University, where he majored in chemistry and minored in biology, John Northrop received his B.S. degree in 1912, his M.A. degree the following year. He was for three years (1910-13) a member of the university fencing team, which won the intercollegiate championship in 1913. That year the twenty-two-year-old Northrop tried his hand at farm work, and in 1914 he was a prospector in Arizona.

After obtaining his doctorate from Columbia in 1915, Northrop, recipient of the William Bayard Cutting Traveling Fellowship, worked for a year in the laboratory of biologist Jacques Loeb at the Rockefeller Institute for Medical Research. There he delved into the subject of duration of life. He was then appointed to an assistantship at the institute, subsequently becoming an associate (1917), an associate member (1920), and finally a member in 1924. He has been at the institute's Princeton laboratories since 1926. In 1917 and 1918, during World War I, the biochemist had served as a captain in the Chemical War Service of the United States Army. His studies of fermentation at this time led to the development of a process for producing acetone and ethyl alcohol which was of importance in the manufacture of war materials.

When Northrop began his research on enzymes in 1920, these reagents, vital to digestion, respiration, and other life processes, were a scientific mystery: nothing was known of their chemical nature, and their conformity to the laws of chemistry was questioned. The scientists's work in the course of the next two decades helped bring about a much better understanding of enzyme activity. His experiments contributed to the proof that enzymes obey chemical laws and that they are essentially protein in composition and general properties. (In describing them, Northrop adds that they must have some characteristic structure not found in proteins. As defined in *Van Nostrand's Scientific Encyclopedia*, an enzyme is "an organic catalyst, i.e., a substance produced by a living organism that conditions some chemical action within the body and is not permanently altered in the process.") The

results which Northrop achieved in his studies also proved important in connection with the chemical work on viruses conducted by W. M. Stanley⁴⁷, a colleague of his at the Princeton laboratories. (The two were to share half the 1946 Nobel chemistry award, the other half being presented to James B. Sumner⁴⁷.)

In 1930, four years after James Sumner's preparation of urease, the first enzyme ever isolated in a chemical laboratory, Northrop obtained pepsin in pure, crystalline form. Later, in collaboration with Moses Kunitz, Northrop crystallized trypsin and chymotrypsin. He also succeeded in isolating pepsinogen and trypsinogen, the inactive precursors or parent-substances of the active digestive agents pepsin and trypsin respectively. It is Northrop's hypothesis that all proteins, "whether they occur in meat, enzymes, viruses or antibodies," are derived from a single mother-substance to which he has given the name proteinogen. In 1947 he was in pursuit of "the ultimate, intimate structure" of enzymes.

Another phase of Northrop's investigations has been concerned with bacteriophages, substances that are especially abundant in the intestinal tracts of man and animals and "which possess the remarkable property of dissolving bacteria." In 1936 he isolated a bacteriophage exhibiting the properties of a nucleoprotein which acts upon staphylococcus. He is also reported to have done work on the kinetics of bacteriophage action and the conditions governing the production of bacteriophages. In addition, the biochemist's researches have included studies of phosphoric acid in starch, of the effect of temperature on insects, and the agglutination of bacteria. In 1941 Northrop announced the production, for the first time, of purified diphtheria antitoxin, a crystalline form which, he maintained, was forty to fifty times as effective as the crude form of the antitoxin and left no unpleasant secondary serum reactions.

The 1946 Nobel prize winner first won honors in 1931 when he was awarded the Stevens prize by the Columbia College of Physicians and Surgeons. Other tributes to his achievements followed: the Charles Frederick Chandler Medal from Columbia University for 1937 (both Northrop and his father had studied under Chandler); the Daniel Giraud Elliot Medal from the National Academy of Science; a D.Sc. degree from Harvard in 1936, from Columbia and Yale in 1937, from Princeton in 1940, and from Rutgers in 1941; an LL.D. degree from the University of California in 1939. The author of the book *Crystalline Enzymes* (Columbia University Press, 1939), Northrop is also on the editorial board of the Rockefeller Institute publication, *Journal of General Physiology*, and was one of the editors of *Experimental Biology Monographs*. He has written numerous papers on the "physical chemistry of proteins, the agglutination of bacteria, the kinetics of enzyme reactions, and the isolation and chemical nature of enzymes," and has also lectured on these and similar subjects. He was

Press Assn., Inc.

JOHN HOWARD NORTHROP

the De Lamar lecturer at the school of Hygiene and Public Health at Johns Hopkins University in the year 1937, the Jesup lecturer at Columbia University in 1937-38, Hitchcock professor at the University of California in 1939, and Thayer lecturer at Johns Hopkins in 1940.

During World War II Northrop, who serves on the National Research Council's committee on proteins, was consultant and official investigator to the National Defense Research Committee. From 1941 to 1945, he was a consultant to the Office of Scientific Research and Development. He is a trustee of the Marine Biological Laboratory at Woods Hole, Massachusetts, and holds membership in the National Academy of Science, the American Association for the Advancement of Science, the Society for Experimental Biology and Medicine, the American Society of Biological Chemistry, the American Chemical Society, the Harvey Society, the American Philosophical Society, and the Association of the New York Academy of Medicine. In countries abroad he is a member of the Halle Akadamie der Naturforscher and of the Société Philomathique. His other memberships include Delta Kappa Epsilon, Sigma Xi, Phi Lambda Upsilon, and the Century Association. In June 1918 the biochemist was married to Louise Walker of New York City; their two children are Alice Havemeyer and John. A sportsman, Northrop belongs to the Wilderness, Nassau Gun, Springdale Golf, and Clemo Hunting and Fishing clubs. He is especially fond of field shooting and salmon fishing and has spent considerable time in the woods of Newfoundland and Canada, where he used to pass the summer months making studies of potato culture.

NORTON, HOWARD M(ELVIN) May 30, 1911- Journalist

Address: b. c/o Baltimore Sun, Baltimore, Md.;
h. 6 Oak Grove Ave., Catonsville 28, Md.

In 1947, for the sixth time, a Pulitzer Prize was awarded to the Baltimore *Sun*. The 1946 gold medal rewarding distinguished public service was given to the *Sun* for a series of articles probing the Maryland unemployment compensation system, articles written by its staff correspondent, Howard M. Norton.

Descended on his father's side from a family which settled in New England in the middle of the seventeenth century, Howard Melvin Norton was born in Haverhill, Massachusetts, on May 30, 1911. His parents were Clarence Alfred Norton, now deceased, and Grace Frances (Eckel) Norton; he was an only child. Until 1919 he was brought up in Massachusetts, from 1919 to 1925 in Alhambra, California, and from 1925 to 1933 he lived in Miami, Florida. He obtained his first newspaper experience at the Miami Senior High School, where he rose to be associate editor of the school paper, then called *The Stingaree*, and where, he recalls, his English and journalism teacher was one of the first to encourage him toward journalism as a career. When he was graduated in 1928, he was also vice-president of his class. At the University of Florida, from which he was graduated with a B.S. degree in January 1933, he majored in journalism

and was active in extracurricular activities. In addition to serving as a reporter on the *Florida Alligator*, the student newspaper, he sang with the university glee club in 1929, 1930, and 1931, and was a member of the journalistic fraternity Sigma Delta Chi (president in 1932) and the Fourth Estate Club (president in 1931-32).

Norton considers the beginning of his career to be the period in 1930 when, as a college student, he was editor of the Winter Haven (Florida) *Daily Chief*. His next professional position came in 1933 after graduation from the University of Florida. He went to Japan and became a copyreader for the Osaka daily paper *Mainichi*. At the same time he was a correspondent for the Los Angeles *Times*, the Kansas City *Star*, the San Francisco *Chronicle*, the Philadelphia *Inquirer*, and the Whaley-Eaton news service of Washington, D.C. Three years later, in 1936, he became Far-Eastern representative of the Whaley-Eaton service, with headquarters in Tokyo. In this post he remained until 1940, also serving for a brief space of time on the editorial staffs of the *Japan Advertiser* and the *Japan Times*, both published in Tokyo.

Norton returned to the United States in 1940 to join the staff of the Baltimore *Evening Sun* and for two years acted in the several capacities of copyreader, reporter, picture editor, Washington correspondent, and "Behind the News" editor. Then, in 1942 he transferred to the "Sunpapers" morning edition, the better known Baltimore *Sun*, for which he has been foreign editor, war correspondent, Washington correspondent, and staff correspondent. As a war correspondent he began reporting on the Pacific theater in 1944, covering the New Guinea and New Britain campaigns and landing with the Twenty-seventh Army Division on D-Day at Saipan and with the Marines on D-Day at Guam. (In the last he was injured.) In March 1945 he went to the Italian front, from which he was the first American correspondent to report the execution of Mussolini⁴² on April 28, 1945. In the following months he reported on the occupation activities of the Twenty-ninth Division in the Bremen-Bremerhaven district of Germany. Late in the summer of 1945 he resumed his status as a civilian newspaperman.

The 1946 Pulitzer Prize "for the most disinterested and meritorious public service rendered by an American newspaper during the year" was awarded to the Baltimore *Sun* by Columbia University on May 5, 1947, for Norton's special series of eighteen articles (June 26-July 14, 1946) on the Maryland unemployment compensation system. These exposed maladministration by the Maryland Unemployment Compensation Board, an exposure which was to result in the conviction of ninety-three persons and in numerous changes in the law. Following the appearance of Norton's series, the Legislative Council of the Maryland General Assembly began an investigation of the board, Norton was called to testify at public hearings, and in 1947 the changes recommended by the Legislative Council were adopted by the State legislature.

Baltimore Sun

HOWARD M. NORTON

The journalist is a member of the National Press club in Washington, D.C., and of Sigma Delta Chi. He and Marjorie Ellen Anderson were married on July 7, 1940, and are the parents of a boy and girl, Howard Melvin, Jr., and Martha Ellen. Norton has brown hair and eyes, is five feet eight inches tall, and weighs 175 pounds. Badminton and hiking are two of his relaxations.

NOUE, JEHAN (LUDOVIC JAMES ACHILLE) DE, COMTE (nōō zhān lǔ'-dō"vēk' zhānz á"shēl' dē) June 17, 1907-United Nations official; lecturer

Address: b. c/o Protocol and Liaison Division, United Nations, New York; h. 70 Park Ave., New York; 70 Avenue Marceau, Paris

The maintenance of democratic procedures in such matters as the seating of delegates at United Nations sessions and at official diplomatic functions and of providing entertainment for U.N. members is the work of the United Nations Protocol and Liaison Division, which is directed by Captain Jehan de Noue. His duties in this capacity have caused De Noue—lecturer, French Army officer, and diplomat—to be described as the "U.N.'s 'Emily Post' and 'protector' of all visiting U.N. diplomats."

Jehan Ludovic James Achille de Noue, a member of a French noble family which traces its lineage back to the thirteenth century, was born on June 17, 1907, in Etretat, a city on the northwest coast of France in the province of Normandy. He is the only son in a family of two children of Achille and Ellen Beatrice (Reid) de Noue. The paternal branch of the family numbers among its forebears many prominent officials in France's Army and her courts of justice. After completing his secondary school and advanced education at the Ecole des Roches, from which he received his *baccalauréat* degree, Jehan de Noue, who throughout his youth traveled extensively, entered the Ecole des Sciences Politiques in Paris, afterwards studying, too, at the Sorbonne, one of the colleges affiliated with the University of Paris.

After he left the university, Captain de Noue recalls, he "mixed a lot in diplomatic circles." His career began in 1936 when the French Government Tourist Department sent him as a cultural envoy and lecturer to the United States and to Canada. When France and Great Britain went to war against Germany in 1939, De Noue returned to his native land and was commissioned a liaison officer with a battalion of the Coldstream Guards of the British Expeditionary Force in France. While assigned to this contingent, De Noue, as told in the *New York Times* (April 27, 1941), took part in the Louvain and Flanders engagements and experienced the evacuation of British and French forces from Dunkerque early in June of 1940.

Later that year, with one phase of his military service ended, Jehan de Noue returned to

JEHAN DE NOUE

the United States to lecture, this time at the Alliance Française in New York City, meanwhile addressing gatherings in a number of places to raise funds for the benefit of French war prisoners and for French relief associations. This he did for one year. Then, during the 1941-42 school term the titled Frenchman—his title is that of count—held the position of chief of the language department at Rollins College in Winter Park, Florida, and also served as lecturer at the Middlebury College (Middlebury, Vermont) summer session in 1941 and 1942.

The year 1943 saw De Noue's return to military service and to his work as liaison officer. He was attached to the First British Infantry Division, accompanying it on its North African and Italian campaigns. He was also liaison officer with the United States fighting forces when they landed at Anzio (Italy) in January 1944, and later was shifted to the post of French Allied Military Government officer in the French Army, at the time in action in the Italian peninsula. During a period of months in 1945 and 1946 the Frenchman served as chief staff officer of the Allied Commission in Italy, a position followed by that of executive assistant in the French Air Division of the Allied Control Commission stationed in Berlin. In July 1945 De Noue, whose rank was that of captain, was awarded the Bronze Star by the United States and the Croix de Guerre by his own country, for his valuable aid to the Allied war effort.

Meanwhile Captain de Noue was engaged in the United Nations activities preceding its official commencement. He attended the U.N. Preparatory Commission in London in January 1946; and at the first session of the U.N. General Assembly held in the same city, he participated in the work of the Office of the Executive Secretary, later being appointed the Chief

NOUE, JEHAN DE—*Continued*

of Protocol and Liaison of the international organization for the preservation of world peace.

The Chief of Protocol's staff of five aides is international in its makeup: four of the members, liaison officers, are English, Chinese, Ecuadorian, and Russian nationals, and the fifth, called De Noue's "Girl Friday," is Miss Sylvia Grove-Palmer, of Venezuelan and English parentage. The duties of Captain de Noue, who "has been through the polite mill of diplomacy and international etiquette for many years," are found to be often "exasperating" and "challenging." Aside from attending to the many conventional details of diplomatic observance, he must also formulate new rules and regulations, wrote Ruth Karpf in the *New York Times* (October 27, 1946), "to fit the more popular and democratic character" of present-day international dealings. Among the new regulations is that concerning the seating of United Nations functionaries at all formal or official activities in alphabetical arrangement by countries, rather than by the older system of precedence in accordance with "certain accepted seniorities," which it superseded. When the U.N. is in session, De Noue must also see to it that all of the flags of the fifty-one nations represented at the U.N. are placed in a circle, again in alphabetical order.

As "protector" of U.N. delegates while they are attending session meetings, Captain de Noue has to make provision, among other things, for the necessary police escort for the members to which their position entitles them, and to prevent reporters, photographers, and the general public from becoming too bothersome. The Protocol and Liaison Division's "hospitality program" involves accepting—or declining, if there are too many—invitations to private clubs and homes for individual U.N. members or for entire delegations. In this connection, the director must not allow important social functions given by or for the diplomats to overlap. An anecdote told about Captain de Noue illustrates his occasional reaction to his exacting work: When he stated in the fall of 1946 that he would soon be taking a vacation, he was questioned as to where he was going. "To North Africa," he answered, adding, "To the desert."

The director of the Protocol and Liaison Division is a dignified, "slim and impeccably turned out Frenchman" a little less than six feet in height, with red hair and blue eyes. He belongs to the Roman Catholic church. Recreations of the unmarried U.N. official, who belongs to the Jockey Club in Paris and to a number of other athletic associations, are tennis, golf, riding, swimming, and winter sports.

NOVIKOV, NIKOLAI V(ASILIEVICH)
(nô'vyî-kof nyî-kû-lî' vû-syêl'yê-vyîch) Feb. 7, 1903- Former Soviet Ambassador to the United States

Address: Moscow

Nikolai Vasilievich Novikov from April 1946 until October 1947 served as Soviet Ambassador to the United States. Considered "one of the up-and-coming men of the Russian diplomatic corps," he had worked in the field of foreign affairs for his country for eight years before becoming head of the Soviet Embassy in Washington, D.C., in 1946.

Nikolai Vasilievich Novikov was born in Leningrad, to Vasili and Pelagheya Volkova Novikov on February 7, 1903, two years before the first revolt against Czar Nicholas II. At the time of the Russian Revolution of 1917, Nikolai was fourteen, but what part the young boy may have taken in those eventful days or in the period ensuing when the Union of Soviet Socialist Republics was being formed has not been recounted. He was graduated from the Oriental Institute of Leningrad in 1930. According to an Associated Press dispatch he then "held various positions in Soviet scientific and economic institutions"; contrary to one report, however, he did not teach at the Oriental Institute.

In 1935 Novikov entered the Institute of Professors of the World's Economics and Politics in Moscow, and after three years of study there began his career in the People's Commissariat for Foreign Affairs as deputy director of the First Eastern Department. He then served as director of the Near Eastern Department, the Balkan Department, and the Fourth European Department. In October 1943 as Envoy Extraordinary and Minister Plenipotentiary to Egypt, he became head of the Soviet Legation in Cairo which, according to *New York Times* correspondent Harold B. Hinton, was then the center for Soviet relations with the entire Near East. At the same time, in 1943-44, he was Ambassador Extraordinary and Plenipotentiary to the Greek and Yugoslavian Governments-in-exile, which had set up headquarters in Cairo. While minister to Egypt, Novikov traveled to Lebanon and Syria and negotiated Soviet recognition of the Governments established in these countries when France relinquished the legislative and administrative powers she had held over them as mandates.

The Russian diplomat came to the United States in November 1944 as Minister-counselor for the U.S.S.R. Embassy in Washington, D.C. When Andrei Gromyko,⁴³ then the Ambassador, began to take an active part in the United Nations and Allied conferences in 1945, Novikov, serving at intervals as chargé d'affaires, was in effect Ambassador during his superior's frequent absences. According to the Associated Press, he was the spokesman for three of the Soviet Union's exchanges with the United States over American recognition of the Bulgarian Government and Russian troop withdrawal from Iran, issues creating dissension between the two major powers in 1946. The previous year, at the "Salute to Spanish Republicans" rally in New York's Madison Square Garden, he had also voiced his country's stand against Franco. Calling Franco a "hireling of Hitler and Mussolini," Novikov declared that the Soviet Union was "the leading power in the task of protection of democracy in the

whole world" and "therefore . . . a logical supporter for the re-establishment of democracy in Spain." Novikov's appearance at the rally was interpreted as Soviet advocacy of severance by the United States of diplomatic relations with Spain and was attacked by the Congressional Committee on Un-American Activities as a "direct violation of diplomatic privilege."

When Gromyko was named permanent Soviet representative to the U.N. Security Council in April 1946, Novikov succeeded him as head of the Russian Embassy. The new Ambassador, reported *Time*, "is regarded by colleagues as more self-confident and suave than his predecessor." Like Gromyko, Novikov also had to deal with difficult diplomatic problems. At meetings of the Far Eastern Commission, on which he now became the Soviet representative (he had formerly been Gromyko's chief deputy on the Commission), he sought curtailment of Emperor Hirohito's freedom to move about Japan and he advocated the adoption of more severe restrictions in Japan against Germans than against nationals of Axis satellites. Novikov was a member of the Soviet delegation to the 1946 Paris Peace Conference. On the Bulgarian Political and Territorial Commission, he charged the British Representative Gladwyn Jebb with attempting to divert attention from his country's difficulties in Palestine when the Englishman proposed increased safeguards for Bulgarian minority groups.

One of the Soviet delegates to the U.N. General Assembly in 1946, Novikov was a member of the fifty-four nation Trusteeship Committee. Meeting in subcommittee with the representatives of sixteen other nations, he held that the Big Five had the right to act as "states directly concerned" in trusteeship affairs even if they were not mandatory powers, and pressed for a definition of the much-debated phrase. As provided in Article 79 of the U.N. charter, trusteeship agreements had to be approved by a majority of the "states directly concerned" before going into effect, but standards for determining such states were not given.

Asserting that the Soviet position was not motivated by an intention to use the veto on trusteeship drafts, Novikov called the subcommittee's decision to bypass clarification of the ambiguous phrase a violation of Article 79; the eight trusteeship agreements passed by the subcommittee and then, on December 13, 1946, by the Assembly, were therefore contrary to the Charter, he maintained. He criticized the drafts on the ground that they failed to provide for the development of self-government in the trusteeship territories, a goal to which signatories of the U.N. Charter are pledged. Novikov particularly raised objections to certain clauses which gave the trustee powers the right to exercise administrative power over the fiscal affairs of trusteeship areas and administer them as integral parts of their territory, and which permitted fortification of the areas without requiring Security Council approval. He also accused Britain of violating the U.N. Charter in failing to apply for a trusteeship agreement for Palestine and attacked a pro-

Associated Press

NIKOLAI V. NOVIKOV

posal by Field Marshal Jan Christian Smuts for annexation of South-West Africa by South Africa.

Upon Novikov's return to the United States after a call to Moscow for diplomatic consultations with the Kremlin (March-April 1947), the delayed conference between the United States and Russia on Lend-Lease settlement was scheduled to begin. Negotiations involving the wartime Lend-Lease account (estimated by the United Press at \$11,297,000,000) were conducted by the Soviet Ambassador and the United States Assistant Secretary of State for Economic Affairs, Willard L. Thorp.⁴⁷

The Soviet Ambassador stressed the importance of Soviet-American relations "for the cause of universal peace and security." For a better understanding between the two nations, he recommended "a careful handling" of post-war difficulties so as to prevent any differences from destroying the unity that had prevailed during the war. When asked how the United States could assist the Soviet Union's rehabilitation program, he advocated a "more intensive trade" between the two nations and the fulfillment of agreements on German reparations by all the Allies, "especially with respect to deliveries from the western areas of Germany to the U.S.S.R." Novikov in July 1946 told interviewers that all Soviet-American disagreements would be "ironed out," that contrary to the idea held in some quarters, serious discord between the United States and the U.S.S.R. was not inevitable. "As to the Soviet Union," he said in June 1947, "it has never denied the possibility of peaceful co-existence and co-operation of the economic systems in the two countries." In October Novikov, who had returned to the Soviet Union because of ill health, was relieved of his duties as Ambassador to the United States by the Presidium of the Supreme Soviet. His successor was Alexander

NOVIKOV, NIKOLAI V.—*Continued*

Panyushkin, the former Soviet Ambassador to China.

Novikov holds the Order of Red Banner of Labor and the Order of Patriotic War, first class. Upon coming to the United States he joined the Metropolitan Club (Washington, D.C.). Lidia Ivanovna Kovaleva Novikov, who became the diplomat's wife on August 29, 1936, gained a reputation in Washington as a gracious hostess. As one of the guests of honor, she spoke at a luncheon in December 1946, sponsored by the committee of women of the National Council of American Soviet Friendship, and in an interview to the North American Newspaper Alliance, has given her views on how the spirit of Yalta could be restored in Soviet-American relations. The Novikov's children are Yuri Nikolaevich and Nikolai Nikolaevich. Of medium height, the thickset former Ambassador is said to be taciturn but approachable, enjoys tennis, and is a collector of rare books.

NOYES, W(ILLIAM) ALBERT, JR. Apr. 18, 1898- Chemist; educator

Address: b. c/o University of Rochester, Rochester, N.Y.; h. 7 Summit Dr., Brighton, N.Y.

An international figure in chemical science, W. Albert Noyes, Jr., is the 1947 president of the American Chemical Society, the largest professional association of scientists in the world. Noyes's name is starred in *American Men of Science*, the research chemist having been ranked by his colleagues as one of the thousand leading scientists (about one hundred and seventy-five are in the field of chemistry) in the United States. Electro- and photo-chemistry constitute the principal areas of his work. An educator for more than forty-five years, Noyes began to teach at the University of Rochester in 1938, became chairman of the chemistry department there in 1939.

William Albert Noyes, Jr., was born April 18, 1898, in Terre Haute, Indiana, to the eminent research chemist, whose name he bears, and the former Flora Elizabeth Collier. The boy had two elder sisters, both of whom died in early childhood. After his mother's death in 1901, the boy's father remarried (Noyes has three half-brothers). B. S. Hopkins wrote in the *American Chemical Society Journal* of the Noyes forebears: "In March 1633, the good ship *Mary and John* sailed from the Thames River carrying a considerable group of 'Non-conformists' who were leaving the religious intolerance of Old England in the hope of finding more friendly surroundings in the newly discovered refuge called New England. Among these Puritans was a youth of eighteen, Nicholas Noyes; he was accompanied by his brother, James, and his cousin, the Reverend Thomas

Parker. The party," continued Hopkins, "landed first at Ipswich, but a year later proceeded to Newbury, Massachusetts. Tradition says that when the company finally sailed up the Parker River, Nicholas Noyes was the first to leap ashore."

W. Albert Noyes, Jr., reared in the Middle West, attended Urbana High School in Illinois, where he was active in track and baseball. After being graduated in 1914, he attended Grinnell (formerly Iowa) College for two years on a junior scholarship before enrolling as a student at the University of Illinois for 1916-17. That year he continued his participation in track, took part in debates, was business manager of the *Illinois Chemist*. The chemistry major was later to observe, "My father interested me in chemistry, but it was Professor Richard Chace Tolman, the physicist who was then at the University of Illinois, who oriented me mainly toward physical chemistry."

In the summer of 1917, United States having entered World War I, the young man was a radio operator on merchant ships along the Atlantic Coast and in the West Indies, before entering the United States Army as a private. Noyes became a corporal later in 1917, earned his second lieutenant's bar in 1918, and served in that rank in the 308th Signal Corps Battalion with the AEF in France from June 1918 until the end of the war in 1919. While in France, Grinnell College awarded him his B.A. degree. An American Field Service Fellowship for 1919-20 enabled Noyes to remain abroad to study, and he received his degree of Docteur ès Sciences from the University of Paris in 1920. That year he also studied at the University of Geneva, Switzerland.

The last of Noyes's postgraduate study was taken at the University of California, where he held a chemistry teaching fellowship in 1920-21. He remained at the university as an instructor for 1921-22, then accepted an appointment at the University of Chicago as an instructor in 1922-23 and as an assistant professor from 1923 until 1929. In that year he joined the faculty of Brown University as an associate professor, rose to a full professorship in 1935. Noyes's present association with the University of Rochester dates from 1938, when he left Brown to become professor of physical chemistry and, one year later, chairman of the department of chemistry; he has since served as director of the university's chemistry research laboratory.

A lieutenant commander in the United States Naval Reserve from 1936 to 1941, Noyes was engaged in research for the Government in World War II. Later, as a section chairman on the National Defense Research Committee during 1940-42, Noyes served with Division Ten, concerned with aerosols and absorbents. He remained with the group as division chairman from 1942 to 1946. Meanwhile, he joined the staff of the chief of the Technical Division of the United States Army Chemical Warfare Service in 1942, which staff membership he held until 1947. In the spring of 1947, Noyes was named chairman of the Chemical Corps

Advisory Committee, created by the American Chemical Society at the request of Major General Alden H. Waite⁴⁷, chief of the Chemical Warfare Service. The committee Noyes heads in 1947 serves as a liaison group between the Chemical Corps and chemical profession and industry, providing scientific and personnel advice in research and development.

As an advocate of world cooperation among scientists, Noyes participated in the London meeting, at which plans for the United Nations Educational, Scientific, and Cultural Organization (UNESCO) were drafted; and he has served as science adviser to the United States delegation at the first session of the UNESCO General Conference at Paris in the fall of 1946. Noyes, who supported David E. Lilienthal's⁴⁸ nomination to the chairmanship of the United States Atomic Energy Committee, has said: "International cooperation in a planned economy of scientific effort, if supported vigorously by the United States, could be a vital step toward lasting world peace." This is one of the ideas he had expressed in his radio broadcast (September 1946), "Role of the Scientist in Promoting World Peace," over the National Broadcasting Company network. In 1947 he was elected to the executive committee of an inter-scientific society organized, at the initiation of the American Association for the Advancement of Science, to lobby through Congress legislation for a national science foundation through which Federal aid for scientific research would be channeled.

Early in his career in chemistry, Noyes became a member of the American Chemical Society. His father, William A. Noyes, was a leading member of the group at the time. (Although the elder Noyes died in 1941, W. Albert Noyes in 1947 still retains the "Jr." after his name to avoid confusion, so closely parallel are their careers in the A.C.S.) Noyes, Jr., who had become a councilor at large of the society in 1928, was editor in 1928-29 of the *Chemical Bulletin*, published by the Chicago section of the A.C.S. in cooperation with several other midwest sections. From 1929 until 1938 Noyes served as associate editor of the society's *Chemical Abstracts*, the magazine his father had founded and edited in 1906. After being chairman of the division of physical and inorganic chemistry of the A.C.S. in 1933, the younger Noyes succeeded in 1939 to the editorship of *Chemical Reviews*, which his father had organized and edited in 1924. A director of the A.C.S., on January 1, 1946, the younger Noyes added to his editorship the chairmanship of the committee on professional training of chemists, a position which coincided with his tenure of office as 1946 president-elect of the A.C.S.

On January 1, 1947, Noyes succeeded Colonel Bradley Dewey (president of the Dewey and Almy Chemical Company) as president of the American Chemical Society, a position the elder Noyes had held in 1920. The A.C.S. was to grow, in the years that followed its founding in 1876, to a membership in 1947 of fifty-four thousand, with one hundred and twenty-four local sections scattered throughout

W. ALBERT NOYES, JR.

the country. It is thus the largest of the United States learned scientific societies and in addition, the largest organization of its kind in the world. The A.C.S. president was chairman of the fifteen official delegates of the National Research Council at the Fourteenth Conference of the International Union of Chemistry and the Eleventh International Congress of Pure and Applied Chemistry in London in July 1947. A decade earlier, in the fall of 1937, he presided at a session on photochemistry at the International Scientific Congress in Paris.

The earliest of Noyes's publications is a translation into French, *Traité de chimie physique* (1925), made with H. Weiss, from a text by E. W. Washburn. This was followed by *Modern Alchemy* (1932), a popular science book co-authored by the Noyes father and son. Writing alone, Noyes published *Spectroscopie et les réactions initiées par la lumière* (1938), before collaborating with P. A. Leighton on *Photochemistry of Gases* (1941), an A.C.S. monograph. Noyes also wrote a chapter and a half of James P. Baxter's⁴⁹ 1946 Pulitzer Prize book *Scientists Against Time* (1946). The greater part of the more than seventy-five technical articles which have appeared in various journals of the A.C.S. under Noyes's name, deal with the chemist's research in electrochemistry, discharge through gases, vapor pressures, thermal reactions, and photochemistry, the study of the effects of radiant energy on the various chemical processes. Grinnell College awarded Noyes an honorary D.Sc. degree in 1946.

A member of the American Association for the Advancement of Science, A.C.S. president Noyes was also elected to the American Academy of Arts and Sciences in 1932 and to the National Academy of Sciences in 1943. Other of his affiliations are the New York and Illi-

NOYES, W. ALBERT, JR.—Continued

nois academies of science, the American Physical Society, the Société de Chimie Physique, and the American Philosophical Society, to which he was elected in 1947. His Greek-letter societies are Alpha Chi Sigma, the professional fraternity in chemistry, Phi Lambda Upsilon, the recognition society in chemistry, Sigma Xi, the science research honor society, Phi Beta Kappa, the general academic honor society, and Sigma Alpha Epsilon, a social fraternity.

W. Albert Noyes, Jr., was married to Sabine Onnillon on June 10, 1921. Their son is named Claude Charles. The scientist has blue eyes, brown hair, is five feet ten in height, weighs 165 pounds. He belongs to the Congregational Church. Basketball and tennis are his favorite sports, playing the piano is another form of relaxation for him.

O'DANIEL, W(ILBERT) LEE Mar. 11, 1890- United States Senator from Texas; businessman

Address: b. Senate Office Bldg., Washington, D.C.; h. Ft. Worth, Tex.

A former Governor of the State of Texas for two terms, W. Lee O'Daniel became, in 1941, a candidate for the United States Senate to fill the vacancy caused by the death of the incumbent Morris Sheppard. Seated after winning the special election, he ran for the same office again in 1942 and was re-elected for a full, six-year term expiring in January 1949. The political life of the anti-New Deal Texan began at the age of forty-eight, after a career in the flour business, in the course of which he became known for songs he wrote and for his hillbilly musical advertisements.

Born in Malta, Ohio, on March 11, 1890, Wilbert Lee O'Daniel is the son of William Barnes and Alice Ann (Thompson) O'Daniel. Shortly after Wilbert's birth, his father, a worker in a plow factory, left home to find other employment, and was killed while at work on bridge construction. In 1895 Mrs. O'Daniel, with her two daughters (one by a former marriage) and her son, went to live near Arlington, Kansas, on the wheat and cattle farm of her third husband, Charles H. Baker, a former resident of Malta.

After completing his schooling in Arlington, Wilbert Lee O'Daniel entered Salt City Business College in Hutchinson, Kansas, from which he was graduated in 1908. His first position was as a stenographer in the Kramer Milling Company, an Anthony (Kansas) flour firm, where he in time became sales manager. In 1916 he became sales manager for a mill in Kingman. O'Daniel resigned this position so as to organize and build the Independent Milling Company, a concern incorporating and

selling stock to farmers and other individuals. The Independent Milling Company was merged in 1920 with another company; O'Daniel left the organization. After a few years with the United States Milling Company (Kansas City), which he helped to develop, O'Daniel sold his share and became sales manager, in July 1925, of the Burrus Mill and Elevator in Fort Worth, Texas.

In his first five years with the Burrus Mills, O'Daniel doubled and tripled the sales of their "Light Crust Flour" and was made the president of the concern. In 1930 came the event which was to have an important effect on his business and political career. In the biography *The Life Story of W. Lee O'Daniel*, he is quoted as saying, "One day . . . a group of jobless musicians came to see me. They had a suggestion for hooking up flour advertising with a musical program, using songs that would have a homely appeal to ordinary middle-class people, and it all sounded pretty good to me." The radio program, on Station KFJZ, which was called *The Light Crust Doughboys*, featured regional music, interspersed with flour advertising written by O'Daniel himself; soon it gained a large local popularity.

Encouraged by the success of his radio program, O'Daniel and his *Light Crust Doughboys* musical aggregation toured the West Texas towns in a large bus with a public address system. O'Daniel eventually became the official announcer, "mixing his homespun philosophy with the batter of his biscuit advertising." While on a business trip in 1933, O'Daniel, then flour mill manager, composed the melody and wrote the lyrics for his first song, "Beautiful Texas," which was broadcast over a local (Fort Worth) station, later was bought by a music publishing firm in New York, and attained national popularity. In the meantime, he was secretly writing verse "for strictly family consumption." (In June 1917 O'Daniel had been married to Merle Estella Butcher.) Among his efforts were "Your Own Sweet Darling Wife", "Wrecks Along Life's Highway," and "The Boy Who Never Gets Too Big to Comb His Mother's Hair." W. Lee O'Daniel admittedly knew nothing about musical composition, but he was aided in his melodic efforts by his three children, whose full names are Pat, Mike, and Molly (in 1947 Molly O'Daniel Wrather White), each of whom played a musical instrument.

O'Daniel in 1933 became president for one year of the Chamber of Commerce of Fort Worth. He immediately set upon a campaign to attract business interests to his adopted city. His administration helped to formulate a two-year program encompassing "tax reduction in city, county, State and national Government," the "encouragement of new industries," and the "promotion of business stabilization through adherence to the principles of fair price, reasonable salaries, and legitimate profits." As a result of his efforts, it is said that a total of 488 new enterprises were established in Fort Worth during 1933.

In 1935 he severed his connection with the Burrus Mills and then established his own

concern. The W. Lee O'Daniel Flour Company trademarked the name "Hillbilly" and, underneath the illustration of a goat on the flour sack appeared an original jingle by O'Daniel, followed by the message: "Please pass the biscuits, pappy." From then on he became known as "Pappy" O'Daniel. His *Hillbilly Boys* band went on the air in August 1935; two of the instrumentalists were his own sons: Pat, the banjo player, and Mike, the fiddler.

Then, in 1938, "Pappy" O'Daniel announced that more than fifty thousand of his radio listeners had written to him suggesting that he run for Governor of the State of Texas. Taking the field against a dozen opponents, O'Daniel stated that his platform was based upon the Ten Commandments, the Golden Rule, reduction of corporate taxes to induce new business to come to Texas, and a pledge to pay thirty dollars a month pension to every citizen over sixty-five years of age. During his first gubernatorial primary campaign which he won (winning the Democratic nomination was tantamount to winning the election), the opposition discovered and publicized the fact that O'Daniel had not paid his poll tax. In reply to such charges, O'Daniel said: "I didn't pay my poll tax because I was fed up with crooked politics in Austin and hadn't intended to vote for anyone this year. I didn't know I was going to be called on to run." While campaigning for the governorship, O'Daniel, traveling with his band, continued to sell Hillbilly Flour, often in carload lots.

Governor O'Daniel's first term in office (he was renominated for a second term in 1940 by a larger majority than the first time) was, by a number of observers, considered not to be particularly successful, although some of the appointments he made were thought fairly good. The *New Republic* (June 23, 1941) noted that O'Daniel's "unfamiliarity with governmental and economic problems handicapped him at every turn, and his legislative program bogged down." For the failure of his program, he "blamed a recalcitrant legislature." In his second term, O'Daniel's attempt to put through a transaction tax was defeated; the Texas legislature, however, passed an omnibus tax bill providing old-age assistance checks, to be given, however, only to those in need. He also proposed a measure, passed by the legislature, outlawing the use of violence in strikes and preventing strikers from using threats or force to prevent others from working. (In his book *Inside U.S.A.*, John Gunther discusses some of the phases of O'Daniel's career.)

The following year (1941) O'Daniel became a nominee in the special election to fill the Senatorial vacancy caused by the death of Morris Sheppard. One of twenty-seven candidates, O'Daniel won with a plurality of 1,095 votes. On his first day in his new office, O'Daniel introduced in the Senate a bill, the counterpart of his Texas measure, to outlaw the use of force or violence to prevent anyone from "engaging in a lawful vocation." He also voted against extension of the Selective Service draft. In March 1942, the Senate rejected O'Daniel's motion to attach riders abolishing

Press Assn., Inc.

W. LEE O'DANIEL

"overtime payments for labor, the closed shop, picketing, and 'force and violence' in labor disputes" to the Smaller War Plants Corporation bill (*New York Times*, April 1, 1942). In November 1942 he introduced a bill to suspend the Wages and Hours Law, which established overtime pay for work over forty hours a week, asserting that this law had caused "a fictitious and wholly unnecessary labor shortage." That same month the Senate adopted his amendment (later rejected by a House vote) calling for a year's military training in the United States for eighteen- and nineteen-year-old youths before permitting their assignment to combat duty.

In 1942 O'Daniel was returned to the Senate for a full six-year term. In his tenure, he has voted on many issues with the anti-New Deal bloc of Democrats and Republicans in Congress. His actions on domestic issues include the following: in 1943 he voted against provision of funds to continue the National Resources Planning Board; favored a bill to increase soil conservation payments to farmers; voted against a bill to do away with the Farm Security Administration; went on record as one of the Senators overriding the Presidential veto of the Smith⁴¹-Connally⁴¹ antistrike bill; and supported the Administration's "hold-the-price-line" policies.

Senator O'Daniel in 1944 upheld a tax bill which provided that labor unions file income reports, as a basis for taxation, and voted against the amendment granting Federal ballots to the armed services. Reversing his "hold-the-price-line" position of the year previous, O'Daniel in February 1944 opposed an amendment (giving subsidies to stabilize food costs) to the bill which extended the existence of the Commodity Credit Corporation. Among his other legislative stands, O'Daniel came out against cloture of the anti-poll tax bill;

O'DANIEL, W. LEE—*Continued*

and was one of the opposition to a measure that would increase unemployment benefits paid to war workers during the reconversion period.

With the approach of the 1944 national elections, O'Daniel was to reveal himself as opposed to a fourth term for President Roosevelt. The Texan in 1943 was quoted, nevertheless, as believing that the President would be renominated at the Democratic Convention and "indirectly indicated his belief that the President was a better than even chance for a fourth term" (*New York Times*, December 13, 1943). Earlier, in October, he had presented an amendment to the Constitution to limit to a six-year, nonsuccessive term the offices of President and Vice-President of the United States and all members of Congress. He also stated that "Communists and fellow travelers" were attempting to convert the Government "into a highly centralized socialistic or communistic nation." Several months earlier, in August 1944, O'Daniel himself refused an invitation by the American Democratic National Committee, an anti-New Deal group, to become its candidate for the Presidency.

In the field of international affairs, the junior Senator from Texas, during his years in office, opposed extension of the reciprocal trade agreements (June 1943), and UNRRA appropriations under the Allied agreement (February 1944); he supported the Reciprocal Trade Agreement Act which called for a 50 per cent cut in the tariffs (the motion was defeated in June 1945), and in July 1945 voted against a Taft⁴⁰ proposal "to postpone consideration of the Bretton Woods Agreement until November" of the same year.

The Texas Senator by 1945 had been given membership on the Senate committees of Claims, Post Offices and Post Roads, Commerce, District of Columbia, and Irrigation and Reclamation. (In the Eightieth Congress convening in January 1947, in which there was a Republican majority, O'Daniel was to hold membership on the Civil Service and Public Works committees.) The year 1945 saw O'Daniel's rejection of the nomination of Henry Wallace⁴¹ for the post of Secretary of Commerce and of Aubrey Williams for administrator of the Rural Electrification Administration. He was against the measure reducing the Fair Employment Practice Committee appropriation, a measure designed to save the committee "from extinction"; upheld an amendment to the Full Employment bill, which would have put an end to the TVA and REA; voted against extending the President's emergency powers for six months beyond June 30, 1946. O'Daniel also offered a bill to alter the Servicemen's Readjustment Act, which stipulated that membership or nonmembership in, or refusal to join a union would not constitute a reason for veterans being denied work.

When OPA extension came up for consideration in 1946, O'Daniel waged an eight-hour anti-OPA filibuster and temporarily blocked the unanimous consent necessary for continuance of the act. During the Senate contest, O'Daniel said, "I am sure that there is no place in

America for OPA. It is unconstitutional, purely communistic and socialistic." In the Eightieth Congress (1947) O'Daniel criticized portal-to-portal pay suits as "stagnating industry," asked termination of rent controls, and approved the succession bill which places the Speaker of the House next in line for the Presidency in the event that there is no Vice-President. The Senator at the end of the year (December) voted against the bill authorizing the \$597,000,000 in emergency relief for France, Italy, and Austria, and against the Republican anti-inflation bill. Also in December 1947 Senator O'Daniel, who has supported General Douglas MacArthur⁴² for President as a third-party candidate, stated, according to the *New York Times* (December 11, 1947), "that he himself might be induced to run for the Vice-Presidency if that was necessary to put over such a ticket." He declared that the idea for his running was that of George W. Armstrong, a wealthy Texas oil man, rancher, and industrialist, and political supporter of the Senator.

W. Lee O'Daniel belongs to the fraternal order of the Masons (Shriner). He is affiliated with the denomination known as the Christian Church; in Washington, D.C., he is an elder of the National City Christian Church. Tall and heavy-set, he has black hair and brown eyes, looks younger than his age. Audiences are said to like his Texas drawl and disarming grin.

O'DWYER, WILLIAM July 11, 1890-
 Mayor of New York City

Address: b. City Hall, New York 7; h. The Mayor's Official Residence, Carl Schurz Pk., New York 28

NOTE: This biography supersedes the article which appeared in *Current Biography* in 1941.

As Mayor of the City of New York, William O'Dwyer has become a national figure, holding, as he does, a position considered by some to be second in magnitude and complexity only to that of the President of the United States. A leader in the Democratic party councils, O'Dwyer exerts much influence upon the greatest single mass of urban voters in the country. Before acceding to the mayoralty in November 1945, O'Dwyer served as a city magistrate and as district attorney. He first came into the national spotlight during the "Murder, Incorporated" trials in 1940.

One of eleven children, William O'Dwyer was born at Bohola in County Mayo, Ireland, on July 11, 1890, the son of Patrick and Bridget (McNicholas) O'Dwyer. Patrick O'Dwyer had

come to Bohola (Gaelic for "house of [Saint] Tola") from County Cork in the 1880's in order to teach at the local public school, where Bridget McNicholas was then a schoolmistress. All of the O'Dwyer children received their early education in their father's class; William O'Dwyer's sisters teach at the school today. Young William attended St. Nathys College in Roscommon before going to Spain to study for the priesthood at the Jesuit University of Salamanca. He might have stayed there had he not been deficient in everything except the study of languages. As it happened, he was three years short of graduation when he left Salamanca to come to America. In June 1910 the twenty-year-old O'Dwyer landed in New York City with \$25.35 in his pocket. After paying a month's rent in advance at a West Side boarding house, he went out and found a twenty-dollars-a-week job as a laborer. In the years that followed he was also to work as handy man in a grocery (at nine dollars a week), deck hand on a South American freighter, fireman on a Hudson River steamer, plasterer's apprentice, and bartender.

At the time of his arrival in America O'Dwyer wanted to study medicine. "The best thing in the world I could think of doing was fixing up people's bodies. But," he told a *PM* interviewer, "I couldn't support myself for eight years in medical school. So I decided the next best thing would be fixing up people's troubles. I could study law and still draw my twenty bucks a week." Thus, while working as a longshoreman he began attending evening classes at the Fordham University Law School. In July 1917 he joined the New York police force at a salary of one thousand dollars a year, becoming a patrolman on what was reputed to be the toughest water-front beat in Brooklyn. On one occasion he had to shoot a man, a particularly unpleasant experience for O'Dwyer, who hated—and still hates—firearms. Finally, in 1923 he was graduated from Fordham with an LL.B. degree and in the same year was admitted to the New York bar. The police department, in the meantime, had transferred him to the police legal bureau, which he headed from 1917 until 1925. That year he resigned from the force to accept a clerkship in a legal office. In June 1926 he entered law practice, opening his own office on Court Street; his first client was a truckman accused of having stolen a hogshead of olives. A reporter friend of O'Dwyer's had his headline prepared—"Ex-Cop Wins First Case"—but O'Dwyer lost the case. (O'Dwyer today does not like olives.)

By 1932 O'Dwyer received his appointment as a New York City magistrate, having been so named by Acting Mayor Joseph V. McKee on December 7, 1932. Chosen by Mayor La Guardia⁴⁰ to preside at the Brooklyn Adolescent Court from the time of its opening on January 1, 1935, O'Dwyer made a practice of consulting clergymen, welfare workers, and probation officers before passing judgment upon the sixteen- to nineteen-year-olds whose cases he reviewed in the experimental court. "You can always do something with the simple, mis-

WILLIAM O'DWYER

guided youngster," he has said, while averring that leniency would be a mistake in the case of the confirmed young criminal. On December 1, 1937, O'Dwyer was appointed by Governor Lehman⁴¹ to fill a vacancy on the bench of the Kings County Court in Brooklyn; in November 1938 he was elected to a full term of fourteen years at a salary of twenty-five thousand dollars a year. When, in 1939, he was elected district attorney on the Democratic ticket for the Borough of Brooklyn, he accepted a five-thousand-dollar cut in salary.

District Attorney O'Dwyer took office on January 1, 1940, and began immediately to "clean house" and bring new men into his department. Less than three months afterward he announced the solution of fifty-six murders of the kind practically never solved—underworld murders, nearly all of which were linked. The trials, which began not long after that, were a national sensation. "Murder, Incorporated" was the title popularly given to the ring of criminals involved, although O'Dwyer preferred the appellation "Murder, Incidental"—incidental to the various rackets in which the principals (active and passive) were engaged. Since there was little legal evidence against the "corporate directors" of the murder syndicate, it was the "applied psychology" of O'Dwyer that brought a chain of confessions and sent seven killers to the electric chair. Although the nation as a whole was experiencing an increase in crime in 1940, O'Dwyer declared that there had been a substantial (20 to 32 per cent) reduction in the number of crimes in Brooklyn. O'Dwyer was re-elected district attorney in November 1943 with the endorsement of all major parties.

On December 7, 1941, O'Dwyer sent a telegram to President Roosevelt⁴² offering his services in the national emergency. After receiving his commission as a major in the United

O'DWYER, WILLIAM—*Continued*

States Army (1942), O'Dwyer was assigned to duty on Governors Island, in New York harbor, before being transferred to the Air Corps Matériel Command's Eastern Procurement District (also in New York). In October 1942 Mayor O'Dwyer was sent to Washington, D.C., where he became Lieutenant Colonel O'Dwyer, a special investigator of frauds in contract procurements for the United States Army Air Corps, his position until March 1943. He also served in the capacity of special adviser in the Office of the Assistant Chief of the Air Staff. It was in this period with the USAAF in Washington that O'Dwyer advanced to full colonel (September 1943). From January until June 1944, he remained in the nation's capital as chief of the Investigations Division of the Office of Legislative Service of the Army Air Forces, before being named by Roosevelt as chief of the Economic Section of the Allied Commission. In this position, as a personal representative of the President with rank of Minister, O'Dwyer was sent to Italy in June 1944 to represent the Foreign Economic Administration. While in Rome he was advanced to brigadier general (August 1944). O'Dwyer also served as executive director of the War Refugee Board, receiving his appointment January 27, 1945. He returned to civilian life after V-E Day.

Since his district attorneyship, William O'Dwyer had been mentioned as a possible Democratic party candidate for Mayor of New York. In his first campaign for the office, in which he was defeated by the incumbent, Mayor Fiorello H. La Guardia, by 133,841 votes (November 1941), O'Dwyer relied upon his distinguished public record as prosecutor and judge to "make a strong appeal to the voters regardless of politics." Some commentators insisted that he was not a "Tammany man" although he did owe allegiance to the Kelly organization in Brooklyn. Anti-Tammanyites, on the other hand, saw in the trend of the campaign an attempt to use O'Dwyer's reputation for honesty and his respectability to bring back the "good old days" of Tammany Hall rule. After his election as Mayor on November 6, 1945, defeating Newbold Morris and Jonah Goldstein (La Guardia did not run) by the largest majority ever given a candidate for that office, O'Dwyer was able to show to what extent he was independent of Tammany Hall domination—traditionally the Democratic party organization in New York had used the mayor it supported as a political tool. As early as September 1946 John K. Weiss of *PM* wrote: "Mayor William O'Dwyer has moved into unchallenged leadership of the Democratic party in New York City"; if this statement seemed premature to many, O'Dwyer's subsequent Tammany "house cleaning" supported that contention.

In his first year as Mayor of the largest city in the United States, O'Dwyer was faced with several major labor disputes, the earliest (February 1946) being the tugboat strike, in which oil supplies to the city were cut off. His emergency order drastically curtailing the use

of fuel was rescinded after it aroused a "public clamor." This was one of O'Dwyer's "early blunders" discussed by Amos Landman in *New Republic* (January 13, 1947). The Mayor later settled a threatening transit crisis, helped end a Hudson Tubes strike by bringing pressure to bear upon a "recalcitrant management," and dealt with a severe truck strike, all of which labor disputes were instrumental in the formulation of "The O'Dwyer Plan for Industrial Peace." As outlined in a brochure of that title, the formula provides for the appointment of tripartite committees composed of representatives of the public, industry, and labor, to aid in the adjustment of industrial conflicts threatening the vital city services. Utilized by the Mayor's Division of Labor Relations, the plan has effected settlements through the use of voluntary agreement. Settlement in the case of the tugboat workers and truck drivers was of more than local importance, for a tie-up of the world's largest port would have had both national and international repercussions. At a rally at which O'Dwyer urged the Presidential veto of the Taft-Hartley⁴⁷ labor bill curbing union activities, cries of "O'Dwyer for Governor" were made from the floor, echoing the reported sentiments of the New York State Democratic party.

To improve the efficiency of the city's administration, O'Dwyer in the fall of 1947 created the Bureau of Analysis to study the operations of city departments. In order to decrease the city's deficit and to provide funds for improved hospitals, health centers, and schools, O'Dwyer, who was subjected to much criticism, asked the State legislature for permission to increase the city's subway fares (the proposed rise in fare has been a topic of controversy in New York for several years). Another cause of press criticism has been the administration of the city's Welfare Department, and in November O'Dwyer replaced the incumbent commissioner and appointed a permanent committee of "distinguished citizens" to advise the department.

"When adults are bigoted, it's hard to change them," O'Dwyer has said. "But children can be taught democracy while they are young. It'll take three generations of educating school children to wipe out racial and religious prejudice, but we're not going to wait that long. We'll do what we can in the meantime." O'Dwyer has urged that public financial support to colleges and universities be withdrawn from those institutions in which evidence of racial or religious discrimination was found. An outspoken opponent of "Bilboism"⁴⁸, O'Dwyer has pressed for the elimination of the Jim Crow practices, and has come out in favor of opening Palestine as a haven for the displaced Jews of World War II. "I, as Mayor and as an immigrant who was admitted to the United States and given the privilege of citizenship [in 1916] advocate . . . [taking the Jews] out of the hellhole where they now are and giving them a home here," if only temporarily. Maintaining his early interest in child welfare, O'Dwyer in September 1947 appointed the New York City Youth Bureau to analyze

the work done by public and private child welfare agencies. When Congress relaxed rent controls, New York City became the first city in the United States to establish local control over apartment rents and evictions. Blaming high prices on the Republican party, O'Dwyer said that the term "consumer resistance" was "a fancy way of saying that people are doing without necessities of life because they don't make enough to afford them." He has urged that Congress pass the Taft⁴⁰-Ellender⁴⁸-Wagner⁴¹ Housing bill.

O'Dwyer was the first person to sign the petition circulated by The Committee for the Marshall Plan to Aid European Recovery. Fordham University awarded the Mayor an honorary D.C.L. degree in 1946. For his wartime European mission, he became a Grand Officer of the Crown of Italy in 1945; other war service awards are his bronze star medal and European campaign ribbon. He was to be recipient of the first World War II Victory Medal awarded in New York. As Mayor, he received in August 1946 the Congressional Selective Service Medal for "invaluable cooperation and assistance" in administering Selective Service in New York City. He has been honored by such national organizations as the American Legion and by such local organizations as the Williamsburg Settlement of the Brooklyn Philanthropic League—in 1946 he was Marathon Pictures announced plans to begin in 1947 production of *The Pride of New York*, with actor Pat O'Brien, a close friend, to play "the boy from Mayo who became mayor." A portrait of the Mayor will hang in the college at Ballaghaderreen, Roscommon, in Eire, where O'Dwyer was once a student. A member of the Brooklyn Bar Association, O'Dwyer belongs also to the Knights of Columbus, the Ancient Order of Hibernians, the Mayomen's Association, the Benevolent and Protective Order of the Elks, the Fraternal Order of the Eagles, and the Loyal Order of the Moose. His club is the North Hills Country.

The Mayor is Roman Catholic. While he was still a law student, William O'Dwyer was married to Catherine M. Lenihan on August 3, 1916; Mrs. O'Dwyer died in October 1946, after some years of invalidism. O'Dwyer is "indifferent to liquor, friendly to pipes and cigars, ecstatic about stew, and flies into mock rage over pistachio ice cream—"It's not Irish green!" He likes Irish history, Irish ballads, and has a brogue that asserts itself when he becomes excited. Quick to smile, the "genial," "shrewd", "scrappy" Mayor has blue eyes, dark hair. He stands five feet nine inches tall, weighs about 190 pounds mainly because, he admits, he does not get enough exercise. In his limited time for sports, he plays golf, of which he says, "Confidentially, I'm a bum at the game."

OJIKE, MBONU (ō-jě'kē 'm-bō'nōō) 1914(?)— Author; lecturer

Address: h. Ndizuogu Town, Orlu District, Nigeria

A West African who received his higher education during his seven-year sojourn in the United States, Mbonu Ojike is the author of two books in English, *My Africa* and *I Have Two Countries*, books which were received with interest. Ojike came to the United States from Nigeria, a British colony, to obtain the training necessary to help in the education of his people and in their preparation for independence and industrialization. While in America he attempted to widen Western conceptions of Africa and its peoples.

Mbonu Ojike is the son of Ojike Emeanulu and Mgbeke Ebulaja and a member of the clan of Arochuku. The exact year of his birth is unknown, but he believes it to be 1914; his birthplace is the town of Ndizuogu, located in that part of southeast Nigeria known as the Ibo country. He was also given the name of Okoli, for the day on which he was born; his surname may be translated into English as "He holds power," and Mbonu, as "Actions speak louder than words." Later, in 1922 when he was baptized in the Christian faith, Mbonu adopted the English name of Robinson, which he has never used. Ojike's father was an *amana* of the village, defined by Ojike as "a representative head whose function is to preserve law and order in his community." Ojike has related that his mother was one of his father's ten wives. In 1918 Mbonu's elder brothers, against the wishes of his father, enrolled the child in the village missionary school. Later Mbonu won his father's permission to continue.

In 1926 Ojike was graduated from elementary school; he then became a pupil-teacher in the school in his home town. Later he held the same position in the near-by town of Abagana and was the schoolmaster of an elementary school in Ogidi. In 1928 he passed the entrance examinations to Oka College, and enrolled there in 1929. By agreement with the college, which was a normal school, Ojike was required to teach for five years. Therefore, in 1932 he returned to the Abagana Central School as teacher of the eighth grade. While still a boy, Ojike had shown an interest in the town's affairs: in the 1920's young Ojike was one of the founders of the Ndizuogu Patriotic Union, "charged with the duty of cleaning up and improving the town politically, educationally, and

MBONU OJIKE

morally." He was this group's secretary in 1925.

Because of an increasing high school enrollment, the Education Board in 1933 complied with Ojike's request that he be assigned as secondary school tutor at the Dennis Memorial Grammar School in Onitsha township. There he taught freshmen algebra, geometry, arithmetic, Latin, music (throughout his teaching career Ojike served as organist for local churches), English composition, physiology, and hygiene. Because he had never attended high school, he found it necessary to make up his deficiency in Latin and mathematics by taking correspondence courses from Oxford University—"I taught myself at night what I taught the boys the next morning." Ojike also found the correspondence courses an aid in preparing for entrance into a university; he therefore began to study logic, English classics, religion, economics, and Roman history by the same means. In 1936 Ojike, still at Dennis, organized what he believed to be the first teacher's strike in Nigeria. At the end of 1936 Ojike failed two sets of examinations, one for the Nigerian Senior Teacher's Certificate and the other the London Matriculation Examination. He tried the latter again in 1938, and that time was successful. He then resigned from the private school teaching position and the journalistic post he held at that time and prepared to go to the United States, to attend Lincoln University.

On February 1, 1939, Mbonu Ojike arrived in the United States and a few days later he entered Lincoln University, in Pennsylvania. He spent his first college semester there, majoring in economics and business administration. Dissatisfied with the courses offered at the university, Ojike decided not to return the following year. After a summer in and near New York, where he held a variety of jobs,

he registered at the University of Illinois. Because the money which Ojike had expected from Africa had been delayed as a result of the outbreak of World War II, he worked as a janitor at the same time that he attended the university. At the Illinois school, however, he found that the scope of subjects that he was permitted to study was limited by his selection of a major. With the aid of two Ohioans whom he had met when he was employed at a summer job in Chicago, Ojike was financially able to register at Ohio State University. In June 1942 he received a Bachelor of Science degree, having specialized in economics and business organization. An undergraduate term paper in sociology was to form the basis of his first book, *My Africa*. Subsequently Ojike studied public administration, education, and political science at the University of Chicago. Having written as a thesis, "Higher Education in American Social Order with Reference to a University of Nigeria," Ojike was awarded a Master of Arts degree in March 1943, less than a year after earning his B.S. degree.

During the seven years Ojike remained in the United States he had been eager to broaden Americans' knowledge of Africa: he was often called upon to speak at informal meetings or on radio programs, and in 1942 he began appearing on the lecture platform. From 1943 to 1946 Ojike lectured regularly, traveling to all parts of the United States. In the South, he has said, when speaking before people of his race, he attempted to give his hearers a sense of their tradition and respected place in the world. During 1945-46 he was executive director of the African Academy of Arts and Research, "a nonprofit organization whose sole aim is to promote good will, understanding, and cooperation between Africa and America." Ojike returned to Nigeria at the end of 1946 and became general manager for the *West African Pilot*. His duties include those of editorial writer, columnist, and business manager.

The first part of *My Africa*, which was published in 1946, is a narrative of Ojike's life before he came to the United States; the second is devoted to a discussion of African culture, history, and geography. It is "a plea for international amity and mutual understanding," wrote a *Library Journal* reviewer, in recommending the book for purchase by libraries. In the words of this reviewer, Ojike "sets the culture of Africa over against foreign ways as introduced by Christianity, objects intensely to British rule, and makes a convincing appeal for peace, progress, and freedom, basic needs of mankind." Other critical opinion of *My Africa* was divided. Patrick Putnam, in the *Saturday Review of Literature*, thought that "his book is a good job—a very good job—but a very uneven one." In his *New Republic* review, Max Gissen wrote: "*My Africa* is honest, passionate pleading, but it goes badly as a book to read. [This] might possibly be explained by the author's incomplete familiarity with the language. Harder to accept are the poor organization of the material . . . and any number of pointless anecdotes." While several of the critics found that the author generalized

"too patly," Jerry Rand (New York *Sun*) believed that "brilliant scholarship has turned out a painstaking, objective study." *I Have Two Countries*, published in June 1947, continues the autobiographical portion of *My Africa*.

L. J. Trese wrote in *Commonweal* of Ojike's second book: "For all his thirty years Mbonu Ojike writes with the unspoiled naturalness of a preadolescent. There is the same unselfconscious preoccupation with self; the same sense of wonder in each day's discoveries; the same calm expectation of welcome and affection from all he encounters. . . . Therein lies its charm. . . . This book has no sociological significance. It is an unabashed study, not of American mores and morals, but of Mr. Mbonu Ojike." The New York *Times* reviewer, John Barkham, found "vivid prose" in *I Have Two Countries*. "Ojike is worth listening to," Horace Reynolds told *Christian Science Monitor* readers. "This book on the American education of a young Nigerian makes one laugh, question, and think."

Ojike has written articles for American and Nigerian periodicals and an autobiographical pamphlet, *Portrait of a Boy In Africa*, published by the East and West Association. In April 1947, after his return to Africa, Ojike was married. The brown-eyed, black-haired Nigerian weighs 165 pounds and is five feet seven and a half inches tall. Walking and badminton are two forms of exercises Ojike enjoys, and he names debating and conversation as other relaxations.

Ojike, M. *My Africa* (1946); *I Have Two Countries* (1947)

OLESON, LLOYD F(REDERIC) (ō'lě-sĕn) Jan. 16, 1911- Veterans organization official; businessman

Address: b. c/o Disabled American Veterans, 1423 E. McMillan St., Cincinnati 6, Ohio; h. 585 S. Jordan Ave., Ventura, Calif.

National Commander Lloyd F. Oleson of the Disabled American Veterans is the first veteran of World War II, exclusively, to head one of the older major veterans groups. Before his election at the October 1946 convention of the D.A.V. held at Portland, Oregon, Oleson, a lawyer, was engaged in advertising and promotion.

Born January 16, 1911, in Champaign, Illinois, Lloyd Frederic Oleson is of Swedish and Scotch-Irish descent. His father, Olaf Eric Oleson, was a cattle rancher, and soldier in the Spanish-American War, in which he was wounded. The boy's mother, the former Clara S. Fieg, came from a family of farmers. With his sister Margaret L. (Oleson) Keyser (who is married to a United States Army officer) Lloyd Oleson was reared in Champaign, where he attended the high school. There he edited the school paper and participated in football, baseball, and swimming, before being graduated in 1929.

With this preparation he matriculated at the University of Illinois in nearby Urbana to major in history, accounting, and law. A member of the Sigma Chi fraternity, Oleson was to be elected to membership in Delta Sigma Epsilon and Alpha Delta Sigma (the advertising recognition society). He was active in school government as president of the students' union, and as a member of the students' senate and of the board of directors; Oleson was also chairman of the university social committee and of the dance supervision committee. As in high school, he was on the staff of the newspaper, as business manager. Oleson was a captain in the Reserve Officers Training Corps (ROTC), before receiving his B.S. degree. Further study at the same university brought him the degrees of Bachelor of Arts and Bachelor of Laws.

While in high school Oleson had worked as an assistant on a Champaign newspaper. An early association with Dean Thomas Arkle Clark and President David Kinley, both of the University of Illinois, influenced his ultimate choice of promotion work as a career. Accordingly, he spent the years from 1928 to 1938 on the same newspaper, advancing to the position of business and circulation manager by the year of his enlistment in the United States Army in 1938. Oleson was thus working on experimental tanks before the first armed division in World War II was formed. Later sent abroad as an officer in the tank corps, he was in North Africa when five tanks were shot from under him.

During his war service period Oleson won the Distinguished Service Cross for extraordinary heroism—it was the first such medal to be won by an American soldier in the European-African theater of World War II. Oleson, who was wounded four times in all, recovered from the first three injuries in a short time and had returned to active duty before sustaining the fourth wound, which caused him to be hospitalized for two years. After his discharge from the hospital and from the Army, Oleson spent the year 1945-46 as manager of the Ventura (California) Chamber of Commerce. In October 1946, at the twenty-sixth national convention of the Disabled American Veterans, held in Portland, Oregon, Oleson succeeded Dow V. Walker as national commander of the organization for the 1946-47 term of office.

Now one of the "big three" of the older veterans groups (the other two are the American Legion and the Veterans of Foreign Wars), the D.A.V. was organized at the end of World War I by a group of disabled veterans in order to help their former comrades. The organization was chartered by an Act of Congress in 1932 in recognition of the work it had done. In January 1946 there were an estimated one hundred full-time D.A.V. national service officers on duty in Veterans Administration regional offices to help the disabled veterans to cut "red tape" in getting hospitalization, medical care, pensions, and vocational training. They thus aid the former serviceman to make his new start in life. D.A.V. service officers

Chase-Sta'ler

LLOYD F. OLESON

receive a six-month course subsidized by the D.A.V. and the VA at the American University in Washington, where they are taught counseling, occupational guidance, and legislative and judicial procedure. Under Oleson's leadership the D.A.V. has now some four hundred more officers, all disabled veterans themselves, in training for the orientation of others. (It has been estimated that almost 2,500,000 servicemen were disabled by wounds, disease, or accidents in World War II, more than five times the number in World War I.)

Oleson's group has taken a stand against granting pensions to the disabled veteran and for finding a job for him. Commander Oleson has said: "Ninety per cent of all 'disabled' veterans are capable of working at gainful employment. Every effort must be made to find suitable jobs. . . . Every effort must be made to prevent any avoidable dependency upon disability compensation, pensions, or bonuses. That is the best way to preserve the self-respect of our country's disabled veterans." Under Oleson's leadership the D.A.V. began a campaign to help private industry fit disabled veterans into jobs at which they could work as well as when they were able-bodied. Thus the organization has a "two-directional" plan of reorientation—that of acclimating the disabled veteran to the job and adjusting the job to the veteran.

The D.A.V. commander, who is also a member of the American Legion and of the Veterans of Foreign Wars, was married on August 3, 1941, to Dorothy Murrell; their son is Lloyd Frederic Oleson, Jr. His church is the Methodist, and his lodges are the Masonic Order and the Benevolent and Protective Order of the Elks; he is not a member of any political party. Oleson has blue eyes and light hair, is five feet ten inches in height and 210 pounds

in weight. Photography and horseback riding are his favorite recreations.

OLIVER, LUNSFORD E(VERETT) Mar. 17, 1889- United States Army officer

Address: b. c/o War Department, Washington, D.C.; h. 1005 National St., Vicksburg, Miss.

Among the United States Army officers who have achieved prominence both during and after World War II is Major General Lunsford E. Oliver, Commander of the Fifth Armored, or "Victory," Division in Europe, member of the military liaison committee of the Atomic Energy Commission, and co-leader of the 1947 American military mission to Turkey. Oliver served on the Turkish mission from May until September 1947.

Lunsford Everett Oliver, son of Thomas Jefferson and Mary Lorinda (Evans) Oliver, was born in Nemaha, Nebraska, on March 17, 1889. From 1901 to 1904 he was a student at the Nebraska State Normal School, from 1907 to 1908 at Cotner University in Bethany, Nebraska. Later admitted to the United States Military Academy at West Point, he was graduated in 1913, receiving his appointment as a second lieutenant in the Corps of Engineers on June 12, 1913. His first assignment detailed him to border patrol duty at Texas City, Texas, and lasted until September 3, 1914. A year and a half at the Engineer School in Washington, D.C., followed; it was while he was at the school that he received his first promotion, to first lieutenant, on February 28, 1915. He was graduated on March 31, 1916, and, after spending another short period at Washington Barracks with the First Battalion of Engineers, was stationed, successively, at Fort Oglethorpe, Georgia, Fort Sam Houston and Eagle Pass, Texas; and from September 9, 1916, to March 30, 1917, at Brownsville, Texas, with the First Engineer Regiment.

During the next two and a half years, Oliver was given a number of brief assignments in rapid succession. Between April 6 and June 12, 1917, he acted as assistant to the district engineer for the Big Bend district of Texas, operating from headquarters at Marathon, Texas. Promoted to a captaincy on May 15, 1917, he next commanded a company of Engineers stationed first at El Paso and then at Brownsville, Texas. On August 5 he was promoted again, to the temporary rank of major, and became supply officer at Camp Grant, Illinois, serving first the Twenty-first and later the Thirty-second Regiment. On March 9, 1918, he was placed in command of the Thirty-sixth Engineers at Camp Grant and on May 19, 1918, was transferred with them to Camp Mills, New Jersey. In June 1918 he organized the Fifty-third and Fifty-fourth Engineer regiments and then served until September 3, 1918, as an instructor in the Engineer Officers' Training School at Camp Humphreys, Virginia. He had been promoted to the tem-

porary rank of lieutenant colonel on August 23, 1918. Through January 1919 he served with the 219th Engineers, first at Camp Humphreys and then at Camp Dodge, Iowa, and on February 15, 1919, returned to Camp Humphreys for another two months of duty as an instructor in the engineer school.

From Camp Meade, Maryland, where he was stationed in May 1919, Lieutenant Colonel Oliver was ordered to Europe. There he served in Germany with the Second Engineers before bringing them back to Camp Travis, Texas, in the fall of 1919. On November 10, 1919, he entered the Office of the Chief of Engineers in Washington, D.C., to begin a span of eight years in charge of peacetime Army construction work. Between May 1, 1920, and June 30, 1922, he supervised construction of the Key Bridge across the Potomac River. (It was during this period, on July 1, 1920, that he was promoted to the permanent rank of major, after having reverted to his previous permanent rank of captain on March 15, 1920.) From June 1922 to May 1924, as district engineer with headquarters at St. Louis, Missouri, he directed work on that section of the Mississippi River lying between the mouth of the Missouri and the mouth of the Ohio. In the summer of 1924 he was ordered to Juneau, Alaska, as engineer officer with the Alaska Road Commission. This was his post for three years.

In August 1927 Major Oliver enrolled in the Command and General Staff School at Fort Leavenworth, Kansas. Graduated in June 1928, he assumed command of the Twenty-ninth Engineers at Fort Humphreys, Virginia. Approximately a year later, on August 1, 1929, he was again detailed as an instructor to the Engineer School at the Fort Humphreys post. Assigned to duty with the Mississippi River Commission at Vicksburg, Mississippi, on July 1, 1932, he became district engineer at Vicksburg two years later and remained in that post for a three years' tour, during which he was promoted to lieutenant colonel (August 1, 1935). Following this, he spent another year acquiring advanced training at the Army War College in Washington from August 1937 to July 1938, and then became an instructor in the Command and General Staff School at Fort Leavenworth. On November 28, 1940, he was assigned to the First Armored Corps; on May 19, 1941, to Headquarters, Armored Force, Fort Knox, Kentucky; on February 21, 1942, to the First Armored Division at Camp Forest, Tennessee. He had received the temporary rank of colonel on June 26, 1941, of brigadier general on February 16, 1942, and became a major general (temporary) on November 20, 1942.

General Oliver's overseas service in World War II began with preparations for the North African campaign in 1942. On May 20, 1942, with the men of the First Armored Division, he landed in Ireland, there to begin training maneuvers in conjunction with British Army units. As he relates the story of the next several months ("In the Mud and Blood of Tunisia," *Collier's*, April 17, 1943), he was called to London early in September 1942 and there apprised of the plans for the operations in North

U.S. Army Signal Corps

MAJ. GEN. LUNSFORD E. OLIVER

Africa and placed in command of an armored combat division consisting of "approximately one regiment of tanks with its complement of self-propelled artillery and antitank guns and infantry." Final preparations, involving the perfecting of the troops in landing operations and the coordination of plans with the Navy and Air Corps, kept him and his immediate staff occupied, he has estimated, for an average of fourteen hours a day for about forty-five days during September and October. The trip to the Mediterranean, where their destination was Oran in Algiers, was uneventful. On November 7, D-Day also for Casablanca, American operations commenced. (The British were already in the field under General Sir Bernard Law Montgomery¹².) In the article in *Collier's*, General Oliver expressed his confidence that the excellence of the Allied soldiers and the superiority of their equipment to the enemy's would bring about ultimate victory in North Africa. For his part in the campaign he received the Distinguished Service Medal in December 1942.

In February 1943 the general was back in the United States, assigned to command the Fifth Armored Division, training at Camp Cooke, California. Subsequently, he moved with this division to Pine Camp, New York, and from August 1944 led it in the fighting in northern France and Germany. A unit of the First Army under Lieutenant General Courtney H. Hodges¹¹, the "Victory" Division, as the Fifth was called, in the first twenty days of the European operations participated in the enveloping movement resulting in the creation of the Falais-Argentan pocket which trapped the German Seventh Army. The Fifth Division was the first to attempt to breach the Siegfried Line in the experiment which provided the information for the subsequent Allied break-through, and in all drove some four

OLIVER, LUNSFORD E.—*Continued*

hundred miles to the Seine River, crossing it at Vernon, thirty-five miles from Paris. Then, after a brief stop for mopping-up operations in Paris, the Fifth pushed on to Berlin, being instrumental in taking, successively, Noyon, St. Quentin, Luxembourg, Kleinhau, Brandenburg, and Bergstein. It was the first division into Luxembourg, the first into Germany north of Trier in the Rhineland, and is said to have been the American division nearest Berlin when V-E Day came. The citation which accompanied the Oak Leaf Cluster awarded General Oliver in July 1945 stated in part: "Through his marked aggressiveness, adept utilization of armor and superior tactical knowledge, General Oliver's Fifth Armored Division made an invaluable contribution to the advance of our forces from the Contentin Peninsula to the Roer River."

In July 1945 General Oliver was transferred to the command of the Fourth Armored Division in the European theater. He returned to the United States in September 1945, was assigned to the Army Ground Forces, Washington, D.C., and later was made Assistant Chief of Staff, G-4, in charge of supply. In November 1946 he was appointed one of six members of the joint Army-Navy military liaison committee established to work with the United States Atomic Energy Commission set up by the McMahon⁴⁵ Atomic Energy Act of 1946. After Congress passed the Greek-Turkish aid bill, in May 1947 the General, together with Rear Admiral Ernest A. Herman, was placed in charge of the twenty-man military mission sent to Turkey to survey that nation's needs in arms, military roads, and transportation, and to draw up blueprints for the proposed expenditure of one million dollars to bolster Turkey's defenses. (The mission left the United States for Istanbul on May 19, 1947, before President Truman⁴⁶ had actually signed the measure.) After a two-month tour of Turkey with a group of military experts, General Oliver returned to the United States, the mission having completed its work. At the first reunion meeting of the Fifth Armored Division Association held in Chicago in August, at which he received a plaque, the General summarized his recommendations for Turkey by suggesting the re-equipment of the Turkish Army so that mechanization would free more men for industry, and the mobilization of half a million men to counterbalance the thirty-five divisions kept by the Soviet on the Turkish border.

Major General Oliver is a member of the Society of American Military Engineers. He was married May 28, 1921, to Janet Putnam, the sister of a West Point classmate, Colonel Rufus W. Putnam of the Corps of Engineers. The Olivers have three children, Thomas Kilbury, Mary Putnam, and Rachel Louise.

Who's Who in America, 1946-47

O'NEIL, JAMES F(RANCIS) June 13, 1898- Veterans organization official

Address: b. c/o American Legion National Headquarters, 777 N. Meridian St., Indianapolis 6, Ind.; h. 869 Union St., Manchester, N.H.

The national commander of the American Legion for the 1947-48 term, succeeding Paul H. Griffith⁴⁷, is James F. O'Neil of New Hampshire, who had never before been elected to a Legion office. He has, however, held many appointive posts since becoming a charter member of the Legion. A former newspaperman, O'Neil is chief of police of Manchester, New Hampshire, and a member of the Truman Amnesty Commission.

James Francis O'Neil, a grandson of Irish and English immigrants, was born in Manchester, New Hampshire, on June 13, 1898. His father, Joseph Henry O'Neil, was a machine operator in a textile mill, later became a foreman. After the death of James's mother, Mary Elizabeth (Dalton) O'Neil, which occurred when he was about fifteen, the boy took much of the responsibility of looking after his brother Joseph, who was then nine years old. While attending Manchester High School in the morning, James worked in the afternoon as a job-press hand in the Amoskeag textile mill. He planned to enter Dartmouth College with his friend John L. Sullivan, son of a well-known cigar manufacturer, after their graduation in 1915; but he was unable to afford college and continued to work in the mill until the spring of 1916.

The eighteen-year-old youth then joined the First New Hampshire Infantry, which was preparing to participate in Pershing's Mexican border campaign against Pancho Villa. According to Bob Considine, O'Neil was on his way to Mexico the day after he enlisted. There O'Neil's service included work as a supply sergeant. Back in New Hampshire in February 1917, having re-enlisted, he went on recruiting duty. That summer, on July 25, 1917, his regiment was reactivated for World War I as part of the Twenty-sixth Infantry (Yankee) Division. Private O'Neil embarked for France, and there participated in the St. Mihiel offensive and the battle of Château-Thierry. In the course of his nineteen months in France he rose to the rank of regimental sergeant major and was commissioned a second lieutenant on the field in the summer of 1918.

After the Armistice, Lieutenant O'Neil worked on several service publications, and was a charter member of the American Legion at its founding in 1919. (Two years later he was a founder of Henry J. Sweeney Post No. 2 of Manchester, and he continued to serve on Legion committees.) Still hoping to enter Dartmouth, but still lacking money, O'Neil went to work in the machine shop of a shoe factory (W. H. McElwain Company) in September of 1919, and two years later returned to the Amoskeag Manufacturing Company as a textile apprentice. He did not, however, get to college. When a strike interrupted his work in 1922, the former Army newspaperman ob-

tained a job on the Manchester *Daily Mirror* as "sportswriter, City Hall reporter, and strike expert." With two other reporters who felt themselves affronted by the local superintendent of schools, he once ran for a position on the school board in order to have the superintendent removed. One of the reporters succeeded in this objective; as for O'Neil, he has said, "I lost out by one vote, and should have. I was twenty-one."

From sportswriter to sports editor to make-up editor, to assistant city editor was James O'Neil's history on the *Mirror*. In 1925 he left to become a feature writer on Colonel Frank Knox's⁴⁰ Manchester *Union and Leader*, which are the largest papers in the State. (O'Neil has mentioned Knox as an individual who has had an influence on his choice of life-work: both worked to organize the American Legion in New Hampshire, "which carried me [O'Neil] into the newspaper field as an employee for him [Knox].") The latter was also to be responsible for O'Neil's obtaining his future police job.) His new salary enabled O'Neil to marry. The next year, 1926, found him a delegate from the Department of New Hampshire to the American Legion national convention, and he has continued to represent the State at Legion conventions each year. In 1934 O'Neil was appointed to the Legion's national Americanism commission, of which Paul Griffith was the chairman. O'Neil was to become vice-chairman five years later, and chairman five years after that, with Homer Chailaux remaining as salaried director of Americanism until his death in February 1946.

In 1934, too, according to a *PM* article, thirty-six-year-old city editor O'Neil (he had previously been feature editor and State editor) was asked by Governor John G. Winant⁴¹ to become State Commissioner of Labor. Instead, O'Neil accepted a post as chief deputy of the Manchester chief of police Michael J. Healy, his wife's uncle, who was in failing health. On the death of the elderly chief in 1937, James O'Neil became chief of police. As such, he served on the interstate Uniform Crime Commission (whose recommendations were adopted by forty-one States) and he became chairman of the New Hampshire branch of the International Association of Chiefs of Police. The municipality in which he functioned has a population of about seventy-eight thousand; O'Neil is perhaps proudest of the way he made it unnecessary to have military police patrols in Manchester, despite the presence in near-by camps of ten thousand troops. In New Hampshire, O'Neil pioneered in the development of aviation, was the State's first Director of Aeronautics (1937), served as chairman of the State's Aeronautics Commission (1941), and drafted the New Hampshire Aeronautics Law.

Continuing his activities as a Legionnaire, the municipal official, according to his Legion campaign literature, led the 1941 drive to bar from public schools the Rugg⁴² and other textbooks considered questionable. By December 1941 he had held the following posts, all appointive: chairmanship of the Guenther Fund to send

JAMES F. O'NEIL

young men to West Point, and of the recreation and sports development committee (he helped to develop the Legion's junior baseball competitions), and memberships on the committees to care for war orphans and to make awards for "outstanding Americanism." On the State level, he was chairman of seven committees, and a member of four or five others. He represented the Legion before Congress in the discussion of matters relating to communism, naturalization, immigration, and the GI Bill of Rights.

After the Pearl Harbor bombing, Chief O'Neil, then forty-three, applied to his former employer, Secretary of the Navy Knox, for Navy duty, and was "turned down cold." Upon Knox's death in April 1944, O'Neil's old friend John L. Sullivan became Assistant Secretary of the Navy for Air. "Two days after he got the job, I was in the Navy," O'Neil has said. "Three days later I was in Pearl Harbor." As civilian special assistant to Sullivan, the New Englander toured the southwest Pacific theater of operations, took part in three major engagements, and was present when the occupation of Japan began. He also went on "numerous secret missions for the War Department" before returning to New Hampshire and his police post.

Two days before Christmas 1946, President Truman announced the appointment of James O'Neil to sit on the Amnesty Commission with retired Justice Owen Roberts⁴³ and Willis Smith, sometime president of the American Bar Association. Their task was to review the cases of sixteen thousand persons convicted of draft law violations. Shortly after the appointment, O'Neil began a vigorous campaign to support his candidacy for the post of national commander of the American Legion, a position which pays ten thousand dollars a year in salary, forty thousand in expense allowance. According to the *PM* article, the Governor of

O'NEIL, JAMES F.—*Continued*

New Hampshire wrote to all the Governors in the country asking them to support O'Neil. "All the sales managers O'Neil knew wrote to their salesmen throughout the country asking them to support O'Neil. The House and Senate of New Hampshire met in joint session to support his candidacy." "No one asked me to do a darn thing" (in return for support), the candidate has said.

Before the national convention in August 1947, candidate O'Neil made trips to nearly every State in the country. At the convention, held in New York, he voted with the majority of the New Hampshire delegation in favor of the Taft⁴⁰-Ellender⁴⁶-Wagner⁴¹ Housing bill, which he had previously opposed on the ground that "housing should be solved on a community and State level." When the convention as a whole refused to support the bill, O'Neil again reversed his position, saying, "I will follow this mandate." More than a hundred resolutions which the Americanism commission had prepared under his chairmanship were adopted by the convention.

Five months earlier O'Neil had presented some of the recommendations to the House of Representatives Un-American Activities Committee—he then urged that the Communist party be outlawed, that the mails be closed to allegedly Communistic publications, that Federal aid be refused to schools and colleges which failed to "purge their faculties of Communists and fellow travelers," that all aliens be registered and their activities checked, and that immigrants be rejected if the countries of their origin refused to receive nationals deported from the United States. Later, in a post-election interview, Commander O'Neil stated, "I have fought fascism and nazism just as I have fought communism. I was the first to recognize the danger of the German-American Bund. I'm against any 'ism' that isn't Americanism." He expressed belief that "we must rely primarily on an educational campaign" to show the relative advantages of capitalist democracy, and must improve the existing system to enable it to compete successfully with totalitarian regimes.

One of eight candidates for the national commandership, the New England police chief was described by rivals as the "hand-picked" choice of the Legion's so-called "king makers" or policy-making group. Other candidates pointed out that O'Neil had never been elected to an important Legion office, having been appointed to those he held; and the Conference of Union Labor Legionnaires opposed him as "an extreme conservative." Support for O'Neil was so widespread, however, that halfway through the first ballot at the Legion's August convention, the other candidates withdrew from the race, making his election unanimous.

Since taking office, O'Neill has set forth a plan whereby the Government would guarantee bonds of incorporated groups, to be known as veterans homestead associations. Accepting this as possible alleviation of the housing problem, a homestead bill will be proposed in the second session of the Eightieth Congress by

Representatives Joseph W. Martin⁴⁰ and Edith Nourse Rogers⁴². O'Neill has also approved the State Department's *Voice of America* broadcasts. The Legion gave its support to the House probe on Communists in Hollywood, and has established a school to train Legionnaires how to "spot and counter" subversive activities. Universal military training is another measure advocated by the Legion. O'Neill served on the board which compiled the list of World War II conscientious objectors granted pardons late in 1947.

"The Legion takes all of my time except my duties as police chief," O'Neil has said. "My family have suffered." The family consists of Edythe Reid (Graf) O'Neil, to whom he was married in September 1925, and their children Kenneth Graf, a World War II naval combat aircrewman and now a Legionnaire, and his younger brother, James Russell. A Roman Catholic and a Republican, James O'Neil has said, "My religion has nothing to do with my political thinking." He holds membership in the International Association of Chiefs of Police (which organization he represented on the special advisory committee to the United States War and Navy Departments), the Newcomen Society, and the Knights of Columbus. The Legion commander is a short (five feet seven and a half inches), stocky (172 pounds) man with brown eyes and graying brown hair.

OSCAR OF THE WALDORF See Tschirky, O. M.

PARKER, MRS. JAMES C. See Parker, K. V.

PARKER, KARLA V(ANOSTRAND)
Nov. 30, 1894- Camp Fire Girls official

Address: b. c/o Camp Fire Girls, Inc., 88 Lexington Ave., New York 16; h. 1729 Union Blvd., S.E., Grand Rapids, Mich.

At the close of its 1946 convention the National Council of the Camp Fire Girls chose as president Karla V. Parker, a former public school teacher whose interest in the organization had begun when her own daughters became members. Active on a number of local youth groups, Mrs. Parker has been quoted to the effect that her favorite public official is the one who uses his power to promote the care and protection of youth.

Karla VanOstrand Parker, one of the three children of Charles Harry VanOstrand, a pharmacist, and the former Ray Delamere, was born in South Haven, Michigan, on November 30, 1894. She is of one half Dutch, one quarter English, and one quarter Irish ancestry: her paternal grandfather was descended from

Dutch settlers of New York in pre-Revolutionary days; her maternal grandmother's family was Dutch, her paternal grandmother English, her maternal grandfather Irish. Young Karla lived in South Haven until she was eighteen, attending the public schools there and earning her first dollars working in her father's drugstore. Most of her secondary education she obtained at the South Haven High School, but when her father established his new pharmacy in Kalamazoo, in the same State, in 1912, she was transferred to the Kalamazoo Central High School and received its diploma the next year.

While in high school she had played on the basketball team and been active in music and dramatics. In college, the Michigan State Normal School (now the Western Michigan College of Education), Miss VanOstrand continued these interests, turning particularly to water sports and becoming a charter member and officer of The Masquers, a dramatics society. Her major was home economics and she was looking toward a life of social service. Among the factors influencing her choice of career she counts her family as probably the most important, citing the compassion of her mother, the broad interests of her father, the educational interests of her aunts, the devotion and intellectual alertness of her grandparents, and the consecration of an uncle. Dr. Eduard Christian Lindeman, the Michigan-New York educator, was also an early influence in developing her sense of social consciousness, she has said.

About 1916 Karla VanOstrand began teaching in the public schools of Kalamazoo. Between school years, during the summers of World War I she managed a Community Cannery at Grosse Pointe Farms, Michigan, where adult volunteers and 4-H Club girls canned surplus vegetables in a conservation project. She continued to teach until 1924, when the family—now consisting of herself, her business executive husband, James Cowlbeck Parker, to whom she had been married on September 17, 1919, and her two young daughters, Nona Rae and Carlene Alice—moved to Grand Rapids. As the children entered school in Grand Rapids, Mrs. Parker turned to writing, beginning to contribute children's fiction to a number of periodicals and articles on education and homemaking to *Better Homes and Gardens*, the *Journal of Home Economics*, the *Christian Science Monitor*, the *Michigan Education Journal*, *National Parent-Teacher*, and others.

It was in 1928, Mrs. Parker has written, that she first became interested in the Parent-Teacher Association. From 1934 to 1935 she was president of the South High School P.T.A.; from 1935 to 1937, on the council of the Grand Rapids P.T.A.; from 1939 to 1942, first vice-president of the Michigan State P.T.A. At the same time, from 1935 to 1939 she edited her State's P.T.A. organ, the *Michigan Parent-Teacher*. From 1942 to 1945 she was president of the Michigan Congress of Parents and Teachers, an organization which in the year 1945 was comprised of 119,500 members in 1,022 local units, 65 councils. During this term of office she was also a mem-

Coulter Studio

KARLA V. PARKER

ber of the Governor's Legislative Survey Committee, which submitted to Governor Harry F. Kelly recommendations for the legislative protection of youth, and of the Michigan Public Education Study Commission investigating educational administration in Michigan. In 1946 she became regional vice-president of the National Congress of Parents and Teachers.

Mrs. Parker's interest in the Camp Fire Girls dates from 1930, when her own daughters became old enough to join the movement. She believes particularly in the Camp Fire program's emphasis on a girl's home surroundings and her future as a homemaker, considering the habits and values thereby inculcated as among the most potent influences making for true democratic attitudes. This she made clear when she accepted the presidency of the organization's National Council on November 7, 1946, at the end of the 1946 convention in Cleveland. (She was re-elected to this position in 1947.) "When we work in Camp Fire," she told the assembled delegates, "we are not only guardians but trustees of the kind of world that is to be. Even the solution of such problems as that of capital and labor have their roots directly in the home." Among the measures she recommended was the giving of "status and social recognition to the work of the mother."

On another occasion Mrs. Parker expressed her views on the role of education in the integration of home and community life when she said: "It seems to me that there is no greater need today than to discover a workable method of re-establishing the family as the primary and central influence in the lives of children. . . . Education, I am convinced, holds the key [to the elimination of many social problems, including divorce, juvenile delinquency, racial and religious prejudice, and others]: public school, college, and adult, with

PARKER, KARLA V.—*Continued*

particular emphasis on the first. The concept of the school as an agency for the transmission of facts ought, I feel, to be drastically revised. Instead, education should be devoted chiefly, though not exclusively, to bringing forth a generation of boys and girls who understand the social significance of the family, the importance of human relationships, the processes of democratic action. Young people ought to be aware of the stages in child growth and development, to possess the skills of child rearing and homemaking, to participate in vocational experience through cooperative programs of education and industry. This would by no means exclude cultural knowledge but rather would it make it more vital and appealing by its application to daily life and it could be as rich and extensive as the individual's capacity to assimilate."

Mrs. Parker is a member of the executive committee of the Michigan Council on Adult Education and chairman of its Committee on Home and Family Living, which under her leadership published a nationally recognized pamphlet entitled *Education for Home and Family Living*. She is also chairman of the Kent County Youth Guidance Committee, secretary of the Grand Rapids Public Recreation Board, and a member of the League of Women Voters. Her recreations, as in her youth, center in water sports, particularly swimming, and in art, music, drama, and ballet. She is moderately interested in antiques, she says, of which she has a number of pieces, among them early Victorian furniture and fruit plates. With brown hair that is graying and brown eyes, she stands five feet six inches tall and weighs 155 pounds. She attends the Christian Scientist Church. As to her politics, she has said, "Republican—surely in Arthur Vandenberg's town!"

PATE, WALTER L(ACEY) Sept. 10, 1878- Tennis team captain; lawyer

Address: b. c/o Cooke, Brown, and Pate, 2 Wall St., New York 5; h. "The Locusts," Locust Valley, N.Y.

Known in international sports circles for his activities in championship tennis, Walter L. Pate was nonplaying captain of the United States Davis cup team which brought the silver trophy back to the United States in the 1946 twenty-country international competition. Pate is a member of the New York law firm of Cooke, Brown, and Pate.

Walter Lacey Pate was born in Brooklyn, New York, on September 10, 1878, the son of Albert Henry and Ada (Thomas) Pate. His maternal grandparents were Canadian, his paternal were English; grandfather William Pate founded William Pate and Company, printers of etchings and engravings. Albert Pate was a partner in the firm at the time of his son's birth. When young Walter reached school age, he was sent to the Adelphi Academy and later to the Pratt Institute High School in his native Brooklyn. It was here that he prepared for college—he studied law at Cornell Univer-

sity, where he was active in extracurricular athletics and was a member of the Phi Kappa Psi fraternity. After Cornell had awarded him his LL.B in 1899, he was admitted to the New York Bar in 1900.

Upon his graduation in 1899, Pate entered the firm of Noble and Camp; by 1914 he had become a partner in the company. When World War I began several years later, Pate took a leave of absence to serve six months overseas, where he was in charge of the Young Men's Christian Association shipping bureau. After his return to the United States, he resumed his duties as a partner in the firm of Nobel and Camp, remaining there until 1921. In that year, Pate and Charles Martin Camp formed their own company, Camp and Pate, which conducted its activities at law for four years. Pate joined Thompson, Freedman, and Cooke in 1925, and remained with them until 1934, at which time his name appeared in the partnership of Freedman, Cooke, Brown, and Pate. In 1937 this was succeeded by Cooke, Brown, and Pate; Pate, together with Carleton S. Cooke and Philip V. Brown, are continuing a succession of partnerships which is now (in 1947) over one hundred years old, having been located for the last sixty-six years at the same Wall Street address. Pate's practice is general; the firm specializes in decedents' estates and tax matters.

While at Cornell, Pate had engaged in many vigorous sports such as track (he was a cross-country runner), crew (he was coxswain of junior varsity in his senior year), boxing, wrestling. Pate once told an interviewer, "The physical need of continuing some form of exercise after leaving college inspired me to organize the Brooklyn tennis club." That was in 1900, the year the Davis Cup amateur tournaments were begun. Early in his tennis career, Pate began following the tennis circuit throughout the season, playing against many of the world's ranking players of the time while never actually gaining "top ten" prominence himself. However, with Samuel Hardy, he did hold the Veterans Double Tennis Championship of the United States in 1924 and 1925. He was the Wingate Memorial lecturer (1929-32) on tennis at high schools and universities. His first lasting service to American tennis had been made in 1923 or so, when, as head of a tennis education committee, he had twenty-thousand feet of film shot of master strokes by many of the greatest players on the courts. Taken at regular speed and in slow motion, the films gave full details of the racket swing, the footwork, and the body follow-through. These pictures have been projected on screens throughout the United States and in many countries of Europe and the Far East. Pate also developed laboratory tests for tennis equipment—strings, balls, nets, and rackets. Only tennis balls passing his inspection test are permitted in official tournaments and matches of the United States Lawn Tennis Association.

The United States Lawn Tennis Association was founded in 1881 (modern tennis dates from 1874) and sponsored many of the international matches later held. As a delegate-at-large in the association, Pate has served on

many of its committees, such as the executive, advisory, and financial. Back in 1900, competition for the giant silver cup offered by Dwight F. Davis was initiated as a step forward in international tennis tournaments. One of Pate's committee chairmanships in the lawn tennis association was to be of the Davis cup committee of management. In 1935 he became nonplaying captain of the United States Davis cup teams (he served until 1939); he did not accompany the squads on an "overseas invasion" until two years later, because of the commitments of his legal practice. On that occasion (1937), the cup was wrested from Great Britain—the United States had lost it to France in 1927 and France had lost it to England by 1933. The cup was to remain in America for two years (1937, 1938), until won by the Australian tennis team in 1939. (During the World War II years of 1940-45 no international tennis tournaments were held.) Pate was elected captain of the first postwar squad (1946) to vie for repossession of the cup at the final playoffs which took place December 1946 in Australia. On January 11, 1947, Pate arrived in New York with the famous trophy.

To members of his Davis cup team Walter L. Pate is "Cap." J. P. Allen (*New York Sun*) describes him as a strict disciplinarian—"the racket swingers he pilots . . . know his word is law." In accordance with his pet formula—condition and concentration—Pate sees that his men keep early hours, train vigorously. Expert in the art and strategy of tennis, Pate coaches the team, using "his gift for keen analysis that continually confounds his players and professionals." A member of the International Lawn Tennis Associations of Great Britain and of the United States, Pate plays the game on the lawns of the West Side Tennis, Racquet and Tennis, and Nassau Country clubs. He also belongs to the Beaver Dam Winter Sports, Regency, Heights Casino, Pennsylvania Luncheon, and Lawyers (Brooklyn) clubs. Once a member of the University Club, Pate holds membership in the Cornell clubs of New York (he was president 1941-47) and of Nassau County (he was president in 1945-46). Since 1931 the lawyer has also been treasurer and clerk of the Incorporated Village of Lattingtown in Long Island.

Pate was married to Marian Davol on November 15, 1904; their children are Elizabeth Davol (Mrs. Robert Davis Siering) and Marjorie (Mrs. George Lindsley Stearns). Mrs. Pate died in May 1940. Pate is a Congregationalist and a member of the Republican Party. In 1946 Joe Williams of the *New York World-Telegram* described him as a man "of limited height, iron gray as to hair . . . pressing sixty-nine, though he could cheat on his age by ten years and fool a lot of people." Music, bridge, fishing, and tennis are his main means of relaxation. Although an "unflinching advocate of simon-pure amateurism" in tennis, his favorite player is Don Budge⁴¹, the professional, whom he regards as the greatest tennis player of all time: "I believe that in 1937 and in 1938 Budge played the best tennis the world has ever seen." Asked if he saw another such player coming

Antoine-Kershaw, Melbourne

WALTER L. PATE

in the near future, Pate answered, "No, and my eyes are good."

PATTERSON, FREDERICK DOUGLAS Oct. 10, 1901- College president

Address: b. c/o Tuskegee Institute, Tuskegee, Ala.

Frederick Douglas Patterson in 1935 became president of Tuskegee Normal and Industrial Institute, which was founded by Booker T. Washington for the purpose of giving Negroes vocational training. An outstanding Negro educator, Patterson in 1943 organized the United Negro College Fund, which fund-raising group he serves as president. He is also the author of a plan to improve the housing of Southern low-income farmers.

Named after the Negro journalist and anti-slavery leader, Frederick Douglass, Frederick Douglas Patterson was born in Washington, D.C., on October 10, 1901. His parents were William Ross and Mamie Lucille (Brooks)

Press Assn., Inc.

FREDERICK DOUGLAS PATTERSON

Patterson. After attending the Prairie View State College in Prairie View, Texas, from 1915 to 1919, he transferred to Iowa State College to study veterinary science. From that college he received a doctorate in veterinary medicine in 1923 and a Master of Science degree in 1927. Five years later he was awarded a second doctorate, this a Ph.D. from Cornell University.

In 1923, the year of his graduation from Iowa State College, Patterson became an instructor in veterinary science and in chemistry at Virginia State College in Petersburg, Virginia. After four years he was advanced to the post of director of agriculture. It was in 1928, a year later, that Patterson first went to Tuskegee Institute in Alabama, as head of its veterinary division, at the same time serving as an instructor in bacteriology. He was raised to the post of director of the School of Agriculture in 1933. In 1935 Frederick Patterson became president of Tuskegee Normal and Industrial Institute. In the year he became president, Patterson was married to Catherine Elizabeth Moton. (They have one son, Frederick Douglass.)

On the Fourth of July of 1881 the faculty and student body of Tuskegee Institute met for the first classes. Founded by Booker T. Washington, who maintained that Negro students must be trained vocationally, Tuskegee from its establishment has required that each student pay part of his or her tuition by doing manual work. The college provides jobs through its placement service and has established a uniform rate of pay for all students, regardless of the task to which they are assigned. By 1947 Tuskegee had over two thousand students who are taught by a staff of about three hundred and ten (all members of the faculty are Negro.) There are 133 buildings, many of which were built by the students,

on 3,550 acres of campus and farmland. The institute awards Bachelor of Science degrees in nine fields, including agriculture, education, business, and music, and diplomas in five of these.

During the period in which Patterson has been president, several new ideas have been put into practice at Tuskegee. In 1937 the president, then in office two years, inaugurated a new division, a school for domestic service. Here students pursue a four-year course of study and work, learning to perform efficiently all kinds of personal and household service and also becoming familiar with the principles of nutrition and dietetics. Tuskegee, a land grant college, takes part in the activities of communities in its vicinity. Thus its Nutrition Institute adopted a school lunch program and visited one-room schoolhouses, where it trained the teacher and the older pupils to prepare hot lunches for the children.

Much of Tuskegee's scientific work is conducted at the George Washington Carver⁴⁰ Foundation, also established during Patterson's administration. Begun in 1940 by Carver, who had done research at Tuskegee for a number of years, the foundation was endowed by this scientist with a \$33,000 fund, which was increased in 1943 to \$60,000 by the provisions of Carver's will. Other sources of income for the foundation are grants-in-aid and a share of Tuskegee's budget. It also undertakes research for commercial firms, and by the fall of 1946 the foundation was making studies or had completed research in paper, ink, foods, and in animal nutrition. In 1947 eleven students were working under research grants from the foundation.

Patterson in 1943 called a meeting of the heads of a number of Negro colleges to plan a fund-raising campaign for Negro educational institutions. The result was the formation of the United Negro College Fund, of which Patterson became president. Twenty-seven colleges joined the interracial organization, which was incorporated in New York State, and which annually conducts drives. By 1945 the number of members had increased to thirty-two. In its 1947 campaign the fund collected more than a million dollars.

The Tuskegee president was a member of President Truman's Commission on Higher Education, which in December 1947 filed a report calling for a reorganization of the country's system of higher education. Aiming toward the doubling of the number of college students enrolled by 1960, the group advocated direct Federal aid to colleges and universities through the granting of scholarships and fellowships. The majority favored the elimination of segregation, since, they felt, the duplicated system increased expense. A better program for graduate and professional schools was proposed so as to provide students with a richer background of knowledge. Also favored in the report were free public education through the junior college level, and reduced college, graduate, and professional school tuition and fees.

In December 1946 the *New York Times* discussed a plan proposed by Patterson to improve the housing of farmers earning substandard incomes. His suggestion that the farmer and his family could themselves mold concrete blocks and erect fireproof structures which would be inexpensive to build (\$500 to \$2,000) attracted the interest of a number of manufacturers, some of whom offered improvements on Patterson's original proposal. Two model houses were displayed at Tuskegee, and the students constructed a four-room house for a neighboring farmer.

The educator has written for scientific and educational journals and is a co-author of *What the Negro Wants* (1945). He is a trustee of a number of other schools: the Calhoun Colored School, the Booker T. Washington Agricultural and Industrial Institute of Liberia, Fisk University, Bethune Cookman College, Hampton Institute, and the Palmer Memorial Institute. A trustee of the Phelps Stokes Fund, he also belongs to the Southern Education Foundation, the executive board of the National Urban League, and the Southern Regional Council. He is a member of the board of directors of the Southern Conference for Human Welfare and the Colored Work Department Committee of the National Council of the YMCA, and a member of the board of incorporators of the American Red Cross. He is a member of the advisory board of the Southern Association of Young Writers. Patterson belongs to the Iowa chapter of the Veterinary Medical Society and to the John A. Andrew Clinical Society in Tuskegee. His fraternal affiliations are Phi Kappa Phi, and Alpha Phi Alpha. He holds three honorary degrees: an LL.D. from Virginia State College, an L.H.D. from Wilberforce University, and a D.Sc. from Lincoln University. In 1923 he was commissioned a second lieutenant in the Officers' Reserve Corps of the United States Army.

Patterson is a member of the Atheneum Club and he attends religious services in the Methodist Church. He claims no political allegiance, is a member of the bipartisan National Committee on Strengthening Congress formed in December 1946 to suggest possible changes in Congressional procedure. The educator has served as a special assistant to the United States Secretary of Agriculture.

PAUL I, KING OF THE HELLENES

Dec. 14, 1901-

Address: Royal Palace, Athens

King Paul I, sixth monarch of Greece since the liberation of that country from the Ottoman Empire in 1832, ascended the throne on the death of his brother, King George II⁴³, on April 1, 1947. At the time that Paul became King, a United Nations commission was

investigating the frontier disputes of Greece with the adjacent countries of Yugoslavia, Bulgaria, and Albania; the United States Congress was debating a proposed three-hundred-million-dollar loan to the Hellenic kingdom; and the northern provinces of Greece were in a state of civil war between allegedly Leftist guerrillas and the forces of the Government.

King Paul I of Greece was born in Athens, on December 14, 1901. Through his father, later to be King Constantine, he is the descendant of the Danish house of Schleswig-Holstein-Sönderburg-Glücksburg, and a grandson of George I of Greece, the former Danish prince who was elected to the Greek throne in 1863. Paul's mother, Princess Sophia of Prussia, was the sister of Kaiser Wilhelm II and the granddaughter of England's Queen Victoria. With his three sisters and two brothers (Alexander and George, both subsequently Kings of Greece), Paul spent much of his childhood at the Royal Palace in Athens, at the royal family's summer home on the island of Corfu, or at the royal villa of Tatoï, in a suburb of Athens. He was trained to enter the Royal Hellenic Navy at the Greek Naval Academy, where he was an average student in navigation and mathematics. He is an enthusiastic student of ancient Greek—a classical interest which became a bond between him and General Smuts⁴⁴ of South Africa. He has also studied music and philosophy.

Constantine, who became King of Greece in 1913, ruled only four years before being deposed: with his Chief of Staff, John Metaxas⁴⁵, the King was accused of pro-German sympathies during World War I. Dissension between the King and his Premier, Eleutherios Venizelos, over the question of Greece's joining the Allies, led to Venizelos' establishment of a provisional Government at Salonika in 1916. Constantine was deprived of his throne by an ultimatum in June of the following year, and, with his wife and sons, George and Paul, went into exile. Under the protection of the Allies, Constantine's second son, Alexander, was proclaimed King of Greece, while Venizelos declared the country's entrance into World War I on the side of the Allies.

Late in 1920 Alexander died from an infection caused by a monkey bite. In a plebiscite held in November 1920, Prince Paul was named King, but, on the refusal of his father and brother George to renounce their claims to the throne, was unable to accept the crown. Accompanying his brother, Paul returned to Greece in December—the same month that their father's right to the throne was confirmed by plebiscite. This time the disastrous Greek campaign against the Turks in Anatolia (in which Prince Paul participated as a naval ensign) hastened the end of Constantine's rule, and, in September 1922, he was forced to abdicate by a revolutionary committee. For a year afterward George ruled the country, but he was advised to leave Greece in 1923, and thus departed for Bucharest that December with his Queen (Elizabeth, Princess of Rumania) and his brother Paul. On March 25,

PAUL I, KING OF THE HELLENES

1924, the Glücksburg dynasty was deposed and the Hellenic Republic established.

In the course of the next decade, while his brother George lived chiefly in London, Prince Paul paid a lengthy visit to the United States, where he attended memorial services for his father in Chicago, and lectured at Princeton University. Prince Paul, for a year, worked at Armstrong and Sindley's aircraft factory in Coventry, England. During the latter experience he became familiar with aircraft mechanics. The remainder of his exile was spent in Florence with two of his sisters, Irene and Catherine. This exile was terminated in 1935, when George Kondylis, who had declared himself Regent of Greece and persuaded the National Assembly to abolish the republican constitution in favor of the royalist one of 1911, brought about the return of the King by a plebiscite. Since the polls were boycotted by the republicans, King George's right to the throne was authorized, and the monarch returned in December 1935, accompanied by his brother, now the Crown Prince Paul.

Soon after his return George disagreed with Kondylis over the amnesty promised by the King to political prisoners, and dismissed the Kondylis Cabinet. A provisional government formed by Constantine Demerdjis proved no more successful in uniting the dissentient factions in the country and was succeeded by the Government of John Metaxas, appointed Premier by the King. Metaxas declared himself dictator of the country in August 1936. For five years Metaxas dominated the authoritarian, pro-German regime; civil liberties were abolished, the press was curbed, opposition leaders were exiled, and the other fascist governments of Europe were held up as exemplary states. Crown Prince Paul, who became a commander in the Royal Hellenic Navy and held the corresponding rank in the Army and Air Force,

was honorary leader of the national youth organization (compulsory for all children over five) founded by Metaxas, although Paul was known to have opposed the dictatorship. The heir apparent was married in 1938 to his second cousin, Frederika Louisa, daughter of the Duke of Brunswick and granddaughter of former Kaiser Wilhelm II. When the Albanians and Italians attacked Greece in 1940, Prince Paul served on the general staff of the Army. In the month of October 1940 Paul was reportedly imprisoned by the Metaxas police. The Greek Government, meanwhile, maintained cordial relations with Germany, until the Germans in turn invaded Greece on April 6, 1941. By April 22 King George II of Greece was forced to withdraw to the island of Crete, where he and his brother were picked up by a Cairo-bound British destroyer.

Five months after the invasion, the Greek royal party reached London, having circumnavigated Africa. In the British capital a Greek Government-in-exile was formed in the fall of 1941; its headquarters were moved to Cairo the following autumn, to be nearer Greece and the scene of potential Allied action. Paul assisted the war effort by broadcasting messages to the Greek people, while Princess Frederika conducted benefits for the Greek War Relief. To allay Greek fears of a return of the dictatorship when victory was attained, King George promised to abide by the terms of a postwar plebiscite on the restoration of the monarchy. In the meantime Crown Prince Paul, anxious to return to Greece, sought British permission to land on Greek soil with parachute troops, but was refused. His five-year exile from Greece was terminated by the plebiscite of September 1946, held under the auspices of the Tsaldaris⁴⁸ interim government, which authorized George to accept the scepter of Greece once again.

Internally Greece was in a highly explosive state at this time: the country's finances were bankrupt, the remnants of the liberal and communist underground had entered into open warfare with the royalist Government, and the sovereignty of the northern borders was challenged by the Soviet-dominated nations of Albania, Bulgaria, and Yugoslavia. As during the Metaxas regime, civil liberties were reduced to a minimum. Early in 1947 Crown Prince Paul and Princess Frederika visited the northern provinces of Macedonia, Thessaly, and Epirus, where revolt against the civil Government, now headed by Premier Demetrios Maximos, was most intense.

Shortly after the Crown Prince and Princess returned to Athens, King George II died of a heart attack. Six hours after his death, on April 1, 1947, Paul was sworn in informally as the new Greek monarch; the formal oath of office was administered to him by Archbishop Damaskinos⁴⁹ three weeks later. It was believed that the death of King George would not affect the Government policy of all-out warfare against the guerrillas. When interviewed by Raymond Daniell⁴⁴ of the *New York Times* a week after coming to the throne, King Paul admitted that most of the guerrillas

were not communists, but added that their leaders were. "We want and intend," he told Daniell, "to be friends with everybody except the Communists." Meanwhile, in the United States, Congressional discussion of the three-hundred-million-dollar loan for Greece, proposed by President Truman⁴⁵, was in progress. The Greek Government crisis continued into the summer of 1947, when King Paul accepted two new Cabinets—a Populist one, with Constantin Tsaldaris⁴⁶ as Premier, which was succeeded within two weeks by a coalition Cabinet headed by Themistocles Sophoulis⁴⁷. The King in December signed a no-strike decree, carrying the death penalty for violations, a measure sponsored by the Sophoulis Cabinet. In September the monarch visited the frontier town of Florina with two American Congressmen, Representatives Richard M. Nixon of California and James P. Richards of South Carolina. King Paul was stricken with typhoid fever in November, but recovered shortly afterward.

Paul, *Time* believes, has begun his reign with advantages over the late King George: "No taint of supporting the prewar Metaxas dictatorship; a genial, democratic manner; an energetic, intelligent wife." *PM* has called King Paul a "debonair, monocled sportsman . . . with little experience in statescraft, who is less popular than his brother was." On the other hand, the *New York Times* considered that he had "the makings of a popular monarch." Of his three children, Sophia, Constantine, and Irene, Constantine is now the Crown Prince of Greece. King Paul, a yachting enthusiast and licensed airplane pilot, is also a "fair" mountaineer and plays a good game of tennis.

PAUL, ALICE Jan. 11, 1885- Women's organization official; lawyer

Address: b. c/o National Woman's Party, 144 B St., N.E., Washington, D.C.

To secure equal rights under law for the women of the United States, as well as the women of the rest of the world, has been the lifework of Quaker-born Alice Paul, who, in 1942, was elected national chairman of the National Woman's Party. After the passage of the Nineteenth Amendment granting the vote to women in 1920, Miss Paul began a campaign for the addition of an equal rights amendment to the United States Constitution, a campaign which continues into the postwar years. She had led a similar campaign in Geneva in the 1930's advocating an international equal rights treaty for world-wide ratification. A step toward this objective was made when the principle of equality of the sexes was incorporated into the preamble of the United Nations Charter and was made the subject of a resolution passed by the U.N. Assembly.

The daughter of William Mickle and Tacie (Perry) Paul, Alice Paul was born in Moores-

Press Assn., Inc.

ALICE PAUL

town, New Jersey, on January 11, 1885. Before she entered Swarthmore College, she was educated in private schools. After being graduated from Swarthmore in 1905, she did graduate work at the New York School of Social Work for a year and was also a resident at the New York College Settlement in the same period. In 1906 she went abroad to do settlement work in England, where, during her three years' stay, she was thrice imprisoned for suffragist demonstrations. The University of Pennsylvania granted her an M.A. degree in 1907 and a Ph.D. degree in 1912. Much of her postgraduate work was done at the universities of Birmingham and London between 1907 and 1909.

On returning to the United States in 1912, Miss Paul became chairman of the Congressional committee of the American Woman Suffrage Association. At a Denver conference the following year, a group of militant suffragettes, led by Alice Paul, seceded from the parent organization and formed the Congressional Union for Woman Suffrage. She was national chairman of the Congressional Union until 1917, when it merged with the Woman's Party to form the National Woman's Party. As in England, her suffragist demonstrations in the United States led to three prison sentences. From 1917 to 1921 Miss Paul was chairman of the national executive committee of the National Woman's Party; after 1921 she was a member of its executive committee and chairman of the committee on international relations.

For the next seven years, Miss Paul continued her education, obtaining three law degrees in that period—an LL.B. from Washington College of Law (1922), and an LL.M. (1927) and a D.C.L. (1928) from the American University. Specialization in law did not, however, divert her attention from the suf-

PAUL, ALICE—*Continued*

fragist movement: in 1923 the first women's equal rights amendment was introduced in Congress under her direction. Her law education partially completed in 1927, Miss Paul became chairman of the Woman's Research Foundation, a position she held for a decade.

Miss Paul's work developed international ramifications in the 1930's. From 1930 to 1933 she was chairman of the nationality committee of the Inter-American Commission of Women. Representing this organization, and as a member of the Women's Consultative Committee on Nationality of the League of Nations and a member of the executive committee of the Equal Rights International, she lobbied at Geneva for the recognition of complete equality for women throughout the world. This was to be obtained by securing the allegiance of all nations to an Equal Rights Treaty. In reference to a World Code of Law under consideration by The Hague Conference in 1930, Miss Paul said: "Women, whatever their race, are united in demanding that, when a World Code of Law is made for all the world, it shall be a law that is free from all discriminations based on sex. . . . Certainly, at this period in world affairs, international inequalities between men and women should not be written into any new world system of law."

Increased international support of the feminist movement led Miss Paul to found the World Party for Equal Rights for Women, commonly called the World Women's Party. Not long before World War II, Miss Paul spent two years in Geneva as that party's representative. When she returned to the United States in 1941, Miss Paul observed: "This world crisis came about without women having anything to do with it. If the women of the world had not been excluded from world affairs, things today might have been different. . . . What we want to do is to have some say in the movement of peace when it comes. Women had no voice in the making of the Treaty of Versailles, and if we had had, things would have been different today."

At the biennial convention of the National Woman's Party in 1942, Miss Paul was elected its national chairman. Agitation for the equal rights amendment she had originally drafted in 1923 gathered enough support by 1942 to be reported by the Senate Judiciary Committee. The Democratic and the Republican parties adopted it as a plank in their platform in 1944: hitherto especial opposition had come from the Democratic party, which regarded the proposed amendment as a threat to legislation safeguarding women; members of both parties had regarded it as an invasion of States' rights. (It had also been opposed on those grounds by the League of Women Voters.) When put to a vote in the Senate in July 1946, the amendment received a simple majority of 38 to 35, but failed to obtain the two-thirds majority necessary to send it to the House. (Passage by both would allow the amendment to become effective three years after ratification by three-fourths of the States.)

Miss Paul's efforts for the equal rights principle have been acknowledged in the international sphere. In the preamble to the United Nations Charter, drafted at San Francisco in 1945, is a reaffirmation of "faith . . . in the equal rights of men and women." The equal rights treaty broached at Geneva by Miss Paul and the World Women's Party just before World War II is expected to be placed on the agenda of the United Nations Assembly as well. A resolution to this effect was adopted by the Assembly in December 1946. "Now that the Assembly has taken this action," Miss Paul asserted, "there is every reason to believe that all member nations will bring their laws in regard to suffrage up to the standard of equality recommended by the Assembly. The World Women's Party will now work for equality of rights for women in all other fields and for the inclusion of women, with full voting powers, in every delegation to the Council and Assembly of the United Nations."

Another organization to which Alice Paul belongs is the International Council of Women, of which she is the United States member of the laws committee. She is also enrolled in the Sons and Daughters of the Pilgrims, the Daughters of the American Revolution, the Colonial Dames of the Seventeenth Century, and the Ladies of the Grand Army of the Republic. The honorary scholastic societies, Phi Beta Kappa and Pi Gamma Mu, elected dark-haired, blue-eyed Miss Paul to membership.

Who's Who in America, 1940-41

PAYNE, (PIERRE STEPHEN) ROBERT Dec. 4, 1911- Author

Address: b. c/o Mrs. Mary Pritchett, 55 W. 42d St., New York 18

A poet and a believer in "the permanent power of beauty," Robert Payne, young English author whose versatility and prolific output have astonished the literary world, has authored in the space of one year (1947) two novels, a political study, a volume of verse, and a personal journal, and has also edited a book of Chinese poetry. Nor is this the extent of his activities, for scheduled for 1948 spring publication are a new novel, "The Yellow Robe," and an anthology of European poetry, "The Sacred Spring."

Pierre Stephen Robert Payne was born in Saltash, Cornwall, England, on December 4, 1911, the son of Stephen and Mireille Antoinette (Dorey) Payne. His father, a naval architect and airship constructor, built the Singapore naval base and is now a director of supplies at the British Admiralty. His French mother was a medical student at the University of Lyons. After a year at St. Paul's School in London, young Robert went with his parents to South Africa, where he attended the Diocesan College at Rondebosch, Cape Province (1929-30) and the University of Capetown (1931-32). Returning to England, he studied

at the University of Liverpool from 1933 to 1936. Subsequently he read German literature at Munich; and in Paris varied courses in medieval poetry at the Sorbonne with a brief turn at sculpture.

Robert Payne has worked as a shipwright in England, and also in Singapore, where he was an armament officer as well. In 1941 he went to China for the British Ministry of Information, reported the Battle of Changsha for the *London Times*, and in 1942 became associated with Fuhtan University near Chungking and later Lienta University at Kunming, where he taught English literature and naval architecture for four years.

Payne's literary career began at the age of seven, when he wrote "The Truc Adventures of Princess Sylvia." He has been writing ever since. Five or six of his titles were published in England, under the pseudonyms Robert Young, and Valentin Tikhonov (*The Mountains and the Stars*, 1938), before *Forever China* was brought out in America in 1945. This book won instant acclaim, and was considered "a literary event of the first magnitude" by Orville Prescott. Gerald W. Johnston, in the *New York Herald Tribune*, referred to Payne's "sensitive and perceptive mind" and called *Forever China* "graceful, colorful, passionate, and sometimes entralling." Of *Torrents of Spring* (1946), the first of a series of projected novels interpreting modern China, John Cournos of the *New York Sun* wrote, "China lives in Payne's pages as it does in few books." In 1946 the author also collaborated with Stephen Chen on a biography of Sun Yat-sen.

David and Anna (1947), a story of Malaya which the *New York Times* reviewer regarded as belonging to the same world as Blake's "Tiger, Tiger," or a jungle painting by Rousseau, preceded *The Bear Coughs at the North Pole* (1947). In the latter, Payne departed from his former field and produced what Orville Prescott termed a "psychological melodrama" redeemed in part by "many isolated passages and individual scenes . . . that glow with the flames of Mr. Payne's unquenchable talent." *The Revolt of Asia* (1947), "a provocative, informative book" built around key personalities in the political scene was followed by *China Awake* (1947), Robert Payne's latest title, which returns to the diary form so successful in *Forever China*. In the sensitive pages of this "transcendent reportage" John K. Fairbank felt that the author brings to life "a background not found in news dispatches."

Believing that "we can understand a people best through their poetry," the author spent much of his time in China in studying the literature of the country. The result was *The White Pony* (1947), an anthology of Chinese verse translated by Chinese scholars and revised and edited by Payne. He has also published a volume of his own verse, *The Rose Tree and Other Poems* (1947). Although Starr Nelson, in the *Saturday Review of Literature*, found "faintly disturbing echoes of considerably older and greater poets—Yeats, Whitman, Donne, Shakespeare—" in Payne's work, he

ROBERT PAYNE

nevertheless considered that "the total effect of these poems is that of a new voice."

The author left China in July 1946, and later came to the United States, where he now lives in California. Little is known about his private life, but in *Forever China* he refers to his stepson and his stepdaughter, and Orville Prescott has written in the *New York Times*, "Robert Payne's love for China is not so impersonal as his book suggests. He is married to a Chinese woman." The dedication of *The Rose Tree*—"For my daughter"—gives another clue. The blue-eyed, brown-haired author, who is of medium height, has no political or religious affiliations, and belongs to no clubs or organizations because he regards them as "competitive and therefore useless." He "hates all sports," preferring to take his recreation in "reading foreign languages, wandering, working, and traveling." An additional occupation is "looking," a lost art which he feels should be revived. Payne, who likes to work at night, has the novelist's customary admiration for Flaubert, and lists Rimbaud, Shakespeare, Baudelaire, Tu Fu, the Chinese *Book of Songs* as favorite reading. He "worships children and flowers and the sun"; and he has said, "I want to write all the poetry that is in me, and read all the good poetry that has ever been written, in all languages."

PEARSON, LESTER BOWLES Apr. 23, 1897- Canadian Government official
Address: b. c/o Department of External Affairs, Ottawa, Canada; h. 243 Augusta St., Ottawa, Canada

Lester Bowles Pearson, appointed Canadian Under Secretary of State for External Affairs

Canada Nat. Film Bd.

LESTER BOWLES PEARSON

in 1946, is the former Canadian Ambassador to the United States. Among his contributions to the development of the United Nations was his chairmanship of several UNRRA committees and his participation in the drafting of the constitution for the United Nations Food and Agricultural Organization. During the early part of his career in the Canadian diplomatic service, he had been delegated to attend a series of international conferences on naval strength and disarmament and Imperial Conferences held over a period of years in The Hague, London, Geneva, and Ottawa.

The son and grandson of Methodist ministers, Lester Bowles Pearson was born in Toronto, Canada, to Edwin Arthur and Annie Sarah (Bowles) Pearson on April 23, 1897. His early education was received in the schools of Peterborough and Hamilton, Ontario. The young man had completed one year's study at Victoria College, the United Church college of the University of Toronto, when he enlisted as a private with the University of Toronto's hospital unit for service overseas in World War I. After serving at Salonika, where he acquired the nickname of "Mike" and the rank of lieutenant in the Canadian Army, he was transferred to the Royal Flying Corps in which he became a pilot after one hundred minutes of flying instruction. From 1917 to 1919 he held a flight lieutenancy in the Royal Air Force.

Invalided home after a crash, Pearson resumed his studies at the University of Toronto, turning also to athletic sports such as ice hockey and Rugby. He gained some experience in office work with Armour and Company in Chicago before getting his B.A. degree in history from the university later in 1919. From there, on a Massey Foundation Fellowship, he went to Oxford, where, at St. John's College, he won his hockey and lacrosse "blues," played tennis, and later received his Bachelor's and

Master's degrees. On his return to Canada in 1924, he accepted a lectureship in history at the University of Toronto. There Pearson, who also served as coach for the university's Rugby team, was made assistant professor in his department.

Lester Pearson was called to the Canadian diplomatic service in 1928, when he became first secretary to the Canadian Department of External Affairs, thus embarking upon a series of foreign missions which were to take him abroad frequently during the seven years he held that office. He attended the Conference for the Codification of International Law at The Hague (1930), the London Naval Conference (1930), both the London and Geneva Disarmament Conferences (1933-34), the Imperial Conferences in London (1930, 1935), League of Nations meetings, as well as the Imperial Conference in Ottawa at which he represented his country in 1932. The Canadian Department of External Affairs twice lent Pearson for special duties: in 1931, to be secretary to Lord Stamp's Royal Commission on Wheat Futures, and in 1934 and 1935, to be secretary to the royal commission investigating price spreads and mass buying. (For special services with the latter commission, he received the order of the British Empire in 1935.)

Appointed first secretary to the London office of the Canadian High Commissioner (1935), Pearson was promoted to secretary, with the rank of counselor, in 1938, a post he retained until May 1941, when he was recalled to Ottawa to serve as Assistant Under Secretary of State for External Affairs. The following year, in June, Pearson was sent to Washington as Minister Counselor of the Canadian Legation. From July until December of 1944 he held the rank of Envoy Extraordinary and Minister Plenipotentiary. When Leighton McCarthy⁴², the Canadian Ambassador, retired at the end of 1944, Pearson was appointed to succeed him by Prime Minister Mackenzie King⁴⁰.

When the United Nations Relief and Rehabilitation Administration was established in 1943, Pearson was made chairman of the Committee on Supplies, later, in August 1945, becoming Canada's representative to the Central Committee of UNRRA. He headed the Canadian delegation at the UNRRA Conference in London, at which Canada and France were brought into membership on the last-mentioned committee. His other contributions to UNRRA organization were his serving as conference chairman at the November 1944 meeting of the UNRRA Council in Montreal and as alternate Canadian member at the council's 1946 meeting, held in Geneva.

The Canadian diplomat was assigned to represent Canada at the Dumbarton Oaks (1944) and the San Francisco (1945) conferences, as well as at the meeting of the United Nations Interim Commission on Food and Agriculture at Hot Springs, Virginia. His appointment to the chairmanship of this body in July 1943 gave him the responsibility of formulating a long-term plan for the restoration and improvement of agriculture and agricultural production. With

the aid of a group of economics, scientific agriculture, and nutrition experts, from the forty-four nations composing the membership of the commission, a constitution embodying the aims of the United Nations Food and Agriculture Organization was drawn up by August 1944 and ratified by thirty-four nations at Quebec in October 1945. Its functions were to be research, publicizing, conservation, and improvement of agriculture; and its objectives, to raise standards of nutrition, to improve agricultural production, to raise rural standards of living, and to contribute to an expanding world economy.

At the January 1946 meeting of the United Nations General Assembly in London, the name of the Canadian Ambassador to the United States was under discussion as a possible choice for the secretary-generalship of the U.N., an office later assigned to Trygve Lie⁴⁶. As the chairman of the fifty-five-nation Political and Security Committee of the U.N. General Assembly, Pearson presided over the debate, in the May 1947 special session, which determined the establishment and terms of reference of the committee of inquiry into Palestine, to report its findings in September 1947 at the regular General Assembly meeting. At the latter time the compromise between the Soviet and American viewpoints, which resulted in the vote for the partition of Palestine at the end of November, was considered by George Barrett of the *New York Times* as "largely a result of the tireless efforts of Lester B. Pearson," who had proposed several solutions to problems confronting the committee.

Pearson, who was recalled from his post as Canadian Ambassador to the United States on his appointment as Canadian Under Secretary of State for External Affairs in September 1946, is a student of Pan American and Far Eastern affairs. He had been Canadian representative, until his departure from Washington, on the Far Eastern Commission from its inception. At the 1947 *Herald Tribune* Forum, Under Secretary Pearson voiced Canada's attitude toward the Pan American nations: "We are anxious and able to develop and increase our trade and economic relationships not only with the United States but with all our Latin-American friends. For Canadians, who maintain their high standard of living by foreign trade, it is of the greatest importance to extend that trade with an area of the world which has the promise, as possibly no other area of the world now has, of economic stability and growth and progress."

The honorary degrees bestowed upon Canada's Under Secretary of State have come from four universities: Toronto, Yale, New York, and Rochester. His wife, the former Maryon Elspeth Moody, was, as the Under Secretary himself, graduated from the University of Toronto; they were married on August 22, 1925. The Pearsons have a son and a daughter: Geoffrey Arthur Holland and Patricia Lillian. Pearson, it was once said by the *New York Herald Tribune*, "is a stocky, genial man who refreshes diplomacy with a lively sense of humor and a scorn for pomposity."

PECK, GREGORY Apr. 5, 1916- Actor
Address: 10331 Wilshire Blvd., Los Angeles 24, Calif.

Gregory Peck came to Hollywood in 1943 after a brief stage career on the road, in summer stock, and on Broadway. By 1944, after his appearance in two films, *Days of Glory* and *Keys of the Kingdom*, he had made a reputation that brought him contracts with four motion pictures studios; and with his performance in such films as *Spellbound* and *The Yearling*, his popularity was established. Typical of the comment which Peck has evoked was that of Clarence Brown, his director in *The Yearling*, who described him as "an inspiration—an actor of quiet strength."

Born Eldred Gregory Peck on April 5, 1916, the future actor was reared in his native La Jolla, a southern California seaside town, where his father owned a drugstore. According to a September 1945 *Photoplay* article, his parents, Gregory and Bernice (Ayres) Peck were separated about six years after their marriage, and young Gregory was brought up chiefly by his father and maternal grandmother. Gregory attended grade school in La Jolla and high school in San Diego.

For a year the youth was enrolled at San Diego State College, but left to work for an oil company as night watchman and utility delivery man. When told by his assistant manager that he had a future with the company, that ten or fifteen years would bring him "as much as three hundred dollars a month," Peck decided to go back to school, this time entering the University of California, at Berkeley. He had hoped to become a doctor, an ambition which his father encouraged, but found that he had "to wade through too many [chemistry and physics] books to make people well. . . . If there's anything the world doesn't need, it's a bad doctor," he concluded and changed his major to English and drama. Campus athletic activities and part-time jobs left little time for study: a track and crew man, he was a California alternate in the 1938 Poughkeepsie regatta, waited at table, ran a parking lot.

At the University of California's Little Theater, where he played in *Moby Dick* and *Anna Christie*, Peck found himself. "I got rid of Gregory Peck, the guy who was so unsure of himself," he has related, "and became, to myself, a veritable wonder man" on stage. Immediately after his graduation from the university in the summer of 1939, he set out for New York, hoping for a role behind the Broadway footlights. His first New York job, however, was as a twenty-five-dollar-a-week "talker" in the amusement area of the World's Fair

GREGORY PECK

in 1939. After about six weeks he left to guide sight-seers through Radio City, work which netted him an average of forty dollars a week until it ended after a few months as visitors became fewer.

In the meantime, Peck had won a scholarship in a contest sponsored by the Neighborhood Playhouse School of the Theater, in New York. He studied there for two years, supplementing the fifty dollars a month which he received from the school for living expenses with occasional work as a model. During the summer months he played in stock; in the summer of 1940, he won the annual award, endowed by Dorothy Stickney⁴², at the Barter Theatre, in Abingdon, Virginia, where patrons may obtain a ticket for a chicken or a hatful of eggs. The following summer Peck appeared at the summer theaters in Suffern and White Plains, New York. In the fall of 1941 Guthrie McClintic⁴³ saw him act at the Neighborhood Playhouse and gave him a fifty-dollar-a-week, eight-line role in a revival of *The Doctor's Dilemma*, in which Katharine Cornell⁴⁴ was touring. While playing with this road company, Peck met Finnish-born Greta Konen, Miss Cornell's hairdresser and make-up expert. Miss Konen and Peck were married in 1942.

After the completion of the tour with the Cornell company, Peck was assigned to understudy Philip Merivale and Jean-Pierre Aumont in *Rose Burke*, a McClintic production which did not reach Broadway. Then, in the summer of the year 1942, while Gregory Peck was at the Cape Playhouse in Dennis, Massachusetts, he received a call from McClintic to play the lead in Emlyn Williams'⁴⁵ *Morning Star*. When it opened in Philadelphia, wrote Pete Martin (*Saturday Evening Post*, September 22, 1945), Peck "received about as bad a set of notices from the critics as it is possible for an actor to get." More sure of himself, how-

ever, by the time the play arrived on Broadway, his performance was well received by New York critics. But *Morning Star*, not a success, closed after a month. He appeared in two other plays on Broadway, *The Willow and I* and *Sons and Soldiers*, both short-lived, but according to Martin, each "a succès d'estime" for Peck. He was also the juvenile lead opposite Jane Cowl in *Punch and Juliette*, which did not appear in New York.

It was in one of these "flops" that Hollywood scenario writer-producer Casey Robinson saw Peck, and as a result made him an offer which was the beginning of Peck's motion picture career. The actor's first film was Robinson's *Days of Glory*, in which he played the part of a leader of guerrillas. Reviewers were impressed by Peck and his leading lady, Tamara Toumanova, but not by the film. Even before the release of *Days of Glory* in June 1944, the "Peck stampede" had begun. Peck's agent, wrote Amy Porter (*Collier's*, December 15, 1945), "was a harried auctioneer presiding over the wildest bidding (among producers) Hollywood had ever seen." Peck signed five contracts: with Twentieth Century-Fox, Metro-Goldwyn-Mayer, RKO, and with producers Casey Robinson and David O. Selznick⁴⁶; he was thus committed to star in about fourteen films. Much of this good fortune the actor himself attributed to the wartime shortage of cinema stars, agreeing with one interviewer that there are many good actors "who never get discovered." (A spinal injury incurred in his years of college athletics made him ineligible for the armed forces in World War II.)

In 1945 audiences saw Peck in three films considered among the most outstanding of the year. As the selfless missionary priest in the screen adaptation (a Twentieth Century-Fox production released in December 1944) of A. J. Cronin's⁴⁷ *Keys of the Kingdom*, he gave a "quiet and forceful" performance which won for him a nomination for the Motion Picture Academy Award, as well as praise from Cronin for catching "the clumsiness and beauty of Father Chisholm's character." It was this role, he told *Saturday Evening Post* readers in March 1947, that he liked best of those which he had had thus far. In MGM's *Valley of Decision*, in which he was starred with Greer Garson⁴⁸, he played the son of a steel magnate who braves social criticism as he woos the family's young Irish servant. This role was not his best, remarked Sara Hamilton in *Photoplay*; but she added, "He succeeded in giving it life, strength, and charm." Again the actor won plaudits for his part opposite Ingrid Bergman⁴⁹ in the Hitchcock⁵⁰-directed *Spellbound* (a Selznick International picture), which, according to *Collier's*, broke all box-office records. Peck's "portrait of the mentally ill ex-Army doctor is ably modulated and utterly convincing," was one opinion. *Picturegoer*, a British film magazine, called Peck the best actor of 1944 for his performance in *Spellbound*.

The actor continued to build his screen reputation in 1946-47 with parts in MGM's *The Yearling*, David O. Selznick's *Duel in the Sun*, and *The Macomber Affair*, a picture based on

an Ernest Hemingway short story. His performance in *The Yearling*, as Penny Baxter, the understanding father, who knows that "a boy ain't a boy fer long," received the critics' highest praise and also brought him a second nomination for the Motion Picture Academy Award. For his roles in *The Yearling* and *Duel in the Sun*, he won the *Look* magazine award for the best acting performance in 1946. A contrast to his characterization of the gentle Penny were the two unsympathetic roles in which Peck was cast at this time: in *Duel in the Sun*, the highly publicized, multimillion-dollar Western, which reviewers found a spectacular disappointment, he played the lawless Lewt McCanles; and in *The Macomber Affair*, he was the cynical hunting guide, Robert Wilson, who adapted his morals to suit those whose whisky he drank. As a 10 per cent owner, Peck also had a voice in the production of *The Macomber Affair*. (In a previous year he had made a profitable investment in the Broadway play *Bell for Adano*.)

Other films in which Peck was scheduled to appear were *The Paradine Case*, a Hitchcock-directed, Selznick production, and dramatizations of two novels, *Gentleman's Agreement* and *Earth and High Heaven*. He was also reported to be considering the leading role in a screen adaptation of Thomas Wolfe's *The Web and the Rock*. On the radio he was heard in programs such as the *Cavalcade of America* and the *Screen Guild Players* and in special broadcasts for the March of Dimes Campaign and the United Jewish Appeal.

Happy when he is working, restless when he is not, Peck is admittedly a worrier about his work. "He is never pleased with a scene," observed Ingrid Bergman, "and always wants to do it over." According to interviewers, the actor has no special theory to expound about the drama, nor does he harbor any overpowering ambition to play Hamlet. He has been impressed with the talents of his various directors from whom, he states, he has learned much, and declares that his goal is to be "an actor who play by play in every way gets better and better." To prevent himself from becoming complacent about his film success, he has remarked that he would like to return to the stage at intervals, there to receive "the real body blows" of the theater critics. In the summer of 1946 he appeared in three plays, among them *The Playboy of the Western World*, at the Cape Playhouse. In collaboration with Joseph Cotten⁴³, Dorothy McGuire⁴⁴, Jennifer Jones⁴⁴, and Melchor Ferrer, Peck operated a stock company which was given the name Selznick Actors Company, at La Jolla, California, in the summer of 1947. He appeared in several plays in addition to serving as a managing producer. With Laraine Day and Shephard Traube, he has formed the Winners Company, a group which is touring the West Coast with a production of *Angel Street*.

On August 16, 1946, "three Pecks (the actor, his wife, and their son Jonathan) became a bushel." The new addition to the family was a son, Stephan. The Pecks live in a house

overlooking San Fernando Valley and Coldwater Canyon, where Peck, "a deep breather," can enjoy plenty of living space. He likes to swim, box, and ride horseback. No lover of night clubs, the actor prefers an evening of good talk and likes to entertain friends at his home, particularly those who will lend an ear to his guitar playing. He and his wife like to step through an American square dance or a mazurka. Their large record collection includes such dances, as well as folk songs sung by Burl Ives⁴⁶, compositions by Rachmaninoff and Debussy, and some of Franklin D. Roosevelt's⁴² "fireside chats," which Peck waxed with his own recording machine. He is interested in politics and has been a member of the Independent Citizens Committee, but, he adds, "I'm not a chronic crusader." He was one of the signatories to a letter to the House Un-American Activities Committee deploring the investigation of communism in the motion picture industry. Many interviewers have discovered a resemblance in Peck to Lincoln, Mary Morris of *PM* noting "a suggestion of nobility in the bony, rugged face" and a "rather gentle, shy manner." "Any pictured resemblance," declared the actor, "lies in the frame [his is six feet three, weighs 170 pounds]. . . . My honest face if any, never impresses anybody—except once when I bluffed in poker and ran a pair of nines over a straight."

PEKER, RECEP (pě'kâr rā'zhěb) 1888-
 Former Prime Minister of Turkey

Address: Ankara, Turkey

Former Turkish Prime Minister Recep Peker was one of the early associates of Kemal Atatürk, founder of the Turkish Republic. After a career in the Sultan's Army, Peker served on the general staff of the Nationalist Army which fought the Greeks in 1919-22 and brought about the Turkish Revolution. Subsequently he held many Governmental posts, climaxed by the Prime Ministership. He held this office until his resignation in September 1947.

Recep Peker was given the single name, Recep, at the time of his birth in 1888. It was not until 1934, under a modernization law of the Turkish Republic, that Recep assumed a family name, Peker; according to *World Report*, his full name means "Recep, the very strong man." (Other anglicized spellings of

RECEP PEKER

his name are Redjep, Resheb, and Rejeb.) The place of his birth is Istanbul.

Peker's formal education began when he was seven; by 1907 he had been graduated from the Yildiz War Academy as a staff officer in the Sultan's Army. Young Recep Bey, as his name appeared before 1934, fought in the Balkan War of 1912 and again, during World War I, on the Caucasian front. After the war he became an assistant instructor of military history at the Yildiz War Academy. In 1920 the army officer went to Anatolia, a portion of Asiatic Turkey, to join Mustafa Kemal Pasha's Association for the Defense of the Rights of Anatolia and Rumelia. It was in that year, too, that a parliament was convened in Ankara and a new Nationalist Government was proclaimed. Peker served on the general staff of the Nationalist Army, which in the following two years routed from Turkey the Greek Army, which had originally been assigned by the Allied powers to occupy that country.

During these years, there were two Governments in Turkey: Kemal's Grand National Assembly in Ankara, and the Sultan's Government at Istanbul. In time, the Nationalists won recognition from European powers, and in July 1923 the Lausanne Treaty, which redefined the Turkish boundaries, was concluded with the new Turkish Government. On April 23, Peker took his seat as a member of the Grand National Assembly and was appointed parliamentary secretary-general. At about this time, Kemal ordered a new election and, in August, Peker was elected representative for the precinct of Kutahya. It was this second Assembly which adopted the Turkish constitution, declaring Turkey to be a Republic (the capital of the new Government had been established as Ankara a few weeks before). Mustafa Kemal, who had previously been invested with the title

of Gazi (Conqueror for Islam), was elected President by the National Assembly.

Kemal, at the end of 1922, had formed his followers into a political party, the *Halk Firkasi* (the People's party, also called the Populist party and the Republican People's party). Late in 1923 Peker was appointed secretary-general of the party, thus becoming one of the three members comprising the Council of the Presidency-General. One article of the party's regulations decrees: "All decisions handed down by the Council of the Presidency-General are obeyed by party members without reserve or condition." Peker also served as editor of the Ankara newspaper, *Hakimiyeti Milliye* ("National Sovereignty"); later the name of this paper was changed to *Ulus* ("Nation"). On May 21, 1924, Peker was appointed Minister of Interior in Kemal's Cabinet; he held this post until January 1925, although the Cabinet had undergone one reformation in these eight months. Upon his resignation from the Cabinet, he was again appointed secretary-general of the Republican People's party. On March 4, 1925, Peker became Minister of National Defense; it was on that date that the Grand National Assembly enacted the Law for the Maintenance of Order, which was the result of some uprisings and which established some degree of martial law in Turkey. This law was suspended in 1929. When the term of parliament expired in December 1927, Peker relinquished his position as Minister of National Defense.

Peker continued to serve in the Grand National Assembly and in April 1928 was elected vice-president of the parliamentary group of the Republican People's party. As the name implies, this group was comprised of the party members who were serving in the legislature; its decisions, although debatable in group sessions, are binding on members when a parliamentary vote is taken. "Thus," noted A. C. Edwards (*International Affairs*), "a kind of duplicate parliament exists in Ankara." During his years in the legislature, Peker served on committees concerned with matters of national defense, revision of the constitution, internal affairs, transportation and communications. In October 1928 Peker was appointed Minister of Public Works, a post from which he resigned in March 1931. He was thereupon again appointed secretary-general of the Republican People's party. Peker lost this position in 1936 when the party was more completely integrated with the Government, and the position of secretary-general of the People's party became unified with that of the Minister of the Interior, a post to which Recep Peker was appointed in August 1942.

From 1935 to 1942 (the year in which he was again appointed Minister of the Interior) Recep Peker "cracked a political whip over the People's party" (*World Report*) as president of the disciplinary council of the parliamentary group. In October 1945 Peker (who had resigned his Cabinet post in May 1943 because of ill health) again served as vice-president of this group. In July 1946 Peker was elected deputy from Istanbul. It was in this election

that an opposition party, for the first time in the Republic's history, was allowed to place candidates on the ballot; the new Democratic party won 69 of the 465 seats in the Grand National Assembly. To this gain by the opposition is attributed, by some sources, the appointment of Recep Peker later in July as Prime Minister of Turkey: *World Report* stated that "he was picked for his job by President İsmet İnönü"⁴¹ . . . because he is a man upon whom İnönü can rely to keep the opposition in line"; the opinion of I. F. Stone (*PM*) was that the President was forced, by the moderate success of the Democratic party, "to put a strong man . . . whom İnönü personally disliked, into office with orders to use the police and force if necessary." Accusations were made by the Democratic party that not all the votes had been counted; later in the year the Assembly enacted an election law which was considered to be more equitable.

Much has been written of Peker's and İnönü's efforts to further or hamper (opinions differ as to which way Turkey is moving) democratic progress in Turkey. The New York *Herald Tribune* reported that the new Premier, who represents the extreme Right wing of the People's party, appointed "militarists and extreme conservatives" to his Cabinet, and a *Christian Science Monitor* correspondent asserted, "Using suppression of Communist groups as a pretext, the Government has dissolved virtually all worker's associations, has stringently curtailed freedom of expression, and has jailed not only Left-wing leaders, but also liberals and spokesmen of national minorities." A New York *Times* writer, Dana Adams Schmidt, saw a different situation in Turkey: "Slowly and somewhat tortuously, Turkey is going ahead with her effort at democratization and liberalization." Schmidt pointed out that the resettlement law had been revised so that the Government could no longer move individuals arbitrarily, that some restrictions on religious education had been lifted, that foreign companies are to be permitted to export profits made in Turkey, and that court action, rather than executive order, is now necessary to suspend newspapers (Schmidt said eleven papers had been suspended under the new procedure). The Democratic party manifested its opposition in several ways: for ten days the party boycotted meetings of the National Assembly; it also boycotted a parliamentary by-election and, in so doing, won the support of a large number of voters; and in July 1947 Democratic party leaders accused Peker of terrorism and of hampering progress. Peker's reply to these measures was to accuse the opposition party of attempting to incite a revolt in Turkey at a time when the security of Turkey was threatened by "those who spy on us at the frontier and look for the day of our downfall."

Turkey's Premier, however, had full support in his conduct of foreign affairs; his retention in his Cabinet of the Foreign Minister appointed by his predecessor (Sükrü Saracoglu⁴²) "was interpreted as a step to show that the new Government intends to continue Saracoglu's external policies, which called for instant action

against any encroachment from any direction." The encroachment to which the New York *Herald Tribune* referred in this statement may have been the pressure on Turkey exerted by Russia to bring about revision of the Montreux Convention of 1936, which gave Turkey control of the Dardanelles, but allowed all foreign ships (except warships) to pass through the straits. Russia wished a new convention whereby Turkey, Russia, as well as Bulgaria and Rumania, would administer the straits. Peker announced Turkey's willingness to revise the convention, but also asserted that Turkey considers itself bound by the provisions of an Anglo-Turkish defense alliance, concluded in 1939. The United States and Great Britain supported Turkey in her stand. More than moral support was offered Turkey in the form of the Truman plan to give military and financial assistance to both Greece and Turkey. Of the so-called "Truman Doctrine," Peker stated, "The deep influences of the ideas asserted in these words will reach beyond the Mediterranean, the Middle East, and the Near East. The ideas of the President . . . represent a complete awakening of American public opinion and a complete view of the difficulties . . . which surround the world."

On September 9, 1947, Peker unexpectedly resigned from his post as Prime Minister. The move was particularly surprising because he had, a few days before, asked for and gained a vote of confidence from the Turkish parliament. One interpretation came from Robert Root of the *Christian Science Monitor* in his October 30, 1947, analysis of the Turkish situation: "Symbolic of the peaceful but rapid transition . . . from a one-party dictatorship to a two-party political democracy . . . was the recent fall of the Government of Prime Minister Recep Peker."

Peker, according to *World Report*, held large interests in the Ish Bank, which financed many new industries before it was nationalized. Peker is said to favor such Government control of economic affairs, which was "the paternal philosophy of Atatürk" (Kemal). "This paternalism, which might be labeled socialistic in a Western country," *World Report* stated, "makes Peker a conservative in Turkish politics."

"A large man, tall and brawny, he is proud that his son is a physical giant and a basketball star." Peker's wife and daughter "are numbered among Turkey's most beautiful women." The former Premier, who has been lecturing on the history of the Turkish revolution at the universities of Ankara and Istanbul, and on Russian affairs at the Turkish School of Political Science, is said to have a library of more than fifty thousand volumes in Turkish and French. One of his main interests is gardening: according to a biographical account prepared by the United Press, "the grounds surrounding his home in suburban Ankara are said to be lovely. This is no mean accomplishment, considering the arid conditions in the central plateau of Turkey."

World Report 2:38 Ap 1 '47 por

PENNEY, J(AMES) C(ASH) Sept. 16, 1875- Chain store executive*Address* b. c/o J. C. Penney Company, Inc., 330 W. 34th St., New York 1

In 1902 J. C. Penney established the nucleus of one of the largest chains of retail department stores in the world. In 1947 the company which bears his name is operating 1,603 stores located in all of the forty-eight States of the Union; in 1946 the J. C. Penney Company transacted business amounting to more than \$676,000,000 in dry goods, shoes, and wearing apparel. Penney's company is unique in that the manager of every store shares in the profits of the entire chain.

James Cash Penney is descended from an English family which settled first in Virginia, moved to Kentucky, and then to Missouri. He was born September 16, 1875, in Hamilton, Missouri, where he was reared. Like his great-grandfather and his grandfather, his father, the Reverend James Cash Penney, was an "old-school" Primitive-Baptist preacher who served without salary—he made his livelihood through farming. At one time he was a Populist candidate for the Missouri House of Representatives. The boy's mother, Mary Frances (Paxton) Penney, was the daughter of Colonel Richard Paxton, a Kentuckian.

When young Penney was eight, his father decreed that his son must, in the future, buy his own clothes, which meant also the immediate replacement of his badly worn shoes. Penney has recalled this incident: "I don't know how I earned the money, but I remember the shoes I bought. They were brogans, with buckles and eyelets." After buying his shoes, the first two dollars and fifty cents he could spare he invested in a pig, later selling it and buying other young pigs. Reviewing his school years, during which he also worked, Penney has said, "All that time I was going to school, but I am afraid I was thinking more about making money than about acquiring an education. My father must have had an idea I was cut out for a trader, for it was he who selected my vocation for me and secured my first job with a leading merchant of our town."

On February 4, 1895, a year and a half after his graduation from Hamilton High School, Penney began his career, as a clerk in a dry-goods store owned by William M. Hale and Company in Hamilton; his salary for eleven months was two dollars and twenty-seven cents a month. In 1897 he went to Colorado for reasons of health and for a short time clerked in a Denver department store; later he moved to Longmont, Colorado. There, after a brief and unsuccessful proprietorship of a meat and bakery business, he was engaged by T. M. Callahan, whom he has designated as "the man who gave me my great opportunity in life."

In 1899 Callahan sent Penney to his Evanston (Wyoming) store to work under Guy Johnson at a salary of fifty dollars a month. Shortly after arriving there (August 1899), Penney was married to Berta A. Hess. (There were two sons by this union, Roswell Kemper and James Cash, Jr.) In the spring of 1902 Penney was sent to the frontier town of Kemmerer, Wyoming, to open one of Johnson's and Callahan's new stores. He was given the opportunity of purchasing a one-third partnership interest in this enterprise, which had a capital stock of six thousand dollars. Penney borrowed fifteen hundred dollars, which, together with the five hundred dollars he and his wife had saved, made up his one-third share of the stock investment. By the end of his first year, sales had reached the twenty-nine-thousand-dollar mark. To quote Penney: "Giving me the opportunity to share in the ownership of the store fired my soul with an ambition I cannot describe. It was then that I got the vision of a chain of stores under a partner-ownership. From that time on, throughout all these years, we have been giving men an opportunity to share in the growth and development of our business."

In 1903 the young merchant acquired a one-third interest in another Johnson and Callahan establishment, over which he also had supervision. A year later he opened a third store, this time hiring a manager. He then began to expand, purchasing a store in Cumberland, Wyoming, in 1904, and others elsewhere. In 1909 he gave up personal management of the Kemmerer store and moved to Salt Lake City, where he established headquarters for all his stores. Additional branches were added in Wyoming, Utah, Colorado, Montana, and the Dakotas, until by 1911 there were twenty-two. In these early days the stores were run on a partnership agreement between Penney and each individual manager, the manager receiving one-third of the profits of the establishment. In 1927, however, the J. C. Penney Company was fully incorporated; thereafter, managers were given stock in the entire company chain, the amount dependent upon the profits of each manager's store.

The original incorporation of the business took place January 16, 1913, under the name of J. C. Penney Company; it was in that same year that the headquarters for a chain of forty-eight stores were moved to New York. By 1916 there were 127 stores; in 1924 Penney opened the five hundredth store in Hamilton, Missouri—this was at the same location as his first place of employment 29 years earlier. In January 1926 the company moved into the J. C. Penney Company building, an eighteen-story structure in New York. It continued to operate on a partnership basis until 1927. Then, in *Newsweek's* words, "banking exigencies and sheer size—just under a thousand stores—made full incorporation necessary. The public could buy Penney stock [on the market] for the first time." By 1929 there were 1,450 stores, and by 1947 there were 1,603 stores, which, in 1946, had done a business of more than \$676,584,135. President of the J. C. Penney Com-

pany, Inc., until 1947, Penney was chairman of the board of directors from 1917 until April 1946, becoming in 1947 honorary chairman of the board.

For about twenty-seven years the founder of the Penney mercantile chain has devoted much time to the development of agriculture and livestock. These he regards "not as a hobby, but as a serious purpose." On Emmadine Farm (in Dutchess County, New York) are bred registered Guernsey cattle on a thousand-acre tract bought by Penney in 1921, and given, together with the buildings and the herd, to Foremost Guernsey Association, Inc., (of which Penney is president) for the purpose of perpetuation. This herd of pure-bred "Foremost Guernseys" has been described as among "the finest prize-winning Guernseys in the world." In 1996 the farm and its herd will become the property of the University of Missouri to be used in the furtherance of agriculture and animal husbandry. Penney operates eight farm properties in Missouri, five of them on a partnership plan. He is president of Emmadine Farms, Inc., and a member of the American Guernsey Cattle Club, the New York State Guernsey Breeders' Association, and the National Dairy Association. A trustee of the Eastern States Exposition and an honorary life member of the Royal Agricultural Society of England and of the English Guernsey Cattle Society, Penney also attends agricultural shows and fairs and is the author of magazine articles on farming and cattle raising.

Penney believes in the practical application of religion in everyday life, a principle about which he has written articles and made speeches. The *Christian Herald* commented, "Even more significant than his business career has been J. C. Penney's growth in stature as a Christian layman. . . . He is identified with national religious programs and movements to which he gives a generous share of his time and strength." Penney is a member of the Non-denominational Church at Memorial Home Community in Clay County, Florida. He has contributed a chapter to Wallace C. Speer's *Laymen Speaking* (1947), has made numerous trips on behalf of the Laymen's Movement for a Christian World (of which he is a member of the board of directors), and has fulfilled many speaking engagements before civic clubs and church groups. He is a member of the board of directors of Allied Youth, Inc., and of the board of managers of YMCA schools.

In 1926 J. C. Penney had built the Memorial Home Community in Florida in memory of his parents, at a cost of about \$1,250,000. The Community houses aged religious workers and their wives, among whom as many as nineteen creeds have been represented at the same time. In 1946 Penney donated the Memorial Home Community to the association which publishes *Christian Herald*, a magazine for all denominations; he added to the gift two hundred and fifty thousand dollars toward a million-dollar endowment. In association with Ralph W. Gwinn, in 1947 a member of Congress, whose firm is counsel for the J. C. Penney Company, Penney in 1925 organized the J. C. Penney-

J. C. PENNEY

Gwinn Corporation, which established a scientific farming community in Florida, known as Penney Farms.

Several honorary degrees have been awarded to Penney: in 1925, Doctor of Business Administration from Kansas Wesleyan University; in 1927, Doctor of Commercial Science from Boston University; in 1928, LL.D. from Rollins College; in 1945, LL.D. from the University of Wyoming. He has been elected to honorary membership in alumni associations of the University of Missouri and Boston University. Penney is a thirty-third degree Mason and a Shriner; he is a Democrat. His clubs are the Rotary and the Union League in New York City, the Mansuring Island and the Apawamis in Rye, New York, and the Westchester Country Club in White Plains, New York.

In 1919, nine years after the death of his wife, Penney was married to Mary Hortense Kimball; they had one son, Kimball. Again widowed in 1923, Penney was married in 1926 to Caroline B. Autenrieth; two daughters were born to them, Mary Frances and Caroline Marie. Penney is five feet eight inches in height, has gray eyes, and white hair. Among the precepts which he has expressed are his beliefs in "the hard right rather than the easy wrong"; that "youth is the time for hard work"; that "when we cease to struggle, dry rot sets in." He has always disapproved of coffee, tobacco, and alcohol (in the early days of the company his employees were discharged if found smoking or drinking). Speaking of his own life, Penney has remarked, "Were I to commence again . . . giving men an opportunity to share in what they help to create would remain one of my cardinal principles."

PHELAN, EDWARD (JOSEPH) July 25, 1888- International Labor Organization official
Address: b. c/o International Labor Organization, 3450 Drummond St., Montreal, Canada; h. 1321 Sherbrooke St. W., Montreal, Canada

Edward Phelan, an authority on world labor problems, was in September 1946 appointed director-general—he had, since 1941, been acting director—of the International Labor Office (I.L.O.), the secretariat and “world center of information and research” for the International Labor Organization. For twenty-seven years, in various executive capacities, Phelan has served the I.L.O.; and his foresight and planning were largely responsible for the founding of the parent organization (1919), which was formerly affiliated with, though not a part of, the now defunct League of Nations. From its inception the International Labor Organization has been dedicated, among other things, to the settlement of world labor problems and the establishment of minimum living and working standards. As the information center and the body which prepares the agenda to be discussed by International Labor Organization delegates, the I.L.O. has helped shape many of the organization's policies and has thus contributed its share to the advancement of social justice. In December 1946 the labor organization became associated with the United Nations as one of its specialized agencies.

The descendant of a family of mariners, Edward Joseph Phelan was born on July 25, 1888, in Tramore, Waterford County, on the southern coast of Ireland, into the family of Thomas Phelan. Completing his early education, he entered St. Francis Xavier College, where his outstanding record in his studies won for him scholarships enabling him to pursue his education further at Liverpool University in England. There he specialized in mathematics and physics and was graduated with honors in 1911, receiving his degree in arts and science.

The young Irishman chose as a career to enter Great Britain's Civil Service. Edward Phelan took, and passed, the examinations. When David Lloyd George⁴⁴ began an investigation in 1913 into housing facilities for the working classes, Phelan took part in this inquiry. Three years afterward, in the year 1916, when Lloyd George consolidated the various branches of labor administration, hitherto directed by the Home Office or the Board of Trade, under the aegis of a newly established Ministry of Labour, Phelan, who previously had served on the Board of Trade and the National Health Insurance Commission, was transferred to the Ministry.

Late in 1917 Phelan was lent temporarily to the Foreign Office to become in January of 1918 one of the members of the British mission to war-torn Russia (its history is told

by its chief, R. H. Bruce Lockhart, in his *British Agent* [1933]). Phelan, called by Lockhart “a brilliant young official of the Ministry of Labour,” was chosen because of his thorough acquaintance with British labor.

When Phelan, then chief of the Intelligence Division of the Labour Ministry, was chosen one of the staff of the British delegation to the Peace Conference, he brought with him to Paris in January 1919 the plan, incorporated in the British delegation's peace proposals, for an International Labor Organization. This plan is said to have originated with Phelan himself. All peace convention delegates were committed to the idea of an organization for labor: the demands of organized labor in the belligerent countries “to reap some benefit” from World War I and the attempt to better labor conditions by the occasional, private, pre-World War I international labor legislation conferences had indicated the need for such an agency (*Industry, Government, and Labor: Record of the International Labor Organization, 1919-1928*). Most of the representatives from other nations believed that the agency set up under the projected labor clauses in the peace treaty (under these clauses the labor organization's direction would devolve to the League of Nations) would prove adequate. Phelan, however, as reported by James T. Shotwell⁴⁴, one of the American delegates, in his *At the Paris Peace Conference* (1937), “argued effectively that the League of Nations would not be able to mobilize as efficient instruments for actually securing social legislation as a body especially appointed for that purpose.”

The idea of a collateral organization for world-wide labor legislation was finally accepted by those sitting on the International Commission on Labor Legislation and was later added as a clause to a number of the peace treaties. Serving as principal secretary to the labor section of the British delegation, Edward Phelan, in conjunction with George N. Barnes of the British War Cabinet, Samuel Gompers, then president of the American Federation of Labor, Emile Vandervelde of Belgium and other members of the commission, helped to draft the constitution of the International Labor Organization. Wrote Shotwell: “The International Labor Organization owes more to him [Phelan] than will probably ever be widely known, for both as planner and negotiator he worked impersonally in order to work effectively.”

The International Labor Organization came into existence one year before the League and is financed by the Governments represented in it. In addition to the I.L.O. it comprises two other bodies, the International Labor Conference and the Governing Body. The Conference, a “world parliament” of the member nations, “drafts the international treaties setting minimum labor standards.” Membership in the Conference entitles a country to send delegates—representing Government, labor, and management—and a number of advisers to the annual meetings. As the executive council of the labor organization, the Governing Body, also tripartite in composition, oversees the work of

the I.L.O. and appoints its director. The labor legislation, accepted by a two-thirds majority of the Conference at its meetings, is designated treaties or conventions. When ratified by the respective legislative bodies of the nations adopting them (nations are not required to accept), the conventions become legally binding. The Conference also recommends as guides to national legislation various economic and social improvements. By 1946 seventy-six treaties were adopted by the Convention—legislation protecting women and children, colonial labor standards, etc.—and received nearly one thousand ratifications by more than fifty nations.

In October 1919 in Washington, D.C., the organization held its first meeting: an International Labor Conference was called to consider among other problems "the application of the eight-hour day and prevention or provision against unemployment." Phelan and Harold Butler of the British Ministry of Labour were the two men who organized this Conference, Phelan serving as its assistant secretary. The first convocation of the Governing Body late in November of the same year resulted in the establishment of the International Labor Office—its staff is drawn from all countries—and in the appointment of Albert Thomas, a former French deputy and member of the French war Cabinet, as its provisional director. When Thomas received the permanent directorship in January 1920, he selected Phelan as chief of the diplomatic division of the I.L.O. (*Yes and Albert Thomas* [1936], a book written by Phelan, presents "the views and work of the first director" and Phelan's "own conception of the International Labour Organization and its responsibilities.") In the same year the International Labor Organization set up its headquarters in Geneva, Switzerland, where it remained for twenty years, maintaining branches in other countries.

For thirteen years Phelan directed the administration of the diplomatic division. Then, in 1933 he was promoted to the I.L.O. post of senior assistant director to Harold Butler who succeeded to Thomas' office at the latter's death. In the meantime Phelan's I.L.O. responsibilities included formulating plans for different Conferences, and for a number of Governing Body sessions—he attended all the Conferences and meetings of the Governing Body, the only one to do so—and he accompanied Albert Thomas to other countries in connection with varied phases of the Office's work. During those periods when Thomas, and after, Butler, were occupied elsewhere, Phelan also acted as deputy director of the I.L.O. Meanwhile, he was present at all the convocations of the League and other inter-nation meetings. In 1938 when the directorship was once more vacant, he and John G. Winant⁴¹ of the United States were proposed for the position. Phelan withdrew, however, "as he felt it vitally important that an American should hold a key post in international affairs" (the United States joined the International Labor Organization in 1934). Winant became director; Phelan assumed the position of deputy director.

Blackstone Studios

EDWARD PHELAN

Phelan has written much, most of it dealing with social and economic themes. He has contributed several chapters to another of Shotwell's books, *The Origins of the International Labour Organization* (1934); and among his other writings are included the chapter "Social Services and Defense" to be found in the *National Conference of Social Work* (1941), and "Unemployment as a World Problem" in *International Co-operation and Unemployment*, edited by P. Q. Wright, and the article "The New International Civil Service" in the periodical *Foreign Affairs* (January 1933). In connection with certain phases of his career and interests the I.L.O. official has delivered, with John Maynard Keynes⁴², the Norman Wait Harris Foundation Lectures for 1931 at the University of Chicago and has addressed a number of meetings of the Geneva Institute of International Relations, his speeches being published, with those of other diplomats and officials, for the Institute in the "Problems of Peace" series (1926-1936). Among the latter appear Phelan's "British Empire and the World Community," "The International Labor Organization and the Future of the Collective System," and numerous treatises describing in detail international trends in labor legislation and the progress of the organization.

In the spring of 1940, in order to avoid all war hazards, most of the regular staff of the International Labor Organization was transferred from Geneva to Montreal, Canada, where its work went on as if without interruption. Winant resigned in the following year to become United States Ambassador to Great Britain and Phelan became acting director. Reports from its remaining branches kept the I.L.O. in touch with world labor conditions; its *International Labor Review* and other periodicals continued to be published. Throughout World War II conferences, though sometimes

PHELAN, EDWARD—*Continued*

small in attendance, were convened in order to discuss major subjects of postwar concern. The I.L.O., as the result of the Washington and New York conferences (November 1941), was given the task of being the "clearing center" for all postwar national reconstruction projects and plans and of ascertaining to what extent "they would help or hinder the achievement of the social objectives of the Atlantic Charter," a supervision accepted by several larger nations. At the London Conference (April 1942) the machinery to undertake the supervision was provided. The acting director meanwhile was occupied in discussing pressing world labor questions with international leaders.

Phelan's observations of trends led him to conclude that labor in the future would not concentrate so much on a "program of protection against and prevention of certain social evils" as on a "demand for the achievement of a better society as a whole" (*Christian Science Monitor*, October 14, 1942). In the field of international relations, the acting I.L.O. director was of the opinion that the "democratic nations would continue to cooperate with Soviet Russia after the war" since "he saw no barriers to such cooperation because of their different social and political systems." Discussing the problem of postwar employment and the goal, "Jobs for all," in a *New York Times Magazine* article for April 30, 1944, Phelan asserted: "We would come closer to the mark if we should set out postwar sights of 'Jobs producing goods and services for all.' This is a much closer approximation of the social objectives for which the United Nations are at war. What is a job if it does not result in material benefit or positive service to the world?" At his suggestion later in 1944 a tripartite committee was created "to wage a world-wide fight against unemployment" in conjunction with various United Nations agencies.

At the Conference held in Montreal in the same month he was selected director-general, Phelan, "soberly optimistic," delivered a report in which he warned that a continued increase in world prices would effect an "economic collapse" in most countries. Wage increases, he remarked, "arising from increased productivity and from agreed decision to increase the share going to labor at the expense of the share going to profits do not represent an inflationary threat," however. In October the International Labor Organization voted to enter into free partnership with the United Nations. Under the agreement, signed in December, the labor organization maintains its independence both as to function and site—its headquarters will be stationed in Montreal for the time being although for its 1947 sessions it returned to Geneva. Fullest cooperation between the two groups will be in the "budget and staff fields" and in matters of common interest to both. Phelan described this collaboration between the two organizations as "the very essence of the world's efforts to achieve peace, production and

prosperity. . . . We welcome this result because we believe that working together we can achieve more than we could achieve by working separately."

The first session in seven years of the Governing Body took place in Geneva in March 1947. Its agenda included the question of budget contributions to cover the increase in the organization's expenditures. In addition, the Governing Body authorized the convening, in Geneva, of a 1948 Technical Tripartite Conference on Safety Provisions for Factories, which will draw up a "model code" to aid war-devastated nations in the process of rebuilding factories; and appointed a committee to advise on the setting up of an advisory committee on salaried and professional workers to replace separate prewar committees in the same fields—UNESCO will be represented. (Further details of the Governing Body's sessions are given in the *United Nations Weekly Bulletin* for March 25, 1947.)

In June and July 1947 the first plenary session since 1939 of the International Labor Organization was held, in Geneva. This session had the largest attendance of any previous Conference in the history of the organization, according to Phelan. Among other problems, the delegates considered the question of "international guarantees for freedom of association and industrial relations" submitted by the U.N. Economic and Social Council. (The U.N. General Assembly in November endorsed the trade union principles established by the International Labor Organization.) The delegates were confronted with providing for a "minimum standard of social policy in dependent territories." In the course of the meetings Phelan was to state that the International Labor Organization "must deal more actively with the problems of agricultural labor," remarking also that the "possibilities of international action on the problem of emigration would receive the careful attention" of the Governing Body.

At this session the director-general also announced that Austria had been readmitted to the International Labor Organization, that the Philippines and El Salvador had declared their intention of joining, and that Yugoslavia had indicated her decision to resign (in 1949). Four months later, Phelan, speaking to newspapermen, stated that although the constitution of the labor organization had been altered so that Russia would be eligible to join, the Soviet Union had not shown any intention of doing so. During the year (1947) a number of International Labor Organization technical committees met in different countries to discuss problems of particular industries.

The director of the I.L.O., who is a citizen of Eire, has received the honorary degrees of LL.D. (National University of Ireland), D.Sc. sociales (Université Laval, Quebec), and D.Sc. sociales, économiques et politiques (Université de Montreal). The "tall, rangy" labor expert is married to the former Fernande Cronsaz. Observers have described him as modest, soft-spoken, unassuming and have noted, too, his

Irish sense of humor, his "persuasive Irish tongue and . . . immense though quiet energy." His favorite sports he lists as golfing and sailing.

PHILIP, PRINCE OF GREECE See
Edinburgh, Philip, 3d Duke of

PICARD, FRANK A(LBERT) Oct. 19, 1889- Federal judge

Address: b. Federal Building, Detroit, Mich.;
h. 1600 Cedar St., Saginaw, Mich.

To Frank A. Picard, United States Judge serving in the Eastern District Court of Michigan, was assigned the task of deciding the amount of portal time to which workers in the Mount Clemens Pottery Company were entitled when the Supreme Court, on June 10, 1946, upheld the portal-to-portal pay principle. It was the Mount Clemens case, in which Picard had in 1943 handed down a ruling, granting over-time pay to employees for actual labor. The portal-to-portal issue was not involved in the original suit before Judge Picard; but when it was returned to him by the Supreme Court, it became the test case for suits by a large number of labor unions demanding more than five billion dollars in back pay.

Frank Albert Picard was born in Saginaw, Michigan, to Alfred and Zepherine (Lagault) Picard on October 19, 1889. At the age of nine his career as an aerial acrobat was terminated at its outset by the objections of his father, a hotelkeeper who had twelve children to support. Frank's brothers were known to circus audiences as the "Flying Picards." At Saginaw High School, which he entered after attending the Hoyt Grade School, Frank was a member of the student council and captain of the football team, which, in 1907, won a Michigan State championship. Completing his secondary schooling in 1907, he found a job as a reporter on the *Saginaw Daily News* and remained in journalism for two years; he worked for the *Courier Herald*, and at the age of nineteen was managing editor of the *Saginaw Exponent*, a daily newspaper.

Young Picard then decided to study law and enrolled at the University of Michigan, where he received his LL.B. degree in 1912. Admitted to the bar then, he was assistant prosecuting attorney in Saginaw County a year, next engaged in private practice for four years. When the United States entered World War I in April 1917, Picard was a partner in the legal firm of Naegely and Picard; a month later he left to serve in the Army of the United States. A captain in the Eighty-fifth Division and recommended for major, he fought in France and was commander of the Headquar-

ters Company, 338th Infantry attachment. After the Armistice, he was stationed at Villerupt, France, with the Army of Occupation, as secretary to the General Staff of the Sixth Army Corps.

On his return to civilian life in May 1919, he joined the firm of Naegely, Picard, and Hopkins, with which he remained for two years. Between the years 1921 and 1939, Picard, who in 1920 had been defeated for the lieutenant governorship of Michigan, continued his legal practice: he was with the firm of Purcell and Picard from 1924 to 1929, and from 1934 to 1939 he was a partner in Picard and Heilman. He also established several business connections, becoming vice-president of Kuiper Bootery, Inc., Paris Shop, Inc., the Bridgeport Land Company, and the Means Stamping Company, as well as a director of the Saginaw Lumber Company. (In 1947 he still held the last two positions.) At the same time Picard was active in public affairs: he was co-author of the Michigan Unemployment Compensation Act, chairman of the Michigan Unemployment Compensation Commission and, according to *Who's Who in Michigan*, the chief formulator of the Michigan plan of liquor control. A firm advocate of prohibition repeal, he was the first chairman of the State's Liquor Control Commission, serving in this capacity from 1932 to 1934. In 1934 Picard, "billed as 'The Daring Young Man on the Flying Trapeze,'" was a Democratic candidate for the United States Senate, but lost to his Republican opponent, Arthur H. Vandenberg⁴⁰. Five years later the attorney, who reportedly was "not an ardent supporter of the New Deal," but who repudiates that statement, accepted a Federal judgeship in the Eastern District Court of Michigan.

One of the cases which came before Judge Picard while he was serving on the Federal bench involved the workers at the Mount Clemens Pottery Company. Under the Fair Labor Standards Act, they sued for unpaid overtime, claiming that the company had required them to report at the plant before the scheduled starting time and that they actually began their work before the starting whistle was blown. (Before beginning to work at their benches, they had to perform certain preparatory tasks such as putting on work clothes, sharpening tools, and walking to work benches, but this was not the point at issue in the suit originally presented to the judge.) Picard, convinced that part of the additional time was actually spent in production, in 1943 ruled that the men should receive overtime pay and awarded them a total of \$2,415.74 in back wages. The issue of portal-to-portal pay had no bearing on his decision; the claim was not advocated even by the plaintiff workers.

Following the Mount Clemens workers' appeal, taken on March 15, from the decision of Judge Picard in the Sixth Circuit Court, the Justice Department requested a review by the Supreme Court. Attorney General Clark sought "prompt and definitive adjudication of the proper application of the *de minimis* rule . . . to facilitate the disposition of the multitude of cases which [threatened] to embarrass judicial

Press Assn., Inc.

FRANK A. PICARD

administration . . . and to disrupt industrial relations." The workers subsequently moved to have their appeal irrevocably dismissed, thus taking the case off the Appellate Court docket and preventing a quick ruling from the Supreme Court. Approximately five weeks later, President Truman signed into law a controversial Congressional bill designed to eliminate portal-to-portal pay suits. The law, which establishes a two-year statute of limitations on filing claims, in the reported opinion of the Department of Labor, "goes far beyond the outlawing of pending suits and would seriously cripple future enforcement of the Fair Labor Standards Act and lead to endless litigation." The New York *Herald Tribune* editors found it "difficult to recommend the measure."

On June 10, 1946, the United States Supreme Court, while affirming the decision of the Sixth Circuit Court of Appeals, which had reversed Judge Picard's findings in the case, nevertheless held that the pottery workers should be compensated for time spent in preparatory activities. "The statutory work week," wrote Justice Frank Murphy⁴⁰ in the majority opinion, "includes all the time during which an employee is necessarily required to be on the employer's premises, on duty or at a prescribed workplace." With the qualification that trifling amounts of time should be ignored the judges returned the case to Picard to redetermine the time for which the Mount Clemens pottery workers were entitled to compensation. The decision which the district court judge had to render would affect labor-management relations throughout the nation as well as the Government's budget, emphasized observers, for on the strength of the Supreme Court ruling, suits amounting to about five billion dollars had been filed by labor unions, and the

Department of the Treasury had ruled that employers could collect a large portion of the portal claims they might have to pay in tax rebates. In a brief filed by the Department of Justice, Picard was advised to dismiss the Mount Clemens pottery case unless further evidence proved the workers' claims more substantial.

After attempts to obtain an accurate estimate of the time consumed by employees in walking and other preparatory activities, Picard, who had himself visited the company with a stop watch, on February 8, 1947, dismissed the pottery workers claims as trifling. (He also ruled that, if his decision were reversed by the Supreme Court, the Mount Clemens Pottery Company should not be liable for claims retroactive beyond June 10, 1946.) "Let us not be understood as holding that all portal-to-portal suits should be dismissed," he emphasized, however, in his seven-thousand-word opinion: the case of the coal miner and certain other types of workers, he pointed out, is different from that of the general worker in a manufacturing plant. As instructed by the Supreme Court, he had attempted to formulate his decision "in light of the realities of the industrial world," and this he had interpreted as meaning a decision which would "aid in promoting accord and not inciting discord" and which would be fair to industry "while granting labor all its rights." His ruling did not settle the many pending portal-to-portal pay suits nor eliminate the necessity to clarify the term "work week" in the 1938 Fair Labor Standards Act. But the jurist would, in the opinion of the New York *Times* editors, "be remembered as having done much to . . . restrict the [portal-to-portal] principle to its fair and proper sphere."

A member of the Michigan State and the Saginaw County Bar associations (he was president of the latter in 1935), Picard lists membership in many other organizations and clubs. Included are the University of Michigan Alumni Association, the Knights of Columbus, the Saginaw and Saginaw Country clubs, the Automobile Club of Michigan, the Barristers (of the University of Michigan), and the Greek letter societies of Alpha Omega, Sigma Delta Chi, and Gamma Eta Gamma. He has been a member of the Saginaw Chamber of Commerce and has served as president of the Saginaw Community Concert Association, the Alliance Marquette Society, the Catholic Federation of Parishes (Picard belongs to the Roman Catholic Church), the Saginaw High School Alumni Association, which he helped organize, was State governor of the Michigan Kiwanis Clubs. In the month of June 1921 Picard was married to Ruth Caroline Doersam of Saginaw; they have four children: Frank A., 2d, Ruth Mary, Patricia Eve, and John Alfred. The Federal jurist is a man of short stature with a head of abundant white hair and a tanned face. He has been described as shrewd and earnest. In his many years of public life, declared a *United States News* writer, he has "never lacked a lashing answer for his critics."

PICCARD, AUGUSTE (pē"kâr' ô-güst')
Jan. 28, 1884- Physicist; educator

Address: b. c/o University of Brussels, Brussels, Belgium; h. 20 Avenue Ernestine, Brussels, Belgium

PICCARD, JEAN FELIX (pē"kâr' zhân fâ"lēks') Jan. 28, 1884- Aeronautical engineer; chemist; educator

Address: b. c/o University of Minnesota, Minneapolis, Minn.; h. 1445 E. River Rd., Minneapolis, Minn.

Two of the world's leading aeronauts, Auguste and Jean Félix Piccard, carrying on their researches in Belgium and the United States, respectively, have added to science's knowledge of the stratosphere as a result of their balloon ascensions of the 1930's. Interrupted in this work by World War II, they have now finished their mechanical designs and plan to complete experiments in 1947, preparatory to establishing new records. Jean Félix Piccard will attempt an ascent to an altitude of one hundred thousand feet and Auguste Piccard a descent into the ocean to a depth of twelve thousand feet. Both men are also educators: Auguste Piccard has been a professor of physics at the Polytechnic Institute of the University of Belgium since 1922, while his brother has taught aeronautical engineering as a professor at the University of Minnesota since 1937.

Twin sons were born to Jules and Hélène (Haltenhoff) Piccard on January 28, 1884, in Basle, Switzerland, where the father was a professor of chemistry and head of the department of chemistry at the University of Basle. The children are the descendants of the Vaudois family of Lutry in the canton of Vaud, Switzerland. Their grandfather was *commissaire général* of the canton, and an uncle, Paul Piccard, who was founder of the Piccard-Pictet Company in Geneva, designed and sold the first Niagara Falls turbines. The Piccard twins, named Auguste and Jean Félix, have a brother, now a retired judge for the Federal Supreme Court for Insurance in Lucerne, and a widowed sister, who, also remaining in Switzerland, lives in Lausanne.

Young Auguste and Jean Félix, reared in Basle, attended the Obere Realschule. After being graduated in 1902, both matriculated at the Swiss Institute of Technology in Zurich, in 1907 Auguste receiving his degree in mechanical engineering, Jean his in chemical engineering. Both went on to graduate work at the institute and were awarded doctorates in natural science, and both were to choose a career in science and teaching. Auguste re-

mained at the Swiss Institute of Technology in Zurich until 1922. Then, establishing residence in Belgium, he taught as a professor of physics at the Polytechnic Institute at Brussels University until the German invasion of that country in World War II. The occupation years he spent in Switzerland, designing precision instruments for physicists, in the employ of the Swiss aluminum industry. At the end of the war he returned to the University of Brussels, where he continues to teach as a physics professor in 1947.

Jean Piccard had received his doctorate in organic chemistry in 1909 with the thesis *The Constitution of Meriquinonique Compounds*, which brought him an institute prize and the silver medal award. In the course of his graduate study at the University of Munich (1910-14), Piccard did research in organic chemistry as private assistant to Adolph von Baeyer (1910-12) and was a *privatdocent* at the university (1914). Jean Piccard filled a similar position at the University of Lausanne in 1914-16, before being appointed a professor there for the years between 1919 and 1926. The intervening three years were spent in the United States at the University of Chicago, where he served as an assistant professor (1916-18) and associate professor of organic chemistry (1918-19). It was there that Jean Piccard met and, on August 19, 1919, was married to Chicago-born Jeannette Ridlon; Piccard was to become an American citizen in 1931.

From 1926 until 1929 Jean Piccard was a research instructor at the Massachusetts Institute of Technology, which he left for a position in private industry: he was head of the organic research department of the Hercules Powder Company in Delaware for 1929-32. Piccard's next post was that of research assistant at the Bartol Foundation of the Franklin Institute during 1933-36. Following that appointment, he joined the teaching faculty of the University of Minnesota, first acting as a special lecturer in aeronautics (1936-37) before attaining professorial rank in 1937. In addition to his university duties, Professor Piccard has had, and holds, in 1947, positions as consultant in the fields of chemistry, engineering, and aeronautics.

Evinced an interest in balloon aeronautics, both brothers flew at an early age. Jean Piccard relates: "In 1913 I accompanied him [Auguste] on a sixteen-hour flight from Zurich over Germany and France. We made this flight to measure the density and temperature inside the balloon." The twins served (1915) in the Swiss Army lighter-than-air service. In the years that followed, Auguste became increasingly absorbed in a plan to explore the stratosphere. Jean Piccard has said: "My brother first discussed this proposed flight with me in 1926, when I was in Switzerland. He wanted to go to the great height . . . to determine, if possible, the action of the cosmic ray . . . and the atom in space."

Auguste Piccard, the Belgian professor, first came into world-wide news reports in the 1930's when he invented an airtight gondola, supported by a hydrogen-filled balloon, in

Wide World Photos

AUGUSTE PICCARD

which he proposed to explore the stratosphere. Until then the greatest elevation reached by any man had been 43,166 feet (8.17 miles) achieved in a plane in 1930. Piccard and his assistant, Paul Kipfer, took off from Augsburg, Bavaria, on May 27, 1931, and rose to an altitude of 51,775 feet (9.81 miles) before coming down, after a near-catastrophe, on a glacier near the town of Ober-Gurgl. On the second ascent, on August 18, 1932, Piccard and his assistant Max Cosyns ascended from Zurich and came down near Lake Garda in Italy, attaining the altitude of 53,152.8 feet (10.07 miles). Their stratospheric gondola, named the F.N.R.S. for Fonds National de Recherche Scientifique (the National Fund for Science Research of Belgium), which financed it, was an aluminum cabin in the shape of a globe with oxygen equipment for the two aeronauts guiding it and apparatus for making scientific observations aloft. This came to a total of 850 pounds, to be supported by the giant gas-filled balloon having a diameter of thirty-three yards.

The significance of the two balloon ascensions made by Auguste Piccard was threefold. In addition to giving the first description of the hitherto unseen reaches of the stratosphere, Piccard showed that it was possible to travel in the stratosphere—he had predicted twelve-hour flights between the United States and Europe through the stratosphere. He also brought back data used in the investigation of radioactivity and atmospheric electricity, and in the study of cosmic rays and other scientific phenomena. (The value of the data was questioned in some scientific circles on the grounds that the equipment used in recording it was inadequate.) The Belgian Aero Club awarded Piccard its gold medal, the club's highest trophy, in recognition of the first stratospheric balloon ascension.

The American professor, Jean Félix Piccard, made another flight on October 23, 1934, in a spherical balloon piloted by his wife. The two took off from the Ford Airport in Dearborn, Michigan, to reach an altitude of 57,549 feet before landing in Cadiz, Ohio. Interested, as was his brother Auguste, in studying cosmic radiation in the stratosphere, Piccard carried with him on the ascent cosmic-ray-measurement instruments designed by scientists W. F. G. Swann⁴¹ and Robert Andrews Millikan⁴⁰. For this flight Piccard and Mrs. Piccard were awarded Certificates of Performance by the National Aeronautical Association in 1935.

In 1936 Jean Piccard launched from Minneapolis unmanned balloons of taped plastic film, which subsequently landed in Arkansas. This was soon to be followed by the first manned flight of multiple free balloons. The name of this aerostat, which was held aloft by a cluster of ninety-eight sounding balloons, was *Pleiades I*, and the project was sponsored by the Research Foundation of the Kiwanis Club of Rochester, Minnesota. Plans for a successor, *Pleiades II*, were interrupted by World War II, during which years Piccard taught United States Navy officers and cadets in the aeronautical program at the University of Minnesota, and conducted research work for the generation of gaseous oxygen from liquid oxygen under the auspices of the Navy. In 1945 with assimilated rank of colonel in the Army Air Forces, he served three months at the German Air Documents Research Center in London.

During 1946 and 1947 Jean Piccard completed plans and the designs for a new stratospheric flight with *Pleiades II*, which he and Mrs. Piccard would take aloft by means of a cluster of eighty to one hundred large taped film balloons, all plastic and attached by nylon strings to the gondola, capable of reaching an altitude of one hundred thousand feet, and carrying a useful load of five thousand pounds. Part of the weight of the *Pleiades II* would be used for equipment to record data on the solar spectrum (for use in the study of atomic physics) and on the stratospheric air currents (for use in meteorological and aeronautical calculations). The flight is to start from the Ottumwa Naval Air Station in Iowa.

Meanwhile, in 1946 Auguste Piccard in Brussels announced that he would gratify a forty-year ambition, planned before, and interrupted by, World War II, to descend into the depths of the ocean. "When I was a student in Zurich," he has said, "I hoped to be the man who would plunge into the sea deeper than any man before." His immediate predecessor, William Beebe⁴¹, had descended 3,028 feet into the waters off the coast of Bermuda in 1934. He used a "bathysphere" (sealed diving bell) attached to a boat by metal cable. Piccard, discarding the use of a cable on the theory that Beebe had gone as far as possible with one, proposed to adapt the balloon technique to underwater uses. He planned to lower himself and Cosyns in his "bathyscaphe," a steel, watertight cabin hung from a box-shaped hydrostat filled with heptane, a form of avia-

tion gasoline. This lighter-than-water substance is ballasted by scrap metal; by changing the balance between gasoline and metal, the craft is made to rise or sink. Built so as to resist pressures of twelve thousand pounds per square inch, the bathyscaphe is expected to reach depths of twelve thousand feet (something less than four miles) in the proposed descent in the fall of 1948, off the west coast of Africa in the Gulf of Guinea. "Plans call for an undersea journey lasting from eight to ten hours," reported *Popular Science* in December 1947. "A motion picture camera will photograph strange denizens of the deep illuminated by 3,000 candle power lamps. The explorers' rapid-fire comments on what they see will be picked up by the microphone of an automatic voice recorder."

Auguste Piccard has described the preliminary tests made on the bathyscaphe in the *New York Times* (August 1-11, 1947). Previously he had written a detailed account of his stratospheric ballooning for the *National Geographic Magazine*; he has also written articles for *Rotarian*, and numerous other periodicals. His books are *A 16,000 metri; i miei viaggi nella stratosfera* (1933)—translated, "At 16,000 Meters; My Trip into the Stratosphere"; *Audessus des nuages* (1933)—"Over the Clouds"; and *Entre terre et ciel* (1946)—"Between the Earth and the Sky." Jean Piccard, who has also written on the subject of ballooning for *Rotarian*, has published many papers in his early specialization, chemistry (organic, inorganic, and physical) and in aeronautical engineering. Like his brother, who is a member of many learned societies (and received an honorary Ph.D. degree from Strasbourg University in 1932), Jean Félix Piccard belongs to the organizations named below: the American Association for the Advancement of Science, the Minnesota Academy of Science, Franklin Institute, the American Chemical Society, the American Society of Engineering Education, the National Aeronautical Association, the Institute of Aeronautical Sciences, and the American Meteorological Society. A member of Sigma Xi and Tau Omega, his clubs are the Campus (Minneapolis) and the University (St. Paul).

The American aeronautical engineer and Mrs. Piccard, an aeronautical research consultant at General Mills, Inc., are the parents of John Auguste, Paul Jules, and Donald Louis. Jean Piccard is Episcopalian. Auguste and Marianne (Denis) Piccard, who were married in 1920, have five children: Denise, Jacques, Mannette, Hélène, and Ginette. Auguste, who is six feet three inches in height and weighs 180 pounds is one inch taller and ten pounds heavier than his brother. Both have gray eyes. In 1946 Wendell Knowles described them in a *Liberty* article: "They both have long thin faces, high intellectual foreheads which are heightened by balding spots encroaching on the long tousled [gray] hair behind. . . . They don't look like daring adventurers, but even at sixty-two they're both still explorer-fit. Jean is right-handed and Auguste is left handed—that's the biggest difference." A biologist,

Press Assn., Inc.

JEAN FÉLIX PICCARD

learning of the plans of the two brothers, one to soar into the stratosphere, the other to go down into the ocean depths, commented: "This is proof they are identical twins. They developed from opposite poles of the same egg; therefore, one wants to go up, and the other down!"

PIKE, SUMNER T(UCKER) Aug. 30, 1891- United States Government official; former businessman and financier

Address: b. c/o United States Atomic Energy Commission, Washington 25, D.C.; h. Lubec, Me.

After making a fortune in oil and another in Wall Street, Sumner T. Pike retired from business to enter Government service under the New Deal—he has described himself as "Leftish, as Republicans go." In 1946, after six years as an SEC commissioner, he became a member of the Atomic Energy Commission, which was "trustee for the world" of the power released by splitting the atom.

The son of Jacob Clark and Mary Susan (Tucker) Pike, Sumner Tucker Pike was born on August 30, 1891, in the town of Lubec, Maine, where his family's home and industries are located. After public school he attended Hebron Academy. He was graduated from

SUMNER T. PIKE

Bowdoin College, where he was elected to Phi Beta Kappa and to the social fraternity Delta Upsilon. (Pike has been on overseer of Bowdoin since 1938, and was awarded its LL.D. in 1941; his second honorary LL.D. was given him by Bates College in 1945.)

After receiving his B.A. in 1913, Pike went to Boston and joined the large public utility firm of Stone and Webster. During the next four years he was a clerk in two of the firm's subsidiaries, the Savannah (Georgia) Electric Company and the Lowell (Massachusetts) Electric Light Corporation. In May 1917, with the country at war, twenty-five-year-old Sumner Pike entered the Army as an officer candidate. Rising to a captaincy in the Coast Artillery, he was made an instructor in the officers training camp at Fort Monroe, Virginia. After his discharge from duty in January 1919, Pike went back to work for Stone and Webster, becoming purchasing agent and assistant to the manager of the Eastern Texas Electric Company in Beaumont.

In 1920 Pike became a vice-president of two firms, one in Dallas and one in Kansas City, engaged in the sale of equipment for retail filling stations, garages, and oil fields. He retained his posts with both the Service Station Equipment and Rupert Equipment companies through 1922; then, in 1923 he began his Wall Street career as assistant to the president of G. Amsinck and Company, a firm engaged in trading with Central and South America.

Entering the insurance field in 1924 as a financial employee and secretary of the Continental Insurance Company, until 1928 Pike was associated with the America Fore group of fire insurance companies, also in New York, and was in charge of the investment department. This connection was followed by a vice-presidency and directorship of Case, Pomeroy, and Company, which *Time* has described as one of Wall Street's "toniest" investment firms. As-

suming this post the year before the stock market crash, Pike worked for eleven years to develop oil and mining enterprises in many parts of the world. In January 1939, having made a second fortune, he retired at the age of forty-eight and took a trip around the world.

On his return, at the end of November 1939 Pike became a dollar-a-year business adviser to Secretary of Commerce Harry Hopkins⁴¹. Although a Republican in the Democratic Roosevelt⁴² Administration, he was soon appointed (February 1940) to represent the Department on Senator O'Mahoney's⁴³ Temporary National Economic Committee. The TNEC, also known as the Monopoly Investigating Committee, was studying the concentration of economic power and the causes of "poverty in the midst of plenty." After his appointment to the Securities and Exchange Commission in June 1940, Pike continued to serve on the TNEC, while emphasizing that he was in no sense an SEC spokesman on the committee.

In February and March 1941, before TNEC's expiration, Pike offered a plan to aid small business and also co-authored specific recommendations to improve life insurance, based on an SEC study made at the request of TNEC. He and SEC lawyer Gerhard A. Gesell urged that State supervision be strengthened; that the Federal Government "plug up the loopholes" and aid the States in so doing; that some form of low-cost Government insurance, perhaps an extension of Social Security, be substituted for the high-cost, weekly-payment life insurance; and that the insurance companies, "by far our most dynamic savings institutions," should not add to the shortage of venture capital by confining their investments to bonds, but should find "room for the . . . common stocks of substantial corporations." Pike's request for a similar study of fire insurance was backed by the United States Conference of Mayors, which considered exorbitant the rates charged to municipalities.

In his committee work, wrote the *Nation*, Pike "impressed his colleagues by his independence and open-mindedness." When the President appointed him to fill out an unexpired term on the five-man SEC, the choice was known to be approved by SEC member Leon Henderson⁴⁰ and by Presidential assistants Corcoran⁴⁰ and Cohen⁴¹, who had drafted the Securities Act. This fact caused some apparent uneasiness in the business community, which otherwise looked with approval on Pike's record as a practical businessman and financier.

For six years (reappointed to a full five-year term in June 1943), Pike served in Philadelphia as a commissioner of the quasi-judicial agency charged with protecting investors and the public by regulating trading in securities. Former SEC chairman Jerome N. Frank⁴¹ has described him as "eagerly and intelligently" helping to enforce the Public Utility Holding Company Act of 1935—which means, in the words of the *Government Manual*, that he worked on "integration and simplification of holding company systems of electric and gas utilities; supervision of the purchase and sale of securities, utility properties, and other assets by registered public utility holding companies

and their electric and gas utility subsidiaries; and approval of their reorganizations, mergers, and consolidations." Pike's work also included helping to draw up an over-all power program for defense and considering changes in the basic securities acts, and in October 1941 he testified before the New York State Joint Legislative Committee on stock investments by life insurance companies.

A year later, in December 1942, President Roosevelt asked Commissioner Pike to take a six-month "furlough" from the SEC and come to Washington as a dollar-a-year man assisting Price Administrator Leon Henderson to "straighten out the crude oil tangle." The *New York Times* report identified Pike as a "former New York financier and utilities man known as a 'rugged individualist' [who] lost a fortune and regained it in Texas crude [oil] and is known as a specialist in oil production problems." Many thought Pike's new position an unenviable one, placing him squarely between two strong-willed and outspoken officials, OPA chief Henderson, with his duty to the consumers, and Petroleum Administrator for War Ickes⁴⁰, with his responsibility to the producers. In the summer of 1943 Pike, as head of the OPA Fuels Price Division, incurred the wrath of the industry and reportedly lost "some old and cherished friendships" by standing firm against higher crude oil prices. This courageous fight, as *PM* termed it, won him the reported backing of farm, labor, and New Deal groups for appointment to the three-man board set up in late 1944 to handle the disposal of billions of dollars worth of surplus property.

Pike, in the meantime, had returned to Philadelphia. In March 1946 he submitted his resignation to President Truman⁴⁵: a four-line letter saying, "I am getting stale on this job." Pike preferred to do some fishing and pay some attention to the family businesses. When Pike returned to Government service that October, it was as a member of the five-man United States Atomic Energy Commission, a post which required him, by the terms of the McMahon⁴⁶ Atomic Energy Act, to divorce himself entirely from all business interests whatever.

Responsibility for controlling all research and production of atomic energy was placed by Truman upon Pike and his four fellow commissioners, of whom two were also Republicans: Rear Admiral Lewis L. Strauss⁴⁷, and W. W. Waymack⁴⁸. The other two members had no political affiliations: they were Professor Robert F. Bacher⁴⁹ and chairman David Lilienthal⁴⁴, former TVA head and chairman of the State Department committee which worked out the Government's policy on international control of atomic energy.

For a two-year term (at a Cabinet-size fifteen thousand dollars a year) Pike was to help administer a one-and-one-half-billion-dollar concern with an annual payroll of two hundred million dollars (as of 1946), land holdings eleven times as large as the District of Columbia, and complete responsibility for what one writer termed "the most dangerous but hopeful power in the material world." Pike's selection,

with that of the other commissioners, met with praise from Right, Left, and Center; from newspapers, from the Federation of Atomic Scientists, from commentators in and out of office. The *New York World-Telegram* described Pike as "a businessman of boldness and imagination [who] served competently on the Securities and Exchange Commission," and also approved his fellow appointees. The *New York Times* declared the country fortunate in having such men available. The *New Republic*, which had been disappointed in Truman's previous nominations, had only praise for the new commissioners, and described Pike and Waymack as "precisely the types with precisely the backgrounds for a job of such overwhelming importance."

When the AEC nominations came up for confirmation in January 1947, opposition to Pike was voiced by some Republicans and southern Democrats because of his work for "New Deal agencies." After eighty-four days of Congressional discussion, the nominations were passed by the Senate Atomic Energy Committee with a vote of six to two for Pike; on April 9, 1947, they were confirmed by the Senate itself. "The five commissioners" (to quote Stephen White) "found they work magnificently as a team"—they had been serving as interim administrators, pending confirmation.

The AEC "operates as a unit on all problems," reported the *United States News*. "There is no assignment of particular fields to individual members." Among the decisions made were those to decentralize administration as much as possible and "do nothing it can hire someone else to do." To combat the shortage of highly trained research personnel, the commission planned a program of special graduate and postdoctoral instruction at its regional laboratories, and of the exchange of scientists between the laboratories and the associated universities. The isotope sales program was described as working efficiently, the Military Liaison Committee was engaged in weapon development, and some progress was being made on declassifying the scientific discoveries of the Manhattan Project from the status of military secrets, which hampered further research and proved irksome to scientists. As for cancer research, the House of Representatives appropriated twenty-five million dollars for that purpose. Of its accomplishments as of November 1947, Edward B. Lockett wrote in a comprehensive *New York Times Magazine* article (November 30, 1947), "Charting the work ahead was incomparably the most difficult. It meant, first, graphic projection of a job entirely new under the sun; and second, fitting it into the framework of American democracy."

A member of the American Association of Petroleum Geologists, the American Statistical Association, and the American Geographical Society, bachelor Sumner Pike belongs to the Masonic Order and to one club in Washington and four in New York. More than six feet tall, he is gray-haired and has a ruddy complexion; his eyes are blue-gray. An article by Jerome Frank (*New Republic*, November 11, 1946) mentioned Pike's personal charm, his "immense sympathy, based on firsthand knowl-

PIKE, SUMNER T.—*Continued*

edge, for the people of every country," and his "amazingly detailed knowledge of the American economy," which extends to knowing transport schedules by heart. Judge Frank gave this picture of his old associate: "When Sumner Pike speaks, you know that he is a New England Yankee. . . . When you walk into his home, books are piled everywhere—tables, chairs, floor. . . . He's a good poker player. He talks rapidly, surely, and cleverly."

LOWDEN, SIR EDWIN NOEL (plou'den) Jan. 6, 1907— British Government official; industrialist

Address: b. c/o Cabinet Office, Great George St., London; h. 78 Cranmer Court, London; Martels Manor, Dunmow, Essex, England

British Official Photo.

SIR EDWIN NOEL LOWDEN

The task of formulating Great Britain's recovery plan, a long-term program to make the most efficient use of that country's limited manpower and natural resources, has fallen to Sir Edwin Noel Plowden, who was appointed chief executive of the Ministry of Production by Prime Minister Clement R. Attlee⁴¹. Before receiving the appointment in March 1947, Plowden had served as chief executive of the Aircraft Production Ministry in World War II. Primarily a businessman, he has been a director of C. Tennant Sons and Company, Ltd., one of England's largest steel and chemical manufacturers.

Born in England on January 6, 1907, Edwin Noel Plowden is the fourth son of Roger H. Plowden. The boy was to receive his early education at a school in Switzerland. His family originally intended to send him directly from there to Cambridge University; it was thus against their wishes that Plowden interrupted his education to acquire "some firsthand information on life." After working for a time on a farm, he boarded a ship for the United States, where he hired out as a day laborer and later as a worker in a lumber camp. "Then," wrote Peter Lyne in the *Christian Science Monitor*, "having had some practical experience in the world, he took his degree at Cambridge." His college at the university was Pembroke.

After being graduated, Plowden became a key figure in "The City," London's financial center. Among his business associations was C. Tennant Sons and Company, Ltd., a firm engaged in manufacturing iron, steel, and chemicals. *Business Week* described the company as a "small-scale counterpart of Union Carbide and Carbon Company" in the United States. Plowden was also in Government service, as a member of the Economic Warfare Ministry. Shortly after the hostilities of World War II had broken out, in 1940 he joined the Aircraft Production Ministry in the capacity of "trouble shooter." "After Dunkerque," stated *World Report*, "as the driving force in the Ministry of Aircraft Production, Plowden somehow managed to keep the RAF supplied with the fighter planes that won the Battle of Britain over a numerically superior Luftwaffe." Early in 1945 Plowden was appointed chief executive of the Aircraft Production Ministry, succeeding Sir Wilfred Freeman. (Sir Stafford Cripps⁴⁰ is credited with having urged Plowden's appointment.) It was in this capacity that Plowden served until the end of the war, after which he returned to private business.

In addition to the directorship of C. Tennant Sons and Company, the commercial connections to which Plowden returned were directorships in the British South American Airways Corporation under Lord Glenconner, which *World Report* has characterized as "thus far the most successful of the three air lines nationalized by the Labor Government"; in the British Aluminum Company, the country's largest producer of that metal; and in *Future*, which *Business Week* has called "Britain's postwar *Fortune*." Plowden, who also returned after

the war to the chairmanship of the publishing firm of Adprint, had been one of the men behind the development of Power Jets, Ltd., the company which gave Britain world leadership in jet propulsion.

On March 27, 1947, Prime Minister Clement R. Attlee recalled Plowden to Government service as "economic chief of Britain's recovery drive." His appointment as chairman of the newly created Planning Board, at a salary of twenty-six thousand dollars a year, was championed by Sir Stafford Cripps, under whom Plowden was to work. The task ahead of him was to repair the disaster inflicted upon British industry by an unprecedentedly severe winter of 1946, and then to "make up for lost time." While matters of policy remain the province of the Cabinet, Plowden has been given wide powers in planning for the maximum utilization of available manpower and other resources in Great Britain. With a small planning staff of three or four assistants, an industrial consultant from the Cabinet, and economic advisers from the planning sections of the major Government departments, Plowden will parallel the work of the economic section of the Cabinet Secretariat and the Interdepartmental Steering Committee. He will make direct recommendations to Lord President Herbert Morrison⁴⁰ and to Prime Minister Attlee, thus implementing the White Paper of January 1, 1947. The report warned that the British standard of living was menaced, and called upon the country to increase output both for home consumption and for export purposes.

In an editorial on the Labor Government's choice of Plowden, a strong advocate of private enterprise, for the position of chairman of the Planning Board, *Business Week* said: "Significantly, pressure for the appointment of a businessman to the planning post came from top civil servants as well as from leaders outside the Government." The magazine noted that Plowden, with his part-time industrial consultant, Sir Robert Sinclair of the Imperial Tobacco Company, represent, respectively, the corporation which produced 93 per cent of Britain's war aluminum, and the trust which accounts for 70 per cent of the country's tobacco. Seen as the principal link between private industry and the Government, Plowden will strive to make the Planning Board representative of management, labor, and the Government, in the task of guiding a planned economic recovery. "I will, of course," Plowden told the press, "drop everything to do this job."

Plowden became Sir Edwin Noel Plowden, K.C.B., in 1946, having been made a Knight Commander of the Bath in recognition of his achievements in the Aircraft Production Ministry. In 1933 Plowden was married to Bridget Richmond, second daughter of Sir Herbert William Richmond, the naval historian. The Plowdens have two sons and two daughters. Described as "resembling the world's idea of a young British schoolteacher," Plowden wears horn-rimmed spectacles, has dark hair and dark eyes, is slim. His clubs are the Travellers' and the City University. "In London," according to *World Report*, "his residence is a two-

room flat in Chelsea, the artist quarter where James McNeill Whistler and others lived. He has a country place in suburban Essex, outside London, to which he likes to retire on week ends."

POPE, ARTHUR UPHAM Feb. 7, 1881-Authority on Persian art

Address: b. and h. Asia Institute, 7 E. 70th St., New York 21

At the age of thirty-eight, Arthur Upham Pope turned from his career as a professor of philosophy to devote himself to enlarging and disseminating the knowledge of Persian art and archaeology. In 1947 the chancellor of Asia Institute, he is considered pre-eminent among authorities on the culture of Persia, the country now known as Iran, which he has termed "the greatest and noblest of all lands."

Arthur Upham Pope is of old New England stock—among his ancestors are George Washington's chief of staff and a collateral of the Presidents Adams. Born February 7, 1881, in Phoenix, Rhode Island, he is the son of a Baptist minister, the Reverend Louis Atherton Pope. His mother, Imogene (Titus) Pope, daughter of a sea captain, had been graduated in the first class at Wellesley College. One paternal uncle was a Civil War general; another was one of the first manufacturers of bicycles and automobiles. According to the *New Yorker*, Pope credits his interest in things Iranian to the Persian rugs collected by his twin aunts, who were among the first women doctors in the United States.

Young Arthur and his sister and brother were reared in Phoenix and in Newburyport, Massachusetts. Two years at the Newburyport High School were followed by another two years at Worcester Academy. At about this time the boy had thoughts of a career in music—at fourteen he gave a piano recital which made "a certain impression." At Brown University he was active in athletics, debating, and social organizations although, he says, he has suffered ill health from his childhood. (At Newburyport High School he had won twenty-three out of twenty-four bicycle races.) After receiving his B.A. degree from Brown in 1904, Pope remained at that university as an instructor in philosophy.

While teaching at Brown, Pope continued his studies, receiving his M.A. degree in 1906. (He was married the year before to Bertha Clark, who, as Bertha Damon, was to write the best-selling *Grandma Called It Carnal* some years after their divorce.) In 1907 and 1908 Pope did graduate work at Cornell and at Harvard, after which he returned to Brown. From 1910 to 1917 he taught at the University of California, and in 1917 at Amherst; he is remembered as "a brilliant and popular lecturer,

M. I. Boris

ARTHUR UPHAM POPE

particularly in the overlapping fields of philosophy and the arts." In the summer of 1914 Arthur Pope was a lecturer (of the Carnegie Endowment for International Peace) at the University of Colorado. He worked actively during these years against oppression of Negroes, and as a member of the Protestant Friends of Ireland. In line with his interest in Persian rugs, he catalogued the Hearst collection of carpets in 1916.

In 1918, Pope, then an acting associate professor, became a civilian employee of the War Department General Staff, in charge of testing, and of instruction in the use of the rating scale for officer promotion. After World War I he organized and became executive secretary of the League of Oppressed Peoples, and made speaking tours in favor of the Irish Free State throughout the United States and in Canada. To finance these activities, in 1919, after several months of intensive study, the former professor became a consultant on Persian art to museums and private collectors. He soon found that his services as an appraiser of Persian rugs brought him five times his professor's salary. Pope was joined in this private counseling service by Phyllis Ackerman after their marriage in January 1920. Dr. Ackerman, who uses her maiden name, had studied philosophy under him at California, had taught that subject, and was art columnist for the New York *Globe* at the time of their marriage. Like her husband, she became a world authority on Persian art; she is an authority, also, on tapestries and textiles of other countries.

Pope was the director of the California Art Museum (San Francisco) in 1923-24. For ten years, until 1934, he served as the Chicago Art Institute's adviser in Islamic art, and during 1925-30 he was advisory curator and trustee of the Textile Museum of the District of

Columbia. By 1925 Pope and his wife were able to make an "extensive exploratory trip" to Russia, the Caucasus, and Iran. As commencement speaker at Teheran University, Pope described Iran's past artistic glories, a subject less familiar to his hearers than philosophy. *Persian Art*, the first of his four books on the subject, was published in Teheran that year, the year Prime Minister Riza Khan Pahlavi became Shah.

Arthur Upham Pope is credited with giving the impetus to the Iranian cultural renaissance under Shah Pahlavi. Invited to speak before the Iranian Cabinet, the American was named honorary art adviser to the Iranian Government and special commissioner to handle its exhibit at the Philadelphia Sesquicentennial Exhibition of 1926. The Persian Government building, which he designed, was awarded a gold medal. Later that year he organized other exhibitions, including the first International Exhibition of Persian Art, held at the Pennsylvania Museum; the museum appointed him its Persian art adviser two years later.

Pope and Phyllis Ackerman were appointed designers in 1926 for the interior of the Alhambra Hotel in the Yosemite Valley, a resort hotel the International Hotelkeepers Association later adjudged the finest in the world. During 1927-28 Pope was consultant to the San Francisco Opera House, and in 1928 he decorated the outdoor Woodland Theatre near his "Scholars Cottage" in San Mateo, a task which had to be completed within nine days. (Pope had long been interested in music, acoustics, and the modern application of ancient ideas of theater design.)

In 1928, too, Pope organized the American Institute for Iranian Art and Archaeology on the promise of a wealthy friend to contribute a hundred thousand dollars. The friend's actual contribution was thirty-five dollars, but Pope found other patrons, formed a corporation, and opened an office. (Later he obtained grants from the Carnegie, Rockefeller, and Oberlander educational funds, and from some museums.) The institute expanded: in 1947 it became the Asia Institute, comprising the School for Asiatic Studies, the Institute of Asiatic Economics, and the India Institute, as well as the original Iranian Institute. Pope serves without salary as chancellor, as school director and lecturer, and as editor of the quarterly bulletin. His income, which is reportedly modest, is earned as consultant on purchases of Iranian objects.

The Popes resumed their annual or semi-annual field trips to Persia and neighboring lands in 1931, expeditions which have uncovered valuable objects, and on which Pope has taken about ten thousand photographs of Iranian architecture. (A few times his life was threatened by religious zealots.) This photographic collection has been exhibited in European capitals and at American universities, museums, and art associations. In 1931 the archaeologist codirected the second International Exhibition of Art, and organized the exhibition of Persian art at Burlington House, London, under the auspices of the Persian Shah, the

British King, and foreign ambassadors. The stimulus this gave to interest in Persian art was reinforced by exhibitions Pope arranged in Leningrad in 1935 and New York in 1940. The latter included twenty-eight hundred objects, worth millions of dollars; a thousand of the objects had never before been publicly shown or catalogued.

All these activities were connected with the editorial and historical task the Popes had undertaken: to compile and publish *A Survey of Persian Art, from Prehistoric Times to the Present*. In eight years (1931-1938), Pope and his wife, the assistant editor, contributed nearly one-half of the three volumes of text, much of it new material; Pope himself wrote eight sections, including those on the history of Persian architecture, ceramics, and carpet weaving. Together they edited, annotated, and translated the work of seventy-two collaborators, and selected the approximately five thousand illustrations. The book cost about \$340,000 to produce, a cost to which Pope contributed his savings of thirty-five thousand dollars. The *Survey* is described as the largest body of published reproductions of Iranian art, and the greatest single work in the history of art. A review by Meyer Schapiro in the March 1941 *Art Bulletin* (published by the College Art Association of America) stated that the editors had allowed judgments of quality to replace interpretations of style, and had failed to relate art history to social history.

During this period Pope continued other activities: in 1934-35 he lectured in French universities for the James H. Hoyle Foundation, in 1937 he directed a survey in Baltimore of ways to develop art appreciation, and in 1938 began his work in behalf of China relief. At the time of the fall of France in June 1940, Pope organized and became chairman of the Committee for National Morale, which prepared memorandums for the United States Cabinet. The Executive Office of the President later stated that the committee "had a vital and far-reaching influence on all morale activities of the Government." During the war the Iranian Institute gave short courses to Government personnel going overseas on special missions, and Pope supervised a number of Army projects, made overseas broadcasts in several languages, and performed "numerous confidential services for the various war agencies." Pope was one of the two hundred and twenty well-known Americans who in May 1943 addressed a letter to President Roosevelt⁴² urging him to declare war upon Finland.

A vice-president of the National Council for American-Soviet Friendship and a trustee of the American-Russian Institute, Pope has expressed his viewpoint on the U.S.S.R. in a magazine article (*American Mercury*, February 1944), in many of his letters to the *New York Times*, and in the historical sections of his book, *Maxim Litvinoff* (1943). The book was described by Ambassador Davies⁴² as "indispensable reading for anyone who wishes to understand the U.S.S.R."; by the *London Times* as "probably a standard work for generations"; and by the *St. Louis Globe-Democrat* as "worth

more than three divisions to the Allied cause." Pope's writings include the articles on Persia in the latest edition of the *Encyclopædia Britannica*; his latest work is *Masterpieces of Persian Art* (1945).

By 1947 the capital assets of Pope's institute had been multiplied twenty-five times; the board of trustees includes five former United States Ambassadors, a Senator, and two generals; and the student body is "almost as distinguished as the faculty," which comprises twenty full-time and twenty unsalaried part-time instructors. A number of the courses it gives are not obtainable anywhere else. According to a *New Yorker* profile, Pope "does an enormous amount of work" and "sprints vigorously to keep the place solvent." With the cooperation of the Woochefee Institute, one of several organizations devoted to furthering the ideals of that well-known Chinese university, eight faculty members were added to the staff of the Asia Institute. This development is part of Dr. Pope's ambition to see Asiatic studies in the United States reach standards on a par with those of European institutions.

Arthur Upham Pope is the only foreigner to be accorded the highest Iranian decoration, Commander of the Order of the Crown, which was bestowed on him in 1945 by Shah Mohammed Riza Pahlavi. (Pope and his wife already had the decoration for intellectual achievement, the Order of Elmi, and Pope had been decorated with the Order of the Lion and the Sun.) The six-foot-one-inch scholar, who weighs 200 pounds, is brown-eyed and has what he calls brownish-gray hair. He has been described as "a handsome, talkative fellow with . . . a somewhat ascetic look." The Pope-Ackermans accept few social invitations. At home in their apartment on an upper floor of the Asia Institute, they are surrounded by Persian art objects; their five cats, too, are Persian. Arthur Pope has resumed his piano-playing, and makes a hobby of photographing eighteenth- and early nineteenth-century New England architecture. He is an independent in politics and has no church affiliation.

POUND, ROSCOE Oct. 27, 1870- Jurist; educator

Address: b. c/o Harvard University, Cambridge, Mass.; h. 304 School Ave., Watertown, Mass.

A prolific author of law texts and an educator for more than forty-five years, Roscoe Pound, it has been said (in *Review of Reviews*), is "probably, along with Mr. Justice Holmes and Mr. Justice Brandeis, one of the trio of Americans best known to scholars of modern jurisprudence throughout the world." After twenty years as dean of the Harvard Law School, Pound in 1937 succeeded to one of the newly created university professorships,

The Marshall Studio

ROSCOE POUND

enabling him to teach in any faculty of Harvard University. When he becomes a professor emeritus in June 1947, Pound will return to China to continue the work he began, as an adviser to that country's Ministry of Justice in the reorganization of its judiciary system.

Roscoe Pound was born October 27, 1870, in Lincoln, Nebraska, the son of Judge Stephen Bosworth and Laura (Biddlecombe) Pound. Judge Pound, a descendant of a seventeenth century west Jersey settler, was the judge of the Second, afterwards the Third Judicial District of Nebraska, a member of the State Constitutional Convention, and a State senator. It was in his native Lincoln, Nebraska, that Roscoe Pound was reared with his two younger sisters, Olivia, now an authority on school administration and vocational guidance, and Louise, now an educator and well-known writer ("In fact," writes Roscoe Pound, "in Nebraska I'm known as Miss Pound's brother").

Young Roscoe Pound was educated chiefly by his mother until he reached the age of ten. At that age he was sent to a Latin School. At the University of Nebraska, wrote *Time*, "husky and fast, he played football and baseball, formed a habit . . . of trotting one mile a day" (at fifty he could still run a mile in less than five minutes). A major in botany, he received his B.A. degree in 1888. His graduate work, too, was to be in botany, specifically plant geography, ecology, and parasitic fungi. Pound received his M.A. in 1889 and his Ph.D. in 1897 at the University of Nebraska. In this period the young man was one of the founders and the first director of the Botanical Survey of Nebraska (1892-1903), which research culminated in *Reports of the Botanical Survey of Nebraska* and *Flora of Nebraska*—Pound was one of the editors of both books. With F. E. Clements, Pound is also the author of *Phytogeography Of Nebraska* (1898, revised edition

1900). Listed as a phytogeographer in *American Men of Science*, Pound's name is starred as one of the thousand leading scientists in the United States, one hundred of which are in the field of botany.

It was early apparent, however, that Roscoe Pound would follow his father's legal profession. Immersed as he was in botany, the nineteen-year-old had nevertheless left Nebraska for a year to study at the Harvard School of Law in 1889-90. Back home again, according to a story in *Time*, one of Pound's Lincoln law office employers said to him: "Roscoe, you know enough law. Go see the county bar examiner. And take along a box of cigars." The examiner, noting that the cigars were his favorite brand, told the aspirant lawyer: "If your boss has educated you as well in the law as he has in cigars, you are well enough qualified to practice." Pound was thus admitted to the bar in 1890. He began his practice in Lincoln, Nebraska, with the firm of Pound and Burr in 1890; he became a partner in the firm in 1893, left two years later to practice alone (1895-1901). Then, for about two years (1901-03) the young lawyer served as Commissioner of Appeals in the Supreme Court of Nebraska. Pound, during part of this period (1899-1903), also taught jurisprudence and Roman law as an associate professor of law at the University of Nebraska. (In his two years on the Supreme Court bench, he continued to teach, but without compensation, since he believed it wrong to draw two salaries from the State at the same time.) From 1903 until 1907, again in private practice, Pound was dean of the College of Law at the University of Nebraska. He subsequently served as a professor of law at Northwestern University (1907-09) and at the University of Chicago (1909-10).

In 1910 Pound returned to the Harvard campus as Story professor of law; he became the Carter professor of jurisprudence in 1913 (which appointment he held until 1937). At the end of six years, still one of the newest members of the faculty, he was appointed dean of the Law School in 1916. "In Pound's time," wrote *Time*, "Harvard Law shifted from a school that turned out private barristers and corporation lawyers with broad-A accents, to a training school for Government lawyers too." Among Pound's students were some who wrote or administered early New Deal legislation: Thomas Corcoran⁴⁰, David E. Lilienthal⁴⁴, and Dean Acheson⁴¹. His twenty years as dean have been termed Harvard Law School's golden age. Pound became dean emeritus in September 1936, having resigned, he said, to "work on the frontiers of knowledge." In June 1937 he received one of the first of the university's "roving professorships," which entitled him to teach in any faculty of Harvard University. Upon his retirement with the title of professor emeritus on June 30, 1947, Pound, at the invitation of the Chinese Government, is to return to China. He had begun the task of reorganizing the Chinese judiciary system in the summer of 1946 for the Ministry of Justice. While there, wrote Donald B. McCammond in the *Christian Science Monitor*, he "enjoyed his work, his life, and his associates. What is

equally important to Dean Pound, so did Mrs. Pound."

Pound has served abroad before, with the advisory committee of the Juristic Section in the Institut International de Coopération Intellectuelle set up by the League of Nations, and as a member of the American-British Claims Arbitration group of 1925-26. President Hoover¹⁴³ selected him for membership on the National Commission on Law Observation and Enforcement, which functioned from 1929 until 1931. Since 1938 Pound has directed the National Conference of Judicial Councils. To these and to other groups the educator has emphasized the need for considering actual world conditions as well as turning to the fixed legal codes. Pound has done much to promote sociological jurisprudence through his writings: 16 law texts were published in 1904-44. (*Interpretations of Modern Legal Philosophies; Essays in Honor of Roscoe Pound* [1947] edited by Paul Sayre, commemorated Pound's seventy-fifth birthday.) As of 1940 there were 773 articles, addresses, and books credited to Pound: source listings for these and later works are to be found in Franklyn Christopher Setaro's *Bibliography of the Writings of Roscoe Pound* (1942). The lawyer has written an introduction to *Law In Action* (1947), an anthology of fiction about courts and their officers.

In recognition of his contributions in the field of law Pound has received an honorary LL.M. degree from Northwestern University (1908); honorary LL.D. degrees from the universities of Michigan and Nebraska (1913), Missouri and Chicago (1916), Brown (1919), Harvard (1920), Cambridge (England, 1922), Union (1923), Pittsburgh (1926), Colorado (1927), George Washington (1928), California (1929), Cincinnati (1933), and Rutgers (1941); an honorary L.H.D. degree from Boston University (1933); and an honorary *Juris Utriusque Doctor* (in canon and civil law) degree from the University of Berlin (Germany, 1934). Elected an honorary fellow of Stanford University in 1941, Pound the year before had won the American Bar Association medal for "conspicuous service to the cause of American jurisprudence" (1940). The American Bar Association, of which Pound is a member, is one of the many legal, philosophical, sociological, and scientific organizations in the United States, Scotland, France, Italy, Argentina, and Great Britain with which he is affiliated. Another of these, the Académie Internationale de Géographie Botanique, awarded Pound their medal in 1898; botany, particularly geographical botany and the study of parasitic fungi, has remained one of his "hobbies" to date (1947). Dr. Otto Kuntze, who died in 1907, once gave the name *Roscoeopoundia* to a fungus parasite (not to a genus of lichens as some suppose). Another interest is Lucretius, a course on whose writings he gave at Harvard.

Pound, who is now studying Chinese, has mastered French, German, Italian, Spanish, Sanskrit, Greek, Latin, and Hebrew; he has some knowledge of Russian. "I was told," wrote Oliver Wendell Holmes, "[that he was

once] put into a dining car to equalize a baseball man because he knew all the scores for years. I never saw anyone so well read in the philosophy of law, and I am told he can hold his own against seasoned heads over the wine cup. . . . Oh, dear me, it makes me tired to try to remember the titles of what he knows." A member of Phi Beta Kappa and of Phi Beta Kappa Associates, Pound served as a senator of the parent organization from 1937 to 1946. His clubs are the Union (Boston), Century (New York), University (Chicago), and Cosmos (Washington). Pound, a thirty-third degree Mason, is a past deputy grand master of the Masonic Order in Massachusetts, is the author of *Lectures on the Philosophy of Freemasonry* (1915). He is a Republican; in religion, a member of the Society of Friends.

Pound was married to Grace Gerrard in 1899. After her death in 1928, he was married to Mrs. Lucy Berry Miller, on June 30, 1931. The "chubby-faced, pink-cheeked, twinkle-eyed" jurist has brown eyes, graying (once brown) hair, and a bristly mustache. New students soon discovered two other distinguishing features—his green eyeshade and his cigar. Pound is five feet ten and a half, weighs 200 pounds, believes in the body's ability to adjust to cold temperatures. "If he owns an overcoat, he keeps it hidden from his friends," said one writer on the *Harvard Law School Record*.

POWELL, WILLIAM July 29, 1892-
Actor

Address: b c/o Metro-Goldwyn-Mayer Studios,
Culver City, Calif.

A star since the late 1920's, William Powell, who has appeared in about seventy films, has been "on some studio's payroll every week since 1926." Usually cast as a suave sophisticate, he is particularly identified with the role of Dashiell Hammett's *Thin Man* detective, which he has played six times, and of Florenz Ziegfeld, whom he has portrayed in two pictures. In 1947 he won new laurels with an entirely different characterization, the title role of *Life With Father*.

William Powell, whose middle name is Horatio, was born in Pittsburgh, Pennsylvania, on July 29, 1892. He began making speeches as

POWELL, WILLIAM—*Continued*

soon as he could talk, his mother, Nettie Manila (Brady) Powell, once said. She and his father, accountant Horatio Warren Powell, wished to see him prepare for a law career, but the boy was early drawn to the theater—he “haunted the gallery.” At the Central Union High School in Kansas City, Missouri (to which city the family moved in 1907), William Powell was a cheerleader. According to Don Eddy, in an *American Magazine* article, his old classmates remember him rather for the dramatic manner in which he recited entire chapters of the classics, and for “an almost visible mantle of aloofness,” which “set him apart.” Although his was one of the supporting roles in the school production of *The Rivals*, the youth is said to have overshadowed the leads. This success crystallized his desire to become an actor.

After one week at the University of Kansas in 1911, young Powell returned home, determined to earn enough money to study acting in New York. Five months as a fifty-dollars-a-month clerk for the local telephone company left him fifty dollars in debt to his father, however. According to a studio release, Powell then wrote a twenty-three-page letter to an aunt, asking for a loan of fourteen hundred dollars for two years’ expenses and tuition at the American Academy of Dramatic Arts. Given seven hundred dollars, he went to New York and became a classmate of Edward G. Robinson and Joseph Schildkraut at the school. Within six months his money was gone.

Twenty-year-old Powell was in September 1912 given a walk-on in the *The Néer-Do-Well*, adapted from a Rex Beach story, but the play closed after two weeks. The actor at the time shared a studio with Ralph Barton, later a leading caricaturist, and they “starved together” through what Powell calls the hardest winter he has spent. Finally, in 1913, Powell got the part of Eddie Griggs in *Within The Law* and toured with the company in 1913-14. He and another member of the cast, Eileen Wilson, were married in April 1915. (Their son, William David, remained with the mother after the Powells’ divorce; a *magna cum laude* graduate of Princeton and a World War II Marine, he entered the Warners story department in March 1947. He is the author of a biographical sketch about his father, which appeared in the December 1947 issue of *Photoplay*.)

The next four years William Powell spent learning his profession in stock and vaudeville—he played forty weeks of one-night stands. He worked with stock companies in his native Pittsburgh, in Portland (Oregon), Detroit, Buffalo, Northampton, and Worcester, and usually played two roles in each production. In 1918 Powell returned to Broadway in small parts in the Leo Ditrichstein vehicles, *The King* and *The Judge of Zalamea*. An attempt at musical comedy, supporting Frank Craven in *Going Up*, was followed by a return to stock in Boston. Then Powell was given the part which “made” him, that of Javier in *Spanish Love*. When the romantic melodrama opened in New York in August

1920, one reviewer said, “William H. Powell, racked in body, heart, and mind, had the sting of reality.” Another remarked, “William H. Powell did valiant work as the man who was dying hard.”

The actor, who had previously tried without success to get motion picture work, played the role of Fortnam in John Barrymore’s silent film *Sherlock Holmes* in 1921. Next, an accident to a leading player in the Marion Davies *When Knighthood Was in Flower* gave Powell the role of the comic “heavy,” Francis I. Sent to Italy with Ronald Colman⁴³ and the Gish sisters⁴⁴ to make George Eliot’s *Romola*, he used the opportunity to tour the Continent. After returning to America Powell was “one of Broadway’s busiest young actors,” although he rehearsed during one season in five plays which closed before they reached New York. The last of the two hundred plays in which he has appeared was *The Woman Who Laughed*, which reached Broadway in August 1922, but closed after two weeks.

For a number of years William Powell was cast as screen villains including characters in *Aloma of the South Seas* (which starred Warner Baxter and Gilda Gray) and *The Great Gatsby*. As the “particularly despicable” Italian thief, Boldini, he shared some of the *Beau Geste* honors with his friend Ronald Colman. *The Last Command* (1928), in which Powell played a Russian revolutionary to Emil Jannings’ Czarist general, was particularly noteworthy. Of *Interference*, his first talking picture, Elinor Hughes of the Boston *Herald* wrote: “His cultivated and expressive voice, his smooth, polished manner and easy assumption of emotion masked under flippant cynicism, made him the outstanding person in a cast that included Clive Brook, Evelyn Brent, and Doris Kenyon.”

At this time, when the advent of the sound track ended a number of actors’ screen careers, Paramount Pictures decided to star William Powell. They cast him as the dilettante detective, Philo Vance, in *The Canary Murder Case*, released in February 1929, and followed it with *The Greene Murder Case* in August and *The Benson Murder Case* the next year. (Three years later, Warner Brothers⁴⁵ were to add *The Kennel Murder Case* to this list.) Interspersed with these parts were a variety of others. The memorable *One Way Passage* (1932), in which Powell, as a man returning from the Orient to face execution, fell in love with a girl returning to die of heart disease, was one of four vehicles co-starring Kay Francis. Another was *Ladies’ Man* (1931), in which Carole Lombard played the other feminine lead. (Married in June 1931, Powell and Miss Lombard were divorced in 1933.) Few remember that William Powell once played opposite Bette Davis⁴², in *Fashions of 1934*.

Released from his Warners contract in 1934, after two years, Powell was signed by MGM and starred with Clark Gable⁴⁶ and Myrna Loy in *Manhattan Melodrama*. This was the first of a dozen Powell-Loy vehicles. Their third, *The Thin Man*, established them in the public mind as exemplars of the idea that

"marriage can be merry." Made in fourteen days, the relatively low-budget picture grossed about two million dollars. Five other profitable Thin Man pictures were released in 1936, 1939, 1941, 1945, and 1947. In them Powell plays Nick Charles, a retired detective who with light-hearted courage solves murders between exchanges of bright dialogue with his adoring wife, consumption of "enormous quantities" of alcohol, walks with his perky wirehaired terrier, and encounters with his picturesquely named criminal friends. Although the thin man of the original title was actually a murder victim, William Powell and Myrna Loy were so often referred to as "Mr. and Mrs. Thin Man" that, in their 1945 and 1947 vehicles, the title was used for the Powell role. William Powell was nominated for the Academy Award for the best performance of 1934, but the award went to Gable for his acting in *It Happened One Night*.

The year 1936 was a particularly successful one for Powell. Of his five pictures, four were outstanding hits: *After The Thin Man*; the biographical *The Great Ziegfeld*, which brought Luise Rainer an Academy Award; *My Man Godfrey*, co-starring Carole Lombard, which was perhaps the most favorably reviewed "screwball" comedy; and *Libeled Lady*, a romantic comedy with Myrna Loy, Spencer Tracy, and Jean Harlow. Powell, who had acted with Miss Harlow in *Reckless* (1935), was reported engaged to marry her at the time of her death in June 1937. The actor, reported the *Liberty* article, suffered illnesses in 1937 and underwent three operations in 1938. (As a condition for obtaining his services for *The Baroness and the Butler* in 1937, the year in which he was voted one of the top box-office stars, Twentieth Century-Fox placed his ex-wife Eileen Wilson, under a \$150,000 contract.)

After his return in 1939 from a seventeen-month absence from the screen, Powell limited his appearances to one or two pictures a year, reducing his earnings from a reportedly \$600,000 in 1941 to \$292,500 in 1944. In the years 1942 and 1944 the actor was teamed with Hedy Lamarr in the mystery melodrama, *Crossroads*, and in the comedy *The Heavenly Body*, two pictures in which many reviewers found little to recommend except Powell's skill and Miss Lamarr's beauty. His Nick in *The Thin Man Goes Home* (1945) was "as suavely resourceful as ever," but the plot was considered less satisfactory than its predecessors, and *The Hoodlum Saint* (1946) was another poor story for him.

Then, in the spring of 1946, Powell tested for and won "one of the prize roles of all time," that of Clarence Day, Sr., in Warners' Technicolor production of the record-breaking play, *Life With Father*. Powell said in 1947 that he had asked his own studio, MGM, to buy the play for him five years earlier. For the role of the terrible-tempered, individualistic New York householder of the 1880's, he dyed his hair red, replaced his brown mustache with a red one, changed his voice and mannerisms. When *Life With Father* opened in August

WILLIAM POWELL

1947 (shortly before *Song of the Thin Man*), it immediately established itself as a hit. Irene Dunne⁴⁵ played the role of Mrs. Day, and elaborate arrangements for equal billing were worked out. Meanwhile, Powell was at work under another loan-out, to Universal-International for *The Senator Was Indiscreet* and *Mr. Peabody and the Mermaid*. Of Powell's performance in the former picture (which was released in December 1947), Cecelia Ager of *PM* remarked: "[His] characterization is a beauty, worthy of . . . everybody's rousing cheers."

In the Father role, wrote Howard Barnes, Powell gave "the greatest performance of a highly distinguished career," and proved "altogether the best of the mummies who have donned a red wig to celebrate a curious patriarchy." "He has summoned up a robust gusto that no other role ever indicated was among his resources," said Alton Cook. The *New York Times* reviewer stated, "Even his voice, always so distinctive, has taken on a new quality, so completely has Mr. Powell managed to submerge his own personality. His Father is not merely a performance; it is character delineation of a high order, and he so utterly dominates the picture that even when he is not on hand his presence is still felt." The *New York Film Critics* named Powell as the best actor of 1947 because of his work in *Life with Father* and *The Senator Was Indiscreet*.

"Suave", "sophisticated," and "debonair" are the adjectives usually applied by writers to William Powell—adjectives which he has come to dislike. Half an inch less than six feet tall, the 160-pound actor has "china-blue" eyes; he says frankly that he "touches up" his thinning, graying brown hair. Called one of the screen's best-dressed men, he pays little attention to fashion but much to fit, and will not carry anything in his pockets which makes them bulge. "I think it takes five years just to break in a

POWELL, WILLIAM—*Continued*

hat or a pair of shoes or a suit," he has said. Powell is a member of the Bel-Air Country, Hollywood Athletic, and Palm Springs Racquet clubs in California, and the New York actors' club, the Lambs. In January 1940, after a three-week courtship, he was married to petite Diana Lewis, a small-part player who had been in show business for twenty-two of her twenty-four years, and whom he calls "Monsie." There are reported to be several sides to the Powell personality—he is known to acquaintances as a reserved, undramatic, businesslike man, and to intimates as a gay eccentric given to practical jokes.

PRESSMAN, LEE July 1, 1906- Labor organization attorney

Address: b. c/o Congress of Industrial Organizations, 718 Jackson Pl., Washington, D.C.; h. 4619 Norwood Dr., Chevy Chase, Md.

The general counsel for the Congress of Industrial Organizations is Lee Pressman, whose legal advice has been reflected in CIO dealings with industry and the Government; and as a CIO spokesman he has appeared frequently before Congressional committees and other Federal bodies on behalf of labor and minority groups.

One of two sons, Lee Pressman was born in New York City, on July 1, 1906, to Harry and Clara (Rich) Pressman, Russian immigrants. He grew up in Manhattan and Brooklyn and attended Stuyvesant High School, from which he was graduated in 1922. At Cornell University, in Ithaca, New York, which he then entered, young Pressman won scholarships, some of which paid for his tuition; he became, as well, a member of the honor society, Phi Beta Kappa. He received his B.A. degree from Cornell in 1926 and, supported by several scholarships, proceeded to earn his LL.B. degree at Harvard Law School. In 1929, the year he completed his law studies, he was admitted to the New York bar and became a practicing attorney in New York City. From 1929 to 1933 he was an associate in the firm of Chadbourne, Stanchfield, and Levy, handling cases involving corporations, receiverships, and labor.

In 1933 Pressman, who had campaigned for Franklin D. Roosevelt⁴² in the 1932 Presidential election, was appointed to a Government post. For two years he worked under Henry A. Wallace⁴³, then Secretary of the Depart-

ment of Agriculture, as assistant general counsel for the department's Agricultural Adjustment Administration. In 1935-36 Pressman was the general counsel for the Works Progress Administration, headed by Harry Hopkins⁴⁴. At the same time he also served in a similar capacity with the Resettlement Administration, which was set up, with Rexford Tugwell as chief, to aid low-income or destitute farmers, tenant farmers, share croppers, and farm laborers. (Renamed the Farm Security Administration, it became a part of the Department of Agriculture in April 1935.)

Pressman became associated with the Congress of Industrial Organizations in 1936, a year after the establishment of this body under the leadership of John L. Lewis⁴⁵. As general counsel of the CIO he appeared before various Executive departments and administrative agencies of the Government; and before the United States Supreme Court he argued cases involving civil liberties and the constitutionality of labor legislation. The questions with which he dealt included those arising within the CIO as well as those affecting CIO affiliates in a general way. Pressman also became the general counsel for the United Steelworkers of America (of which he is a member) and for the National Marine Engineers Beneficial Association.

As a labor spokesman, the CIO general counsel has gone beyond strictly legal matters. Speaking at a forum in November 1940, in the early days of the national defense program before the United States entered World War II, he warned that workers would not refrain from striking and would base their wage demands on industry's increased profits, not only on the rise in cost of living (*Time*, November 25, 1940). He took a different stand in the midst of the war, in 1943: the day after Roosevelt had ordered drastic anti-inflationary measures freezing wages and prices and prohibiting workers from changing jobs, Pressman urged eight hundred delegates, from CIO unions, meeting in New York to support the order as "one of the greatest contributions which could be made to the war effort"; he recommended that wage increases be sought through job reclassification and through incentive payments. According to a *PM* report, other CIO leaders did not accept the Executive Order as unreservedly as he and later issued a statement "toning down Pressman's enthusiasm." Among Pressman's other activities in 1943 was his appearance before the Senate Judiciary Committee during its hearings on the constitutionality of the anti-poll tax bill: he held that the poll tax was "simply a legal trickery" benefiting a particular group of candidates.

Together with other CIO spokesmen, Pressman assailed the "work-or-be-drafted" bill before the Senate Military Affairs Committee in 1944, declaring that labor shortage crises had been and could continue to be solved without national service legislation. He also called for a guaranteed annual wage in 1944 and contended that the Little Steel Formula limitation on wages was unfair to labor in view of the 30 per cent cost-of-living increase since 1940.

Roundly criticizing the Seventy-ninth Congress with regard to some of the laws it passed during the reconversion period, Pressman in 1946 charged that it had "sought to stifle labor organization" and had "resisted any effort to lighten the tax burden on the lower income groups, but had acted swiftly to remove the excess profits tax on corporations while continuing the carry-back provisions permitting gigantic tax rebates out of excess profits tax payments of prior years."

The legislation proposed the following year by members of the Eightieth Congress, designed to outlaw the closed shop and industry-wide bargaining and to impose other restrictions on organized labor was even more strongly assailed by Pressman and other union leaders. In a thirty-six page CIO booklet in which he analyzed the projected labor measures, Pressman declared the legislation was intended to "chop the heart of the Wagner Act and the Norris-La Guardia⁴⁰ Act." As for the issue of portal-to-portal pay claims, Pressman, denouncing the Gwynne bill, maintained it should be resolved not by Congressional legislation but through collective bargaining and by empowering the Wage-Hour Administrator to make binding interpretations of the Fair Labor Standards Act. (The Supreme Court's ruling on the portal-to-portal principle had resulted in an avalanche of suits by labor unions.) The CIO general counsel warned his colleagues that the fight against "antilabor" legislation must be waged not only on Capitol Hill but in the State legislatures. According to Joseph A. Loftus (New York Times, February 23, 1947), eight States had outlawed or were about to outlaw the closed shop by February 1947. When, in June, the Taft⁴⁰-Hartley⁴⁷ Act outlawed the closed shop for the rest of the country, Pressman's worst fears were realized. In July the CIO started a campaign for the law's repeal and for the defeat of those members of Congress responsible for its passage. Under Pressman's direction, the CIO legal staff prepared a forty-one-page analysis of the new law, containing advice on circumventing the National Labor Relations Board.

Toward the end of September Pressman announced that CIO attorneys would begin action against legislation in the State of Florida, which banned the closed shop and several other union security agreements. From the suit, Pressman said, a test of the constitutionality of labor laws in eleven other states would be derived. Another test of constitutionality was involved in three cases, concerning the United Construction Workers and two CIO unions, dismissed by the NLRB early in November 1947 because officials of these unions had not conformed with the non-Communist oath requirement of the Taft-Hartley Act. Since the cases had been in review before the NLRB prior to the time the Taft-Hartley Act became operative (August 22, 1947), union officials considered the requirement invalid in these instances. Until certain statutory and constitutional questions were disposed of, Pressman said, the union would "withhold decision on its approach to the courts."

Press Assn., Inc.

LEE PRESSMAN

Pressman has been described by Joseph and Stewart Alsop as "the hero of the CIO's communists and pro-communists." In their demands for the ousting of radicals, Right-wingers within the organization reportedly have agitated for Pressman's dismissal. "But," said a *Fortune* writer, "he doesn't mix legal advice to Mr. Murray with social emotions." As general counsel for the United Steel Workers of America, Pressman, in April 1947, assisted Philip Murray in negotiations for a new contract with the United States Steel Corporation which resulted in slightly more than a fifteen-cent hourly wage increase for 142,000 production employees of the corporation's five principal operating subsidiaries. In the contract between the steel workers union and United States Steel, which also renewed provisions for maintenance of membership and the check off, the union agreed not to "aid or support" any existing portal-to-portal pay claims.

In 1945 Pressman was a member of a CIO delegation which visited the Soviet Union, returning an earlier visit to the United States by delegates from the All-Union Central Council of Trade Unions of the U.S.S.R. as guests of the CIO. At the CIO's eighth national convention in 1946, he was secretary of the important resolutions committee. The attorney has contributed to law periodicals and is a member of the New York City Bar Association and the National Lawyers Guild. (He is on the executive board and the executive committee of the latter organization.) He registers at the polls as a Democrat. Since June 1931 he has been married to the former Sophia Platnick; they have two daughters, Ann Elaine and Marcia Lee. Pressman has been described as "heavy-set and given to collegiate tweeds and bow ties."

RAMADIER, PAUL (rà-mà-dyā') Mar.
 17, 1888- Former French Premier

Address: Paris

For the first Premier of the Fourth French Republic, President Auriol⁴⁷ chose a fellow Socialist, Paul Ramadier. Although Ramadier had served in previous Cabinets of the provisional Governments established in France between the liberation of that country in 1944 and the enactment of its new constitution in 1946, he was relatively unknown. Ramadier had been Minister of Labor in the Blum Cabinet of 1937, and during the Nazi occupation he was active in the resistance movement. He held the office of Premier until December 1947, when he was succeeded by Robert Schuman.

Otto & Pirou, Paris

PAUL RAMADIER

Paul Ramadier was born in the city of La Rochelle, France, on March 17, 1888. Joseph Ramadier, his father, was a psychiatrist. (His brother became a surgeon.) The maiden name of his mother, Alix, was also Ramadier. From the *lycée* in Rodez, the capital of the department Aveyron, where he obtained his secondary education, young Ramadier went to the law school of the University of Toulouse. After receiving his law degree, he pursued studies for his Doctor of Laws degree at the University of Paris and submitted a thesis on Roman law as part of his work toward this higher degree. Besides his doctorate, Ramadier also

received a diploma for advanced studies in literature.

At the age of twenty-one, Ramadier became an advocate at the Court of Appeals. Ten years later he was elected mayor of Decazeville, a town in Aveyron. From 1928 until 1940 the French lawyer acted as a deputy and general counselor for the department. Meanwhile he had, in 1936 and 1937, served as Undersecretary of State in the Ministry of Public Works in the Blum Cabinet, and, in 1937 and 1938, as Minister of Labor under Premier Camille Chautemps. When France was occupied by the Germans in 1940, Ramadier joined the resistance movement. After the establishment of the Provisional Government of the French Republic in 1944, following the liberation of France by the Allies, Paul Ramadier was Minister of Supplies in the Cabinet of General de Gaulle⁴⁰ for the five months from November 1944 to March 1945; he was one of the metropolitan resistance members added to the De Gaulle Cabinet when the Government was transferred from Algiers to Paris. During the month of December 1946, while Leon Blum⁴⁰ was Premier, Ramadier served as Minister of Justice.

Upon the formation of the first Government of the Fourth French Republic in January 1947, President Auriol appointed Ramadier the Premier. His nomination was approved by the National Assembly in a vote of 549 to 0. Unlike Blum, who had been forced to form an all-Socialist Government because of the intransigence of the other parties (which opposed his plan to give the Ministry of Defense to a Communist), Ramadier was determined to form a coalition Government. To forestall objections by the centrist and rightist parties to a Communist Minister of Defense, he formulated the plan of making that Minister merely a coordinator of the Ministries of Air, War, and Navy, which were assigned to members of the minority parties. Because of the desire of Georges Bidault⁴⁵, leader of the MRP, to continue his work as Minister of Foreign Affairs, the MRP finally accepted the make-up of the Ramadier Cabinet. The compromise led to a Cabinet composed of nine Socialists, five Communists, five MRP members, five Left Republican Unionists, and two Independent Republicans.

The Ramadier Cabinet was confirmed by a vote of confidence (543 to 18) taken in the National Assembly at the end of January 1947. Shortly afterward, it seemed as if strikes and requests for a general wage increase would lead to the downfall of the Cabinet. The French General Confederation of Labor advocated a seven-thousand franc (about fifty-nine dollars) minimum monthly wage standard, which was opposed by Premier Ramadier; his anti-inflationary policy was to freeze wages and continue the price-cutting program launched by Premier Blum. After the strike of newspaper pressmen and mechanics began in February 1947, the Premier conceded that "abnormally low" salaries (particularly those of coal miners) should be raised without, however, establishing a precedent for a general wage increase. The increase, it was later determined, was to be paid from a national wage fund to which employers would donate one per cent of their

pay rolls. The month-long strike of the newspaper pressmen was ended in mid-March 1947 when the strikers agreed to return to work at their original basis of pay. To regulate French press agencies and publications appearing more than thirty times yearly, the Premier presented to the National Assembly in July a program calling for the establishment of a twenty-three-member national press chamber; the proposed statute also contained a clause guaranteeing a free press and eliminating the need for Government licensing of publications.

In the early spring months of 1947, the country was undergoing another domestic crisis. Because of the wheat shortage, some wheat contracts were exempted from the general 5 per cent price cut ordered by the Premier in February. Although production of French wheat was eventually to be brought to its pre-war level under the four-year Monnet plan for reconversion and recovery, Premier Ramadier revealed that France would probably have to remain on a short bread ration for twenty-three months. Wheat pledged by the United States was delayed in shipment, and French credits intended for the purchase of capital goods from abroad had to be diverted to the purchase of wheat. In April 1947 all consumption of wheat was placed under strict control, and the following month, Ramadier requisitioned until August the flour mills of the Paris region. With a Government estimate to substantiate his claim, the Premier predicted that France herself was "reasonably certain" to be able to supply 250,000 tons of wheat between May and July. Ramadier assumed the portfolio of Minister of Food. Emergency allotments of corn received from the United States and the allocation of more than eight hundred thousand tons of grain in August were not enough to alleviate the shortage, which caused the Premier to declare a reduction in the bread ration the latter month.

The Ramadier Cabinet also found itself confronted with the problem of determining France's foreign policy in the European, Asiatic, and African spheres. In regard to Germany, the coalition Cabinet at the end of January approved a plan for a federation of autonomous, but weakened, German states. According to this plan, the Ruhr area was to be placed under United Nations control and its products made available to all European members of the United Nations which had actively participated in the defeat of Germany. The decision of the Ramadier Government to support the country's demand for a demilitarized Germany averted a crisis and the possible resignation of the Cabinet. The Premier in February 1947 revealed his desire for a Franco-American, and a Franco-British alliance, as well as for a triple entente, to be composed of France, Great Britain, and the U.S.S.R.

In reference to the European Recovery Plan (Marshall Plan), Ramadier expressed his doubts as to its practicability without Russian cooperation. The Marshall plan, by including considerations for the revival of German industry, ran contrary to the foreign policy of the Ramadier Government. Early in October

1947, however, a plebiscite held in the Saar area was overwhelmingly in favor of economic fusion with France, thus reversing the decision of the 1935 plebiscite; immediate political union with France was not contemplated, according to French Government spokesmen, nor had the integration of the Saar coal industry into the Marshall Plan been determined.

The coalition Cabinet was almost dissolved in March 1947 by the refusal of the Communist members of the National Assembly to support the Premier's request for appropriations of thirty-four billion francs for military operations against the Viet Nameese in Indo-China. (The Communists advocated settlement of the rebellion there by negotiations with Ho Chi Minh, president of the Viet Nam Republic, and by cessation of hostilities.) Upon the demand of Ramadier for a vote of confidence, his policy was endorsed by the Assembly on March 22, 1947, by a vote of 411 to 0. A compromise between the Government and the Communist party was evolved: the Communist deputies refrained from voting in the National Assembly, but the five Communist Cabinet ministers agreed to vote for the requested credits in order to remain in the Cabinet. The Communist explanation for this tactical division of their leaders and their rank and file was that French negotiations at the Moscow Conference (the Council of Foreign Ministers) would be hindered if the Government fell. Further divergence between the Communist party and the Government arose because of a rebellion in Madagascar and rioting in Algeria, which were said to be linked with the Viet Nam revolution. In each case, the Communists supported the independence movements of the native citizens. Two solutions to the colonial problems were offered by the Ramadier Government: one of them, establishing a separate legislative assembly in Algeria, was passed late in August 1947, but the Algerian plea for dominion status was rejected. The Government offered dominion status to Indo-China in September, with the proviso that the French would be allowed to retain their military bases in that country.

The stability of the Government was challenged in April 1947 by General de Gaulle, who characterized the Ramadier Government as an unworkable compromise, and again, in May 1947, by the Communists. This final disagreement between Ramadier and the Communist ministers in his Cabinet was precipitated by a wildcat strike for a ten-francs-an-hour increase in pay at the nationalized Renault automobile plant. At first it was unauthorized by the General Confederation of Labor, but later that organization, as well as the Communist party, supported the strikers' demand for higher wages. On May 1, 1947, the Communist Cabinet ministers refused to endorse the Government's wage-freezing policy. When the issue was submitted to the National Assembly on May 4, 1947, the Government policy received a confidence vote of 360 to 186, with 60 abstentions. (Communist ministers and deputies were among those who abstained.) Declaring that the Cabinet's solidarity had been broken, Pre-

RAMADIER, PAUL—*Continued*

mier Ramadier requested and received the resignations of the five Communist members of his Cabinet. At the Renault plant the strike was settled for a production bonus of three francs per hour on increased output—the solution suggested by the General Confederation.

The Premier was instrumental in averting strikes in several other industries—the bakery, railway, department store, power, banking fields—and also in the civil service, until November, when a wave of strikes spread through the country. Because of his economy program, launched in June, Ramadier permitted only bonuses, rather than pay increases to the workers. He had also attempted to forestall the devaluation of the franc by obtaining a loan of \$250,000,000 from the World Bank. To obtain support for the Ramadier measures, seven votes of confidence were taken in the National Assembly between July and October; but after the election returns in the latter month, which showed an average voting strength of 40 per cent for General de Gaulle's coalition party (the Rally of the French People), Ramadier's Cabinet became insecure. The Premier's attempts to strengthen his Cabinet by revising its membership were unavailing. On November 19, 1947, he submitted his resignation. When the attempts to create another predominantly Socialist Cabinet under Léon Blum were unsuccessful, a few days later Robert Schuman was made Premier.

Ramadier is the author of four books: *Missio in bona rei conservandae causa*, 1911 (his doctoral thesis); *Le Fonctionnement juridique des coopératives de consommation* ("The Juridical Function of Consumer Cooperatives"), 1928; *Définition et nature des coopératives* ("Juridical Definition and Nature of Cooperatives"), 1929; *Le Droit des coopératives en France* ("The Law Regarding Cooperatives in France"), 1932. His interest in cooperatives is not solely theoretical: he is a member of the legal council of the Consumer Cooperatives and of the International Cooperative Alliance. From the French Government Ramadier has received the Médaille Militaire and the Croix de Guerre.

The former French Premier likes to pursue historical studies and to translate Greek and Latin texts. Five feet ten inches tall, weighing 187 pounds, Ramadier has light brown eyes, gray hair, and a small beard. By his marriage in 1911 to Marguerite Cerri, there are two sons: Claude and Jean (the latter has been awarded the French Medal of the Resistance). Because of his gentle manner, Paul Ramadier was identified in the resistance movement by the password "Violette."

RASMUSSEN, GUSTAV (räs'mōō-s'n gōōs'tāv) Aug. 10, 1895- Foreign Minister of Denmark

Address: b. c/o Ministry for Foreign Affairs, Christiansborg Castle, Copenhagen; h. Hotel d'Angleterre, Copenhagen

Denmark's relations with other nations are guided by Gustav Rasmussen, Minister for Foreign Affairs. A lawyer, who in 1917 began his career in Denmark's Foreign Office, Rasmussen's policies have met with the approval of the Danish people, although the Danes have, since the end of World War II, voted to change the political party in authority. The major problems with which Rasmussen, in 1947, was concerned included United States' interest in Greenland, the large number of German refugees in Denmark, and the treatment of Danes in South Schleswig.

Gustav Rasmussen, the son of Casperitta, née Baroness Wedell-Wedellsborg, and Christian Rasmussen, was born in Odense, on the Danish island of Fyn, on August 10, 1895. Before he completed his formal education, in 1917 Rasmussen had served as secretary to the Danish Legation in Petrograd (later Leningrad). He was also, during the year 1917-18, delegate for prisoners of war in Siberia. At the University of Copenhagen, where he studied law, Rasmussen attained *accessit* (honorable mention) for the University of Copenhagen's Prize Question in 1920. Rasmussen was awarded his degree in 1921, in which year he received his appointment as a secretary in the Ministry for Foreign Affairs.

Since 1921 Rasmussen has risen through the ranks of the Ministry he was to head. In 1926 he was named head of a section there. A year later he was sent to Berne, Switzerland, as chargé d'affaires; he remained in that post until 1931. Rasmussen was called upon to use his legal talents in 1932 as deputy advocate in a case before the Permanent Court for International Justice at The Hague. The dispute was between Denmark and Norway over the ownership of East Greenland (a separate case concerning Southeast Greenland had been filed but was later dropped). On April 5, 1933, the World Court ruled "that the declaration of occupation promulgated by the Norwegian Government on July 10, 1931, and any steps taken in this respect by that Government constituted a violation of the existing legal situation and are accordingly unlawful and invalid." Norway immediately accepted the World Court's decision.

Rasmussen continued to serve in Geneva in 1934-35 as counselor of the Danish delegation to the League of Nations. After four years as chief of a section in the Foreign Office, Rasmussen, according to the *Statesman's Year Book*, served as counselor of the Danish Legation in London (1939-42). In 1940 Denmark had been invaded by German troops, and in 1942 the Germans forced Rasmussen's removal. He then (March 1942) became a member of the Danish Council and the Danish Military Mission in London. In September 1944 he was named head of the Section for Civil Affairs in

the Danish Military Commission to the Allied Supreme Headquarters, remaining in the same post until August 1945. On May 5, 1945, the Danes were liberated from German occupation, and shortly thereafter Rasmussen was appointed Danish Minister to Rome.

The results of the Danish elections, held in October 1945, gave the Agrarian party a majority, and Knud Kristensen was called upon to form a Cabinet; Gustav Rasmussen was chosen Foreign Minister. Denmark's position in foreign affairs, after World War II, was summarized by Karen M. Jones in the September 1945 *American Scandinavian Review* article: "The role of Denmark—indeed of all Scandinavia—appears in Europe somewhat analogous to our own in the wider sphere. Its importance is quite apart from the question of military and economic might." The writer believed that the countries which form the Scandinavian group, and particularly Denmark, could show the way to world peace by extending political democracy to include minority groups.

One of the gravest problems confronting the Danes after the war is that of German refugees who had fled to Denmark. Rasmussen estimated that these people, who wanted to return home, cost the Danish Government about two hundred million kroner a year, which was about 40 per cent of the nation's prewar budget. (Rasmussen said the two hundred thousand Germans in a small country like Denmark were equivalent to two and a half million in Great Britain or seven to eight million in the United States.) Their number has been gradually reduced to about seventy thousand. Late in 1946 Rasmussen went to the United States to discuss with Secretary of State Byrnes the problem of the refugees.

Another postwar problem has been that of South Schleswig, a part of Germany administered by Britain. Rasmussen found it necessary to negotiate with Britain on the rights of the "Danish-minded" (so Rasmussen has termed those whose sympathies are with Denmark) people in that area. In a November 1946 speech in which he reviewed the problem and the accomplishments toward its solution, the Foreign Minister asserted, "In their demand for cultural and political freedom we will support those whose minds are turned towards Denmark. We will fortify their confidence in their own strength. We will support them in their demand for freedom to adhere to the faith of their fathers, freedom to lead their lives on the soil they love." Another question with which Rasmussen has had to deal was the request by the parliament of the Faeroes for complete autonomy.

By October 1947 the negotiations between Denmark and the United States for a new Greenland defense pact had reportedly made progress. The new agreement was necessary because Rasmussen had requested abrogation of the 1941 treaty which had allowed the United States to establish bases on that island. Reportedly the United States had offered to purchase the island at a price of one billion dollars, but in March 1947 Rasmussen averred, "On behalf of the Danish Government I estab-

GUSTAV RASMUSSEN

lish that Denmark is not willing to negotiate on the sale of Greenland. It will not be sold to any nation." Previously, on January 19, 1947, Rasmussen told the Foreign Press Association that Denmark also wished complete disarmament and denazification of Germany. He stated, too, that the freedoms which would be granted in Germany should include freedom to print publications, teach children, and conduct meetings, these freedoms to be extended to non-Germans living in Germany (he was thinking, in particular, of the Danes in South Schleswig). On this occasion, too, he expressed his Government's views on the Danish peace settlement with Germany: these advocated "equal tariff; access for all nations to Germany by land, sea, and air; the opening of the Kiel Canal to all shipping; and a new agreement on German waterways."

Denmark's foreign export situation, stated Alexander Kendrick (a writer for the *Chicago Sun* and *PM*), who had visited the country in January 1947, was poor. He added that the "Russians are keenly interested in broadening their present trade with the Danes and they are willing to pay going rates." (In August 1946 Denmark had agreed to export 90 per cent of her surplus butter and bacon and nearly all her eggs to the British Isles.) A more encouraging picture of Denmark's progress in foreign trade was presented when Rasmussen's staff prepared a report under terms of the Marshall⁴⁷ Plan. From May 1945 to August 1947 Denmark had exported 3,800,000,000 kroner's (\$794,960,000) worth of food; in comparison to her prewar exports, foreign sales of cheese had more than doubled, eggs had tripled, and potatoes septupled. Denmark would need aid in the purchase, during 1947-51, of coal, oil, machinery, iron, steel, fertilizer, agricultural machinery, and feed for cattle. Her war losses were placed at twelve billion kroner, and her outstanding debt to the

RASMUSSEN, GUSTAV—*Continued*

United States at thirty-five million dollars. Denmark was asking two billion dollars in reparations from Germany.

Rasmussen has weathered a change in Cabinet; he was renamed Foreign Minister in the Government formed by Hans Hedtoft in November 1947. He was willing to remain in the newly formed Cabinet, he said, because he felt that it was his duty to remain free of domestic politics and to maintain the foreign policy which had been approved by the Rigsdag (Danish parliament). A member of the Danish delegation to the London meeting of the United Nations General Assembly in January 1946, the Foreign Minister also was chairman of the Danish delegation to the second session in 1946 of the General Assembly, held in New York. He has written a number of works on international law and other subjects.

RHEE, SYNGMAN (rê sîng'măn) Apr. 26, 1875- Korean political leader

Address: b. c/o Korean Commission, 416 Columbian Bldg., Washington 1, D.C.; h. Seoul, Korea

"Korea's most distinguished and provocative statesman," according to *Time*, is Syngman Rhee. Rhee served as the first President of the Provisional Korean Republic from 1919 through 1941; in present-day Korean politics, he has caused controversy by his anti-Russian stand. Since 1919, when the Korean Republic was established, Rhee had been fighting for an independent Korean government; he has carried on that struggle in 1946 and 1947, strongly opposing the proposed four-power trusteeship for Korea.

An only son, Syngman Rhee was born to Kyung-sun and Kim-Hai Kimsio Rhee on April 26, 1875, in Whanghai Province, Korea. He is descended, through his father, from the Ri dynasty, which had ruled Korea from 1486 to 1910. (Ri, Yi, alternate names for the dynasty, and Rhee all have the same Chinese and Korean ideograph.) In compliance with his father's wish that he obtain a literary degree and, consequently, appointment to a high Government post, young Rhee received a classical Chinese education. When he had finished his studies, he placed first in the national examinations held in the capital city of Seoul. Because he thought that a knowledge of English would be necessary to maintain a Government post, and since no Korean school offered instruction in this language, Rhee enrolled at Pai Jai, a Methodist mission school in Seoul. By the time he left the school, Rhee had been influenced by the talk of democracy he heard there, and in 1894 he joined the Independence Club, which pressed for democratic reforms under the Korean monarchy and for elimination of Japanese influence in the Government. Shortly afterward, he founded and edited *In-*

dependence, the first daily newspaper in Korea and the first paper published wholly by Koreans. When, in 1895, the leader of the Independence Club was forced to flee from Korea, Rhee became leader of the reform movement.

In 1897 Rhee led a mass demonstration of students. As a result, he was imprisoned and subjected to six months of torture. During these months Rhee became a Christian convert. After he was sentenced to life imprisonment, he was removed to another jail where he organized his co-prisoners into classes to study religion, economics, and English. He also conducted religious services. While in prison, he translated several English books into Korean and, in 1904, wrote in Korean "Spirit of Independence," a book which has had many reprintings (one in 1947) and which, reported *Newsweek* in 1943, is "the book all literate Koreans abide by today."

In 1904 a general amnesty of political prisoners was declared, and Rhee was released. With the help of his father, he traveled to the United States. During his six years in that country, he received a B.A. degree from George Washington University, an M.A. degree from Harvard University, and a Ph.D. degree from the theological department of Princeton University, having written for his doctorate (1910) a thesis, *Neutrality as Influenced by the United States*, published in 1912. During his years at Princeton, the Korean reportedly was influenced by Woodrow Wilson, who ended his administration as president of Princeton in the year Rhee received his degree.

Syngman Rhee returned to Korea in the fall of 1910 or 1911 as a YMCA official. While in his native land, he organized and was the leader of the Korean Christian Student Movement and was a missionary teacher for the Methodist Mission Board. Still concerned over the fate of his country (Japan had, by now, openly occupied Korea and changed its name to Chosen), Rhee continued his political activities, organizing resistance to the Japanese in whichever part of the country he traveled to do missionary work. Discovery by the Japanese forced him again to leave Korea.

This time Rhee fled to Hawaii, where he founded the Korean Methodist Church and the Korean Christian Institute, which school he directed until 1939. In Hawaii, too, he established the *Korean Pacific Magazine*. In the meantime, he remained in contact with the independence movement in Korea. On March 1, 1919, a group of Korean rebels signed the Korean declaration of independence. On that date, simultaneous meetings and demonstrations were held throughout Korea. The year 1919 is remembered as the year of a Japanese purge of Korean Nationalists. Secret elections had been held, and delegates met in Seoul to establish a Korean Provisional Government. Syngman Rhee was unanimously elected President, and a republican form of government was adopted by constitution.

Early in 1920 Rhee went to Shanghai to direct this Korean government, which convened yearly. The government organized guerrilla resistance to the Japanese in Korea, and

later, when the Japanese invaded Manchuria, aided the Chinese in their fight. At one time, according to Robert T. Oliver, an American authority on Korea, thirty thousand men were fighting for China as representatives of the Korean Provisional Government. In 1924 the provisional group began to decline as a result of a factional split. It was revived, however, in Chungking in 1940, having, during the sixteen intervening years, undergone a series of reorganizations. Rhee was regularly re-elected President; he held this post until 1941, when he relinquished his duties to Kim Koo, another Korean independence leader.

The history of the Korean Provisional Government has been partly characterized by its attempts to win recognition for itself, particularly from the United States. "America is the hope of Korea," Rhee wrote in 1944. "Although the American people have not realized it, they as well as the people of the other democracies are in a very real sense responsible for Korea's plight. They are responsible because they have ignored, for the most part unwittingly, Japanese treachery toward Korea . . . because they have permitted their Governments to pursue policies that have directly and indirectly facilitated Japan's exploitation of Korea." To aid this striving for recognition (which was not obtained), he established the Korean Commission in Washington, D.C., "to serve as a diplomatic agency of the exiled Korean Republic." Supported by donations from Koreans in the United States, the commission, on which Rhee serves as chairman, in 1947 continued to function as the quasi-diplomatic agency of the Representative Democratic Council, an American Military Government-sponsored group. (The Provisional Republic of Korea was voluntarily suspended in October 1945.) During World War II, the commission and the government unsuccessfully sought to have the republic accepted on the same basis as governments-in-exile, which received Lend-Lease aid, and to have it represented at the San Francisco Conference which drafted the United Nations Charter. Rhee is also head of Dong Ji Hoi, the largest group of Koreans in the United States.

In 1945, after the defeat of Japan, Rhee returned to Korea with the sanction of the United States War Department. At a liberation demonstration in Seoul, reported the *Christian Science Monitor*, "Dr. Rhee suddenly was brought from behind a screen for his first public appearance in Korea in a quarter of a century. The crowds went wild." But the occupation Government (Korea, as a once Japanese-dominated country has been occupied, since the end of the war, by the United States and Russia, a measure the people reportedly resent deeply) found that Rhee and his followers disagreed with some of the American policies for Korea. One point of objection is the division of Korea at the 38th parallel into a zone administered by the United States (southern Korea) and one administered by Russia (northern Korea). Rhee strongly opposes the establishment of a trusteeship for Korea (a 1945 agreement with Russia provided for a four-

Edmonston Studio

SYNGMAN RHEE

power trusteeship for a period up to five years). Such a step, Rhee believes, would result in eventual Communist domination of Korea. Instead of compromise with the Russians (Rhee has refused to cooperate with the Joint Commission working toward a Russo-American agreement on the future government of Korea), Rhee wishes to see established an independent government in the south, with continued military occupation by the United States (but with no political interference). This government, he hopes, can eventually, through the U.N., force the Russians from the north. He has asked the Joint Commission for a definition of trusteeship (he believes this should be confined to "aid and assistance") and democracy (because, he asserts, Russians and Americans define the word differently).

Early in 1946 the New York *Times* summarized the program proposed by Rhee, who has been considered an extreme Rightist. This would include confiscation of all Japanese- and traitor-owned property and the redistribution of such property to the peasants on the basis of their ability to develop the land; purchase of large estates for similar redistribution; nationalization of heavy industries, mines, forests, public utilities, and banks; state supervision of all commercial and industrial enterprises; a planned economy; a program of progressive taxation; a program of social security, unemployment insurance, and minimum wage protection; compulsory education; compulsory military service; restrictions on the employment of women and children, and universal suffrage. Shortly after his return to Korea, Rhee was appointed chairman of the Representative Democratic Council of South Korea. A year later, however, his name was not on the list of members of the Coalition Committee. Rhee's followers attribute this to his vigorous anti-Communist campaign; they feel that General

RHEE, SYNGMAN—*Continued*

John R. Hodge⁴⁸, Commander of the American Army of Occupation in Korea, has encouraged, rather than attempted to curb, dissemination of Communist propaganda in southern Korea. In November 1946 forty-three of the forty-five elective seats in the Interim Legislature were won by Rhee's followers (of the fifty-four political parties in Korea, several claim Rhee as their leader); General Hodge, authorized to appoint forty-five additional legislators, chose one Rhee follower and forty-four of his opponents, according to a Korean Commission statement.

Reports from Korea concerning the degree of Rhee's influence have differed, although most concur with *World Report's* statement: "While many disagree with him politically, there are few who would deny his pre-eminence as Korea's first citizen." In March 1947 Gordon Walker, *Christian Science Monitor* correspondent, wrote that Rhee and Kim Koo "hold the major pursestrings, control the powerful Korean police, and exercise more political influence than any group south of the 38th parallel," but two months later Walker found that there were signs that Rhee "is losing support as leader and spokesman for the Rightist parties." Some sources feel that his advocacy of an independent southern Korea has turned some followers from him, but in May 1947 William H. Newton (New York *World-Telegram*) asserted, "If there was a general election tomorrow in South Korea, there isn't much question that Dr. Rhee would be elected President." His "anti-Communism and anti-occupation ideas," remarked Neal Stanford in the *Christian Science Monitor*, "are credited with causing not a little of Korea's present-day troubles." To this same anti-Communism some observers have attributed the reversal of political opinion in southern Korea to the anti-Communist.

Rhee's strength will be tested not later than March 1, 1948, as a result of a United Nations General Assembly decision. Troops are not to be withdrawn until this provisional Government has united the two zones and made the necessary arrangements with the occupation forces. The U.N. dispatched a commission to supervise the balloting; Rhee, a Scripps-Howard writer (Parker La Moore) reported, is insistent on holding elections before the commission arrives. Pending the U.N.-sponsored election, a pro-Soviet Government has been established in Northern Korea.

Rhee's ideas are expressed in a number of his articles, speeches, and pamphlets. He is also the author of *Japan Inside Out*, published (in English) in 1941. While the statesman was in Geneva, outlining Korea's case against the Japanese at the League of Nations, he met Miss Francesca Donner, an Austrian. They were married in 1934. (His only son, by an earlier marriage, died in 1915.) The Korean, who is small of stature, has been described as "handsome, even dapper," and "gentlemanly." He makes a practice of taking a walk daily, and enjoys an occasional game of tennis. Fond of classic Chinese poetry, Rhee also finds relaxation in composing poems in Chinese. Since the

days of his prison torture, he has a habit, when excited, of blowing on his once-injured fingers.

RICE, PAUL NORTH Feb. 9, 1888- Librarian

Address: b. c/o New York Public Library, 476 5th Ave., New York 18; h. 301 Cliff Ave., Pelham, N.Y.

Paul North Rice, chief of the reference department of the New York Public Library, was installed as president of the American Library Association on July 4, 1947. The American Library Association, which was founded in 1876 in Philadelphia at the United States Centennial Exposition, is a national organization for professional librarians; its most important problem, in the light of present-day affairs, is said by its new president to be the "promotion of international understanding" in the United States. Active in library work and organizations for many years, Rice was chairman of the committee of the Association of Research Libraries which prepared the 167-volume *Catalog of Books Represented by Library of Congress Printed Cards* (1942-46).

Born February 9, 1888, in Lowell, Massachusetts, Paul North Rice is the son of Charles and Miriam Owen (Jacobs) Rice. The paternal branch of his family has lived in Massachusetts since 1640, when Edmund Rice settled there. His grandfather was librarian of the Springfield (Massachusetts) Public Library for more than thirty years; his father, a Methodist minister, served in various churches in the Boston area. Two brothers of Rice's were to become lawyers.

Rice was reared in the Massachusetts towns of Lowell, Cambridge, and Springfield. "All of the male Rices for several generations," he has said, "have attended Wesleyan University, and a considerable number of them have been, at one time or another, connected with the teaching faculty." In keeping with family tradition, Paul North Rice entered that university, in Middletown, Connecticut, from which he received his B.A. degree in 1910. Choosing his grandfather's profession for himself, Rice became a student at the New York State Library School in Albany. In 1911 he became a reference assistant at the Ohio State University. He returned to the library school for a year's further study in 1913, the year in which he also received his New York State certificate as a librarian. The year 1914 marked his first employment in the New York Public Library, as a reference assistant at the information desk of the New York Public Library, in which library he was promoted to the post of chief of stacks in 1916.

When the United States entered World War I, the librarian joined the United States Army, serving, successively, as a private, sergeant, and second lieutenant (1917-19). After his discharge from the Army he returned to the New York Public Library to become first assistant at the information desk (July-December 1919), chief of the accessions division (January-June 1920), and chief of the preparation division (1920-27).

In 1927 Rice went to Dayton, Ohio, as librarian of that city's public library. The depression years were particularly difficult for Ohio public libraries, owing to a change in the source of tax support in 1929. There were several months during his tenure in which the library was without operating funds and a longer period in which it was faced "with the loss of all tax support." Largely through Paul North Rice's administration of the office of president of the Ohio Library Association (1930-31) and of that of chairman of the association's legislative committee, these legislative financial difficulties were remedied. Upon his resignation in 1936 the library's board of trustees adopted a resolution which read, in part: "He has combined in his executive contribution the qualities of the scholar, the able businessman, and the expert librarian; he has made himself invaluable as a citizen of Dayton through his devotion to every high ideal of civic and community life."

The librarian left his Dayton post to become director of libraries at New York University. His new position was created by the demand for coordination of the various libraries serving the different schools of the university. By 1936 the growth in the student body and the expansion of the different schools of New York University demanded greater library facilities for the university. To give coordination to the various libraries serving the different schools, the office of director of libraries was created and Paul North Rice was called upon to administer it.

Then, in 1937 Rice entered upon a new post, as chief of the reference department of the New York Public Library. This department, which occupies most of the classical building on Fifth Avenue, serves about one and a half million readers a year. Its holdings consist of three and a half million books, pamphlets, and periodicals. Their housing requires eighty-five miles of shelves and the employment of 515 people. The public catalogue, with its six million reference cards, has been called "the most valuable scholastic tool in this hemisphere."

Rice was an instructor in public library administration at the Columbia University School of Library Service during the 1938-39 term, and he is the author of articles published in professional library periodicals. The *Catalog of Books Represented by Library of Congress Printed Cards*, prepared by a committee under his chairmanship and completed in 1946, is "a photographic reproduction of a series of nearly two million cards as they stand in a depository card catalogue." Archibald MacLeish⁴⁰, in the introductory remarks to the 167 volumes, states:

Fabian Bachrach

PAUL NORTH RICE

"This enormous work is not merely a catalogue of books, but a source book for the study of catalogues . . . a kind of kitchen midden of American librarianship." Of much importance to library administrators is the *Classification and Pay Plans for Municipal Libraries* (1938), which was prepared by the American Library Association board on salaries, staff, and tenure, on which Rice served as chairman (1937-40) and as member (until 1942).

As part of his work in the library field, the New York librarian is active in the American Library Association, which he had joined in 1912. During 1936-38 he was an ex-officio member of the A.L.A. council, serving from 1938 on as council member. He has also been executive assistant on the A.L.A. cooperative cataloging committee (1931-32); chairman of its second activities committee (1933-35), its committee on salaries, staff, and service (1936-37), its library buildings round table (1936-37). From 1942 to 1947 he was a member (and chairman from 1944 to 1945) of the A.L.A. board on resources of American libraries.

At the 1947 annual congress of the American Library Association, at which Rice took office as president, he expressed the belief that it might be necessary for librarians "to desert [their] boasted neutrality" in this atomic era. "American public libraries have always prided themselves on being neutral on all subjects. We have attempted to have the best books on both sides of controversial subjects. We are proud of our neutrality on matters of religion, politics and even the arts; and we may well be. Many of us believe that another war may mean the end of civilization. Many of us are sure that the only hope is international cooperation. If we believe that, do we dare make our libraries neutral as between an isolationist or an international point of view? Must we not follow the splendid example of the Enoch Free

RICE, PAUL NORTH—*Continued*

Library in helping to convince the people of Baltimore that in an atomic age the only choice is destruction or internationalism?"

At the same conference the A.L.A. council voted to support UNESCO in developing public libraries abroad, and urged Congress and Secretary of War Patterson to see that the Army library service's program was "supported from appropriated funds with librarians to be given civil service status." Of the UNESCO program, A.L.A.'s new president said: "It is natural that in matters of international cooperation we librarians view the United Nations Educational, Scientific and Cultural Organization with ardent hope. It is good to know that the United States National Commission for UNESCO will act with the A.L.A. in public library development and popularization."

Other positions Rice has held include that of treasurer (1916-17), vice-president (1938-39), and president (1939-40) of the New York Library Association; first vice-president of the New York State Library School Association, Inc. (1926-27). In 1938 he became a member of the American Library Institute's executive committee, in 1940 of the advisory committee, in 1942-46 was executive secretary of the Association of Research Libraries. He is a fellow of the American Library Institute, and a member of the New York Library Club, the Rotary and Grolier clubs, Phi Beta Kappa, and Phi Nu Theta. His church is the Methodist. As for his political affiliation, he has said: "I am a registered Republican but bolted the ticket with my first vote and voted for Theodore Roosevelt and the Bull Moose Progressives, and since then have bolted the ticket enough so that I never yet have voted for anyone who was elected President."

Paul North Rice was married to Genevieve Briggs on July 17, 1924. They and their children, Rachel, Lenore, Horace, and Charles (whose second names are Briggs) live in a New York suburb. Rice has been described as a man with "infectious enthusiasm, a hunger for work, a balance of judgment, and a wealth of ideals." Weighing 190 pounds, he is five feet seven and a half inches tall. His eyes are gray-blue; his once brown hair is white. Recreations of the librarian are reading, swimming, and walking. For twenty-five years he and several friends have taken an annual hike over three of the highest mountains of the Catskills. "With the years," says Rice, "the mountain trails have become less rugged, thus accommodating our less rugged physiques."

Who's Who in America, 1946-47

Who's Who in Library Service (1943)

RICHARDS, VINCENT Mar. 20, 1903-
Tennis commissioner; businessman

Address: b. c/o Dunlop Tire and Rubber Corp., 500 5th Ave., New York 3; h. 155 Garth Rd., Scarsdale, N.Y.

The first commissioner of the World's Professional Tennis League is Vincent Richards, who became a national tennis champion at the age of fifteen, and later was four times National Professional Singles Champion, and seven times Professional Doubles Champion. Richards, who is assistant to the president of the Dunlop Tire and Rubber Corporation, accepted the commissionership of the league on a non-salary basis in March 1947.

Vincent Richards, born in New York City on March 20, 1903, is the son of Welsh-descended Edward A. Richards and Irish-descended Mary (McQuade) Richards. Reared in the suburban city of Yonkers, where his father was a well-known contractor, young Vinnie earned spending money as a newspaper boy. He began to play tennis at the age of eight, entered his first tournament at twelve, and soon was traveling to other cities to play as a member of a boys' team representing New York. Richards attended Fordham Preparatory School, the Jesuit institution in New York, was a student at Fordham University for two years, and studied at the Columbia University School of Journalism in 1922.

At fourteen Vinnie Richards won the 1917 National Boys Outdoor Singles Tournament. Bill Tilden, ten years his senior, defeated the boy in a tournament and then asked him to be his partner in the next summer's contest for the adult National Doubles Championship. This doubles title, which was Tilden's first important victory, was held by Richards concurrently with several other national championships. In the wartime year of 1918, the fifteen-year-old schoolboy also won the Indoor Singles crown, the Junior Doubles (with Harold Taylor) and the Boys Outdoor Singles. In 1919, the year of his graduation from Fordham prep, he advanced to the Junior Outdoor Singles Championship, retained the Indoor Singles, and won the Men's Indoor Singles and three doubles titles—Junior Indoor Doubles with Frank Anderson, Mixed Doubles with Marion Zinderstein, and Indoor Doubles with Tilden.

Altogether, the New York student won the Indoor Doubles five times with three partners; the Indoor Singles and Men's Indoor Singles three times each; the National Doubles three times with Tilden and twice with R. Norris Williams; the Mixed Doubles twice (once with Helen Wills); and the National Clay Court Doubles once, with Ronald Roberts. Chosen for five Davis Cup squads, he competed for the highest team trophy in international tennis; and he won the Men's Singles and, with Francis Hunter, the Doubles title in the Olympic Games of 1924, at Paris. (Richards did not succeed, however, in reaching the finals of the National Singles Championship Tournament.) The *Outlook* remarked of Richards in October 1925, "He is noteworthy for his good sportsmanship in a game where good sportsmanship is taken for granted."

The author of many articles on tennis and tennis players, Richards had an eight-thousand-

dollar annual contract with Hearst's King Features syndicate in 1924-27, which enabled him to play tennis the year round—or, as he put it, to be "a first-class tennis bum." (He was also an Equitable Life Insurance agent in 1925-26.) Then the United States Lawn Tennis Association forbade players to report on tournaments in which they were competing, on pain of losing their amateur standing and being barred from further championship competition. "In the case of Richards," commented Herbert Reed two years later (in an article, "The Lost Leader"), "the rule was most exasperating. He was not one of those who sold 'ghosted' stories of the day's play. . . . [Journalism] was his profession. Tennis was his pleasure, and it is today. No amount of pay for his tennis play or his instruction can destroy the unmistakable amateurism that is in him."

In October 1926, after a season in which he and Tilden represented the United States on French tennis courts, and he and Williams won tournaments culminating in the National Doubles, twenty-three-year-old Richards signed a contract to play professional tennis for the promoter C. C. ("Cash and Carry") Pyle. As a result, the USLTA ranking committee refused to consider his 1926 amateur record for ranking. Contrary to predictions, the three-month exhibition tour Richards made with Suzanne Lenglen, Mary K. Browne, and three men stars was extremely profitable—Mlle. Lenglen's share was reported as a hundred thousand dollars, and Richards' as thirty-five thousand. This was the beginning of "big-time" professional tennis. The Professional Lawn Tennis Association of the United States was formed the following year, in September 1927, by Richards and thirteen other "prominent professional tennis educators."

Although prevented by illness from playing for two months early in 1927, Richards won the World's Professional Singles Championship by defeating finalist Howard Kinsey in straight sets that September. "He was over-tennis'd last year [1926] at Forest Hills in the National Singles Tournament," wrote John R. Tunis, "[but] yesterday he had that subtle sense of touch which makes him the greatest volleyer in the world." (Afterward he left for an exhibition tour of Japan.) When Richards successfully defended the title in 1928, Herbert Reed said, "Our lost leader now occupies the lonely eminence of an unbeatable player in his own class." The New Yorker was not entirely unbeatable, however. Runner-up Karel Kozeluh had defeated him decisively for the World's Championship in matches held in Prague, London, and the United States that summer and fall, and in 1929 Kozeluh proceeded to take the American title away from Richards. Then the pair joined forces to win the first National Professional Doubles crown, overcoming Kinsey and Wallace F. Johnson in the finals.

Richards, who recaptured the Singles championship in 1930, announced his retirement that October. Later he wrote, "The money made right after an amateur turns professional is the cream, and what he makes afterward comes

Dunlop Tire & Rubber Corp.

VINCENT RICHARDS

hard in comparison." In his case, however, an additional source of income presented itself. The Dunlop Tire and Rubber Corporation entered the tennis equipment field in 1931, and engaged Vincent Richards to be general manager of its sporting goods division. In 1947 Richards is assistant to the corporation's president, and the Dunlop catalogue lists the Maxply model tennis racket, designed by Richards, who "helped in every stage of its development."

Continuing to tour the professional circuit, the executive won both the Singles and Doubles titles in 1933, the latter, teamed with Charles Wood. When the "pro" rankings were issued that December, there were two lists, with Vincent Richards' name topping the ranking by records, and that of William T. Tilden 2d leading those ranked by "relative playing strength." Richards' other titles have included the 1934 Indoor Doubles, with Bruce Barnes, and the Outdoor Doubles, which he and George M. Lott, Jr., won from singles champion Kozeluh and runner-up Barnes in 1937, and which he and singles champion Fred Perry teamed to take in 1938. That October, when Richards and Perry won the first National Open Doubles Championship, it was calculated that the New York businessman had traveled 1,200,000 miles, played tennis on five continents, and won thirty titles. His name was to appear again on the list of national professional tennis champions as Tilden's doubles partner. In 1940 they were runners-up to Don Budge⁴¹ and Perry.

During World War II, Richards appeared in tennis matches for each of the bond drives, and in the Red Cross Benefit Tournament. He, Tilden, Alice Marble, and George Lyttleton Rogers gave forty-three exhibitions before some fifty thousand servicemen in the summer of 1945, and also played thirty-four times under the auspices of tennis clubs. Twenty-

RICHARDS, VINCENT—*Continued*

seven years, almost to the day, after the first Tilden-Richards doubles victory, the pair won the 1945 professional crown from young Welby Van Horn and Richard Skeen. (An article by Richards about Tilden and their 1936 tour, which had appeared in the August 1937 issue of *Esquire*, was reprinted in *Esquire's First Sports Reader* that year, 1945.) Then forty-three, the sporting goods executive was eliminated by Frank Kovacs in the quarter-finals of the July 1946 Professional Singles tournament; nevertheless, the New York Times's Allison Danzig wrote that Richards played "amazingly fine tennis" and "showed the younger generation . . . how a master takes the ball at a low level or on the half volley and puts it away with his first hit. His forehand was strong and deep, and his first service was almost as effective as it ever was." The next June's "pro" matches at Forest Hills found Richards "calling the play-by-play" for the CBS television system, rather than competing.

In March 1947, announcement was made that Vincent Richards had accepted a one-year contract, without salary, as commissioner of a new organization, the World Professional Tennis League, of which Tony Owen was president. The plan was to put as many as possible of the players under contract, take them off the exhibition circuit, and offer instead a series of thirty to forty regular yearly indoor and outdoor tournaments, similar to the professional golf tournaments. The new league took over the offices and personnel of the Professional Players Association, formed in May 1946 by players who were interested mainly in tournaments and exhibitions, rather than in teaching tennis. It also took over the administration of the National Professional Tennis Championships, which the PLTA and PPA had agreed to hold at the West Side Tennis Club, Forest Hills, Long Island, for five years. Competition was open to members of either association. To enforce his rulings, Commissioner Richards was given the power to order fines and suspensions.

Married in January 1924, Vincent and Claremont (Gushee) Richards live in suburban Scarsdale with their tennis-playing sons, Vincent ("Ricky") and Dean. Their eldest child, Adriane, was formerly a Conover model. In religion, Richards is a Roman Catholic. He holds memberships in athletic and social clubs in New York and Westchester, and much of his leisure time is devoted to tennis, golf, and other sports. Al Laney wrote of the green eyed, light-haired tennis commissioner in 1944. "He is a roly-poly man now [Richards is five feet nine inches tall and weighs 172 pounds], but whenever he can get up there where volleying is done, he still has that lovely touch. You never lose the kind of artistry he has with a racket, because it is something that cannot be learned."

RIDGWAY, M(ATTHEW) B(UNKER)
Mar. 3, 1895- United States Army officer;
United Nations military official

Address: b. c/o United Nations Military Staff,
250 W. 57th St., New York 19; h. Fort Totten,
Long Island, N.Y.

The United States Army representative on the United Nations Military Staff Committee and senior United States delegate to the Inter-American Defense Committee, Lieutenant General M. B. Ridgway gained prominence during World War II as the commander of the Eighty-second Division, one of the first two air-borne divisions to be formed by the United States Army. His parachutists carried out the first large-scale air-borne operation in American Army history in the attack on Sicily, participated in the invasion of France, and crossed the Rhine "on bridges of silk." The General, who commanded the Eighteenth Air-borne Corps during the last year of the war, is regarded as an "outstanding authority on the use and command of air-borne troops."

From the time of his birth at Fort Monroe, Virginia, on March 3, 1895, Matthew Bunker Ridgway has led an Army life. The son of Thomas Ridgway, a United States Army colonel of English descent, and Ruth Starbuck (Bunker) Ridgway, he was reared at the various Army posts at which his father was stationed. Matthew attended the English High School in Boston, Massachusetts; after his graduation from there in 1912, he entered the United States Military Academy at West Point, where he was undergraduate manager of football. On April 20, 1917, the day he received his B.S. degree from West Point, twenty-two-year-old Ridgway was appointed a second lieutenant of Infantry in the Regular Army. Less than a month later, on May 15, 1917, he became a first lieutenant, and on August 5 of the same year he was promoted to the temporary rank of captain, attaining the permanent rank of captain on July 18, 1919. The years that followed saw him rise to major on October 1, 1932; to lieutenant colonel on July 1, 1940; to colonel (temporary) on December 11, 1941; to brigadier general (temporary) on January 15, 1942; to major general (temporary) on August 6, 1942; to lieutenant general (temporary) on June 4, 1945; and to brigadier general of the line (permanent) on November 1, 1945. His nomination to the rank of permanent major general was awaiting Congressional approval at the end of 1947.

After fifteen months with the Third Infantry at Eagle Pass, Texas, where he served during World War I successively as a company commander, regimental adjutant, and as commander of the regimental headquarters company, Ridgway, in September 1918, returned to West Point as an instructor. He subsequently became the executive for athletics there (in September 1921), and then the graduate manager of athletics (August 1922). Later, from June 1924 to his graduation in May 1925 he was a student at the Infantry School at Fort Benning, Georgia, where he applied himself to the company officers course. Receiving his first

assignment overseas, he departed for Tientsin, China, in the summer of 1925 to assume command of a company of the Fifteenth Infantry. Upon his return to the United States the following summer, he was placed in command of Company E of the Ninth Infantry at Fort Sam Houston, Texas; he afterward became its regimental adjutant. From December 1927 to February 1929 he served under Major General Frank R. McCoy⁴⁵ on the American Electoral Commission in Nicaragua, returning to the Central American country in July 1930 for further duty with the commission. In December he proceeded to Fort Clayton in the Panama Canal Zone for service with the Thirty-third Infantry. Between his assignments in Nicaragua, Ridgway had been ordered to Washington, D.C., to work with the Commission of Inquiry and Conciliation, which was concerned with the Bolivia-Paraguay boundary dispute; he had also taken an advanced course at the Fort Benning Infantry School, from which he was graduated in June 1930.

From Panama, where he had been stationed for more than a year, Ridgway in the spring of 1932 was ordered to the Philippine Islands to act as liaison officer to the Insular Government. In this capacity he was technical adviser to Theodore Roosevelt, Jr., the Governor-General. The following year, in August, he was sent to study at the Command and General Staff School in Fort Leavenworth, Kansas. After completion of his studies in June 1935, came an assignment to the General Staff Corps as Assistant Chief of Staff, G-3, Sixth Corps Area, at Chicago, followed by several months of duty with the Second Army. Joining the Second Army as Assistant Chief of Staff, G-3 (operations) in March 1936, he had become Deputy Chief of Staff by the time he left in August of that year for studies at the Army War College in Washington, D.C. Ridgway was graduated in June 1937 and ordered to the Presidio in San Francisco to serve as Assistant Chief of Staff, G-3, of the Fourth Army. Two years later, in May, he went to Brazil on a special mission with Brigadier General George C. Marshall⁴⁶, who was then the Chief of Staff-Designate.

In September 1939, the month that World War II began, Ridgway was detailed to the War Department General Staff in Washington, D.C., to work with the War Plans Division, where he was stationed until January 1942. Upon the activation of the Eighty-second Infantry Division in March 1942, he became assistant division commander and then commanding general of this unit, which held a distinguished World War I record. When the Eighty-second became an air-borne division in August 1942, Ridgway remained in command, accepting the challenge of heading one of the Army's first air-borne units. Flying to North Africa with his division in April 1943, he directed the planning and execution of "the first major night air-borne operation ever attempted by any army"—the invasion of Sicily in July 1943—then led the Eighty-second "in its rapid conquest of the Western half of that island" and "during its outstanding participation in the

Italian campaign" from September to November 1943. In the language of the citation accompanying the Distinguished Service Cross, which he was awarded, the General "from the earliest moments of the Sicilian invasion . . . displayed an uncanny ability for appearing during crucial moments in the advance, and by his compelling leadership and inspiring presence helped his command to hurdle their obstacles and once more to continue the victorious advance."

All had not gone well, however, in the air-borne attack on Sicily: "Antiaircraft gunners, both enemy and friendly, shot down more than a score of the Eighty-second's transport planes," was a *Time* account, and "all but one battalion landed in the wrong spot." Ridgway and others who believed in the possibilities of landing men and equipment by parachute and glider, were able to persuade skeptics not to eliminate the air-borne divisions, which subsequently proved their value in the invasion of France in June 1944. On D-Day Ridgway jumped by parachute to spearhead the assault of his parachutists on the Cotentin Peninsula. "His personal bravery and his heroism," read the citation accompanying the Oak Leaf Cluster added to his Distinguished Service Cross, "were deciding factors in the success" of the Eighty-second, which together with two other air-borne divisions, the 101st and the British Sixth, helped to secure the Normandy beachhead. Following the organization of the First Allied Air-borne Army, the General was placed in command of the Eighteenth Air-borne Corps in August 1944, and in the ensuing months directed operations in the vicinity of Eindhoven, Holland, in the Ardennes campaign in Belgium, in the crossing of the Rhine near Wesel, in the Ruhr "pocket," and in the crossing of the Elbe and the advance to junction with the Soviet troops on the Baltic on May 2, 1945.

In August 1945 General Ridgway returned to the United States with the Eighteenth Corps and shortly before the Japanese surrender that month was flown to the Philippines in advance of his troops to arrange details for its participation in an invasion of Japan. Then, in October of that year he was ordered to the Mediterranean theater of operations, where he remained in command until his appointment as representative of General of the Army Dwight D. Eisenhower⁴⁷ on the Military Staff Committee of the United Nations, the body created by the U. N. Charter to advise the Security Council on military matters. He went to London in this capacity (January 1946) and while there also served as an adviser to the United States civil delegation to the U. N. Assembly. As the United States Army representative on the Military Staff Committee during its New York meetings, Ridgway helped to formulate the eighty-page report, in which general principles for the organization of the armed forces to be placed at the disposal of the Security Council were recommended; it was submitted to the Council on April 30, 1947, after more than a year of committee work.

(Continued next page)

U. S. Army Signal Corps
LIEUT. GEN. M. B. RIDGWAY

The document, wrote Peter Kihss of the New York *Herald Tribune* (May 4, 1947), marked "the first, albeit faltering, step" toward the establishment of an "international police force." Observers pointed out that an international force would not be used against any of the Big Five or any nations supported by them, for as members of the Security Council, they have the right to veto military sanctions. Ridgway's own opinion of the U.N.'s present power to guarantee world peace was not optimistic. In a speech before the Metropolitan Club in New York, he warned Americans not to "think they can confide their military security today to the United Nations. It is our hope and objective for the future, but they must not think it can be done today." While carrying out his duties on the Military Staff Committee, Ridgway was also the senior United States delegate to the Inter-American Defense Board, a post for which he had been selected in March 1946. Small committees of this body were reported to be planning the standardization of the armies of the Western Hemisphere in organization, training procedures, and equipment. Another of Ridgway's duties in 1947 was to serve as military aide to President Miguel Alemán⁴⁶ of Mexico during that official's visit to the United States. At the Pan American Conference, held in Rio de Janeiro in the summer of 1947, Ridgway and Argentinian and Chilean experts defined the Western Hemisphere security zone.

General Ridgway has received thirty-three decorations in all: in addition to those already mentioned, he holds the Silver Star, Bronze Star, D.S.M., Legion of Merit, Purple Heart, and eleven foreign medals. The Army officer was married to the former Margaret Wilson (in June 1947 they were divorced). They have one daughter, Virginia Ann, who is now

Mrs. C. L. Crawford. As is typical of most high-ranking officers, Ridgway lists no political affiliation. His religion is the Episcopal. A *Time* description of the General: "Matt Ridgway looks like a Roman senator and lives like a Spartan hoplite. He is ruggedly built [six feet tall and 190 pounds in weight], has straight dark brown hair sprinkled with gray, dark brown eyes, expressive eyebrows. His face (variously described as 'distinguished', 'handsome,' or 'austere') is deeply tanned and crinkled with the lines natural to an outdoorsman." For recreation he turns to rifle-shooting and hiking. He also likes to fish, hunt, and play tennis. Kipling is one of his favorite authors.

ROBBINS, JEROME Oct. 11, 1918-
Choreographer; dancer

Address: b. 421 Park Ave., New York 22;
h. 17 51st St., Weehawken, N.J.

Choreographer Jerome Robbins expressed the principle which has guided the creation of his four ballets and two musical shows when he told an interviewer that he was striving toward the establishment of "a lyric theater," in which all forms of theater art, drama, music, art, and the dance, would be integrated. When he was twenty-six years old, his first work, *Fancy Free*, was presented by the Ballet Theatre, the New York and touring corps organized in 1940. Since that 1944 debut critics have discussed the originality, sensitivity, and high spirits which characterize his work.

Of Russian-Jewish and Spanish descent, Jerome Robbins was born Jerome Rabinowitz to Harry and Lena (Rips) Rabinowitz on October 11, 1918. (The family name was legally changed to Robbins in 1944.) While Jerome was a child, his parents moved from New York, where their son had been born, across the Hudson River to Weehawken, New Jersey. After graduation from Woodrow Wilson High School in the Jersey community in 1935, Robbins matriculated for a Bachelor of Arts degree at New York University. Lack of money, however, caused him to leave college after a year. At about this time, his sister, who had been trained in dancing while her brother had studied piano, introduced him to Gluck-Sandor, who, with Felicia Sorel, was director and choreographer of Dance Center, a group which gave studio performances of ballet in New York. Without having taken regular lessons in the dance before (he had occasionally attended a class with his sister), eighteen-year-old Robbins was accepted as an apprentice with Sandor and Sorel, and began a series of studies. These, in ten years, included interpretative dancing with Alyce Bentley; Spanish dancing with Hélène Veola; Oriental dancing with Nimura; body correc-

tion with Mensendeicke; ballet with Ella Daganova, Antony Tudor⁴⁵, Eugene Loring, and Platova; and modern dance at the New Dance League, to which he won a scholarship.

Robbins paid for his lessons and gained theatrical experience by appearing in several Broadway shows. In 1937 he had a one-line role in *Brothers Ashkenazi*; in 1938 he appeared in the dancing chorus of *Great Lady* and *Stars In Your Eyes*; in 1939 in the chorus of *Straw Hat Revue* with Danny Kaye⁴¹, and later, in *Keep Off The Grass*. During the summers of 1937-41, he was employed at a Pennsylvania adults' camp as a dancer and there designed and staged two ballets: a farce on classic ballet and a serious dance. In 1940 the dancer joined the corps de ballet of the newly formed Ballet Theatre, with which he made his first solo appearance when Agnes de Mille's⁴³ *Three Virgins* and *A Devil* was introduced in February 1941. In that same season, he was one of the Attendant Cavaliers in Tudor's *Gala Performance*; during ensuing seasons, he was seen as Alfonso in Michel Fokine's⁴² *Bluebeard*, Benvolio in Tudor's *Romeo and Juliet*; and with the corps de ballet in Tudor's *Pillar of Fire* and Léonide Massine's⁴⁰ *Aleko*. "Jerome Robbins was perhaps the single justification of *Helen of Troy* [David Lichine, choreographer], for he managed to carry its collegiate humors into real comedy," wrote John Martin (New York Times) of the young dancer's portrayal of Hermes in this parody on the classic myth.

In the fall of 1942 Robbins first appeared as Petrouchka in the Fokine ballet. Grace Robert in the *Borzoï Book of Ballets* reports thus of Robbins' "new and fascinating revelation of a familiar character": "His Petrouchka had shed some of its pathos for a spirit of protest. Where other Petrouchkas looked with sad submission at the pathetic rag-doll hands . . . Robbins' puppet had an angry bitterness that displayed nothing of resignation." The following fall Robbins appeared in the *Fair at Sorochinsk* and *Billy the Kid*.

On April 18, 1944, the ballet, *Fancy Free*, with music by Leonard Bernstein⁴⁴ and choreography by the twenty-six-year-old Robbins, opened at the Metropolitan Opera House. This "rare little genre masterpiece—young, human, tender, and funny" (so John Martin described it) was an immediate success. The reviewer thought of it as "utterly colloquial. . . . Though it employs jazz idioms at will, scorns nothing in the way of sidewalk gesture and dance hall practice, and utilizes the technique of the popular theater . . . it is, nevertheless, an artistic entity and a modern ballet in the best sense of the phrase."

The Bernstein-Robbins combination expanded early in 1945 to include two other newcomers to the theater, Betty Comden⁴⁵ and Adolph Green⁴⁵. Using the three-sailors-on-leave idea presented in *Fancy Free*, the four created, under the aegis of Paul Feigay and Oliver Smith, *On the Town*, "a kind of entertainment that is much too rare in New York," said Wolcott Gibbs, of the *New Yorker*. The *Herald Tribune* gave "a good

JEROME ROBBINS

portion of the credit [for the success of the show] . . . to Jerome Robbins for his choreography. The entire show is fused together by movement which not only ties scene after scene but which serves like a streamlined Greek chorus mutely setting the mood and pitch of an episode."

In June 1945 a new ballet, *Interplay*, by Robbins (with score by Hugh Martin) was included in Billy Rose's⁴⁰ *Concert Varieties*, and in October was added to the repertoire of the Ballet Theatre. "With *Interplay*, the young choreographer [carries] over the contemporary idiom, high spirits and distinctively American flavor . . . into a more formalized and abstract composition. . . . Robbins has succeeded in combining these elements [classic and jazz] in his dance patterns with an ease and seeming artlessness that is disarming," observed Robert Hague (*PM*) of the ballet. Jerome Robbins, Miss Comden and Green, making use of the music of Morton Gould⁴⁵, in December 1945 introduced *Billion Dollar Baby*, "a near hit" (*Newsweek*). While Wolcott Gibbs described Robbins' ballets as being "glumly moral," and was "seriously disappointed" in them, *PM*'s Louis Kronenberger⁴⁴, who, like others of his colleagues, saw some fault in the show as a whole, thought Robbins "probably the hero of the evening, having contrived a lot of lively and amusing dancing," an opinion in which two other critics concurred.

Jerome Robbins turned to the serious mood when he created *Facsimile*, which had its première with the Ballet Theatre in 1946. "He is working here with an idea more subtle and challenging than in his previous works, but he makes his points with clarity," was the opinion of Irving Kolodin (New York Sun). Not all critics were in accord as to *Facsimile*'s success in achieving its aim. John Martin commented that "in its terse, honest, and unrelieved morbidity, it shows itself to be a

ROBBINS, JEROME—*Continued*

youthful work." (The music for *Facsimile* was composed by Leonard Bernstein.)

In the spring of 1947 Robbins' *Pas de Trois*, a *divertissement*, was given its first performance by the Original Ballet Russe (the group presented by S. Hurok⁴¹.) A satire on ballet as "seen so keenly through his [Robbins'] gently malicious lenses," it "lampoons the figurations, attitudes and traipsings-about of classic adagio as indulged in by a seedily grand ballerina and her two-not-always helpful cavaliers." Robbins used as a score Berlioz' *Damnation of Faust*. Another satire on classic ballet, *Summer Day* (danced to Prokofiev's⁴² *Music for Children*) was "the hit of the evening" at *Theater Music of Two Lands*, a music and dance program sponsored by the American-Soviet Music Society. Choreographer Robbins danced the male lead.

Jerome Robbins, with Colonel Jay C. Flippen, also designed an eight-minute vaudeville episode for Edward Chodorov's⁴⁴ drama, *Common Ground*. Having signed with Samuel Goldwyn as a dance director and choreographer, Robbins plans to stage some dances for the films. At the end of 1947, rehearsals had begun for the stage presentation of *Look Ma, I'm Dancing*, based on a one-act ballet play by Robbins, and *'Bye 'Bye Jackie*, which the Theatre Guild had intended to produce. Robbins is choreographer, codirector, and co-author of the projected musical. Robbins staged the dances for *High Button Shoes*, which opened in the fall of 1947. With other critics concurring, Richard Watts, Jr., commented in the *New York Post*: "As one who has never been particularly hospitable to the ballet in musical comedy, I hasten to report that the hero of the evening is Jerome Robbins, who staged the dances. There is more humor and unconventional inventiveness and less stuffiness in Mr. Robbins than in most directors of the pirouette." Robbins was especially complimented for his satire on the Mack Sennett motion picture comedies; William Hawkins suggested that this should be added to the repertory of the Ballet Theatre.

For his choreography, in 1945 Robbins received the Donaldson award, based on the votes of *Billboard* readers. Like many ballet dancers, Jerome Robbins is "small and wiry". He has "bright" brown eyes and a "sharp face." Aside from swimming and traveling, his interests lean toward the artistic: visiting museums and galleries, and painting.

ROBINSON, JACK ROOSEVELT See Robinson, Jackie

ROBINSON, JACKIE Jan. 31, 1919- Baseball player

Address: b. c/o Brooklyn Dodgers, 215 Montague St., Brooklyn 2, N.Y.; h. 1588 W. 36th Pl., Los Angeles, Calif.

A twenty-four-letter athlete in his student days, Jackie Robinson is said to be the only person ever selected to play in the College All-Star games in both football and basketball. In 1945, at the age of twenty-six, ex-Lieutenant Robinson made baseball history as the first Negro to be offered a contract in modern-day Organized Baseball. In 1946 he ended his first season in the top-ranking minor International League as its batting champion and leading second baseman; and in 1947, as first baseman of the Brooklyn Dodgers, he was the "Rookie of the Year."

Born in Cairo, Georgia, on the last day of January 1919, the youngest child of Jerry and Mallie (McGriff) Robinson was named Jack Roosevelt Robinson. He has no memory of his father; he and his sister and three brothers were reared by their mother and uncle in Pasadena, California, to which they were taken when Jackie was eighteen months old. Mrs. Robinson worked at "odd domestic jobs." The boy delivered newspapers, collected junk, sold "hot dogs" at sporting events in near-by Rose Bowl, and did whatever other odd jobs he could find, to help in the family's support. In his free time he followed the example of his brother Mack, an athlete who once set a world's record for sprinting and was second in track to Jesse Owens at the 1936 Olympic Games.

Jackie Robinson starred in football, basketball, baseball, and track at the John Muir Technical High School until his graduation in February 1937, and then at Pasadena Junior College. To the disappointment of the youth's family, Robinson maintained only the minimum scholastic average necessary to be eligible for varsity athletics—but he set a record for the running broad jump of 25 feet 6½ inches; for basketball, of 28 points in one game (in which he did not play full time); and in his second year he had the highest batting average of all junior-college players, an extraordinary .466.

On the football team of the University of California at Los Angeles, which he entered on an athletic scholarship, Robinson averaged twelve yards' gain per carry and led the country in yardage of punts returned. Playing on the same team with All-American end Kenny Washington, he was mentioned in an article of Kyle Crichton's as the greatest prospect on the West Coast in 1939, and drew several nominations for All-America selections in 1940 and 1941. A football injury to Robinson's leg did not prevent him from scoring 148 points at right forward during the 1939-40 basketball season, nor from leading the Pacific Coast Conference scorers two successive years. In his first college baseball game, he stole five bases, including home. After brief tennis practice he went to the semifinals of a national competition for Negro players; and "the first time he ever picked up a golf club, he fired 99."

In 1940 Robinson won the Pacific Coast Conference broad jump title with 25 feet, and went on to take the National Collegiate championship with a leap $1\frac{3}{4}$ inches shorter.

Robinson left college in his junior year and took a job as assistant athletic director at an NYA camp to support his mother (Mack was married and an elder brother had died). After playing in the All-Star football game of August 1941, he turned professional and played a dozen-game tour with the Los Angeles Bulldogs—he heard the bombs fall on Pearl Harbor from the ship on which the team was returning from Hawaii.

Drafted into the Army in April 1942, the twenty-three-year-old athlete was transferred to the cavalry and enrolled in Officer Candidates School, winning his second lieutenant's bars in November. For thirty-one months he served overseas as a morale officer, having been assigned to limited service because of "football ankles." After his discharge from active service as a first lieutenant in early 1945, Robinson coached for a semester at the Samuel Houston College for Negroes in Austin, Texas; he set up its first complete physical training program and coached the basketball team to the city championship. Many of his athletic medals and trophies remained on exhibit there after Coach Robinson left to accept a four-hundred-dollar-a-month position with the Kansas City Monarchs of the Negro American Baseball League, which trained in near-by Houston.

With the Monarchs, shortstop Robinson batted .340 and fielded "sensationally" (adverb from *Time*, November 5, 1945) in 100 games of the 1945 season. In an exhibition game with Bob Feller's⁴¹ white All-Stars, Robinson hit the great pitcher for two doubles. Early in the season the shortstop was brought to Boston for a tryout with the major-league Red Sox. When Robinson received an offer from Organized Baseball that August, however, it was not from the Red Sox, but from Branch Rickey⁴² of the Brooklyn Dodgers, who proffered a contract with the Montreal Royals, the Dodger minor-league subsidiary, which is graded AAA. This first break in baseball's seventy-year-old exclusion policy was a momentous decision for both men, and Robinson gave the matter much serious thought before accepting the six-hundred-dollar-a-month contract and thirty-five-hundred-dollar bonus for signing (figures from Rickey).

Robinson's signing, coming as it did after a long campaign to end anti-Negro discrimination in the national game, attracted nation-wide attention, and articles and pictures of him appeared in a number of magazines. To observers who felt that players from Jim Crow States would resent the presence of a Negro among their teammates or opponents, Robinson pointed out that he and Kenny Washington had played football against Southern colleges without incident, and that he had found the several white Southerners of the 1941 All-Stars to be companionable teammates. Persons and periodicals which ordinarily gave little attention to sports commented favorably on Robinson's en-

Press Assn., Inc.

JACKIE ROBINSON

try into baseball, among them the editorial pages of the *New York Times* and the *Saturday Review of Literature* (November 24, 1945). Robinson himself, deeply conscious that future opportunities for Negroes in baseball would depend in large measure on his personal success as the pioneer, told an interviewer: "Anybody who says I can't make it doesn't know what I've gone through and what I'm prepared to go through to stay up" in the big leagues.

From November 1945 to January 1946 Robinson was in Venezuela, playing a twenty-four-game exhibition tour with the Negro All-Stars. When he arrived at the Royals' Florida training camp in March, reporters and cameramen from all over the country were waiting for him. Rickey had placed four more Negroes under contract, and one of them, pitcher John Wright, was also assigned to Montreal, but Robinson, as a "first," received far more public attention.

Robinson refused an offer of a higher salary from Jorge Pasquel's⁴³ Mexican League, although in Mexico he as a Negro would have faced no problem of possible embarrassment or segregation. Another source of pressure, besides the strain of being constantly in the full glare of publicity, was the fact that Robinson had to learn a new baseball trade: he was tried out at first and second base and assigned to second, "where spikes fly sharpest."

Of Jackie Robinson's International League debut, an exhibition game against the parent Dodgers in Florida, Bob Cooke wrote, "The customers viewed Robinson's appearance as though it were an everyday occurrence and seemed more anxious to cheer him than to find fault with any discrepancies in his ability." Before the end of the month, however, the Royals had canceled scheduled games because the towns of Jacksonville and Deland would not permit

ROBINSON, JACKIE—*Continued*

"mixed athletics," and the team would not play without Robinson.

When the Royals opened the season in Jersey City's Roosevelt Stadium on April 18, 1946, Jack Roosevelt Robinson made what one writer termed "a brilliant personal triumph." Another reporter called it "one of the most sensational debuts any ball player ever made in any ball game," and added that Robinson "dazzled a capacity crowd of twenty-five thousand," batted .800, scored four times, "faultlessly" handled six of seven chances, had a hand in seven of the fourteen Montreal runs, and "put on one of the most amazing exhibitions of baserunning to be seen in this Jersey ball park in many, many years."

After this good start, Robinson ran into a slump. "I was trying too hard," he has explained. Despite old football injuries which kept him out of thirty games, he pulled himself up to a .378 batting average later in the season, and ended with a season's average of .349, the highest in the league. He stole 40 bases, tied for scoring the most runs (113), and led the second basemen by fielding .985, making only 10 errors in 119 games. He and shortstop Al Campanis formed the league's top double-play combination. At headquarters in Montreal, sports writers dubbed him "the new Babe Ruth"⁴³ despite their dissimilarity in style of play. After taking the league championship in the "Shaughnessy System" playoffs, Montreal went on to the Junior World Series, in which, according to Arch Murray of the *New York Post*, Robinson "beat a powerful Louisville club all but singlehanded."

After the season, Robinson went barnstorming with his own team of leading Negro players and Montreal's Campanis and Marvin Rackley in a fourteen-game series with Charlie Dresen's star-studded All-National Leaguers. Back in Los Angeles that November, he joined the highly regarded Red Devils basketball team. In his first two professional basketball games, Robinson scored twenty-three points, two of them by a spectacular fifteen-foot basket thrown from the floor after he had fallen. Meanwhile, Dodger President Rickey announced his decision to shift the Dodger-Montreal training base to Havana in 1947, thus avoiding Florida's segregation law. "It is no secret," wrote a sportswriter in March 1947, "that the main purpose of Montreal's eleven games with the Dodgers this spring is to acquaint Brooklyn players with Robinson's talent and prove to them that he will be a valuable asset to the parent club." On April 11, 1947, Jackie Robinson affixed his signature to a National League contract, reportedly without a glance at the salary figures.

In his first official major-league game, Robinson drove in three runs while going hitless and handled fifteen chances without an error. All reports agreed that the rookie infielder had been so burdened with public attention that he had little chance to concentrate on his work. St. Louis was the one league city where the team's hotel refused to accommodate him. On the Dodgers' early-season trips to the

Midwest, attendance was so much higher than usual that Rickey reportedly hired a statistician to find out how much of it was due to Jackie Robinson. By September, when the Dodgers were considered certain to win the pennant, the hubbub created by Robinson as a novelty had largely died down, but he was much discussed as a ballplayer.

When Jackie Robinson was named "Rookie of the Year" by the *Sporting News*, the editor commented that the choice was made on the basis of "stark baseball values . . . his hitting, his running, his defensive play, his team value. The sociological experiment that Robinson represented, the trail-blazing he did, the barriers he broke down, did not enter into the decision." (Both Rickey and Robinson had been given awards for "dramatic contributions to the struggle of the Negro people for an all-embracing freedom." After the season, Robinson agreed to play in "Courage," an independently produced moving picture dealing with juvenile delinquency.)

Before the season closed, a "Jackie Robinson Day" was held at Ebbets Field. In discussing the Dodgers' achievement in winning the National League pennant, Tom Meany (*PM*) wrote, "It was Jackie Robinson who set the keynote for the Dodgers this year. The Negro flash is the most daring base-runner shown in the majors in many seasons. His antics when he gets on base so upset the pitcher that Jackie is worth ten or twenty points to the average of the fellow following him in the batting order." Grantland Rice asserted, "He is the best man on the bases that baseball knows today." In his first World Series (which the Dodgers lost 3-4) the rookie also distinguished himself. He was runner-up in the sportswriters selection for first baseman on the Associated Press's mythical All-Star baseball team.

Robinson, who in 1947 was at work on an autobiography and on another motion picture ("Brooklyn, USA"), was runner-up to Bing Crosby⁴⁴ in a poll taken by Jimmie Fidler to discover the most popular person in America. A well-built six-footer, Jack Robinson is described as "boyishly good-looking." His best playing weight is 185 pounds. Exceptionally large, strong hands and speedy, graceful motions contribute to his "flashy, eye-catching, crowd-pleasing" style of baseball. The athlete is described as high-strung but even-tempered, and as modest and intelligent. Los Angeles is the home of the Robinsons—the player, his wife, who was Rachel Annetta Isum, and their son, Jack Roosevelt, Jr. Mrs. Robinson's mother lives with them. Rachel Robinson, a U.C.L.A. graduate, worked as a trained nurse before their marriage in February 1946. Robinson, Sr., has memberships in the Pasadena branch of the American Legion and in the Pasadena Community Athletic Club. "Robbie," as he is also called, likes all sports in season and is proud of having played golf with his hero, Joe Louis⁴⁵. A Methodist, he does not drink or smoke. He hopes eventually to work with boys and feels that his activities have given him "an ideal background to help the boys." Above all, he has been influenced, in his words, by an "earnest desire to contribute

to the advancement and recognition of the Negro race."

ROOKS, LOWELL W(ARD) Apr. 11, 1893- International relief official; former United States Army officer

Address: b. c/o UNRRA, 1344 Connecticut Ave., N.W., Washington 25, D.C.; h. 1012 26th St., S., Arlington, Va.

The operations and training director on General Eisenhower's⁴² staff during World War II, Major General Lowell W. Rooks, became in 1947 director general of the United Nations Relief and Rehabilitation Administration with the task of bringing to a close the greatest relief program in history.

Lowell Ward Rooks is of American pioneer background. The forebears of his mother, who was Ruth Naomi Richardson, had traveled the Overland Trail from Indiana to the Oregon Territory in 1845; and four years later his paternal grandfather journeyed from Kentucky to California by way of the Panama Canal. Lowell's father, Albert Rooks, a farmer and miner, followed the pioneering tradition, going from California to the State of Washington, where Lowell was born in the small town of Colton on April 11, 1893. The Rookses moved again, to Alaska, when the boy was five years old. Lowell, however, was reared mainly in Walla Walla, Washington, and had, he says, the life normal to a small city in that Western farm belt.

At the Walla Walla High School, from which he was graduated in 1912, the youth played football and basketball and sang in the glee club. He studied in 1913-14 at the State College of Washington and transferred to the University of Washington at Seattle in 1914, the year of his brother Albert's graduation from Annapolis. (Captain Albert Rooks, USN, was to win, posthumously, the Congressional Medal of Honor in World War II.) Lowell Rooks, who joined Alpha Tau Omega fraternity, studied civil engineering, but never received his degree. In the middle of his senior year he left college to enter the World War I Army. On June 5, 1917, Rooks was commissioned and immediately promoted to first lieutenant of infantry on the basis of his college cadet corps training. Two months later he was a captain.

Assigned to the Fifty-first Infantry as a temporary captain he went to France in July 1918 and served as a company commander in the Gérardmer sector of the Vosges Mountains in September and October. After participating in the Meuse-Argonne offensive in November 1918, he served five months at Recy-

sur-Ourse, a month in Germany at Cochem and Coblenz, and three months at Paris and Brest before sailing for home in September 1919.

Remaining in the Army, Lowell W. Rooks spent the next seven years with the Twenty-fifth Infantry in an Arizona camp near the Mexican border town of Nogales. (In October 1920, at the age of twenty-seven, he was married to Martha Caroline Phillips, the daughter of a Nogales druggist.) After a nine-month course at the Infantry School (Fort Benning, Georgia) Rooks was ordered to Washington, D.C., in June 1927, for duty in the Office of the Chief of Infantry. Rooks's two months with a regiment in upstate New York were followed that December by his departure for the Philippines. There the officer spent two years with the Forty-fifth Infantry at Fort William McKinley.

Promoted to captain in July 1920 and to major in October 1934, Lowell Rooks spent a decade as teacher and student: he instructed at the Infantry School, 1930-33; studied at the Command and General Staff School (Fort Leavenworth, Kansas), 1933-35; was professor of military science and tactics at Washington State College, 1935-36; attended the Army War College in Washington, for the service's highest training, in 1936-37; he then went back to Kansas for four years of teaching at the staff school at Leavenworth. In the vast overhauling and expansion of the American military machine caused by the war in Europe, forty-eight-year-old Rooks was called to Washington in July 1941 to assist the General Staff's plans and training officer (G-3). He had been promoted to lieutenant colonel in July 1940, and seventeen days after Pearl Harbor was given a colonel's eagles.

Colonel Rooks, who had thus helped to plan the training of the peacetime draftees, in March 1942 was made chief of the Training Division at GHQ, later designated the Army Ground Forces. Three months later he was in Africa as chief of staff of the Second Corps, and in December, as a temporary brigadier general, was assigned to General Eisenhower's Allied Force Headquarters in North Africa as assistant chief of staff for G-3. Working under chief of staff Walter Bedell Smith⁴⁴, he had charge of training, of reviewing all possible future operations against the Nazis, of preparing battle plans to submit to Eisenhower, and of maintaining "liaison with the agents for conducting battles."

Given the second star of a major general in June 1943, Rooks was present at the signing of the Italian armistice in September. (In permanent rank he was still a lieutenant colonel.) When the combined Chiefs of Staff chose Eisenhower to be Supreme Commander of Allied forces in the invasion of northwest Europe, and he and his staff moved to England in January 1944, Rooks remained in Italy as deputy chief of staff to British Field Marshal Sir Henry Maitland Wilson⁴⁵, Eisenhower's successor in the Mediterranean command.

Staff officers traditionally yearn for field commands. General Rooks achieved one. He

U.S. Army Signal Corps
MAJ. GEN. LOWELL W. ROOKS (RET.)

commanded the Ninetieth Division in the Battle of the Bulge, Von Rundstedt's powerful German counteroffensive in the Ardennes sector of Belgium, which began December 16, 1944, raged unchecked for twelve days, and was brought to an end by what Rooks calls the rupture of the Siegfried Line in January 1945. Then, in March, the American general returned to his desk at Supreme Headquarters to head operations and training as deputy assistant chief of staff.

On May 12, 1945, four days after the official end of the war in Europe, General Rooks arrived in Flensburg, northern Germany. He had been designated to represent Eisenhower in dealing with the acting German Government of the High Command, headed by Hitler's heir as *Führer*, Grand Admiral Karl Doenitz⁴². Rooks's Allied mission allowed Doenitz to control the local radio so that he could broadcast surrender orders to the 170,000 German troops in the area, but became stricter after one day of "an apparent attempt to revive the World War I legend that the Reich's armed forces never were defeated." For fifteen days after the official surrender the Doenitz group continued to function as a government; Rooks and his mission used it as an intermediary in controlling the armed German troops, who far outnumbered their conquerors and circulated freely in the region on the Danish border. When Alfred Rosenberg⁴¹, leading philosopher of the Nazi party, was discovered in a hospital across the street from Doenitz' residence, doubt was cast upon the new *Führer*'s value to the Allies, and on May 23 General Rooks brought the anomalous "comic opera" situation to an end by placing the entire High Command under military arrest.

The name "L. W. Rooks" appeared in the news again at the year's end, when UNRRA

director-general Herbert Lehman⁴³ appointed him to be his deputy and chief executive officer. On the last day of 1945, the fifty-two-year-old officer retired from the Army with the rank of major general, after more than twenty-eight years of service. The next day Rooks entered upon his duties of coordinating the supply, financial, and distribution services of UNRRA and directing its day-to-day operations. F. H. La Guardia⁴⁰, who took over the UNRRA directorship in April 1946, sent Rooks to China to investigate relief conditions there. Sixteen million Chinese faced death by starvation, Rooks found, while the Kuomintang Government of Chiang Kai-shek⁴⁰ reportedly withheld UNRRA supplies from the people in areas controlled by the Communists. The UNRRA officials were handicapped in China and elsewhere by the world-wide food shortage and by the frequent deadlocks on the American-British-Canadian Combined Food Board over allocating such food as was available.

Although the relief and rehabilitation program for each country was decided upon by the nine-nation Central Committee, La Guardia, Rooks, or another deputy reviewed the time, quantity, and destination of each shipment before shipping licenses were requested. It fell to Rooks, in the director-general's absence, to divert to Yugoslavia a stock of steel rails which had been sent to China but returned because of the clogged condition of the Chinese ports. This was done with the approval of the State Department and before the Yugoslavs aroused American indignation by shooting down several United States planes in August 1946. About this time the multi-billion-dollar relief organization embarked on a process of liquidation planned for the "target dates" of March 31, 1947, in Europe and June 30 in the Orient. With La Guardia's resignation announced, deputy director-general Rooks was chosen to succeed him, and on December 14, 1946, La Guardia informally turned over to Rooks the task of translating the remaining fund and unshipped supplies totaling \$626,000,000 into food and goods shipped to stricken areas within the few months before UNRRA's dissolution.

Of this sum, \$269,119,000 was earmarked for China; but shipping strikes and the embargo which had been imposed because of the distribution scandals had put UNRRA's China program behind schedule. UNRRA, reported Rooks, therefore "redoubled its efforts to reach agreement with the Chinese Government and with the Communist authorities for an increased flow of supplies into Communist territory" in China. He was occupied, also, with negotiations with United States delegates to the U.N., who demanded a revision in relief methods. This ended in February with the setting up by UNRRA of a thirty-five-million-dollar emergency fund for Austria, Greece, and Poland. UNRRA policy, to quote director-general Rooks, was that supplies should be sold in receiving countries under "an adequate and effective rationing system combined with price control and free issues to indigents . . . so that all persons have an opportunity to

obtain their fair share." The money thus received was to be spent for permanent reconstruction projects or for further relief and rehabilitation work in the country of sale.

Christian Science Monitor correspondent Josephine Ripley wrote that the Refugee Defense Committee, which included Dorothy Thompson⁴⁰, Charles Poletti⁴³, and Robert M. La Follette⁴⁴, had charged that there was "a substantial pro-Communist infiltration" in UNRRA and that pressure was being used to persuade unwilling refugees to return to their homelands. This was denied by Rooks, who drew attention to the similarity between UNRRA policy and that of the American and British governments, and who said that not one substantial case of persecution had come before him since the end of the war.

Rooks's last tour of inspection took him and his wife to ten European countries in six weeks. After the closing of these missions in June 30, 1947, one man was left in each active port to handle the final shipments, accountants remained in each country, and a small staff remained in London to administer residual accounts and shipments. Some phases of UNRRA work and allotments of UNRRA funds were taken over by various U.N. organizations. The General's final statement, to the effect that UNRRA had completed a relief program three times the size of that which followed World War I, noted the honesty, effectiveness, and neutrality of the organization.

Late in September 1947 Rooks went to China to determine what recommendations regarding that country would be made to UNRRA's central committee, and to help the Chinese to formulate the plans for continuing the industrial projects begun under UNRRA. The Chinese Relief and Rehabilitation Administration, UNRRA's distribution agency in that country, had launched a group of long-range projects. In consultation with the Chinese Government, Rooks determined that these projects would continue to be administered after December 31, 1947, by a board of trustees composed of fifteen members—ten Chinese members from the Government and from civil life, and five foreign members.

Lowell W. Rooks received ten medals during the last two years of his Army career: the D.S.M. with Oak Leaf Cluster, Silver Star, Legion of Merit, and Bronze Star from his country, and decorations, from Great Britain, France, Belgium, and Brazil. In the Rookses' family there are two children, Martha Jane, and Shirley Caroline, who is Mrs. Nunziato. The brown-eyed, spectacled administrator is tall (just under five feet eleven inches), 160 pounds in weight, and his brown hair has a wide white streak. His religious affiliation is Protestant. Rooks is in some ways typical of high-ranking United States Army officers: he lists no political affiliation, his clubs are the Army-Navy Town and Army-Navy Country clubs of Washington, and his favorite recreations are golf, hunting, and fishing.

ROSENMAN, DOROTHY REUBEN *See* Rosenman, Mrs. S. I.

ROSENMAN, MRS. SAMUEL I(RVING)
Jan. 17, 1900- Housing expert

Address: b. c/o National Committee on Housing, Inc., 1 Madison Ave., New York 10; h. 160 Central Park S., New York 19

From the time of the early 1920's Mrs. Samuel I. Rosenman has been one of the foremost advocates of slum clearance and of low-cost housing, financed by private concerns and where necessary by the Government—municipal, State, and national. Mrs. Rosenman, as a member of various housing committees in her own city and State (both New York), has labored successfully by means of speeches and writings to make the public aware of the necessity for community improvement and planning, and the legislatures cognizant of their responsibility to provide aid for such undertakings. In the position of chairman, since 1941, of the National Committee on Housing, Inc., a private organization composed of business, professional, and civic leaders, she had directed this country-wide association in finding solutions to United States war housing problems and postwar housing shortages—in 1947 there is a dearth in available living quarters for more than three million persons. "Everyone," Mrs. Rosenman has stated in describing her views on the matter, "is entitled to a decent dwelling in a community which has ample facilities for fostering our American way of life." In April 1947 Mrs. Rosenman relinquished her office of chairman of the organization to become chairman of its board of directors.

Mrs. Samuel I. Rosenman was born Dorothy Reuben on January 17, 1900, in New York City, the only child of Solomon and Serena (Sickles) Reuben. As a student at Wadleigh High School (in her native city) from which she was graduated in 1917, Dorothy participated in the activities of such school organizations as the honorary Arista, and Scribes. For one year, because of her interest in children and in the education of the preschool child, she attended the Montessori Training School, of which she became a graduate in 1918. Then, from that year until 1921, the young teacher was director of the kindergarten of the Emmanuel Sisterhood Day Nursery, being selected director of its nursery school in 1921, a position which she held until 1924. In the meantime Dorothy Reuben had supplemented her earlier education courses with studies at Columbia University in nursery school training (1921). Since her work was largely of the settlement-house type, she had an opportunity to become acquainted with New York's slum areas. The appalling living conditions of the people dwelling in the poverty-stricken districts had originally influenced her, in 1920, to resolve to help obtain adequate and sanitary housing for families of low income.

The environs in which she first lived after her marriage have accounted, too, according to the *New Yorker* (May 25, 1946), for her

MRS. SAMUEL I. ROSENMAN

interest in better housing. In the middle of September 1924 Dorothy Reuben became the wife of Texas-born Samuel Irving Rosenman⁴², a lawyer who was to become a judge and afterward one of the closest advisers of the late President Roosevelt. (The Rosenmans are the parents of two sons, James and Robert.) Mrs. Rosenman in her brief interview with the *New Yorker* recalled that 1924 was a year of housing shortage almost as bad as the one following World War II and that the Rosenmans' first home "was a tiny apartment . . . with no light and very little air." She said, "The Judge told me I'd suffocate if I didn't find something to do outside the home. . . . I went ahead and took a course in juvenile-story writing at Columbia. I was coasting along, trying to think of a plot and not suffocate, when one evening at dinner Ira Robbins, chairman of the Housing Committee of United Neighborhood Houses, invited me to help him in a drive to amend the old-law-tenement laws."

That was the occasion which began Mrs. Rosenman's productive association with housing improvement programs for New York City and State. She joined the Housing Committee (later she became committee chairman and board member) of United Neighborhood Houses; about the same period she became affiliated with the social work of the Women's City Club housing committee, of which she was to become director. In 1934 she was one of the founders of the Citizen's Housing Council, serving (1937-39) as vice-chairman of the committee on old housing. While occupied with municipal tenement reforms, Mrs. Rosenman during the three years between 1936 and 1939 was influential in recommending State housing legislation. Some of the State measures—most of which had municipal ramifications—for which she campaigned were amendments to the Tenement House Law of 1901

providing for "structural changes for fire-safety and sanitary purposes" in old-law multiple dwellings or for demolition of the buildings.

Mrs. Rosenman is said to be a person who is not content solely to "sit at a desk and do the planning and organizing" but rather the "type of leader who gets out in front and leads the attack." In 1938, when an amendment to the New York State Constitution was under consideration, Mrs. Rosenman arranged and conducted tours of upstate members of the Legislature through New York City's slum districts, with which they had no first-hand acquaintance, so that she might impress upon them the need for the change. Ratified the following year, the amendment permitted the State "to borrow \$300,000,000 for the purpose of making loans to municipalities or local housing authorities for the clearance, replanning, and redevelopment of substandard areas and for the provision of homes for families of low income." The only housing program financed by a State, it was implemented in the same year (1939) by a bill which Mrs. Rosenman helped draft, the New York State Public Housing Law, patterned after the Federal Wagner⁴⁴-Steagall Act (1937).

Interested in all phases of community (suburb and country as well as city) beautification and development, she supported, in her capacity as chairman of the Citizens Housing Council's committee on investment housing, the adoption by the State of an investment housing program whereby middle-income workers would be enabled to build their own homes. (This committee was responsible to a large extent also for amendments [1940] to the State banking and insurance laws, allowing savings banks and insurance companies to furnish the total cost of this investment housing from their assets.) She served, too, on the same organization's committees working for enabling legislation and for the creation of the New York State Division on Housing, which was established in 1939.

In 1941 Mrs. Rosenman's work in the housing field assumed for the first time a nationwide character: she was given the chairmanship of the National Committee on Housing, Inc., (called originally the National Committee on the Housing Emergency), another organization whose founding she had aided. The Government, before and during World War II, was required to supervise construction and expansion of defense industries in sections of the country where there were often sparse living accommodations for the multitude of workers (usually brought in from elsewhere) needed to man the factories and shipyards. Mrs. Rosenman as head of the National Committee on Housing was among those who advocated substantial, not-too-expensive, attractive emergency housing for war workers. Prefabricated and regular dwellings erected to alleviate all housing shortages, she emphasized, should be well made and equipped with the most modern improvements so that if necessary they might become an integral part of a well-planned postwar community, or in the

case of prefabricated houses, could be transported facily to another community; this subject Mrs. Rosenman examined in articles by her appearing in the *Architectural Record* (April 1942), *Teachers College Record* (October 1942), and the *New York Times Magazine* (January 16, 1944). On the numerous occasions when residents in war-industry districts protested the influx of "foreigners" and emergency housing into their vicinity, they found in Mrs. Rosenman one of their most persuasive opponents. She was a proponent, however, of rent control which, she declared (*National Municipal Review*, March 1943), had effected a check on inflation. Much of Mrs. Rosenman's time in these years was spent in Washington, D.C., where she was to persuade the War Department to release critical materials for emergency housing. (Her husband in 1941 was partly responsible for the amalgamation of sixteen bureaus for the national defense housing program into the National Housing Agency.)

Mrs. Rosenman described her attitude toward community planning at a panel discussion before the Institute on Postwar Reconstruction in March 1944. Concerned primarily with the New York area, she declared that a city must be viewed "as a medium for people who . . . must have a place to live with their families where they can work, play, be educated, shop, and move about. . . . Every community should find out first of all how many people it can expect to employ in the future. The total acreage of usable land should then be measured into appropriate proportions for living, industry, commerce, shopping, recreation, education, and transportation in such a way that overcrowding is avoided and no section is left in a blighted condition."

The housing analyst has also extended her knowledge of housing into the foreign field: in July 1945 Mrs. Rosenman headed a National Committee on Housing mission invited by the British Ministry of Health to conferences with English and Scottish housing officials, and home construction, planning, and finance leaders. During its four-week visit the mission toured public and private housing developments in a number of cities and rural areas. Mrs. Rosenman, her three associates, and their hosts discussed immediate and long-term housing projects and learned that there was unanimity in both countries (England and Scotland) in the matter of providing low-rental housing for low-income families and of proceeding with blueprints for community planning. In post-war United States she has urged avoidance of "shoddy construction, wildcat finance, and haphazard or no planning which characterized the building boom" of World War I and has pleaded for "sound construction standards, uniform lending practices and overall community planning" in solving the housing dilemma for veterans and for other citizens.

In its attempts to rectify the conditions causing the housing shortage, the National Committee on Housing has made several proposals, which, stated the *Christian Science Monitor* (February 6, 1947), have been "close-

ly studied in Washington." The recommendations are those for "Congressional action permitting five-year amortization of rental housing projects and tax concessions to help this program along"; "immediate legislation to finance one hundred thousand dwelling units for veterans of low income"; "removal of all ceilings on new construction"; "prompt passage of the Wagner⁴¹-Ellender⁴²-Taft⁴³ bill"; "postponement of unessential, nonresidential construction"; and "special measures to encourage construction of housing for minority groups." While mounting costs are a chief cause of the housing shortage, Mrs. Rosenman has pointed out, they "present only in acute and aggravated form a condition which existed many years before the war and prevented construction of new homes for the mass of the population." In April 1947 Fred H. Ludwig of Reading, Pennsylvania, was elected to succeed Mrs. Rosenman as the head of the National Committee on Housing; Mrs. Rosenman became, at that time, chairman of the organization's board of directors. In October she received honorary membership in Hadassah and was presented with a certificate in recognition of her achievements.

Mrs. Rosenman's views on different phases of housing and city planning, real estate taxes, mortgages, and the like have appeared in issues of periodicals such as *House Beautiful*, *Woman's Home Companion*, and the *American Magazine*. In addition she is the author of the book *A Million Homes a Year* (1945) which was reviewed favorably by most critics, who liked its simple, colorful style and wealth of information and documentation on America's contemporary housing scene. Since 1943 she has contributed articles on housing and the building industry to the *Britannica Book of the Year*. For a time, from the year 1938 to 1942 her social welfare occupations included membership on the board of the Henry Street Settlement Committee. Mrs. Rosenman is of the Jewish faith, and a Democrat in political affiliation. She is a medium-sized woman, five feet five inches tall and weighing 140 pounds, with dark eyes and graying brown hair.

ROSENWALD, LESSING J(ULIUS) Feb. 10, 1891- Philanthropist; former merchant
Address: h. "Alverthorpe," Jenkintown, Pa.

Philanthropist Lessing J. Rosenwald, as board of trustees chairman of the Julius Rosenwald Fund, carries on the work of his internationally known father, Julius Rosenwald, who endowed the fund to further interracial understanding. In 1943 Lessing Rosenwald organized the American Council for Judaism, of which he is president.

Born February 10, 1891, in Chicago, Lessing Julius Rosenwald was named after a civically active lawyer, Lessing Rosenthal. He is the eldest of five children; his only brother, William, is also active in Jewish philanthropies. Lessing's parents were Americans of Reformed Jewish faith; his grandparents on both sides

LESSING J. ROSENWALD

were merchants who had emigrated from Germany to the American Midwest. When the boy was four his father, then a middle-class clothier, purchased a quarter-interest in Sears, Roebuck, and Company, the mail-order house, for \$37,500, and became vice-president. The tremendous expansion of the mail-order business around the turn of the century made Julius Rosenwald a rich man.

M. R. Werner tells in his biography *Julius Rosenwald* that the children of the servants played with the children of the house as equals, because Rosenwald "tolerated no social distinctions." The family gave parties for the adults and children of the whole neighborhood, and at Christmas prepared thousands of pounds of candy for distribution to children in Chicago institutions. Mrs. Rosenwald, the former Augusta Nusbaum, had encouraged her husband's charitable activities from the first, and was herself active in civic movements—later, on annual visits to Tuskegee Institute, she taught the girl students how to cook, bake, and turn their dresses. At the family dinner table, the five young Rosenwalds were permitted to join in lively discussions with guests in all walks of life, bankers, actresses, rabbis, and social workers, including Jane Addams. They did not have much spending money, despite their father's lavishness with gifts: fearing that wealth would demoralize his children, Julius Rosenwald tried to instill in them his own small economies.

After graduation from the University of Chicago's elementary and high schools, Lessing Rosenwald went to New York State in 1908 to study chemistry at Cornell University. He left in 1911 without graduating, however, and returned to Chicago, where in September he entered Sears, Roebuck as a shipping clerk. Julius Rosenwald, then in his third year as president of the firm, took steps to see that his eldest child received no special favors

and that Lessing's advancement depended entirely upon his own abilities. Young Rosenwald learned the business "from the ground up," working in many departments, and rose through the ranks of the operations department before entering the World War I Navy. While his father was chairman of President Wilson's Committee on Supplies and a member of the War Industries Board, Lessing Rosenwald served as a seaman, second class, at the Great Lakes Naval Training Station.

After the war, in October 1920 Sears opened its first eastern plant in Philadelphia, with twenty-nine-year-old Lessing Rosenwald as general manager. In January 1928 he became executive vice-president of the Sears corporation, and that February he also became a director of the Stanley Corporation of America, a moving picture theater chain. From Los Angeles, where he happened to be at the time of the stock market crash in October 1929, Rosenwald telegraphed to all the retail stores personally guaranteeing the credit of any Sears employees who might be in financial difficulties and require such help. When his father heard this he, in turn, telephoned to all the stockbrokers to guarantee the employees' margin accounts and thus protect from ruin any who had been speculating. The Rosenwald fortune was reduced by an estimated hundred million dollars that day, but Julius Rosenwald borrowed nearly eight million dollars to take over his employees' accounts from the brokerage houses.

At his father's death in January 1932, Lessing Rosenwald succeeded to the chairmanship of the board of Sears, Roebuck. While a vice-president, young Rosenwald had served from January 1931 as board vice-chairman and from July 1931 as chairman of the executive committee, and control was in his hands during his father's illness. After, Rosenwald remained in his Philadelphia office, flying to the Chicago headquarters at least once a week to confer with the company president, General Robert E. Wood.⁴⁴ In 1939, as Wood reached the Sears retirement age of sixty, forty-eight-year-old Lessing Rosenwald resigned the board chairmanship in his favor.

In 1932, Julius Rosenwald left an estate of less than \$17,500,000, of which six and one-half million was divided among his children and eleven million was bequeathed to the Rosenwald Family Association, formed by the children in December 1931 to carry on his contributions to organizations. (Lessing Rosenwald is a trustee and past president of the Association.) The largest of all the elder Rosenwald's philanthropies had been the Julius Rosenwald Fund. As chairman of the board of trustees of the fund, Lessing Rosenwald thus continues the work his father had begun in the field of race relations. The fund distributes about half a million dollars annually through grants to agencies concerned with Negroes and Negro-white relations in the United States, through annual fellowships to Negroes, white Southerners, and race-relations workers. It also finances the preparation of studies and reports, distributes books and pamphlets, arranges conferences and consultations, all with the goal of

spreading the principles of democracy through church, labor, and scholastic channels.

Although the *New York Times* in September 1940 reported that Rosenwald had joined the isolationist National Committee of America First, of which Wood was board chairman, he was a member only until December 1940. He was to serve on two boards of national defense as the need arose. When the Selective Service peacetime military draft was set up in October 1940, Rosenwald served as a member of the local Board of Appeal. In August 1941 he moved to Washington at the request of Director of Purchases Donald M. Nelson⁴¹, an old Sears, Roebuck associate, to head the Office of Production Management's silk commodity section. In the reorganized defense set-up that September, Rosenwald was made chief of the Bureau of Industrial Conservation, and when it was raised to a division, he was given the title of director.

In his capacity of national conservation head, Rosenwald was responsible for reducing waste of scarce materials. By agreement with the Standards Section of the OPA, Rosenwald assumed, in his words, responsibility for "the reduction in the number of various styles, types, or grades of products manufactured" while OPA was to handle "standards, grades, and quality-identifying labels"; however, he allowed OPA to retain several simplification projects which were already under way. He was responsible also for the various scrap drives, perhaps most notable being those for metal and fats—he hoped to bring in annually at least thirty-two million tons of scrap iron and steel, and five hundred million pounds of used kitchen fat. When the various agencies were regrouped in the new War Production Board in January 1943, Rosenwald handed in his resignation. After the war had ended, he was one of the prominent persons signing an Americans United for World Organization document urging "a world security parliament under which the U.N. would rid itself of the veto power and an elected assembly would have the power to act under world law against aggressors."

While his work with the fund is concerned principally with interracial relations, Rosenwald has been active in Jewish affairs as well: in April 1943 he took the lead in organizing the American Council for Judaism, Inc., of which he has remained president. Its declaration of principles—principles which Rosenwald has enunciated in speeches, articles, paid advertisements, and testimony before official bodies—reads, in part, "We oppose the effort to establish a national Jewish state in Palestine or anywhere else as a philosophy of defeatism and one which does not offer a practical solution of the Jewish problem. We dissent from all those related doctrines that stress the racialism, the nationalism, and the theoretical homelessness of the Jews. . . . We ask only this [for them]: equality of rights and obligations with their fellow-nationals" the world over.

In accordance with this view, Rosenwald protested in 1944 the British decision to form "a so-called Jewish Brigade" under "a so-called

Jewish flag," urging instead the "accurate designation of Zionist Brigade and Zionist flag." Started with about a thousand members, of whom ninety were Reformed rabbis, the council later lost half of the rabbis by resignation; in late 1946, however, it claimed twelve thousand members in forty cities, and "some of the country's leading business and cultural leaders" were council members. In September 1946 Rosenwald told a reporter that the council did not oppose further development of Palestine, nor President Truman's⁴² plea that 100,000 displaced Jews be allowed to enter the Holy Land. Rosenwald and twenty-five other civic leaders called on Congress to vote the loan to Britain, denying that "groups in this country which oppose certain acts of our wartime ally intend to use hunger as a political weapon and as a means of punishing an entire people."

The American Council for Judaism sponsored the Stratton bill to allow immigration into the United States of a total of four hundred thousand displaced persons. In June 1947 it submitted to the U.N. Committee of Inquiry on Palestine a twenty-seven-page pamphlet, signed by Lessing Rosenwald, arguing against the establishment of a Jewish nation. A month earlier, Rosenwald was one of the fourteen leading businessmen who made a two-week tour of Germany and Austria, at the request of Secretary of War Patterson⁴³, to study German industry and the Military Government program. In the fall of 1947 Rosenwald urged that the U.N. be appointed trustee for Palestine "without delay," in order to foster self-government of that country; he also, at this time, reiterated his opposition to the partition of Palestine.

Rosenwald had served the Government previously, in 1934, when he was appointed an industry representative on the Regional Labor Board of the short-lived NRA. Following his retirement in January 1939, Rosenwald, a member of the Philadelphia Labor Mediation Tribunal, has arbitrated several labor disputes, and has established the Lessing J. Rosenwald Foundation. He is now (1947) active in countless civic organizations and serves on many boards, including those of the University of Chicago and the Princeton Institute for Advanced Study. He is a director of the American Research and Development Company. Rosenwald's clubs are the Locust, Cornell, Philmont Country and the Standard of Chicago.

Through one of his hobbies, the Philadelphian made a different kind of philanthropic news in 1943, by presenting his collection of about sixty-five hundred prints and drawings—including 236 Rembrandts and many Hogarths and Blakes—to the National Gallery of Art, in Washington. He also presented a collection of illustrated books and cognate reference materials to the Library of Congress. "American art museum directors who have counted on the generosity of Lessing J. Rosenwald to augment their annual exhibition schedules with loans from his incomparable print collection . . . may still join in the general cheering," wrote the *Magazine of Art*, pointing out that the terms of the gift provided for such loans, The Library of Congress devoted

ROSENWALD, LESSING J.—*Continued*

an entire issue of its *Quarterly Journal* to a selection of the Rosenwald books exhibited from October 1945 to January 1946, and included an article by Lessing Rosenwald telling of his career as a collector of prints who became a collector of books.

The Library of Congress' Rosenwald Collection has continued to grow; by May 1947 he had given an additional eighty titles, among them, A. S. W. Rosenbach⁴⁶ said, "some of the most important volumes ever issued by the presses of Europe and America," and of the Philippines. The donor, who was elected to the council of the American Philosophical Society in April, was awarded an honorary doctorate of humane letters by the University of Pennsylvania in June. His name was also mentioned among those of the purchasers of the 102-year-old monthly, *The Scientific American*.

In November 1913 Rosenwald married Edith Goodkind, whose mother was married to Rosenwald's widowed father seventeen years later. The Rosenwalds' five children are Julius 2d, Robert, Janet, Helen (Mrs. Snellenburg), and Joan (Mrs. Scott). During World War II, the elder son was a marine, and the younger a sailor. Politically, Rosenwald records no party affiliation; he championed Willkie⁴⁰ in 1940. Rosenwald is just under five feet ten inches tall, weighs 185 pounds, and his brown eyes are framed by heavy-rimmed spectacles; his gray hair is thinning. *Time* has called him "shy, esthetic."

ROYALL, KENNETH C(LAIBORNE) July 24, 1894- United States Secretary of the Army

Address: b. Office of the Secretary of Defense, Washington 25, D.C.; h. Goldsboro, N.C.

A successful North Carolina lawyer who served in both world wars, Kenneth C. Royall was appointed Under Secretary of War by President Truman in October 1945 and Secretary of War in July 1947 to succeed the retiring Secretary, Robert P. Patterson⁴¹. Secretary Royall is the holder of one of the most important posts in the Army, he has been principally concerned with surplus Army property, national preparedness for a future "emergency," and the Army's courts-martial system.

With the reorganization of the United States armed forces, Royall in August 1947 was designated Secretary of the Army.

Descended from Joseph Royall of Turkey Island, Virginia, and from George Durant, a colonial Governor of North Carolina, Kenneth Claiborne Royall was born July 24, 1894, in Goldsboro, North Carolina. His parents were George Claiborne Royall, a manufacturer, and Clara H. (Jones) Royall. The family included Kenneth's brother, George, Jr., and his two half sisters. Growing up in Goldsboro, which is still his legal home, Kenneth attended the Goldsboro high school at first. He was graduated at fifteen from the Episcopal High School in Alexandria, Virginia. At the University of North Carolina, as in high school, he participated in debating and athletics. He majored in mathematics, won election to Phi Beta Kappa, and in 1914 received his Bachelor of Arts degree. Young Royall next studied at the Harvard University Law School. From 1915 until 1917, when he received the LL.B. degree, Royall was associate editor of the *Harvard Law Review*.

In May 1917, a month after the entry of the United States into World War I, Royall joined the Army. Trained at Fort Oglethorpe, he became a second lieutenant in the Field Artillery Reserve on August 15, 1917. He was assigned to the 317th Field Artillery at Camp Jackson, South Carolina. After receiving a temporary promotion to first lieutenant in 1918, he attended the Field Artillery School at Fort Sill, Oklahoma, from April until June 1918, when he returned to the 317th Field Artillery. He was also trained at the Eighty-first Division Liaison School at Camp Jackson. From August 1918 until February 25, 1919, he served with the 317th Field Artillery in France, where he was wounded in action.

Returning home in 1919, Royall gained admittance to the North Carolina bar and began to practice law in Goldsboro. Eleven years later, in 1930, he also opened offices in Raleigh, North Carolina. And in 1937 he joined with other lawyers in forming Ehringhaus, Royall, Gosney, and Smith. The firm became Royall, Gosney, and Smith in 1939. Royall served as State senator in 1927, as president of the North Carolina Bar Association in 1929-30, and as a Democratic Presidential elector in 1940. By 1942 he had a fifty-thousand-dollar-a-year law practice in Goldsboro and Raleigh, and a reputation for being "one of the State's best trial lawyers."

Six months after Pearl Harbor, on June 5, 1942, Royall went into the Army again at the request of Robert P. Patterson, then Under Secretary of War. Commissioned a colonel, Royall became chief of the Army Service Forces legal section. The following month President Franklin Roosevelt⁴² appointed him counsel for eight Nazi saboteurs who had been landed on American shores by submarine. "As a professional," he "got a big kick" out of that task, enjoying especially his debate with Attorney General Francis Biddle⁴¹ before the Supreme Court, which included Justice Felix Frankfurter⁴¹, once Royall's professor at Harvard.

In May 1943 Royall became Deputy Fiscal Director of Army Service Forces, and in November 1943 he was promoted to brigadier general. He organized the Office of Fiscal Director, rendering "highly valuable assistance," according to the citation accompanying his Distinguished Service Medal, in "the formulation and execution of basic policies and operational procedures." The citation, which he received in November 1945, also noted his "exceptionally meritorious" service from April to November 1945 as special assistant to Secretary of War Henry L. Stimson: "He maintained contact with the Department of Justice in fraud cases involving war contractors, coordinated proposals for legislation and executive orders affecting procurement and related matters . . . represented the War Department at Congressional hearings . . . maintained liaison between the War Department and Congressional committees investigating . . . procurement." General Royall, together with William Marbury, a Baltimore lawyer, drafted the atomic control bill which came out of the House Military Affairs Committee at the end of October as the May⁴¹-Johnson⁴⁶ bill, but which was later superseded by other atomic control legislation.

In October 1945 President Truman named General Royall Under Secretary of War to succeed Patterson, who had become Secretary when Stimson resigned. The nomination was confirmed by the Senate on November 8. Royall was expected to be chiefly concerned with the handling of the terminations of war contracts. He was acting secretary, however, in January during what was called by a *New York Times* reporter "the worst administrative and morale crisis that the Army has faced." American soldiers overseas held mass meetings and demonstrations in protest against the slowness of demobilization. While some Senators blamed the unrest on the War Department, Royall held the American people to account. The Acting Secretary warned that nation-wide "hysteria to get the boys back home" was endangering American occupation policy and consequently "the victory so recently won." He added that a philosophy of "me and my son, John" was flooding Congress with criticism "in spite of the most remarkable record of orderly demobilization . . . in the history of the world."

As the Army's "top ranking civilian observer of surplus Army property," in March and April 1946 Royall toured the world to study the disposition of surplus matériel. On his return he reported, "On the whole the Army has done a pretty fair job." He said all charges of "wanton destruction" had been carefully investigated, and had been found to be unsupported by the facts. Royall also inspected cemeteries abroad where American soldiers were buried. (At the end of April he sponsored a \$100,000,000 program to provide for the return to the United States for reburial of most of the 328,000 war dead in foreign cemeteries.) On the same tour Royall inspected "every disciplinary detention installation" in every theater he visited, because he realized, he said, that public interest in military justice was very high, as it is after every war.

Press Assn., Inc.

KENNETH C. ROYALL

In a series of articles on military justice Roger Stuart of the *New York World-Telegram* called Royall "the chief apologist for the system as it now operates . . . also the War Department's No. 1 bulldog—its main attacker of those who criticize the system." Royall had termed criticism of the courts-martial system "wild and inaccurate," and had said the system was "one of the most misunderstood and misrepresented of all Army activities." He charged on April 20 that the report of a subcommittee of the House urging fundamental reform of the courts-martial system contained incorrect statements, unjustified criticism, and unsupported conclusions. Later, in the fall of 1946 clemency reviews, under Royall's direction, took place at the rate of over one hundred a day. This was because it was felt that under wartime conditions investigations might have been hasty and punishments unnecessarily harsh. Several months later, in April 1947, following an intensive study by the House Committee on Armed Services, the Under Secretary announced his agreement to the revision of the Army's courts-martial system.

On July 19, within twenty-four hours of his nomination by President Truman, subsequent to the resignation of Secretary Patterson, the Senate confirmed Kenneth C. Royall as Secretary of War. Almost concurrently there was enacted the unification of the armed forces. Late in July 1947 Secretary Royall flew to Germany to consult with General Lucius D. Clay⁴⁵ on the project for raising the level of production in western Germany. Returning to the United States, he announced Army plans to build an underground aircraft factory, part of a comprehensive design for maintaining American preparedness at all times. Toward the end of August, Royall returned to Europe where he approved a draft of a foreign trade policy for the United States zones of Germany and Austria and for Japan, to be presented to

ROYALL, KENNETH C.—*Continued*

the International Trade Organization in Geneva. Subsequently, he formed part of the American delegation to a conference on Ruhr coal production held in Washington, D.C. Another fuel problem was considered at a meeting to discuss United States petroleum reserves in mid-August 1947, at which Royall and his colleagues in the Cabinet and military services were assured by representatives of the oil industry that the petroleum needs of the armed forces would be met.

When the reorganization of the defense departments was completed at the end of that month, Royall continued to serve as Secretary of the Army under Defense Secretary Forrestal⁴². One of his first actions in this post was to supervise the drafting of a series of formal agreements dividing personnel and operations of the Army and the United States Air Force, to be submitted to Secretary Forrestal for approval. Under Royall's direction, a request for \$500,000,000 additional funds for the support of American occupation troops in Europe was presented to Congress late in September. In other appearances before various Congressional committees that fall and winter, the Secretary gave his opinion on air power (which he considered less important than the industrial potential in the defense of the country) and on extension of the European Recovery Plan to include western Germany.

In speeches, before his appointment as Secretary, Royall denounced "unjust criticism" of the Army, "based on gossip or on exaggeration or on plain falsehood," and has asked for constructive criticism and public support to stop the growth of partisan attack by "demolitionists." "The potential warlike strength of America is the greatest guarantee of tranquillity among the nations of the world," Royall once said in urging that the United States be prepared to use any weapon at her disposal, including the atomic bomb. In a talk before the CIO Industrial Union of Marine and Shipbuilding Workers, Royall called on labor to "purge its ranks of Communists," and thus, he said, halt the growth of disunity before it became a factor which would aid a potential enemy. Early in 1947, while still Under Secretary, Royall had been a member of the six-man Presidential Temporary Commission on Employee Loyalty, which recommended a systematic loyalty test for all Federal employment candidates.

Civilian employees of the Army had already been subject to such a loyalty test under the Summary Removal Act (Public Law 808) passed by Congress in 1942, which applied to those persons proved to have had Communist, Nazi, or other subversive affiliations. Nine employees were dismissed between August and November 1947, their employment being terminated by the Secretary of the Army. Another action of Secretary Royall's in November was the enlargement of the United States military mission in Greece.

The Army Secretary could hardly be "overlooked," a columnist once noted, since he is six feet five inches tall, and weighs 250 pounds,

A deep-voiced Southerner, who plays golf for recreation, he has black hair and brown eyes and, according to *Time* magazine, a "placid" disposition. Delta Kappa Epsilon fraternity chose him as its honorary president in December 1947. He is Episcopalian. Mrs. Royall, to whom he was married in August 1917, was Margaret Best. Their son Kenneth Claiborne, Jr., was a lieutenant in the Marine Corps during the war; another son, George Pender, is deceased. Their daughter, named Margaret, is now Mrs. James E. Davis. *Time* quotes the Army Secretary as saying at the time of his appointment, "I'd kind of like to go back to my home town."

RUSSELL, WILLIAM F(LETCHER)
May 18, 1890- College dean

Address: b. c/o Teachers College, 525 W. 120th St., New York 27; h. 409 W. 117th St., New York 27

In the course of the last half-century, Teachers College, the school of education of Columbia University, has trained more than sixty thousand educators and is looked upon as perhaps the strongest single influence in progressive education in the United States. The New York institution, founded in 1888, has since 1928 been headed by William F. Russell (he succeeded his late father, who had been dean from 1897).

The son of James Earl and Agnes (Fletcher) Russell, William Fletcher Russell was born in Delhi, Delaware County, New York, on May 18, 1890, the year his father became principal of Cascadilla School in Ithaca. (Of William's three brothers, a younger one, Charles, also became an educator.) William Russell received the first of his many degrees in 1910 when he was awarded a B.A. degree by Cornell University in Ithaca, graduating with Phi Beta Kappa honors. That year also saw the beginning of his pedagogical career, as a teacher of

history and economics in the College High School at Greeley, Colorado. Russell then accepted an assistant professorship in history and sociology at the Colorado State Teachers College the following year.

In 1912 the young professor returned to the East to pursue graduate work at Teachers College, Columbia University. During 1913-14 he was honorary fellow and assistant in philosophy of education at that institution. After he received his Ph.D. degree from Columbia in 1914, Russell held the positions of associate professor (1914-15) and then of professor of secondary education (1915-17) in Nashville, at Tennessee's George Peabody College for Teachers. In this period Russell wrote *The Early Teaching of History in New York and Massachusetts* (1915), *Economy in Secondary Education* (1916), and the section on "Education in the United States" in Sandiford's *Comparative Education* (1917).

From 1917 to 1923 Russell was dean of the College of Education at the University of Iowa. (Russell's knowledge of educational facilities in the State of Iowa was incorporated into his books *School of Finance in Iowa Cities*, 1921, and *The Financing of Education in Iowa*, 1925.) His educational activities took on international scope when he journeyed to Russia as director of the Educational Section of the Russian Division of the Committee on Public Information from July 1918 to February 1919. Russell's *Education in a Democracy* was published in Russian at Vladivostok in 1918, and his *Schools in Siberia* in the next year. He was a member of the China Educational Commission in 1921 and 1922. During this period Russell also was one of the authors of *Christian Education in China* (1922) and of *Schools in Bulgaria*, which appeared a year later.

Russell returned to Teachers College in 1923 to assume the duties of professor of education. During the years between 1923 and 1927 he was also associate director of its newly established International Institute. One of the units by which Teachers College fosters research and experimentation, the International Institute has served the triple purpose of giving special instruction and professional aid to the ever-increasing number of students and teachers from foreign lands, of bringing the schools of the United States into contact with the best of foreign theory and practice, and, upon request, of rendering direct aid to foreign educational authorities. In 1924 the director began a term as educational adviser to the American Library Association, a post he filled until 1930. For two years (1925-27), in addition to his other duties, Russell was chairman of the American delegation to the World Federation of Educational Associations.

When William Russell succeeded his father as dean of Teachers College in 1927 (he was installed in his new post in April 1928), the institution was the largest teacher-training school in the world; and it is still "considered by many the leading school of education in the United States." The Columbia college drew students from everywhere. A few years later, however, confronted by the increasing eminence of other schools of education and by economic

•Leja Gorska

WILLIAM F. RUSSELL

difficulties engendered by the depression, Teachers College found itself in growing financial straits. Aside from financial questions during the 1930's, Russell was faced with numerous other problems as chief administrator of Teachers College. The views of George S. Counts⁴¹ and of other "progressive faculty members" caused Teachers College to be nicknamed in some quarters "the big Red schoolhouse"; and there were accusations from other sources that Teachers College was being unduly influenced by "major business and financial interests." These different charges were answered by a Teachers College faculty advisory committee chosen by secret ballot. The committee's statement, printed in *School and Society* (February 4, 1939), condemned the garbling of stories concerning Teachers College by both radical and reactionary groups, who "have promoted such publicity in order to get prestige for themselves or for their own causes." Russell himself both in his speeches and writings has assailed nazism, fascism, and communism, insisting that democracy can be preserved and totalitarianism prevented in the United States by the establishment of better economic and social conditions for all the people. He has asserted, too, that a subversive idea should be met not with condemnation, but with a better idea.

Meanwhile, Russell and his colleagues continued to develop and expand the educational facilities at Teachers College. The year 1931 saw the establishment of New College, a pioneer experimental school used as a testing ground for the many new ideas concerning improvements in teacher education. Eight years later, however, it was closed for financial reasons. In the spring of 1934 Russell went to Europe. When he returned he was inspired to start at Teachers College an Advanced School of Education patterned after the *Ecole Normale Supérieure* of Paris, at which rigidly

RUSSELL, WILLIAM F.—*Continued*

selected graduate students would be trained for leadership in education, without cost and with assurance of a "permanent post for life." The Advanced School of Education was opened in 1935. Dean Russell in 1936 was made Barnard professor of education at Teachers College.

Dean Russell helped to originate and develop the Congress on Education for Democracy, a group which was convened at Teachers College in August 1939 to discuss education's responsibility in the defense and advance of democracy in America. (The congress—at first it was named the World Congress, a title which later was modified since the conference was to deal primarily with United States educational problems—was the outgrowth of a movement begun originally a few years previous at Teachers College to heal the rift, brought on by financial and social problems, between the lay public, including business groups, and the school authorities.) The three-day conclave was attended by some four hundred representatives of twenty-eight national organizations in the fields of business, labor, religion, agriculture, and education. Representatives came from four European nations—Great Britain, France, Sweden, and Poland.

Russell has engaged in numerous other activities of national scope outside the Columbia campus. A member of the National Advisory Committee on Education from 1928 to 1931, he was chairman of the American Council on Education from 1933 to 1935, when he entered the ranks of the American Youth Commission of the American Council on Education. In 1934, while warning against the beginnings of educational despotism, he advocated Federal aid to education during the emergency, based on the principles of equality of educational opportunity and efficiency. In 1941 Russell began serving as a member of the wartime committee of the United States Office of Education, and as director of the National Citizenship Education Program of the United States Department of Justice, the functions of which consisted of educating aliens for citizenship and providing means whereby the foreign born may become an integral part of the community. (Russell's *The New Common Sense* appeared in that year.) In 1943 the New York dean appeared before the Senate Education and Labor Committee in support of a bill to appropriate three hundred million dollars to stamp out illiteracy in the nation's poorer states.

At a meeting sponsored by the N.E.A. in February 1944 Dean Russell warned that the United States was a likely place for the "reactionary in education" and for "a trust in the 'good old days'" to take root in—that Americans should not "talk of educational imperialism." America could best aid the reconstruction of educational facilities abroad through physical and financial resources. Russell based his conclusion on his experience in Europe and Asia during World War I and shortly thereafter, and at the World Federation of Education Associations meetings in Edinburgh (1925), Toronto (1927), and Geneva (1929), which he attended as chairman of the

American delegation and of the committee on international cooperation, from 1925 to 1929, of the National Education Association. Later, speaking at the ceremonies marking the fiftieth anniversary of Teachers College (November 1944), Russell observed that education for peace demanded the re-education of the American people as well as of the enemy. He advocated in part a program teaching better understanding of human nature and inveighed against any American isolationist policy. Russell, who favors compulsory military training but solely as a means of national defense, was to declare in February 1947 in his annual report that the United States should oppose what he termed the despotic aims of Soviet Russia. Later in the same year he was to accuse the Soviet Union of attempting to keep the European people "ignorant", "servile", "hungry" (New York *World-Telegram*, August 13, 1947). The Marshall Plan, he believed, was the "most direct and least costly reply . . . to the Bolsheviks." Dean Russell declared, too, that it was the task of education in the United States to teach children "to look Bolshevism in the eye . . . and [to understand] what its tactics are."

In April 1945, a curriculum service bureau for international studies was inaugurated at Teachers College by a group of eminent educators from all parts of the United States. Russell was one of the sponsors of this organization, which numbers among its plans the preparation and publication of textbooks acquainting children in American elementary and secondary schools with the culture of other nations. In July of the same year the educator, in an address at the opening of the 1945 summer session at the college, reiterated his conviction that "conformity and flexibility must be taught side by side at every level in the school system if education is to produce a people so disciplined . . . and temperate as to survive and at the same time so supple as to adjust to the mighty changes of a technological world." The Institute of Studies of Comparative Government and Education, an organization designed "to study with scientific precision the relations between education and democracy," was established at Teachers College in November 1946. It will draw its lecturers from among American and European scholars. In August 1947 the dean of Teachers College attended in Glasgow the World Organization of the Teaching Profession, of which he was elected president.

Aside from his concern with national and international problems of education, Dean Russell has had an active interest in the New York City schools. A member of a 1934 committee to survey the municipal public school system, Russell was requested for a second time, late in 1945, to serve the city in an educational capacity. As chairman of the Board of Education's advisory committee on human relations succeeding Frank E. Karelson, Jr., who resigned charging "chaotic" conditions in the city schools, Russell undertook to reorganize the committee and report to the public the work being accomplished. The dean also has supported the projected closing in June 1948 of

the Teachers College experimental, private Horace Mann-Lincoln School so that its funds might be better used for "public schools, many of which were eager to experiment, and whose students were more representative."

The spectacled dean of Teachers College was married in June 1913 to Clotilde Desjardins. Their three children are William Fletcher, Jr., James Earl II, and Robert. Dean Russell is an Episcopalian and a thirty-second-degree Mason (Knight Templar). A vice-president of the Société d'Histoire de la Révolution Française and president of the American Institute of France, Inc., since its founding in March 1947, the educator is also a member of the Columbia University Club and the Century Association in New York, Fairfield Country Club, Cosmos Club (Washington), and the Union Interalliée in Paris. Phi Delta Kappa (Columbia) and Phi Gamma Delta are other societies to which he belongs. In addition to his authorship of other publications, including *Liberty vs. Equality* (1936), Russell is editor of *The Rise of a University*, volume I (1937), and has collaborated on *The Short Constitution*, with M. J. Wade (1921), and *The Meaning of Democracy*, with T. H. Briggs (1941). A recipient of the Butler silver medal from Columbia (1928) and the Horace Mann School Alumni Association medal for distinguished achievement (1939), the dean has also had conferred upon him the LL.D and Ed.D degrees by a number of universities and has been honored by Bulgaria, Yugoslavia, and France.

ST. GEORGE, MRS. GEORGE B(AKER)
See St. George, K.D.P.C.

ST. GEORGE, KATHARINE (DELANO PRICE COLLIER) July 12, 1896- United States Representative from New York; business executive

Address: b. House Office Bldg., Washington, D.C.; St. George Coal Co., 2 Wall St., New York 5; h. Tuxedo Park, N.Y.; 10 Gracie Sq., New York 28

In January 1947 civically active Mrs. George B. St. George became Representative Katharine St. George of New York's rural Twenty-ninth District. Known as a breeder of prize-winning dogs, a worker in philanthropic causes, and as executive vice-president and treasurer of her husband's coal brokerage company, the Republican Congresswoman was soon dubbed by newsmen "the natural successor to Clare Boothe Luce."

Mrs. George Baker St. George was born Katharine Delano Price Collier on July 12, 1896. She is a first cousin of President Frank-

lin D. Roosevelt through her mother, the former Katharine Delano, sister of Sara Delano Roosevelt. Katharine Delano was a daughter of Warren Delano, the importer; and a descendant of Isaac Allerton, the Pilgrims' business agent, and of Philippe de la Noye, a Huguenot who arrived in Plymouth in 1621. Katharine Delano was married to Price Collier, Iowa-born writer and editor. (After her husband's death, she used the hyphenated name of Price-Collier.) Collier, who had been educated in Geneva and Leipzig before taking his B.D. degree at Harvard University, was a Unitarian minister for nine years prior to becoming European editor of *Forum* magazine. It was during the latter period that Katharine, the third child—and second daughter—of the Colliers' four children, was born, in England.

From Katharine's second year to her eleventh, the Colliers lived in the Ramapo Hills colony of Tuxedo Park near New York. At the age of eleven she was taken back to England, to finish her schooling there and in France, Switzerland, and in Germany, where young Miss Collier and her mother were presented at the Kaiser's court. After Price Collier's death in November 1913, his debutante daughter returned to Tuxedo to become a permanent resident there. In April 1917, a few days after the United States entered World War I, twenty-year-old "Cassie" Collier was married to twenty-five-year-old George St. George, whose parents lived in England. St. George, educated at Eton and Cambridge, was then working as a clerk for J. P. Morgan and Company. (His maternal grandfather was George F. Baker, president of the First National Bank of New York.)

In 1919 a Wall Street wholesale coal brokerage concern, later to be called the St. George Coal Company, became the property of George St. George, who in 1947 was chairman of its board, while Mrs. St. George was executive vice-president and treasurer. (His other interests include directorship of a number of banks, and a vice-presidency of the Empire Trust Company.) The St. Georges have one child, Priscilla ("Prune") Avonel Baker, the wife of former New York State Senator Allan A. Ryan, Jr., a mining executive. Mrs. St. George is co-owner with her daughter of the Prune's Own Kennels, established about 1923, which breeds English setters and pointers, a large number of which have been champions. President of the English Setter Club of America, Katharine St. George heads the State chapter of the American Women's Dog Breeders Association, and has for years been secretary of the Tuxedo Kennel Club.

As a resident of Tuxedo Park, Mrs. St. George has been active in local civic affairs. An officer of her Red Cross chapter since 1926 and chairman since 1936, she has served on the elective local board of education since 1926 and was, by 1946, its president. Since 1931 she has served on the Tuxedo Town Board. In these and in other committee offices, wrote the *Walden Citizen Herald* in May 1946, "she enjoys and has well earned the confidence and respect of her fellow townsmen." The name

Dorothy Wilding

KATHARINE ST. GEORGE

of Mrs. George St. George appeared in newspapers, in October 1934, as chairman of the women's division of the Henry Street Visiting Nurse Service fund drive; in March 1940, as chairman of a benefit in aid of Finland; in December 1941, as co-chairman of a Manhattan women's special gifts committee for the New York War Fund; and in 1945-46, as head of a similar group which raised the largest amount of any committee for the Memorial Hospital Cancer Center. During World War II she served as a civilian representative of WAC recruitment and as a governor of the Women's Military Services Club of New York City.

A Republican in a Republican district, Katharine St. George advanced in the party organization to become president of the Tuxedo Republican Club and a governor of the Woman's National Republican Club. When her cousin Governor Franklin Roosevelt became the Democratic party's candidate for President in 1932, Mrs. St. George withdrew from the Republican county committee and "remained withdrawn" for six years, according to the *Independent Woman*. When the suggestion of a third term for Roosevelt was broached, however, she reentered the ranks of active Republican workers, to become treasurer of the Orange County Republican Committee and in 1940, its vice-chairman.

Unable to win her party's endorsement of her candidacy for the State Assembly, in September 1942 Mrs. St. George accepted the chairmanship of the county campaign committee which worked for the election of eleventh-term Representative Hamilton Fish⁴¹, and other Republican candidates. She is credited with being the first woman to hold such a post in New York State. In 1943 the "political dynamo," as Elsa Maxwell⁴² called her, went on to county chairmanship; and the next year she was one of the first county chairmen to ad-

vocate the nomination of Governor Thomas E. Dewey⁴³ to run against Roosevelt, a choice she still held as a delegate to the national convention that summer.

Not long after the convention, according to the *New York Times*, Dewey repudiated Fish's support, on the ground that the Congressman had injected a racial issue into the campaign. In reference to this, county chairman St. George stated her interest in the campaign was chiefly concerned with Dewey's election to the Presidency, but that she considered the repudiation would "do him a great deal of harm in Orange County." Her county was the only one of four in that district to vote by a majority for every Republican candidate in that election, which saw Fish replaced as Congressman by Augustus W. Bennet, a Republican lawyer running on a "Good Government" coalition ticket.

When the 1946 election year arrived, Mrs. St. George herself opened a campaign to win the Republican nomination from Bennet, who was running in the Republican primaries. Her aim, she told an interviewer, was to "rid the party of subversive elements of every stripe." Mrs. St. George won the Republican nomination amidst much controversy concerning her receiving support from Fish. During her ensuing campaign for office, she characterized as erroneous the reports that she was a protégée of Fish: a statement issued in her name by her secretary read, "Hamilton Fish is merely a member of the Orange County Republican Committee, and as such was committed to help elect me as the regular Republican candidate." Her platform was based on promises of both homes and jobs for veterans, of improvement in the agricultural situation for farmers, and of preserving the status quo of labor's gains. "The ultimate goal," she said, "is to have every union member a capitalist."

After her election to the Eightieth Congress as one of seven women Representatives, Mrs. St. George told a reporter that her major objectives were to obtain the relaxing of Government controls over private enterprise and the strengthening of American foreign policy: "We cannot hope to win the respect of the Russians until our foreign policy is as definite as theirs." "It won't get us anywhere for us to go off half-cocked against labor," she also said, citing the Railroad Brotherhoods as an example of good labor-management relations—"It is every working man's right to strike." As for taxes, she told reporters that income taxes should be reduced in the lower brackets first, then "fan out" towards the top.

According to Mrs. St. George, who had asked to be assigned to the House Committee on Foreign Affairs, her second choice was the Committee on Agriculture, because she represented four important dairy counties, and her third choice the Military Affairs Committee, because her district included West Point. As announced on January 13, the Republican Committee on Committees assigned her to the Post Office and Civil Service Committee. The Representative from New York told reporters that foreign policy was still her major interest, and made it the subject of her first speech that

February. She asked that the country keep the secret of the atomic bomb "until perhaps by the grace of God we find a defense against it." Later that month Mrs. St. George questioned the State Department's motives in appointing a son-in-law of Sidney Hillman⁴⁰ as a labor attaché in the foreign service. Mrs. St. George's signature was affixed to a formal request, presented in April by a group of Representatives to Secretary of State Marshall⁴¹, demanding a statement of the Administration's policy on Palestine. When the first session of the Eightieth Congress ended, in July 1947, Josephine Ripley wrote in the *Christian Science Monitor*, "Mrs. St. George has been active and vocal on occasion, during her first session in Congress, conducting herself with the confidence of long experience in political life." Representative St. George's recommendations in the field of foreign policy, made in November 1947, touched upon the distribution of food in Europe, which she recommended should be made only by American agencies; the creation of a "United States of Europe"; and the banning of shipments of durable goods and petroleum to the Soviet Union.

Topics chosen by Mrs. St. George for a series of lectures have included "Has the Government Failed Labor?", "Problems Confronting the Next Administration", "Our Unfinished Work", "A Woman Views Washington," and "Forward to a Better Government." A fine rider, Katharine St. George belongs to the American Association of Horse Shows and the Newburgh Saddle and Bridle Club. Other associations of which she is a member are the New York State Agricultural Society, the Orange County Home Bureau, and the Orange County Chamber of Commerce. Her church is the Episcopal. Reporters who have interviewed the Representative have noticed Republican elephants on the lapels of her dressmaker suits and in several parts of her Washington office, which was also hung with family portraits. The brown-eyed, auburn-haired legislator is five feet two inches tall, weighs 110 pounds. Mrs. St. George once pointed out that one good thing about women in politics is, "They are not continually comparing themselves to the Great Emancipator."

SALTZMAN, CHARLES E(SKRIDGE)
Sept. 19, 1903- United States Government official

Address: b. c/o Department of State, Washington, D.C.; h. 3133 Connecticut Ave., Washington, D.C.

Charles E. Saltzman, vice-president of the New York Stock Exchange, obtained a leave of absence from his Wall Street position in June 1947 in order to enter the United States Department of State as Assistant Secretary

for Occupied Areas. Under his supervision was the administration of the American zones in Europe (Germany and Austria) and in Asia (Japan and Korea).

The son of Major General Charles McKinley Saltzman and his wife, the former Mary Peyton Eskridge, Charles Eskridge Saltzman was born in Zamboanga, on the island of Mindinao in the Philippines, on September 19, 1903. Most of his early life was spent in the various Army posts to which his father was ordered, so that he received his elementary education in the public schools of such widely separated places as New York City and the Panama Canal Zone. In 1920 he was graduated from Central High School in Washington, D.C., where he had reached the rank of captain in the school cadet corps and had served as associate editor of the school's monthly magazine. For the succeeding year he was enrolled in classes at the Sibley College of Engineering at Cornell University.

Saltzman received his appointment to the United States Military Academy at West Point in 1921. At the commencement four years later, he received, besides his Bachelor of Science degree, the title of "Distinguished Graduate." He had distinguished himself at the academy as the president of his class, manager of the football and the swimming teams, and as associate editor of the student yearbook, *The Howitzer*. The newly commissioned second lieutenant was one of the first three West Point graduates to receive a Rhodes Scholarship in 1925, which enabled him to spend the ensuing three years at Oxford University. As a student at Magdalen College of that university, Saltzman was matriculated in the Honor School of Modern Languages, which bestowed the Bachelor and Master of Arts degrees upon him. His interest in athletics undiminished, Saltzman rowed on the Magdalen College crew which participated in the Henley regatta in 1928.

During his residence in England, Saltzman had retained his commission in the Corps of Engineers of the United States Regular Army. On his return to the United States in 1928, he was assigned to duty at Fort Humphreys, Virginia, where he acted as a company officer before being appointed a military aide to President Hoover⁴². (At this time Saltzman's father was Federal Radio Commissioner.) With the intention of entering private industry, he resigned from his Regular Army commission in 1930, but remained in the service of the New York National Guard. After receiving his first lieutenantancy in the National Guard that year, he continued to advance through the grades to the rank of lieutenant colonel (1940).

Meanwhile, the former Army officer had joined the staff of the New York Telephone Company, with which he was to remain for five years. He began as an assistant engineer, and successively held the positions of engineer, assistant commercial manager, commercial manager, and, finally, directory production manager. After August 1935 he became associated with the New York Stock Exchange, where he occupied a variety of posts. At first an

Press Assn., Inc.

CHARLES E. SALTZMAN

assistant to the executive vice-president, Saltzman later served as assistant to the chairman of the business conduct committee and secretary to the committee on "odd lots and specialists." In time he became special assistant to the director of the department of member firms; following the reorganization of the exchange, he was made secretary and, in 1939, vice-president.

When the entry of the United States into World War II seemed imminent, in 1940 Saltzman obtained a leave of absence from the Stock Exchange and re-entered the Army. Assigned to active duty with the rank of lieutenant colonel, he served in territorial United States for two years before being sent overseas. Saltzman saw duty in England, participated in the North African invasion, and took part in the Italian campaign as Deputy Chief of Staff of the Fifth Army and of the Fifteenth Army group until he received an appointment as director of public administration and acting director of public economy, with the United States Occupation Forces in Austria. A brigadier general by this time (1945), he served in those occupation force capacities from July 1945 until February 1946, while stationed in the American-occupied area of Austria. "Our job was rehabilitation," he told a New York *Post* interviewer, "and there wasn't one of us in Austria who didn't come away with a strong sense of the importance of international affairs to the United States now, of the meaning of public service."

Early in 1946 Brigadier General Saltzman returned to private life and to his position as vice-president of the New York Stock Exchange. A year later, in June 1947, he was appointed Assistant Secretary of State for Occupied Areas to succeed former Major General John H. Hilldring⁴⁷. The areas under his administration are the American-occupied

zones in Germany, Austria, Japan, and Korea.

The first public address made by the Assistant Secretary of State after the assumption of his office was to the September 1947 meeting of the International Council of Women. He then said that the United States was about to implement the Potsdam agreement "to treat Germany as a single economic unit and improve the level of industrial production." At the beginning of October Saltzman became chairman of the American delegation participating in the Anglo-American discussions held in Washington on the bi-zonal administration of Germany and on the role of German coal production in the Marshall Plan. Subsequently he formed part of the fifty-man delegation to the Foreign Ministers Conference in London in November.

The State Department official is a member of the board of managers of the Seamen's Church Institute of New York, and a member of the board of directors of the Planned Parenthood Federation of America. In 1947 he acted as chairman of the two-million-dollar-fund-raising campaign of the Planned Parenthood Federation. That same year he was named a member of the board of governors of the American Red Cross. When he is in New York, he frequents the University Club, the Lambs, and the Leash; in Washington he belongs to the Army and Navy Club. His fraternity is Kappa Alpha. For his military record he has received the United States Legion of Merit and the Distinguished Service Medal, the Order of the British Empire, the Brazilian War Medal, the Polish Cross of Merit, the Italian Bronze Medal for Valor, and the degree of Grand Officer of the Order of the Crown of Italy, the French Croix de Guerre, and the Order of the Army Corps; and the Moroccan Ouissam Alouitte with the degree of Commander.

Saltzman is five feet ten inches tall, weighs 156 pounds, and has hazel eyes and dark brown hair. He was married in 1931 to Gertrude Lamont, daughter of former Secretary of Commerce Robert P. Lamont, and is the father of one son, Charles McKinley. This marriage was terminated by divorce in the summer of 1947. By his second marriage, later that year, the Assistant Secretary of State became the husband of Cynthia S. Myrick. Saltzman enjoys opera, plays, Gilbert and Sullivan operettas, and motion pictures. The books he prefers to read are in the nonfiction and current events categories. His favorite sport is tennis—he considers himself a fair player. "My real hobby," he told Sylvia F. Porter of the New York *Post*, "is being with my friends. I'm gregarious. And when I'm with them, I don't like playing bridge or other games. I just like to talk."

 Who's Who in America, 1946-47

SANDOR, GYORGY (shän'dôr dyûrd'y')
Sept. 21, 1912- Concert pianist

Address: b. c/o Haensel and Jones, Columbia
Concerts, 113 W. 57th St., New York 19;
h. 150 W. 55th St., New York 19

One of the piano virtuosos of international reputation is György Sándor. Following his debut in 1930, he has concertized in Europe and in North and South America. He is particularly noted for his interpretations of the compositions of Béla Bartók⁴⁰, under whom he studied in Hungary.

György Sándor was born in Budapest on September 21, 1912. He was one of four sons—there was also one daughter—of Ignác and Jenka (Czipszer) Sándor. The five children, all of whom had inherited their mother's love of music, played together in a chamber music ensemble which they formed. György was the only one of them to gain international renown in the field of music. Young Sándor received his secondary school education at the *Gymnasium* at Madach, continuing at the Royal Academy of Music in Budapest. He received his diploma in piano and composition in 1933.

Although Sándor gave evidence of being a child prodigy, he waited until the age of eighteen to begin his professional career, making his debut in 1930 as a concert pianist in a recital at Budapest. Following this successful first appearance, he performed as soloist with the leading symphony orchestras of Europe. For seven years (1931-38) he concertized in the principal cities of the central European, Baltic, and Scandinavian countries, and in the British Isles. Sándor arrived in the United States in 1938 for his American debut, which took place in New York's Carnegie Hall in February of the following year. The pianist, whose initial appearance had been greeted with enthusiasm by the press and the public, was to give subsequent recitals there in 1941 and 1942. After half a year of concert performances in the United States, Sándor began his first South American tour (1939-40), giving about 110 recitals and concerts in Colombia, Peru, Chile, Argentina, Uruguay, Brazil, and Mexico, as well as in the West Indies; he was to return to these countries in 1941, 1945, and 1946. Following the first trip south, the artist toured Canada in 1941, thus dividing his time that year between the Northern and Southern Hemispheres.

Sándor's concert career was interrupted by World War II, in which he saw military service. After his enlistment in the United States Army in October 1942, Sándor was assigned to the Signal Corps, the Intelligence Service, and lastly to a Special Service School before receiving his discharge in 1944. It was while serving in the armed forces that the Hungarian-born pianist became a citizen of the United States (in 1943). After the war ended, Sándor returned to the piano to present two Carnegie Hall recitals and to give an extensive concert series in South America in his first year (1944-45). He was to be recalled each summer for tours in North and South America, for appearances as soloist with the New York Philharmonic, Miami Symphony,

GYORGY SANDOR

National Symphony (of Washington, D.C.), Scranton, Philadelphia, and Ottawa philharmonic orchestras. In one season (1945-46) Sándor filled twelve orchestral engagements, including an appearance with the New York Philharmonic. His plans for 1947, following his fourth South American tour of sixty concerts, include a series in Mexico (March and April), in Central and South America (May and June), in Europe (August through November) and in the United States and Canada (January through May 1948).

In his musically formative years Sándor had studied composition with the Hungarian composer Zoltán Kodály and piano with Béla Bartók. Sándor played the world première of Bartók's *Dance Suite*, which, first written for orchestra, was transcribed by Bartók for the piano. Sándor also performed the world première of the composer's posthumous Third Piano Concerto which Bartók wrote shortly before his death, the pianist introducing the work on February 8, 1946, with the Philadelphia Orchestra under the direction of Eugene Ormandy⁴¹. When the performance was repeated at Carnegie Hall later that month, Louis Biancolli of the New York *World-Telegram* wrote: "Mr. Sándor's reading was tense and dynamic throughout. . . . You felt a special fervor too—the special pleading of a friend and countryman." Other reviewers cited his "tonal beauty" and "virtuosity." Earlier in Sándor's career a critic in *Musical America* noted that while the pianist "has deft fingers and boundless technical equipment, at present, his playing lacks spiritual appeal and he frequently strives for more tone than any piano is capable of producing musically." Two years later Biancolli was to praise "the strict pianism of his playing," his interpretations being "fitted to the timbre and limits of the piano"; Virgil Thomson of the New York

SANDOR, GYORGY—*Continued*

Herald Tribune called him "a master of his instrument."

While Sándor's endurance and speed are praised, together with his technical skill, some reviewers have felt that he lacked sufficient warmth. A New York *Sun* critic described one performance: "Much of it was beautiful to hear, merely as instrumental sound, but it had little expressive meaning." Of his Columbia recording of Rachmaninoff's Second Piano Concerto in C Minor (made in April 1946) another reviewer said, "Eloquently discoursed and invested with the necessary virtuosity"; his first record album, "The Piano Music of Liszt," was released a month before. Several of Sándor's concert pieces have been of his own arrangement, and his adaptation of a dance from *The Golden Age* by Shostakovich⁴¹ was considered "skillful piano writing."

Having received favorable notice from the Mexican press, Sándor was to receive an elaborate obituary at the hands of the journalists of El Redondel in 1944, after false rumors of his death reached them. The news spread to the Central American countries as well, and in 1945 Sándor was welcomed back as the *pianista resucitado*—the pianist who came back to life. On one of the anniversaries of his "demise," he received a skull made of sugar (a *calavera*) from a Mexican admirer. Of the differences between North and South American concert audiences, Sándor has found the Latin Americans less susceptible to advertising and news features, being influenced more by the actual performance. An artist's first South American concert audience is necessarily small until he receives a critical stamp of approval, after which the audience may double in size for the second recital and, if the artist lives up to expectations, redouble for the third performance. Sándor believes that "with the ever-increasing exchange of artists between its countries and ours, our neighbor to the south is fast becoming of tremendous musical importance." An honorary member of the Ateneo Musical Association of Mexico, the pianist belongs also to several other Latin-American musical societies.

At a series of six one-hour lectures (delivered in Spanish) at the University of Mexico City (1940), on musical interpretation and piano technique, and at the University of Bogotá in Colombia (1941) on the kinetics in piano technique, Sándor was able to teach students his philosophy of music interpretation: "Every movement a pianist makes at the keyboard has a definite effect upon the tone produced," says Sándor. "Naturally this means that any mannerisms an artist might be tempted to use solely for their visual effect must be outlawed . . . for they cannot help but introduce tonal effects which do not belong in the music. . . . The interpreter does not have to put anything into music not originally intended by the composer. . . . If truly revealed, the art of the composer is all-encompassing, and each artist must search out its meanings for himself." On one occasion, during a concert in Costa Rica, Sándor found that the piano was

shaking under his touch, in spite of the fact that he was not violating his philosophic precepts regarding extraneous physical motion—it was an earthquake that rocked the auditorium.

In a newspaper article John Briggs of the New York *Post* reported the gray-eyed musician as "wearing his [brown] hair long and having a generally soulful look that made you think of Liszt in his Parisian days." Sándor is five feet eleven, keeps his weight at 145 pounds by skating, skiing, swimming, and playing tennis. The bachelor pianist has a strong interest in the peoples, customs, and languages of many nations. In addition to Hungarian, he speaks French, German, English, Spanish, and Portuguese, which he is still (in 1947) studying. The easiest way for him to learn a new language, Sándor says, is to read reviews of his concerts in foreign newspapers—he thus learns the adjectives first.

SARTRE, JEAN-PAUL (sär'tr' zhän pôl)
June 21, 1905— French writer and philosopher

Jean-Paul Sartre, French philosopher, novelist, and playwright is the most productive of the younger French writers who came to the fore during the Nazi occupation. He rose to fame as the author of *Les Mouches* ("The Flies"), a play of veiled propaganda which was produced under the very nose of the conqueror in 1943 and which brought a subtle message of heroism and hope to the French people. His only previous literary work, a novel, *La Nausée* ("Nausea"), and a few short stories now collected under the title *Le Mur* ("The Wall"), formed the chief link between him and the outside world throughout the war.

Born in Paris on June 21, 1905, Jean-Paul Sartre spent his entire childhood and youth in that city. After completing his studies at the Ecole Normale Supérieure in 1929 and winning first place in the nation-wide competitive examinations for teachers in the secondary schools (the degree of "agrégé" which he received is slightly more advanced than the American doctorate), he spent several years teaching philosophy in a lycée in Le Havre. While living in this harbor city, he began to articulate his philosophy in terms of actual experience; the novel that resulted, *La Nausée*, is considered by many to be the work in which his philosophy and art are most successfully integrated. "La Nausée," said one French critic, "must be read if one is to understand to what depths of anguish and misery man must descend in his blind search for the notion of being. . . . In it, too, one finds the modern world with all its scars and deficiencies." Sartre himself describes it as representing a synthesis of the philosophical approach of the German thinkers Husserl and Heidegger, under whom he studied in 1933 and 1934.

Hitler's rise to power made Germany unsympathetic to the young Frenchman, and by 1935 he was back in Paris, teaching philosophy at the Lycée Condorcet and living at a small hotel in the Latin Quarter. By frequenting the cafes and nightclubs of the neighborhood, he

was able to study at firsthand the types with which he was to people his later plays and novels. He was at this time a contributor to *La Nouvelle revue française*, and did much to popularize Faulkner, Caldwell, Hemingway, Dos Passos, Steinbeck, and other young American novelists of the day. It was during this period, also, that the groundwork was laid for his major work on Existentialism, *L'Être et le néant* ("Being and Nonbeing"), published in 1943. By some critics *L'Être et le néant* is considered less an original work than an adaptation of Heidegger's *Sein und Zeit* ("Being and Time").

Existentialism, as developed from its Danish and Germanic origins in *L'Être et le néant*, is a philosophy of pessimism, which holds that man's destiny on earth is absurd, that freedom of will determines his actions, and that each individual exists only in order to confirm the existence of other people. "Man can will nothing," says Sartre, "unless he has first understood that he must count on no one but himself; that he is alone, abandoned on earth in the midst of his infinite responsibilities, without help, with no other aim than the one he sets himself, with no other destiny than the one he forges for himself on this earth." Howard A. Johnson, writing in *The American-Scandinavian Review* of the derivation of Sartre's thought from that of his Danish predecessor, Søren Kierkegaard, observed: "But still, how Kierkegaardian is Sartre? He knows the problem as Kierkegaard knows it, but he does not know Kierkegaard's solution. . . . In a word, Sartre is Kierkegaard without God." (The French thinker himself has written of his basic conception in *Theatre Arts* of June 1946. This magazine, and *Partisan Review*, have printed translations of other selections from his works. Sartre's philosophical study, *Existentialism*, was published in an English edition in 1947.)

In World War II Sartre became first a private in the Army and soon after a prisoner in Germany for nine months. He served his apprenticeship as a dramatist by composing and directing plays for fellow prisoners in the prison camp. On his release in 1941, he returned to Paris and was active, as a journalist, in the Resistance movement, contributing to the important underground publications, *Les Lettres françaises*, *Combat*, and others. He was a member of the National Committee of Writers and aided in establishing contact between underground writers and in circulating clandestine publications. "Sartre, among others," wrote *Pour la victoire*, "is a shining example of the moral and intellectual revival of France after the dark night of the Occupation."

Les Mouches, Sartre's play based on the classic Orestes theme, was submitted to the German censor in 1943, and, since its contemporary political message was not discernible in the reading, licensed for production. Eric Russell Bentley, in *The Playwright as Thinker*, describes it as a drama "of resistance to tyranny, of belief in freedom. One can imagine what force some of the lines must have had in oc-

JEAN-PAUL SARTRE

cupied France: the arguments for freedom, the recurrence of the word *liberté*, the fascistic ugliness of all the symbols of authority, the libertarian audacity of Orestes. Yet the political meaning of the piece is strictly secondary; for political freedom is portrayed as the product of a prior freedom more difficult both to conceive and to realize . . . the freedom that comes of finding and realizing the self."

It was late in 1943, with the production of his second play, *Huis clos* ("No Exit"), that a larger public began to be concerned about the meaning of Existentialism, of which Sartre had now become the acknowledged leader. One of his critics has said: "His characters behave as if they had read 'Being and Nonbeing,'" and it is generally agreed that, despite the real creative talent of Sartre, an insight into the chief tenets of Existentialism is essential to the proper understanding of his works. (Both *Les Mouches* and *Huis clos* are available in English translations. The first production of *Les Mouches* in the United States was presented in March 1947 by the Dramatic Workshop of the New School for Social Research in New York City.)

Unlike the American production, seen on Broadway in the fall of 1946, *Huis clos* enjoyed a long run in Paris. *Huis clos*, however, was cited in the Donaldson awards made by *Billboard* magazine in 1947 as the best first play of the year 1946. In the meantime, Sartre, with the assistance of his close friend and disciple Simone de Beauvoir, continued to popularize the doctrines of Existentialism in well-patronized lectures and in much-reviewed tracts. By December 1944, the charges and countercharges had become so heated that Sartre saw fit to publish an article of "Corrections" (*Mise au point*) in the Paris weekly *Action*. This is written in relatively simple language and is the source of most of the notions cur-

SARTRE, JEAN-PAUL—*Continued*

rent about the philosophy which he represents. A pamphlet, *Existentialism is a Humanism*, followed soon after, provoked by what Sartre considered to be unfair inferences on the part of Leftist spokesmen. In 1946, two volumes of a trilogy entitled *Chemins de la liberté* ("Roads to Freedom") were published. *Age de raison* ("Age of Reason") deals realistically with the moral and intellectual dilemmas of a typical group of Left-Bankers, while *Sursis* ("The Reprieve") "resurrects" minutely the political drama of the weeks before Munich. (An English edition of *Chemins de la liberté* was published in the spring of 1947. In reviewing the novel for the New York *Sun*, John Cournos found it "the best French novel since Duhamel's *Pasquier Chronicles*." Orville Prescott, the New York *Times* critic, considered *Age of Reason* a "tedious disappointment," while Lewis Gannett discovered an "erratic brilliance" in it. *Newsweek's* reviewer remarked that the book lacked "originality of plot or situation, but as a study of three or four inconsequential persons lost in the emptiness of their rather meaningless lives it is not entirely lacking in interest." This was followed in November 1947 by the English translation of *Sursis*, which provoked much the same variety of response in the reviewers.

The year before Sartre had visited the United States as a member of a group of French journalists who toured the country under the auspices of the OWI in order to inspect and report on the American war effort. On his second visit, in 1946, sponsored by the service of Cultural Relations of the French Government, he lectured in New York and at Harvard, Columbia, Yale, and Princeton universities. Recently Sartre has been the founder and editor of a monthly, *Les Temps modernes*, at whose offices in the rue Sebastian-Bottin he is said to receive daily a steady stream of visitors of every description, especially the young, from among whom he has recruited his most ardent admirers. Sartre was one of several Frenchmen to address members of UNESCO during the sessions held in Paris.

Two of his later plays, produced in Paris in 1947, were the objects of unusual interest in the public press. One, *La Putain respectueuse*, ("The Deferential Prostitute"), inspired by his visit to the United States, was reviewed by the Paris police as an offense to the "great American democracy" as well as to public morals. *Les Morts sans sépulture* ("The Unburied Dead") likewise stirred up feeling because of its realistic portrayal of the torture inflicted by the Vichy militia on members of the Resistance. As in his earlier plays, the situations are grimly drawn and the dialogue is pared to the bone. "The very severity of these plays," says Sartre, "is in keeping with the severity of French life: their moral and metaphysical topics reflect the preoccupations of a nation which must at one and the same time reconstruct and recreate, and which is searching for new principles." These plays were followed by the 1947 production of *Les Jeux sont faits* ("The Bets

Are Placed"), a film based on a script by Sartre.

In an article in the New York *Times Magazine*, John L. Brown described Sartre as a "short figure, beginning to grow bald, a man pale, blondish, blinking behind horn-rimmed glasses . . . His glance is sharp, analytical, responsive. He is bundled up in a coat acquired during his lecture tour in the United States and in an enormous knitted scarf of a type that is a uniform along the Boul' Mich'. His coat pockets bulge with papers. As he talks, rapidly and well, he gestures with his pipe."

SCHEMM, MRS. FERDINAND RIPLEY
See Walker, M.

SCHOENEMAN, GEORGE J (EREMIAH) (shōn'ě-măn) Mar. 4, 1889- United States Government official

Address: b. c/o Bureau of Internal Revenue, United States Treasury Department, Washington, D.C.; h. 1609 Noyes Dr., Silver Spring, Md.

The collecting of forty billion dollars in Federal taxes for 1947 constitutes the largest business operation in the world. The individual responsible for this task is George J. Schoeneman, Commissioner of Internal Revenue, who has been described in *Collier's* as "a quiet, informed man who knows all about your income tax . . . if that's any comfort to you." Schoeneman was sworn into office July 1, 1947, after serving as Administrative Assistant and Executive Assistant to President Truman for two years. A Presidential appointee, he heads, in his new position, the bureau to which he has devoted much of his career: he has had twenty-five years of experience in improving and building up the procedures of the Bureau of Internal Revenue.

George Jeremiah Schoeneman was born March 4, 1889, in a Newport (Rhode Island) lighthouse of which his father was the keeper. (In later life, when Schoeneman became Executive Assistant to the President, his career was described as "from lighthouse to White House.") Charles and Catherine (Shea) Schoeneman were his parents. George was reared in Newport, where he attended the public schools. At the age of twenty-two, in 1911 he entered Government service, as a stenographer in the Post Office Department in Washington. He had come to the nation's capital planning to study law, "but his rapid promotions to increasingly responsible positions left him no time to pursue this ambition." While in the postal service, he held the position of executive clerk to the Postmaster General, and also was assistant superintendent of the Division of Supplies and Equipment. On November 16, 1919,

he left the Post Office Department to become secretary to one of the members of the Federal Reserve Board.

Schoeneman's career with the Bureau of Internal Revenue began a year later, on September 1, 1920, when he was appointed chief of the Bureau's Personnel and Field Procedure Division. During the next quarter of a century, Schoeneman and his staff brought into the Treasury approximately one hundred and ten billion dollars in taxes, and handled more than three hundred million tax returns. In the course of those years Schoeneman was appointed Supervisor of Accounts and Collections on February 1, 1923; Assistant Deputy Commissioner of Accounts and Collections, January 1, 1924; Deputy Commissioner, Accounts and Collections, August 1, 1929; and Assistant Commissioner of Internal Revenue, May 11, 1944.

As a result of his record as an administrator, Schoeneman was appointed Administrative Assistant to the President on May 10, 1945. In his White House office Schoeneman supervised the broad personnel and civil service problems of the Government service. Shortly afterward he was promoted to Executive Assistant to the President, with responsibility for the supervision and coordination of the work of the White House staff.

Upon the resignation of Commissioner Joseph D. Nunan, Jr., who had, a few years earlier, designated Schoeneman as Assistant Commissioner, President Truman nominated (May 15, 1947) Schoeneman to be the new Commissioner of Internal Revenue. His appointment was confirmed by the Senate on June 13, 1947. For the first time in its history, according to a Bureau of Internal Revenue account, the Bureau was placed under the direction of a career executive, a man "fully experienced in the duties and procedures of the service prior to his appointment." "As a career man," *Business Week* commented, "Schoeneman is welcomed by tax lawyers, who respect his knowledge of BIR's functionings."

Schoeneman, who will supervise the collection of forty billion dollars in 1947 Federal taxes, earns ten thousand dollars a year, and must operate his Bureau on a budget of 188,000,000 dollars, a cost of less than fifty cents per hundred dollars collected. His big problem in 1947-48 is to fit the operations of the Bureau into the reduced appropriations granted by Congress. The Bureau estimated that it would need 208,000,000 dollars to collect 1947 taxes; it received 20,000,000 less, and was forced to give dismissal notices to 4,400 employees on the day before the new Commissioner was sworn in. In addition, the Bureau has not been able to fill 2,200 other vacancies in its staff, because of budget cuts. As of August 31, 1947, the Bureau's staff numbered approximately 48,600 persons, and was composed largely of bookkeepers, clerical workers, and investigators. Besides enforcing internal revenue laws, Schoeneman supervises the determination, assessment, and collection of all internal taxes. These include taxes on income and profits, alcoholic beverages and industrial alcohol, employment

Official Coast Guard Photo.

GEORGE J. SCHOENEMAN

taxes, and other forms of internal revenue. His Bureau also prepares and distributes the forms and instructions for the filing of tax returns.

When Schoeneman accepted his appointment, two Congressional investigations of the Bureau of Internal Revenue were scheduled for 1947-48. One investigation, conducted by the Appropriations Committee of the House of Representatives, is determining whether the reduction in appropriations for the fiscal year 1947-48 is being properly applied. The other investigation, conducted by the Joint Committee on Internal Revenue Taxation, is determining how large a basic organization is needed in order to enforce the tax laws properly.

Schoeneman himself must make the decisions in regard to the application of the tax laws. Of particular interest in 1947 are taxes on the undistributed profits of large corporations. Under Section 102 of the Internal Revenue Code, penalty taxes may be imposed against corporations that withhold profits "beyond the reasonable needs of the business." Just what the "reasonable needs of a business" are, is a question that Schoeneman must decide on a case-by-case basis. "Mr. Schoeneman's appointment to the top revenue post is not likely to mean any softening of tax collection policy, either under Section 102, or any other provision of the tax laws," the *United States News* observed. "The new Commissioner disclaims any intention of going out on a witch hunt under Section 102. . . . Corporate tax payers have nothing to fear as long as they can show a reasonable business need for the earnings they withhold from stockholders."

George J. Schoeneman was married to Lorena Rouse in 1916; their two daughters are Ruth (Mrs. Charles W. Adams) and Bettymae (Mrs. Robert M. Moore). The Commissioner of Internal Revenue is five feet eight inches tall, has gray hair and blue-gray eyes. His time

SCHOENEMAN, GEORGE J.—*Continued*
for recreation is limited, but he enjoys an occasional game of golf.

SEIF-UL-ISLAM ABDULLAH, PRINCE
(sā-ēf'ūl īs-lām āb-dōol-lā') 1912- Yemen Government official; diplomat

Address: b. The Sherry-Netherland Hotel, Fifth Ave. and 59th St., New York 22; Royal Palace, San'a, Yemen

As chairman of the Yemen delegation to the second session of the United Nations General Assembly, His Royal Highness Prince Seif-ul-Islam Abdullah represents one of the least-known nations in the world. For years the country, situated on the fertile Red Sea plateau, has been virtually closed to outsiders. Estimates of the population contained in its 75,000 square miles range from three and a half to four and a half million persons, who are ruled by an absolute monarch. The delegation took their seats in the U.N. on September 20, 1947, when Yemen became the fifty-sixth member nation.

Official United Nations Photo.

PRINCE SEIF-UL-ISLAM ABDULLAH

Of his full title, Seif-ul-Islam Abdullah bin Yehia Hamiduddin, only "Abdullah" is really the Prince's name. "Seif-ul-Islam" is a title borne by every son of the King of Yemen, equivalent to "prince." Prince Abdullah prefers to be known as Prince Seif-ul-Islam Abdullah, however, to avoid confusion with the other royal Abdullahs of Arabia. The remaining three words indicate that Abdullah is the son of His Majesty the Imam Yehia (or Yahya) Hamiduddin, head of the Zaidi sect of Islam. The sixth of Yehia's thirteen

sons, Seif-ul-Islam Abdullah was born in Kef-leh, Yemen, in 1331, by the Moslem calendar—1912 by the Julian calendar; he does not know the Western equivalent of the month and day of his birth. His father, a "poet, philosopher, theologian, and fierce desert warrior," is directly descended from the Prophet Mohammed through the Prophet's daughter, Fatima, and son-in-law Ali, the fourth caliph.

Eight years before Abdullah's birth, Yehia had assumed leadership of the imamate and begun the fight to free Yemen from Turkish rule. The Prince was about two years old when the Turks were finally expelled, just before World War I, in which war Yemen fought against the British. The fact that defeated Yemen retained her independence was described by *Time* as "an extraordinary diplomatic triumph for a chancellery headed by a twenty-two-dollar-a-month Foreign Minister."

Reared in the capital city, San'a, Prince Abdullah was graduated from secondary school in 1926, the year in which Yemen signed its first treaty (with Italy), and in which an American technical adviser, Charles R. Crane, was installed in the palace. Married in 1929, when he was sixteen or seventeen, Seif-ul-Islam Abdullah continued his studies in Moslem theology at the College of Islamic Law and Arabic Literature in San'a, and took part in athletics. He received the highest degree given there in 1934, the year in which his father lost a boundary war against his powerful neighbor Ibn Saud⁴³ but was recognized by Ibn Saud and by Britain and India as the King of Yemen, which state had formerly been known only as an imamate, not a kingdom.

The young man's first experience in governing came when he was made Minister of Education in his father's Cabinet. Next, with the title of Emir, he became governor of Touhama, one of the five districts into which Yemen is divided, with Hodeida as its capital. Abdullah is reported to be desirous of modernizing his nation (he wants, among other things, schools, hospitals, roads), which now lives according to "deep and simple lines . . . laid thirteen centuries ago" (to quote Freya Stark). While retaining the title of Emir, he has represented his father at conferences of the leaders of Arab states, including the conferences of Blou-dan, Inshas, and the Jordan Round Table discussions of Palestine.

From the year 1944 the Prince has devoted his time to travel for the purpose of establishing friendly relations between Yemen and other countries. (One writer called him "Yemen's link with the outside world.") Abdullah concluded a treaty of friendship with Egypt, an extradition treaty with Iraq, and commercial agreements with both nations. (Yemen exports hides, raisins, and the famous mocha coffee.) His visits to Iraq, Lebanon, and Syria were made at the invitation of their respective governments. Since 1945 Seif-ul-Islam Abdullah represented his country in the League of Arab States, and in 1946-47 headed a delegation to the London Conference on Palestine. He also represented his father's Government at the coronation of King Abdullah of Transjordan.

The Arab Prince, who had also visited France, accepted President Truman's⁴⁵ invitation to visit the United States, arriving in July 1947. (A treaty of friendship with the United States had been signed by the Yemen King and a United States mission to Yemen in 1946.) On his tour of New York, Pittsburgh, and the TVA area, Abdullah was accompanied by Karl Twitchell, who, as Charles Crane's engineer, had supervised installation of a steel truss bridge in Yemen two decades earlier. While in the United States capital, the Prince visited Arlington Cemetery, Mount Vernon, Congress, and the Lincoln Memorial. Having pressed for Yemen's application for membership in the United Nations, the Prince won approval for his country as the fifty-sixth member nation on August 18, 1947, and signed the instrument of admission. Yemen was seated on September 20, and the Prince thus became chairman of the Yemen delegation to the second session of the U. N. General Assembly.

With his colorful Yemen costume, which consists of a turban, a long silk robe, beautiful shawls and belts, and a jeweled dagger in his waistband, the Prince of Yemen might wear Western-style sports shoes and Argyle plaid socks. Evelyn G. Kessel, who interviewed the Arab Prince for the November, 1947 *United Nations World*, wrote: "His eyes are kindly behind glasses, his smile is wide, and his curly black beard circles his face like an inverted halo." His Highness' religion requires that he abstain from wine, music, and dancing; his wife, the Princess, lives in their modern, air-conditioned San'a home. Prince Abdullah approves of education for women, "but on certain fixed lines."

SHERRILL, HENRY KNOX, BISHOP
Nov. 6, 1890- Protestant Episcopal bishop
Address: b. c/o Church Missions House, 281 4th Ave., New York 10

One of the first statements made by Doctor Henry Knox Sherrill soon after he was inducted as Presiding Bishop of the Protestant Episcopal Church in America in January 1947 concerned the vital question of the unity of the Christian Church. "Progress cannot be at-

tained," said Bishop Sherrill, "by sporadic, intermittent, individualistic action, or by churches working as separate and distinct units, but only by a well-planned and effective strategy backed by the pressure of Christian consciences and purposes in all churches." As Bishop of Massachusetts, Doctor Sherrill had worked toward interdenominational harmony by serving on the Governor of Massachusetts' Committee on Racial and Religious Understanding and by acting as chairman for the board set up by the Army and the Navy to select chaplains of all denominations, except the Roman Catholic, for the armed forces.

Henry Knox Sherrill, a descendant of a Devonshire Englishman who settled in East Hampton, Long Island, in the seventeenth century, was born in Brooklyn, New York, on November 6, 1890. His parents were Henry Williams and Maria Knox (Mills) Sherrill. Until 1906, when he was graduated from Brooklyn Polytechnic Preparatory School, he was educated in his native borough. For a year before entering Yale University he was a student at the Hotchkiss School at Lakeville, Connecticut, where he earned part of his tuition by waiting at table. At Yale Sherrill's extracurricular work of teaching a church school class at St. Paul's, New Haven, soon made him known among his classmates as a quiet and hardworking student. Sherrill, already planning to enter the ministry, received his B.A. from Yale in 1911 and went on to the Episcopal Theological School at Cambridge, Massachusetts, where, *Time* related, "he was the most respected, although youngest, member of his class." About a month after his July 1914 graduation from the seminary as Bachelor of Divinity, he was ordained a deacon of the Protestant Episcopal Church, and a priest the following year by Bishop William Lawrence of Massachusetts.

Sherrill entered upon his first curacy in 1914 at Boston's Trinity Church (once the parish of Phillips Brooks) under Dr. Alexander Mann. From July 1917 until 1919, the young clergyman served overseas as a chaplain, first with Base Hospital Number Six (recruited from the Massachusetts General Hospital) of the AEF, and later with the First Army at its French headquarters at Bar-sur-Aube. Soldiers were drawn to the chaplain by his amiable umpiring of their baseball games (Sherrill had been the mainstay of the team at the Episcopal Theological School and was a fervent admirer of the Boston Braves) and his sharing of discomforts. "He has made a real parish of the unit," observed Bishop James De Wolf Perry (then chief of the Red Cross Chaplains' Service) while on an inspection tour of the front: "He is an ideal chaplain. . . . Massachusetts should be proud of what it has done to set the standard for hospitalization in France, and Sherrill is responsible for much of the success of it."

On his return from war duty, Sherrill was made rector of the Church of Our Saviour in Brookline, Massachusetts, where he remained until he was called to succeed Doctor Mann as rector of Trinity in 1923. During his seven

Kalden-Keystone

BISHOP HENRY KNOX SHERRILL

years at Trinity, Sherrill acquired the reputation of being a liberal, "Low Church" minister, an enemy of intolerance and national isolationism, and a vigorous speaker whose pulpit manner caused one parishioner to complain: "I don't like him. He keeps me awake." At the unprecedentedly young age of thirty-nine he was elected Bishop of Massachusetts, to succeed the late Bishop Charles G. Slattery. (Previously, Sherrill had been elected Bishop Coadjutor of Pennsylvania, but he had declined the nomination.) The consecration of the new Bishop was performed on October 14, 1930, in his own parish church, Trinity, on the anniversary of the consecration of Phillips Brooks.

For the next six years Bishop Sherrill was the representative of the First Province at the national council of the Episcopal Church. At two general conventions of the Church, that at Atlantic City in 1934 and the one at Cincinnati in 1937, he officiated as chairman of the Committee on Dispatch of Business of the House of Bishops. In 1938 the Massachusetts Bishop was appointed assessor to the Presiding Bishop, Henry St. George Tucker⁴⁸. Less than nine years later, at the fifty-fifth triennial convention of the Episcopal Church held in Philadelphia at the end of September 1946, Sherrill was unanimously elected Presiding Bishop to succeed Virginia-born Bishop Tucker, thus becoming the first Massachusetts clergyman to hold that office in a hundred years. As presiding Bishop, Sherrill is to the Protestant Episcopal Church in United States what the Archbishop of Canterbury is to the Anglican Church; he will hold the \$15,000-a-year position until the retirement age of sixty-eight. After election he restated his liberal stand on Church policy by endorsing the liberalized marriage canon of the Church, which refers the remarriage of divorced Episcopalians to the discretion of their diocesan Bishop, and the

proposed plan of union of the Episcopal and the Presbyterian Churches.

The plan of union had long been under consideration by a commission appointed by the presiding bodies of the two Churches. On September 14, 1946, during the same session of the Episcopal convention which saw Bishop Sherrill elected to the highest office in his Church, a minority group of the joint commission persuaded the House of Deputies (the laical representatives at the convention) not to consider the coalition proposals. In rejecting the measure the House of Deputies thanked the Presbyterians for their cooperation and suggested that the stipulations of the Lambeth Quadrilateral be incorporated into any new plan formulated. Equality of governments, ministries, communicants, and standards of faith were provided for in the proposed plan of union, so that there would be no implication of the superiority of one church and its practices over the other, and so that it would form the rallying point for a more inclusive union of churches. It is believed that opposition from Anglo-Catholic votes helped to defeat the measure.

Bishop Sherrill, who supports the proposed Presbyterian union and interdenominational cooperation, regretted the convention's decision to defer action on the union plan. Throughout World War II he had contributed to ecumenical unanimity by serving as chairman of the General Commission on Army and Navy Chaplains, an interdenominational group which supervised the selection of chaplains from thirty-odd denominations (other than the Roman Catholic) for the armed services. While acting in this capacity, as well as that of chairman of the Army and Navy Commission of the Protestant Episcopal Church, the Bishop traveled thirty-thousand miles by plane, visiting the European front on two occasions and the Aleutians. Shortly after the end of the war, he was a member of a committee chosen by the Federal Council of Churches of Christ to consult with German religious leaders.

The beginning of Bishop Sherrill's presidency of the Protestant Episcopal Church was marked by the purchase of the Satterlee estate in Greenwich, Connecticut, for use as a conference center and home by the presiding bishop. (It was opened early in October 1947.) Two months later, upon the inauguration of an evangelical campaign directed toward enrolling members of the Episcopal Church from among the sixty million citizens of the United States who have no church affiliations, Bishop Sherrill assumed the direction of the campaign. A budget of more than three million dollars for the 1948 activities of the Episcopal Church was approved by the church's national council, with Bishop Sherrill presiding, in September 1947. Bishop Sherrill convened a special meeting of the House of Bishops of his Church in November 1947, at which the Philippine Independent Church was granted communion with the Protestant Episcopal and the privilege of receiving Episcopal consecration for its bishops.

The Episcopal clergyman is the author of the biography, *William Lawrence, Later Years of a Happy Life*, and he has contributed articles, sermons, and editorials to the *Church Militant*, and an article entitled "Commonwealth for the King" to *Christ the King*, the presiding Bishop's Lenten Book for 1935; and "Why Go to Church?" appeared in the "Faith and Life" series of the Pilgrim Press. In recognition of his social service, the Bishop has been made a fellow of the American Academy of Arts and Sciences, and he has received honorary degrees from Yale (D.D., 1929), Harvard (D.D., 1936), Princeton (D.D., 1947), and Boston (LL.D., 1930) universities, as well as from Trinity College (D.D., 1936) and from General Theological Seminary (S.T.D., 1947). In 1947 he also received the Medal for Merit from Secretary of War Robert Patterson. He is also a trustee of several educational institutions, including Boston University, General Theological Seminary, Brooks, Groton, and Rogers Hall schools; the chairman of the board at Massachusetts General Hospital; president of the board of trustees of Saint Mark's School; and a fellow of the corporation of Yale University. For six years (1932-37) he was also a trustee of Wellesley College. From 1928 to 1930 the Bishop was president of the Greater Boston Federation of Churches, and from 1927 to 1930, a member of the board of preachers at Harvard University. At about the same time he lectured on homiletics at the Episcopal Theological School (1926) and at the Boston University School of Theology (1928). In 1947 he is director of the New England Grenfell Association. The missionary work of the Church also falls under his supervision: he is president of the National Council and the board of directors of the Domestic and Foreign Missionary Society. The Presiding Bishop was elected an honorary president of the Episcopal Actors' Guild during the spring of 1947. In August he joined the sponsors of the American Memorial to Six Million Jews of Europe, to be erected in New York. At a meeting of the Grenfell Association of America in November 1947, Bishop Sherrill was elected one of its sponsors.

In recent years the Bishop has foresworn baseball for golf and fishing, although he still retains his loyalty to the Boston Braves. According to a close friend, however, his "real hobby and enthusiasm is his family and home life." Bishop Sherrill was married to Barbara Harris of Brookline, Massachusetts, on September 6, 1921. The Sherrills have four children: in 1947 the two eldest sons, Henry Williams and Edmund Knox, both war veterans, are studying at Yale with the intention of preparing for holy orders; their younger son, Franklin Goldthwaite, is also a Yale undergraduate, while their only daughter Barbara Prue, is at home with her parents. The tall (five-feet-ten), gray-haired, and gray-eyed Bishop has been described as looking "every inch a bishop and every inch an exceptionally friendly and able man." He has "a handsome and impressive personality, erect carriage, a

ringing clear voice that carries conviction to his hearers . . . a ready wit."

SHIPLEY, RUTH B(IELASKI) 1885-
United States State Department official

Address: b. c/o Passport Division, Department of State, Washington, D.C.; h. 5508 39th St., Chevy Chase, Md.

The formulation and coordination of policy affecting American citizens on their entrance into, and departure from, United States and its Territories is under the direction of Ruth B. Shipley, chief of the Passport Division of the United States Department of State. This division, which forms a part of the State Department's Office of Controls, came under the administration of Mrs. Shipley, a Civil Service career official, in 1928, thus making her the first woman to head a State Department division.

Ruth Bielaski, whose surname became Shipley through marriage in 1909, was born in 1885 to the Reverend Alexander Bielaski, a Methodist minister, and his wife, Roselle Woodward (Israel) Bielaski. Her paternal grandfather, a native of Poland and a friend of Abraham Lincoln, fell in a battle of the Civil War. From Ruth Bielaski's birthplace in Montgomery County, Maryland, the family later moved to Washington, D.C., where she attended high school and received her secondary school diploma. In 1903, at the age of eighteen, Ruth Bielaski secured her first position with the Civil Service, as a clerk in the Patent Office.

After her marriage to Frederick William van Dorn Shipley in 1909, Ruth B. Shipley lived in the Panama Canal Zone for a while, then returned to Washington when her husband's illness made it imperative for her to find employment. In 1914 Mrs. Shipley was appointed to a temporary position in the State Department, with an annual salary of \$1,200. (Her brother, Bruce Bielaski, was the head of the Federal Bureau of Investigation at that time.) In 1921 Mrs. Shipley had received a change in status (to that of drafting officer), and a \$1,300-a-year increase in salary. Three years later her Civil Service rating was assistant chief of the Office of Coordination and Review and her salary \$3,200 a year. Upon her assignment to head the Passport Division of the State Department in 1928, she received a salary increase to \$3,600. Her subsequent salary ratings were reported, by the *New York Times* in 1944, as \$5,600, and by *Fortune* in 1945, as \$8,000. Her familiarity with the tech-

Press Assn., Inc.

RUTH B. SHIPLEY

nicalities of citizenship caused her to be appointed a delegate to the 1930 Conference on the Codification of International Law held at The Hague.

The functions of Mrs. Shipley's division fall into eight categories: administration (of passport regulations in the United States and its Territories), limitation (of American travel abroad), determination (of citizenship or nationality as a basis for eligibility), prevention (of fraudulent acquisition or use of passports), issuance, territorial administration (passport control in overseas areas controlled by the United States), supervision (of passport agencies other than that in Washington), and the direction of 3,900 clerks of Federal courts who handle passport matters. Maxine Davis reported in a 1940 issue of the *Saturday Evening Post* that the five agencies of the Passport Division (Washington, Boston, New York, Chicago, and San Francisco), employing 250 people, earned more than a million dollars in fees in 1939 while operating on a budget of \$284,000.

With the passage of the Neutrality Act, and later, the entrance of the United States into World War II, the major part of Mrs. Shipley's work was to discourage, rather than facilitate, foreign travel by American citizens. Full details of the background and business of the applicant were required before a passport was issued; nor was it possible to travel to belligerent countries or the combat zones. By issuing passports to United States citizens, Mrs. Shipley acts as proxy for the Secretary of State, who, through several administrations, has referred all final decisions on passport matters to her. When interpretations of the Passport Division's rules (which were drawn up by Mrs. Shipley with the aid of State Department legal advisers and Assistant Secretaries of State) are found difficult, the Division chief

consults lawyers in the State Department and other officials.

At the beginning of World War II in 1939 the Passport Division ordered the invalidation of all American passports which were then in use. These were replaced throughout the world (by a process of distribution that Mrs. Shipley cannot reveal) by passports of new color, format, paper, and type, as nearly counterfeit-proof as could be devised. The *New York Times* quoted Mrs. Shipley as saying, "The vast majority of the American public has a conscientious and rather prideful attitude toward passports. And the precautions taken to prevent counterfeiting of them are close to those taken with American currency. They are duplicated successfully about as often as money is, and the rate of convictions for such offenses is surprisingly high."

After the end of the war, Mrs. Shipley permitted the resumption of tourist travel by United States citizens to Europe, subject to the marginal accommodations available after all essential travel requirements had been fulfilled. To be granted a passport, a tourist had to present affidavits showing that he could guarantee return transportation, hotel reservations abroad, intra-European transportation, and military permission for travel to the Occupied Zones. Issuance of 188,938 passports during 1946 had made that the peak year for travel since 1930. "As an evidence of increasing travel abroad," Mrs. Shipley stated in February 1947, "the number of passports for January of this year exceeds that of a corresponding month last year by 68 per cent."

For more than twenty-five years Mrs. Shipley, who is now a widow, has lived in Chevy Chase, Maryland. Her immediate family consists of a son, Frederick William, three brothers, and two sisters. Her principal interests outside the office are various welfare activities, and music. She belongs to the League of Women Voters and the Quota Club, and her church is the Methodist. A gray-haired woman, Mrs. Shipley has been described by *Fortune* as "good-looking . . . her alert gray eyes appraise you long and thoughtfully."

SHREVE, EARL OWEN (shrēv) Oct. 31, 1881- Corporation executive; chamber of commerce official

Address: b. c/o Chamber of Commerce of the United States, 1615 H St., N.W., Washington, D.C.

At the thirty-fifth annual convention in April-May 1947 of the Chamber of Commerce of the United States, Earl Owen Shreve, vice-president of the General Electric Company, was elected to succeed William K. Jackson⁴⁸ as president of the chamber. According to

Newsweek (May 12, 1947), the Chamber of Commerce "gave its new president a big order to fill." Some of the organization's objectives, the attainment of which Shreve is to strive for during his term, include new labor legislation, a general overhauling of the existing tax structure, and support of the American free enterprise system in all domestic and foreign transactions.

Earl Owen Shreve, one of two sons of James Elmer and Addie Alma (Cone) Shreve, was born October 31, 1881, in Mapleton, Iowa. His father was a building contractor. After being graduated from the Charter Oak High School in Iowa in 1897, he got his first job as a railroad station agent and telegraph operator at Harrisburg, South Dakota. He later returned to Marshalltown in his native State as assistant to an electrical contractor. Becoming interested in the promising field of electricity, he enrolled as a student in electrical engineering at Iowa State College, where he played baseball, captained the second football team. He received his B.S. degree in 1904. That same year he was chosen by the General Electric Company from among college graduates as an engineer recruit and given a two-year period of "indoctrination, training, and practice" at the company's plants in Lynn, Massachusetts, and in Schenectady. In 1906 he was made salesman of carbon filament bulbs and electrical attachments for General Electric's San Francisco office. Arriving there not long after the earthquake and fire, he dug postholes for the fence being built around the company warehouse in the midst of the rubble before starting out on his sales territory. In those days his territory required three months of travel for a single swing.

For a time Shreve was the company's resident agent for the State of Nevada (1907-8). In 1909 he was reassigned to San Francisco as turbine sales specialist; he became an apparatus salesman in 1911, three years later he was advanced to the position of manager of apparatus sales, and in 1917, after a years as an assistant manager, he was named manager of the General Electric office there. He continued at this position until 1926, when he was promoted to the managership of the General Electric industrial department in Schenectady. Then, in 1929, he became assistant vice-president of the corporation, attached to the staff of the vice-president in charge of sales, and in 1934 he became a vice-president in charge of heavy industry sales. In the year 1945 he was appointed to head the customer relations work, having won the reputation of being a "good man in a crisis," considerate in his criticism of others and generous in his praise.

Meanwhile, Shreve had been active in organizations such as the Chamber of Commerce of the State of New York and the Schenectady Chamber of Commerce. He has also taken part in the work of the Chamber of Commerce of the United States. As director of the national Chamber of Commerce of the United States since 1943, as vice-president in 1944, and as the new 1947-48 president, Shreve has helped to formulate the policies and pro-

Chase Studios

EARL OWEN SHREVE

grams of that organization and will, during his one-year term, help to further the organization's aims. As expressed at the thirty-fifth annual convention in April-May 1947, at which Shreve was elected to office, these aims involve the removal of Governmental controls over industry and commerce, the adoption of new labor legislation, and the development of the advertising methods for "selling" advantages of the American free enterprise system, methods used in the sale of commodities.

On the question of reduction of Governmental controls, the chamber has urged the abolition of Federal activities it considers no longer necessary, reduction in the number of Government employees, the postponement of all new enterprises "until taxes and the national debt are considerably reduced," and the liquidation of Government corporations. The Chamber of Commerce also urged business organizations and State and local authorities to refrain from bringing pressure to bear on Congress for funds to benefit individual States and communities. The organization's tax program includes a tax ceiling of 50 per cent on income taxes, with corresponding decreases in the surtax schedules and an eventual scrapping of the capital-gains tax; an excise tax on widely used articles to supplement income taxes; the reduction of corporate tax rates to less than 25 per cent; and amelioration of the "destructive effects" of heavy estate and gift taxes.

On the labor question, the Chamber of Commerce adopted a policy which, according to the *New York Times* (May 2, 1947), is "parallel with the more conservative sentiment in the Congress," and is considered by "qualified observers" as an "anathema to the leadership of organized labor." The labor resolutions were: outlawing of the closed shop; prohibition of sympathy strikes and secondary boycotts; for-

SHREVE, EARL OWEN—*Continued*

bidding of strikes against the Government or those that disrupt essential public services; banning of "monopolistic practices," including the imposition of "industry-wide bargaining, involuntary royalty payments by management to unions, or interference with the movement of goods"; and requirement of secret balloting by employees before any strike. In general, the speakers at the conference expressed the view that "Government should not attempt to control labor or the methods by which industrial disputes are settled." The function of Government was considered by them to be "to define limits beyond which neither industry nor labor should have special advantages."

Chamber of Commerce conventioners approved President Truman's program of financial aid to Greece and Turkey; among their other actions, both international and domestic, were motions to discourage other nations from adopting excessive tariffs and trade barriers, "coordination of Government agencies dealing with soil and water conservation," permission to "carriers to make conference agreements approved by the Interstate Commerce Commission without being subjected to the antitrust laws," and "retention of State public employment services under State jurisdiction." Both the delegates and Shreve objected to the President's "moral suasion" campaign to reduce prices. In his acceptance speech, the president of the Chamber of Commerce said that businessmen were willing to acknowledge a responsibility to "dispel the inflationary cloud," but stated that the "curing of high prices calls for intelligent restraint by 'Government, business, labor, agriculture, the consumer.'" He also declared that the American people "will not be fooled by attempts to make businessmen scapegoats and blame business alone for the wage-price spiral." "An ounce of production will weigh more in the price scales than a pound of words," he said at the press conference following his election, and added that President Truman should have qualified his appeal to industry delegates at the convention to cut prices "by pointing out that some businesses were not in a position to comply," "particularly in the face of wage increases."

In a radio speech delivered later in May, Earl Shreve commented that the Congressional decision to introduce new labor legislation was merely "heeding the voice" of the American people and that existing labor legislation was "keyed to the conditions of another era." Since he became president of the national Chamber of Commerce, Shreve has also supported the Congressional tax-reduction bill and the Taft-Hartley labor bill, although after passage into law of the latter, he requested business "to bend backward to avoid misuse or distortion" of it (*New York World-Telegram*, August 12, 1947). In the field of foreign relations, he has criticized Soviet Russia for "spurning" the Marshall Plan. He has opposed the granting of authority to the United Nations to "control world oil resources" as contrary to United States free enterprise policies; and at an August meeting of the Na-

tional Institute of Commercial and Trade Organization Executives, he opposed a program of international reconstruction based on charity. "Nations, like individuals, can be weakened and corrupted by 'handouts.' Charity is an exceedingly flimsy foundation on which to base reconstruction. We shall be serving nobody if we deplete our resources beyond the point of safety . . . if we make commitments that may impair our own economic health."

Shreve, in a statement to the press in the fall of 1947 (*New York Times*, October 20, 1947), explained further his views on inflation. He placed the blame for "spiraling prices" upon the "current superabundance of money." Dollars, he stated, were bidding "fiercely and aggressively" for commodities. He saw "more and more production" as the only solution to the decline in value of the dollar, and added: "It [reduction of the excessive money supply] means more economy in governmental expenditures . . . abolition of nonessential governmental services and performance of the essential services with less waste, with less money outlays."

On his return to the United States after a visit to France, where he had been chairman of the American delegation at the meetings in Paris of the council of the International Chamber of Commerce, Shreve said, "The stopgap or interim phase of extending relief to the needy nations should be set in motion with all speed consistent with the necessary legislative action by our Congress." In December 1947 Shreve praised the Marshall Plan, calling it "America's first attempt at thinking and planning on engineering lines instead of acting on hunches" in the problem of European restoration.

In addition to his career at the General Electric Company (he is also director of General Electric Supply Corporation) and his work in the various chambers of commerce, Shreve was formerly president, and board of governors member, of the National Electrical Manufacturers Association; is a member of the American Management Association, and a director of the Schenectady Trust Company. He is vice-president and member of the board of the National Fire Protection Association, was chairman of the contracts advisory committee of the United States Navy Industrial Association. His clubs are the Mohawk and Mohawk Golf (non-resident), Edison, Union League, Rotary (New York), and the Electrical Manufacturers'; his fraternities, of which he is honorary member, Tau Beta Pi and Eta Kappa Nu. Shreve was honored for his work in the field of electricity in 1938 when he received the first award of the Marston Medal for engineering accomplishment. In 1943, for "outstanding service," he was presented with the Chicago Merit Award by the Iowa State Alumni in Chicago. The corporation executive for many years has also been active in boys' and young people's social and educational work: he is a member of the Boys Work Committee of the Rotary Club of New York, an executive member of Junior Achievement, Inc., and a national representative and member of the

executive board of the Schenectady Council of the Boy Scouts of America.

Shreve was married to Annabelle Thomson of Massachusetts on September 9, 1908; they have two sons, Robert T. and Earl O., Jr., one daughter, Natalie (Shreve) Crow, and five grandchildren. The gray-haired executive, whose height is six feet two inches, frequents the golf links for recreation. Descriptions of him mention his "smiling" green eyes, "leo-nine" head, and "Western vitality and good humor"—his favorite expression of approval is "640 per cent perfect."

SIMONSON, LEE (sī'mūn-s'n) June 26, 1888- Stage designer; art critic
 Address: 411 E. 50th St., New York 22

"As a designer, Lee Simonson is a practical man, a craftsman not a dreamer, a doer not a theorist," John Mason Brown has written. Simonson, a director of the Theatre Guild from 1919 to 1940, was the artist who created the sets for some of the history-making productions of the American theater. His book on stage design, *The Stage Is Set*, is a starred book in bibliographies of the theater. Simonson is also known as an art critic, and he has been editor of an art magazine. Other artistic fields in which he is known are those of art exhibition design and interior decoration.

Born June 26, 1888, in New York City, the son of Sali and Augusta (Goldenberg) Simonson, Lee Simonson, who is of German descent, was early influenced by his parents' interest in music, the theater, and literature. "Shortly after my mother's death when I was fourteen," Simonson wrote in his autobiography, *Part of a Lifetime*, "I became [my father's] companion when he went to the Irving Place Theatre"; there the boy saw performances of the plays of Schnitzler, Schiller, Goethe (he related that he could quote *Faust* before he read it). Young Lee failed to be impressed by the modern theater until, in 1904, he saw Arnold Daly in *Candida* and, in 1905, the first American performance of *Man and Superman*. His decision to become an artist and his attraction to color, which is a characteristic of his work, stem from a December 1898 issue of *St. Nicholas*, displaying a frontispiece by Maxfield Parrish. In 1901 Simonson, after attending the Ethical Culture Primary and Grammar School (then called the Workingman's School), entered Ethical Culture High School; by the time he was graduated in 1905 he had succeeded Deems Taylor⁴⁰ as art editor of *Inklings*, the school paper, and had sold a set of short-story illustrations to *Good Housekeeping*.

Simonson entered Harvard in 1905. There he studied under the noted George Pierce Baker and contributed to the *Harvard Month-*

ly; his disappointment at not being elected to membership on its editorial board led indirectly to his writing of the essay criticizing Aristotle's *Poetics*—for the essay the student was awarded the First Bowdoin Prize. Simonson, a philosophy major, completed the requirements for a B.A. degree in three years; the diploma, awarded *magna cum laude*, was dated 1909, however. Simonson had also been elected to Phi Beta Kappa and had helped to found the Harvard Dramatic Club. After graduation the young man went to Paris for art study. In those early days he thought he might become a mural painter, but, he says, "with my passion for galaxies of brilliant color, I realized that any hope of becoming a mural decorator when I returned to the United States was a forlorn one."

"My first sense of modern *décor* and what painters' and designers' vision could do to revivify the theater," Simonson has reported in his autobiography, "came during the summer of 1909 with the first season of the Ballet Russe in Paris and a week of Reinhardt's repertory at the Kunstlertheater in Munich." It was in 1915, three years after he had returned to the United States, that Simonson was called upon by Philip Moeller to design the sets for a production, *Love of One's Neighbor*, presented by the Washington Square Players. Thereafter Simonson planned several settings for the group. Service as a second lieutenant in the Corps of Interpreters took him from his work with the players during World War I.

When Simonson returned to civilian life he joined a group of five other designers, directors, and actors, called together by Lawrence Langner⁴⁴ to form the Theatre Guild. (Simonson became one of six directors on its managing board.) In its first season (1919) the guild's plays were designed by Rollo Peters. Simonson, in the meantime, did two settings for Henry Miller's production of *Molière*, his first work for a Broadway audience. Miller thought the sets too colorful and, subsequently, had them repainted with what Simonson calls "a cast of particularly muddy gray." By mutual consent Simonson's name was disassociated from the production.

Simonson's first designs for the Theatre Guild were for *The Faithful* (1919). In the following year he was the artist for *The Power of Darkness*, *Jane Clegg*, *The Dance of Death*, and *Heartbreak House*. After designing *Mr. Pim Passes By* in 1921, Simonson planned *Liliom*, the settings for which Sheldon Cheney has considered "plastic design at its best." In 1922 Simonson designed the Theatre Guild's production of *He Who Gets Slapped*, *Back to Methuselah*, *From Morn to Midnight*, *R.U.R.*, and *The Tidings Brought To Mary*, the last in collaboration with Feodor Komisarshesky (of this he has said, "Komisarshesky and I . . . made all the scenic changes by a play of light on a platform containing nothing more than a single block"). Among his other Theatre Guild designs are *Peer Gynt*, *The Adding Machine*, *Les Ratés* ("The Failures") in 1923; *Fata Morgana* in 1924; *The Goat Song* in 1927; *Marco Millions*, *Volpone*, *Faust* in 1928; *Dynamo* in 1929; *Roar China*, *The Apple Cart*,

Vandamm Studio

LEE SIMONSON

Hotel Universe, *Elizabeth the Queen* in 1931; *The Good Earth* in 1932; *The School for Husbands* in 1933; *Days Without End*, *Rain From Heaven* in 1934; *Idiot's Delight* in 1936; *Masque of Kings*, *Amphytrion 38* in 1937. In 1924 Simonson had both designed and directed Ernest Toller's *Massenmensch* ("Man and the Masses"); "I . . . reduced the stage picture almost entirely to the mass movements of thirty actors." In 1940 Simonson resigned as a director of the Theatre Guild.

During his twenty-one years with the Theatre Guild, Simonson had, and has subsequently, designed plays for other producers: these include *Road to Rome* (1927), *The World We Live In* (*The Insect Comedy*) (1931), *As You Like It* (1931), a ballet *Pas d'Acier* (1931), *Virginia* (1937), *Lorelie* (1938), *Joan of Lorraine* (1946). According to *Who's Who in America*, he had by 1946 designed more than seventy-five productions. Other of his sets during the years from 1938 to 1946 include those for *The Streets Were Guarded*, *Foxhole in the Parlor*, for several plays which did not reach New York, and for two ballets, *Swan Lake* and *Voices of Spring*.

In 1932 Simonson set forth his views on scenic design in *The Stage Is Set*, an "attempt to deflate some of the pretensions lent to the scene designer by his mentors and well-wishers." Perhaps the best summary of Simonson's theories of stage design are to be found in his definition of scenic art as "the creation of plastic forms and spaces that are an integral part of the acting of any play and project its meaning," and in three statements from *The Stage Is Set*: "A play occurs first of all when it is written. . . . A play becomes real to the degree that any audience succeeds in identifying itself with the lives and deeds portrayed. . . . The business of the stage designer is not to create a work of art that can be

judged as having a life of its own as a more or less beautiful picture but to bring to life the world as pictured by the play." With these ideas in mind, Simonson, who impresses Norris Houghton as an architect in his method, solves the technical problems presented by a new play and consults with the director as to his desired acting areas (although, sometimes, Houghton has pointed out, Simonson's suggestions for a set have influenced the direction of a play), before he considers the aesthetic problem set before him. His first plans are ground plans, he rarely makes models, and often finds he does not have time to render colored sketches of the set ("Drawings for the theater are desires," Simonson writes. "They should be signed with a question mark"). Simonson's contributions to the theater have been discussed by John Gassner⁴⁷, Kenneth Macgowan, George Freedley⁴⁷, John A. Reeves, Norris Houghton, John Dolman, Sheldon Cheney, and others in their books on the theater and theatrical history.

Effective stage lighting, says Simonson, is essential to good designing: he has called the switchboard the "nerve center of a modern stage." In a 1944 article for *The Studio*, Simonson reviewed the history of American stage design. "In a surprisingly short time," he said, "the designer learned to make lighting his second brush, and by the balance of planes of light of varying intensities emphasized the plastic forms of his background and created the illusion of depth, the poetry of distance and enveloping atmosphere by way of overcoming the physical limitations of the small stages. . . . At the same time he gave dramatic emphasis to his actors and by the progression of the light plot . . . achieved successive changes of mood to accompany the play's action."

In 1940, called upon by *Theatre Arts* to voice his opinion in a forum "Broadway Takes Stock," Simonson declared, "The perennial and endemic ailments that afflict play production in New York are due to the fact that it is unavoidably speculative, and the further fact that it is almost impossible to organize systematic gambling on an intelligent basis." Looking back to the turn of the century when most small American towns had some sort of civic theater, Simonson has called for the re-establishment of a system of community theaters. In 1943 he proposed a voluntary taxation of theater owners, playwrights, and producers of "hit shows" to pay for nonprofit theaters throughout the country (placed in towns not visited by commercial road companies) which would "serve as workshops for playwrights and directors as well as training schools for younger actors."

In 1947 Simonson turned to opera design, having been commissioned by the Metropolitan Opera Association to design sets for the four operas of *The Ring of the Nibelung*. (They will be seen early in 1948.) Lester Bernstein told *New York Times* readers: "In the scenic art they will mark as complete a break with the past as the tradition-steeped opera could make. Apart from implementing Wagner's sweeping imagination with all the poetry and

magic of modern stagecraft they are likely, in the opinion of the Met's stage director Dr. Herbert Graf, to strengthen the dramatic coherence of the cycle." Simonson's sets reportedly will use three dimensional set pieces rather than flat planes, gauze translucent backdrops, and a cyclorama as aid to achieving lighting effects through spot and tonal lighting and through light projection. The New York *Times Magazine* of November 2, 1947, reproduced two of Simonson's sketches for the *Ring*.

The designer has also been concerned with the architecture of the theater. In the May 1930 issue of the *Architectural Record* he set forth basic requirements for auditoriums and stage areas. He was able to carry out these ideas when he served, during 1939 and 1940, as theater consultant to the University of Wisconsin, the University of Indiana, and Hunter College, at the time when they were building new auditoriums.

During his early years Simonson was an easel painter and, later, he wrote numerous articles of artistic criticism; in 1940 his name again began to appear more frequently in art magazines. The arranger of many exhibits in art museums (among them the International Theater Exhibition at the Museum of Modern Art for which he prepared sketches for *Hamlet* as he would design and direct it, and a "Ways of Seeing" exposition in 1940 at the Worcester Art Museum), Simonson has called for a new plan for art exhibits. (At Worcester Simonson demonstrated the relation of form, space, and color, with lighted plastic models, and explanations from low-level loudspeakers were synchronized with the changing lights.) He would like to see the placement of each picture in a sympathetic environment (e.g., a Japanese print would be placed in a room with Japanese *décor*). Simonson would also design an art museum as a skyscraper so that the visitor might travel by elevator directly to the exhibit he wished to view, thus eliminating the distraction of passing motley items before he reached his goal. Of art criticism, Simonson asserted, "Criticism throughout the last century failed to perform one of its most essential functions: that of relating the creative artist to his potential public effectively enough to enable him to make a livelihood and so to be free to create." In 1927-28 Simonson was editor of *Creative Art*, the American edition of *London Studio*. His other writings on art include *Minor Prophecies* (1927) and "Art Today" (in preparation). The autobiographical *Part of a Lifetime*, published in 1943, contains an analysis of art and stage design. He edited *Theatre Art*, the catalogue of the 1934 exhibit of stage design of the Museum of Modern Art.

Simonson is also known as an interior architect (he has prepared exhibitions for R. H. Macy & Company, and the Bigelow Hartford Carpet Company, and designed a piano without "piano legs" for the Hardman Peck Company); and as an interior decorator (he planned an apartment with built-in furniture for William S. Paley, president of the Columbia Broadcasting System). He has written articles on

decoration, on fashion, and, for *Vogue*, on cooking. His venture into the field of poetry with the 1946 publication of *Untended Groves* was the least successful of his work. Many colleges and universities have heard him as a lecturer, and he is a director of the Municipal Art Society and of the American National Theater and Academy. In 1944 and 1945 he was a consultant on costume exhibitions at the Metropolitan Museum of Art, and in the latter year staged a widely publicized fashion show there, employing American-designed fabrics that were inspired by objects in the Metropolitan's collection. Simonson also designed the settings for a motion picture, *Show Shop*, which was filmed at the Hearst Studios in New York City.

A year after Simonson's 1926 divorce from Helen Strauss (to whom he had been married in 1916), Simonson was married to Carolyn Hancock, a designer who was one of his assistants. Their children are Jody and Karl. (His daughter, Elinor, by his first marriage, is deceased.) Simonson considers himself a liberal, usually agreeing with the labor viewpoint and voting as a Democrat in national elections. At one time he enjoyed gardening as a recreation. A colored reproduction of a self-portrait of the brown-eyed, black-haired artist, who is of medium stature (five feet seven, present weight 165 pounds), is the frontispiece for *Part of a Lifetime*. A dry sense of humor, sometimes self-appraising, is inherent in his writing.

SINGHER, MARTIAL (săng-gâr mâr"-syâl') Aug. 14, 1904- Operatic and concert baritone

Address: b. c/o National Concerts and Artists Corp., 711 5th Ave., New York 22; h. 4645 Delafield Ave., Fieldston, N.Y.

Martial Singher, the French baritone who made his Metropolitan Opera debut in December 1943 after eleven seasons with the Paris Opéra and numerous guest appearances in Europe and South America, has in three seasons established himself as a leading American operatic and concert artist.

Until after his twentieth year, although his father was famous as an amateur baritone in the Basque region and Singher himself had been a boy soprano in the church choir in Biarritz, Martial Jean Paul Singher was preparing for a teaching rather than a musical career. He was born to Joseph Paul and Marie (Dubourg) Singher on August 14, 1904, in the small town of Oloron-Sainte-Marie in the department Basses-Pyrénées, where his father, a civil engineer in charge of railways in southern

J. Abresch

MARTIAL SINGHER

France, was working temporarily. He received his early schooling in Biarritz and later in Bayonne, and training as a public school teacher in Dax, where he was graduated in 1924 with the additional diploma of a teacher of physical education. Then, after another year of training at the Ecole Normale de Toulouse, he became one of a limited group entering the Ecole Normale Supérieure de Saint-Cloud to prepare for normal school teaching.

It was at about this time that Singher became increasingly interested in music and acting, frequently singing as soloist in concerts given by the last-named institution. A few weeks before he was to graduate in 1927, one such concert was given with Edouard Herriot and Paul Painlevé, Ministers of Public Instruction and War respectively, present. The two statesmen, both lovers of music, urged the young man, who was already taking lessons in music, to become a professional singer. After being graduated from the Ecole Normale Supérieure de Saint-Cloud with the highest honors of the year, Martial Singher won admission to the Paris Conservatoire. For three years he studied voice with the Paris Opéra basso André Gresse, stage technique with the Opéra's stage director Pierre Chéreau, and repertory with Maurice Faure, in 1947 an assistant conductor at the Metropolitan in New York. In 1929 he was awarded the Conservatoire's first prize in singing; in 1930 its first prizes for both grand and light opera singing and the highest honor, the Grand Prix Osiris de l'Institut de France, for his performance as Iago in the second act of Verdi's *Otello*, which he had prepared as his last assignment as a student.

This led almost immediately to his engagement by the Paris Opéra, with a contract dated as of September 15, 1930. But Singher, still skeptical about his preparation, took further

vocal lessons with Juliette Fourestier, the noted voice teacher and wife of the famous French conductor Louis Fourestier, and placed himself in the hands of Signor Tanara of La Scala of Milan and Hans Bruck for coaching in the Italian and German repertory and languages. Meanwhile, Pierre Chéreau recommended him to Pierre Monteux⁴⁶ for the part of Orestes in Gluck's *Iphigénie en Tauride*, and in November 1930 the young baritone appeared for the first time on the professional stage at a gala performance of the Amsterdam Wagner Society, the Amsterdam Concertgebouw orchestra being under the baton of Monteux and Germaine Lubin singing the title role of *Iphigénie*. One month later he made his Paris debut as the monk Athanaël in Massenet's *Thaïs*, the Opéra orchestra being led by Gabriel Grovlez. His success in this second role brought him a guest engagement with the Bordeaux Opera for fourteen performances in *Perkain*, a new opera, based on Basque and Pyrenean folk tunes, by the contemporary composer Jean Poucigh.

After continuing to receive minor assignments in Paris for the next several months, while Vanni Marcoux and John Brownlee shared the major baritone roles, Singher was given his big opportunity in May 1931, when Marcoux became indisposed a few days before a scheduled performance of *Otello* starring Lauritz Melchior⁴¹. Although he knew only the second act—from his Conservatoire days—Singher was assigned Iago on three days' notice. "There were eleven curtain calls after the second act," he recalled for an *Opera News* interviewer in 1943, "only I was almost too bruised to enjoy them, for Mr. Melchior hurled me bodily into the footlights during our passionate dialogue. He was not used to so light an Iago. But he was so kind to me as we took our bows that of course I forgave him. After that performance I was given a new contract as a leading baritone. My worries were over."

During the next ten years at the Opéra (and at the Opéra-Comique from 1938 to 1941) Singher appeared in performances ranging from Bizet's *Carmen*, Rossini's *Barber of Seville*, and Verdi's *Rigoletto* to Rameau's *Castor et Pollux* (revived in April 1935 and taken to the Florence Festival that May), Wagner's *Parsifal*, and the contemporary *Maximilien* of Darius Milhaud⁴¹ (which had its première on January 6, 1932). He was Orestes in the first Paris performance of Richard Strauss's *Elektra* (January 1932); sang Telramund when Margjorie Lawrence⁴⁰ made her Paris debut (as Ortrud, in 1932); made twenty-three appearances in an unexpectedly successful, experimental revival of Thomas' *Hamlet* which used lighting effects in place of scenery (1933); sang the baritone leads in the world premières of Witkowski's *La Princesse Lointaine* (March 26, 1934) and Reynaldo Hahn's *Merchant of Venice* (March 29, 1935); and sang the title role in the first performance at the Opéra of Wagner's *Flying Dutchman* (1937).

In addition, in the decade between 1930 and 1940, Singher appeared as a guest artist in

opera houses in Holland, Belgium, Switzerland, Sweden, Denmark, Rumania, and Portugal; during the George VI coronation in 1937 at Covent Garden; in oratorio, as a soloist with symphony orchestras, and as a recitalist. He came to be regarded as one of the foremost oratorio singers in France and with the aid of Mme. Fourestier, the vocal teacher with whom he continued to study until he left France, slowly acquired a large repertoire of concert songs. In 1936 he was engaged for his first season at the Teatro Colón in Buenos Aires, singing in Massenet's *Werther* and for the first time in Italian and German—Almaviva in *The Marriage of Figaro* and Amfortas in *Parsifal*. During his second season at the Colón he sang in the first Argentine performance of *Hamlet* since Titta Ruffo's retirement and in his first German *Tannhäuser* and *Elektra*; during his third, in *The Magic Flute* and *Ariadne auf Naxos*. In his later repertoire at the Colón were *Carmen*, *Manon*, Rabaud's *Mârouf*, Gluck's *Armide*, Beethoven's *Fidelio*.

When World War II broke out in 1939, Singher was rejected for military service and given his orders instead by the Ministry of Fine Arts. Until the spring of 1940 he was still allowed to sing abroad, and it was on January 10, 1940, between a rehearsal with the Danish Broadcasting Company in Copenhagen and a performance with the Royal Opera in Stockholm that he was finally able to marry Margareta Rut ("Eta") Busch, whom he had met when her father, Fritz Busch⁴⁰, directed him in *Parsifal* in Buenos Aires. In June 1940, however, when the couple were preparing for their first trip to South America together, visas were suddenly canceled. There followed for the Singhers eighteen difficult months, while the baritone continued to sing at the Opéra, but with no heart for the work, he says, and later lay ill with an infection which almost blinded and paralyzed him. Finally, in November 1941, the Singhers arrived in the United States on a four-month visitors' permit on their way to South America, and it was during this interlude that Singher sang as a guest on the *Metropolitan Auditions of the Air* and was promised a contract by Metropolitan manager Edward Johnson⁴³ as soon as he should be free from his South American commitments. Because of further immigration difficulties, however, it was still another two years before Singher's Metropolitan debut took place, on December 10, 1943.

The baritone made his Metropolitan debut in 1943 in the relatively minor role of Dappertutto in Offenbach's *Tales of Hoffmann* under the baton of Sir Thomas Beecham⁴¹. Virgil Thomson⁴⁰ of the New York *Herald Tribune* was enthusiastic about his stage performance of "incomparable elegance" and his "perfection of vocal style," but other critics were somewhat less favorable. Robert Bagar of the *World-Telegram* praised the authority of his acting and his use of his voice, but found that voice, though strong, "wooden" and "not a particularly musical sounding one." Oscar Thompson of the *Sun* thought Dappertutto "not the part to make clear his particular gifts as a singing actor." For his next appearances, as

Escamillo in *Carmen* and Valentin in *Faust*, he received similar mixed notices, but with *Pelléas* on January 26, 1944, he came into his own at the Metropolitan. It was the first time that he had sung the role anywhere, it was noted, and the first time that the role, associated at the Metropolitan primarily with Edward Johnson, had been sung there by a baritone rather than a tenor, as Debussy intended. Typical of the reviews of this performance was Oscar Thompson's judgment that this was a "suave but impassioned Pelléas . . . easily and expressively [sung] in a voice that colored to the words and their emotional inflections."

Two days later Singher gave his first New York recital in Town Hall and scored what Henry Simon of *PM* called a "triumph of mind over voice." With this his colleagues, of the press agreed, Virgil Thomson writing: "Though his voice is not one of unusual natural majesty, his vocal mastery is definitely unusual. . . . A great singing style and a great musical understanding, assurance, dramatic power, and impeccable taste all go into his interpretations. But beneath everything, animating the grand line and sustaining his delicate phraseology, are a rhythmic tension and flexibility of rapier steel. . . . A performance of breath-taking artistry and elegance all round." These successes brought Singher enough engagements for his first coast-to-coast tour and resulted in his revival of *Pelléas* in Montreal, Toronto, Chicago, and in other large cities. During the 1943-44 season at the Metropolitan he also appeared as Wolfram in *Tannhäuser* and Amfortas in *Parsifal*; in 1944-45 adding Mozart's Figaro and repeating Pelléas; in 1945-46 adding Marcello in *La Bohème*, Mercutio in Gounod's *Romeo and Juliet*, Figaro in *The Barber of Seville* and the four parts in *Tales of Hoffmann*. In the 1946-47 season he appeared as Frédéric in *Lakmé*, Valentin in *Faust*, Escamillo in *Carmen*, Figaro in *The Marriage of Figaro*, and Mercutio in *Roméo et Juliette*. His recitals both in and out of New York continued to bring him high praise and a first engagement with the Chicago Symphony Orchestra, on October 25 and 26, 1945, under Désiré Defauw, made other symphonic organizations, such as the Minneapolis, Philadelphia, Baltimore, and New York Philharmonic, engage him. His artistic credo—that it is the "mosaic pattern of complete, well-rounded artistry" allowing "interpretative flexibility to reach the hearers' hearts," and not merely unusual vocal equipment—he has elaborated in an interview printed in *Etude* of January 1947.

Martial and Eta (Busch) Singher are the parents of two sons, Charles Michel and Jean Pierre Aimé. The baritone has blue eyes and brown hair, and an athletic figure (five feet eight inches tall, 155 pounds). In his student days he was an enthusiastic player of tennis, rugby, and *pelote basque*, a game similar to tennis. Today his recreations are less strenuous, but ball games still predominate and photographs of him throwing a beach ball are numerous. He likes intimate, gay company, dislikes large social events and dancing. What he calls his hobbies are two: the reading of

SINGHER, MARTIAL—*Continued*

good books and poetry, and family life, by which he means primarily play or work with his two little boys.

SKELTON, RED July 18, 1913- Radio and motion picture comedian

Address: b. c/o Metro-Goldwyn-Mayer Studios, Culver City, Calif.; h. 400 N. Camden Dr., Beverly Hills, Calif.

Red Skelton, the "limber-legged, rubber-faced" radio and motion picture comedian, has worked in "every branch of show business except carnivals." His professional career, which began when he was ten years old, has included work as a medicine-show singer, a tent-show performer, a circus clown, and a showboat comedian. At sixteen he was the youngest of burlesque comedians.

RED SKELTON

Born in Vincennes, Indiana, on July 18, 1913, Red Skelton, the fourth son of Joseph and Ida Mae Skelton, was named Richard Bernard. The only redhead in the family he soon acquired the nickname which he was to adopt as his first name. His father, a clown with the Hagenbeck and Wallace Circus, died two months before Red's birth, leaving the family in straitened circumstances. Skelton has been quoted by Earl Wilson as saying that as a child he lived in an attic in Mansfield, Ohio, and that he went to work because "the family

was hungry." Reared in Mansfield and Vincennes, he became a newsboy at seven, and "soon learned to sass the customers so that they bought papers to get rid of him." Another source of income was the discarded decks of cards which he picked up in the poolroom where he racked balls; these the boy "doctor" and sold as decks for tricks.

In an autobiography, "I'll Tell All," which appeared in the *Milwaukee Journal* in December 1941, Skelton wrote that, as a ten-year-old, he accidentally fell off the stage at his tryout for a medicine show, breaking several dozen bottles of medicine but making the audience laugh. Hired as a blackface "mammy" singer and general helper at fifteen dollars a week, he toured with the "Doc" R. E. Lewis show in Illinois, Missouri, Arkansas, and Indiana, that summer and the next. His schooling ended with the seventh grade; after that, Skelton has said, "I stole my older brother's birth certificate and went into show business again." When he left home, his mother made him a wig and gave him her blessing.

From the medicine show Red advanced to the John Lawrence Stock Company, a tent show, at fifteen dollars a week, but lost the job because the audience laughed at his dramatic speeches. Later he was one of Clarence Stout's Minstrels, and at fourteen he did comedy skits on Captain Happy's showboat, the *Cotton Blossom*, which sailed the Ohio and Missouri rivers. Next the boy "took up his father's cap and bells" with the Hagenbeck and Wallace Circus. His ambition was to become a lion tamer—until he saw one of the big cats maul Clyde Beatty. At fifteen Red "graduated" to the burlesque circuit (in Indianapolis, Kansas City, Buffalo, St. Louis and other cities) which was then, he has said, "really burlesque and clean as a whistle. We burlesqued Broadway hits." Skelton says that he has always made a point of avoiding off-color material.

In Kansas City at the Gaiety Theater in 1930, Red continued with vaudeville, and had his first meeting with the girl he was to marry when he was about eighteen. Teen-age Edna Marie Stillwell, the daughter of an undertaker, was an usher at this theater, where Skelton was substituted for an absent vaudevillian. Later, when the introduction of strip-teasing had caused the burlesque show to be "run out of town," he turned to entertaining at "walkathon" contests, and was master of ceremonies at a contest in Kansas City at which Edna Stillwell was a contestant. After their marriage in June 1931 the young couple went from city to city following the "walkathon" craze. Red entertained and Edna was a cashier. Skelton's first screen test, in 1932, was a failure because he was given a dramatic script. He did appear in some two-reel comedies produced in New York in the thirties, but they were not widely distributed and have since been forgotten.

During the depression the Skeltons were a struggling vaudeville team. (Mrs. Skelton also wrote the scripts.) Even in those days the couple always kept pets—at least one dog, and once a duck and a polar bear cub they used in their act. In the meantime, Mrs. Skelton saw

to it that her husband studied with a tutor for a high school diploma, which was granted in 1938. Success finally came to the Skeltons in 1936 at Loew's Montreal (Canada) Theater, where they had a twenty-six-week run. Later, when the theater manager demanded something new in their act, they worked up the doughnut-dunking pantomime which was to become Skelton's trademark, take him to Hollywood, and win him the presidency of the National Dunkers Association. For three years Skelton toured in "big time" vaudeville with this half-hour act, which required him to eat twelve doughnuts in different ways for each of the three daily shows. The result was a gain in weight of thirty-five pounds.

Red Skelton made his Broadway debut in June 1937; his vaudeville run there was a long-time one. The comedian's radio debut was in a guest spot on the Rudy Vallée⁴⁰ program of August 12, 1937. Although primarily a pantomimist on-stage, the vaudevillian "clicked" on the air, and was invited back two weeks later and again in November. While master of ceremonies at the Capitol Theater in Washington, Skelton was invited to a White House luncheon for entertainers in connection with President Roosevelt's⁴² infantile paralysis campaign of January 1938. There his irreverent humor attracted the attention of Mickey Rooney⁴⁰, one of the guests, whose recommendation resulted in MGM's signing Red to do his doughnut routine in the Ginger Rogers⁴¹-Douglas Fairbanks⁴¹ vehicle, *Having a Wonderful Time*. He was billed as Richard "Red" Skelton.

During the twenty-five-week lay-off which followed his work in *Having a Wonderful Time*, Skelton and his wife wrote, directed, produced a lavish musical revue, *Paris In Swing*, which they took on tour. According to his autobiographical "I'll Tell All," this broke box-office records but lost money because of excessive production costs, closing with a loss of five thousand dollars. A year or so later, Skelton played the comic lead in Jerome Kern's⁴² operetta, *Gentlemen Unafraid*, which was abandoned after being tried out in St. Louis. Comedian Skelton was given another motion picture role in 1940, when he was assigned a supporting part as a naval lieutenant in *Flight Command*, which starred Robert Taylor and Walter Pidgeon⁴². On the radio he was given the featured comedy spot on *Avalon Time* in the 1939 season, and he and his wife resumed their vaudeville career. In 1940 the act, which included Lupe Velez, ran for six weeks in New York and grew from fifty-five minutes to ninety and sometimes more.

Skelton's act set house records in leading cinema theaters in New York and other cities, including Chicago and Washington. The comedian figured prominently in subsequent Presidential Birthday Ball celebrations (he received the first invitation issued for the 1942 ball, according to the *New York Times*). A supporting role in *The People vs. Dr. Kildare*, released in May 1941, brought Skelton back to the screen. Three months later, *Whistling in the Dark*, which *Cue* described as "a riotously funny comedy about a radio detective who has

to live through one of his own plays," made Red Skelton a star. He was given his own radio program, *Red Skelton's Scrapbook of Satire*, which Raleigh Cigarettes has sponsored from its inception in 1942, and which soon established itself among the twelve leading national programs. Hooper⁴⁷ ratings have shown the Skelton show as high as third in audience size from time to time, after Bob Hope⁴¹ and Fibber McGee and Molly⁴¹; and a "laugh-meter" has shown that he draws laughter every eleven seconds.

Continuing his motion picture work, Red Skelton appeared with Ann Rutherford in the sequels in *Whistling in Dixie* (December 1942) and *Whistling in Brooklyn* (December 1943). The latter required him to pitch against the Brooklyn Dodgers. In 1942 Skelton supported Ann Sothorn, Elinor Powell, and Robert Taylor in *Lady Be Good*, co-starred with Ann Sothorn in *Maisie Gets Her Man* and *Panama Hattie*, and with Eleanor Powell in *Ship Ahoy*, a musical. Skelton played opposite the dancer again in *I Dood It* (1943), which took its title from the phrase Red had coined and popularized as the "mean widdle kid" on his radio program. (News of Colonel James H. Doolittle's⁴² famous World War II raid on Tokyo was headlined "Doolittle Dood It" in some newspapers; and when in 1943 Skelton presented a warplane to the Soviet Navy, according to the Moscow radio, its name was the Russian equivalent of "We Dood It.") He appeared also in *Du Barry Was a Lady* (1942), *Thousands Cheer* (1943), and in *Bathing Beauty* (1944).

Skelton, who reportedly spent seven nights a week entertaining servicemen during World War II, was inducted as an Army private in March 1944. He claims to be the only film celebrity to remain a private throughout his period of service. At first he was assigned to the Field Artillery, but later was ordered to six months' duty as an entertainer on troopships. In Italy he suffered a nervous breakdown for which he was hospitalized for three months. Before his discharge in September 1945, Skelton was assigned to entertainment duty in the United States. Back on the air in December, Skelton climbed within two weeks to third place. He found reason to complain, however, of the casts and scripts of his next pictures, *The Show-Off* and *Merton of the Movies* (he also was seen in *Ziegfeld Follies of 1946*), objections which were thought by Erskine Johnson to have been the cause of the assignment to his future vehicles of Paul Jones, who had produced Bob Hope pictures for Paramount. Scheduled for production by Columbia is "The Fuller Brush Man," in which Skelton will star.

One of few women radio gag-writers, Edna Skelton remained Red's business manager, occasional stooge, and chief radio writer after their divorce in 1943 (she was married to director Frank Borzage⁴⁶ in November 1945). "She brought me up from fifty dollars a week to seventy-five hundred," Skelton has said of Mrs. Borzage; his motion picture earnings have been reported as \$150,000 a year. Another Skelton radio writer is the novelist Benedict Freedman⁴⁷. The comedian's holdings,

SKELTON, RED—*Continued*

Skelton, Inc., comprise three apartment houses, five oil wells, a frozen-food concern, and controlling stock in the Inter-American Film Company in Mexico. A board of directors member of Blind Recreation, Inc., he is also a backer of Pacific Lodge, a home for orphans.

Skelton's second wife is Georgia Maureen Davis, a former photographer's model, to whom he was married in March 1945 while on a furlough from the Army; their daughter, Valentina Maris, was born in May of 1947. In his quieter moments Skelton has studied college subjects privately (he has taken college extension courses from Northwestern University), has done some painting in oils, and likes to construct and operate miniature railroads. He does not smoke, but collects pipes and often carries an unlit cigar; does not drink, although he often seems (in his own words), "more plastered than a California bungalow." Eccentricities for which he is noted include a dislike of talking on the telephone, dislike of the dark, and a preference for a highly unbalanced diet. Descriptions of the freckled, more than six-foot-two-inch Skelton mention his brown eyes and dimples. A conservative dresser whose collection of wine-red ties once numbered more than two hundred, Skelton "wears the most expensively tailored clothes," wrote Sidney Skolsky, "but won't hesitate to fall into a puddle to get a laugh"

SLICHTER, SUMNER HUBER (slik'tēr
 hū'bēr) Jan. 8, 1892- Economist; educator

Address: b. c/o Harvard University, Cambridge, Mass.; h. 10 Wyman Rd., Cambridge, Mass.

In evaluating the career of Sumner Huber Slichter, economist and Harvard University professor, a New York *Herald Tribune* editorial writer stated: "Not only does he rank in the top flight of American economists, but he has built up over the years a reputation for objective judgment in industrial relations second to none." The Harvard University professor is the author of numerous writings on economics, with emphasis on problems of labor-management relationships.

Sumner Huber Slichter was born January 8, 1892, to Mary Louise (Byrne) and Charles Sumner Slichter, in Madison, Wisconsin. His father was then a professor of mathematics in

the University of Wisconsin Graduate School, of which he later became dean. Sumner was reared in Madison with his younger brother, Louis Byrne, who was to become a well-known geophysicist. After graduation from a Madison high school in 1909, young Sumner Slichter went abroad to Munich to study at the university there for a year. Returning to the United States, he attended the University of Wisconsin as an economics major; in 1913 he was awarded a Bachelor's degree and a year later, a Master's. Slichter next studied at the University of Chicago for his Ph.D., which he received in 1918. He enlisted in the World War I Army in June 1918 and received a commission as a second lieutenant in December.

Slichter's first teaching assignment was as an instructor in economics at Princeton University (1919-20). In 1920 he was appointed an assistant professor of economics at Cornell University and, five years later, was promoted to a full professorship. He joined the faculty of Harvard University as a professor of business economics in 1930; ten years later he was given the title of Lamont University Professor. The first courses which he taught in the new post were labor problems and movements, economics of collective bargaining, and problems of industrial relations. At Harvard, he administered the university's Trade Union Fellowships, which are awarded to labor leaders sent by their unions for training for executive responsibility. In 1937 Slichter had conducted classes on labor problems for three hundred industrialists.

Slichter has written widely on labor questions. In 1919 he urged management to adopt a policy of understanding toward labor and of employing a well-trained labor administrator who would be invested with authority. "For years the fundamental labor policies of employers," he stated, "have been at variance with their self-interest." In a 1928 *New Republic* article, he wrote, "It appears that labor's productivity depends partly upon its bargaining power, that a strong labor movement is needed, not only in order to prevent manufacturers from reducing labor's wages, but in order to compel them to raise its efficiency." Eighteen years later he predicted that, by 1966, prices, production, and power of labor would be increased, while there would be a shortage of capital. "We are seeing a shift from a capitalistic community to a laboristic community," he observed. "But if labor lacks the foresight to make policies to encourage high production and create a demand for labor, its power won't do much good." According to the New York *Post* column *Washington Memo*, Slichter and two other labor experts were asked by Truman to prepare reports on the Taft-Hartley⁴⁰ labor bill. The same column reported that each of the three men recommended a Presidential veto.

In the early 1930's Slichter had called for the establishment of a Federal labor board, which would study problems of labor and of unemployment, would be empowered to grant patents with modifications designed to alleviate possible ensuing technological unemployment,

and which would be staffed to retrain for new jobs those laborers displaced by machines. "Is it not possible to do for labor, what, in essence, the Federal Farm Board is attempting to do for agricultural products? Is there not need for a Federal labor board to apply the idea of 'orderly marketing' to human services?" In the 1940's Slichter called for the regulation of both unions and management by: prohibiting discrimination; limiting the unions' right to expel, fine, or suspend members; requiring a financial report to be available for any member's examination; requiring the publicizing of trade agreements; restricting the right of employers to lock out and unions to strike; and prohibiting strikes of a specified type. "Regulations of the sort I have indicated will tend to strengthen trade unions and help them to gain members." In 1946 he called for "a declaration of rights of the community" and a strong conciliation service which would impose compulsory arbitration on labor disputants with the arbitrator to be selected by the parties involved or from a panel of permanent arbitrators originally chosen by a labor-management board. Slichter in 1947 testified before the House Labor Committee in favor of legislation establishing compulsory arbitration. He has also served as an adviser to the Secretary of Labor on the problem of strengthening the existing Government Conciliation Service. In 1947 he was one of the three experts commissioned by the American Federation of Labor Building and Trades Department to recommend methods of avoiding jurisdictional strikes.

During the depression years Slichter discussed many of the proposals for speeding recovery. Disagreeing with the Keynesian theory that higher wages induce higher prices, he at one time suggested a reduction in wages with the stipulation that the added income to employers be spent to hire more workers. He saw Government spending as a temporary solution effective during the period when the public project was actually in work, and the "spread-out" system as a means only to the reduction of future unemployment. Writing in a 1945 issue of *Fortune*, Slichter opposed the Full Employment bill; his arguments were based to some extent on his objections to "excess" Government spending and deficit, and his belief that a Government guarantee of full employment would reduce the worker's incentive to improve on a job. In discussing postwar reconversion, Slichter urged the continuation of price controls: "It would be far better to keep the OPA six months too long than to abolish its six months too early." He advocated a national wage policy (although, in general, the economist opposes Government wage-fixing), and increased unemployment compensation.

In September 1947 Slichter was named associate chairman of a Citizens' Advisory Council, formed to study the possible expansion of the Federal Social Security program. The economist, in an August 10, 1947, *New York Times Magazine* piece entitled "Eight Errors in Our Economic Thinking," asserted: "Eco-

Wide World Photos

SUMNER HUBER SLICHTER

nomie thinking in the United States is still greatly influenced by the Great Depression of the 1930's. . . . [It] is also affected by the failure to realize the effect of the war upon the economy." Slichter then listed the eight fallacies which he felt were hampering American postwar development. At a conference of the American Management Association, held in December 1947, Slichter predicted that there would be no depression in the year ahead, but rather an increase in inflationary characteristics.

A proponent of low tariffs, Slichter has strongly urged continuation of the Democratic Administration's foreign trade policy. "An excess of exports over imports during the 'catching-up' economy [that period which Slichter has described as interim between conversion and normal economies] would make more difficult than ever the later and extremely difficult transition from a 'catching-up' economy to a self-sustaining economy," he wrote in an article for *Foreign Affairs*. "Pressure by the United States for the repayment of debts must not be permitted to encourage the growth of bilateral (or multilateral) discriminatory agreements in international trade." The United States, he said, could prevent such discrimination by encouraging importation. This, Slichter added, could be accomplished "partly by extension of the Hull⁴⁰ program of reciprocal tariff concessions, but in the main through the establishment of low prices of foreign currencies in terms of dollars." In an *Atlantic Monthly* article Slichter declared that neither the Bretton Woods Fund nor a liberal lending policy on the part of the United States solved the essence of the problem of world trade. It is the difficulty, he remarked, that other countries have in selling to the United States that has upset the dollar exchange and the flow of trade. He also asserted, "Reductions in the tariff would raise our standard of living by bringing about a more

SLICHTER, SUMNER HUBER—Cont.

productive use of labor and capital within the United States."

Slichter is also the author of several books. His first was *The Turnover of Factory Labor*, which was published in 1918; his *Modern Economic Society* (1931) is a textbook which "affords a full and realistic explanation of the basic characteristics of our economic system and its operation in the business world." Revising a series of lectures given in 1933 at the Utah State Agricultural College, Slichter in 1934 incorporated them in *Towards Stability*, "an examination of the fundamental conditions under a capitalistic system that must be met in order to achieve economic stability." His *Union Policies and Industrial Management* (1941) is considered "one of the leading books on collective bargaining." Other of Slichter's works are *Economic Factors Affecting Industrial Relations Policy in National Defense* (1941), *Present Savings and Postwar Markets* (1943), *Trade Unions in a Free Society* (1947). Also published in 1947 was *The Challenge of Industrial Relations*.

The economist is chairman of the research advisory committee of the Committee for Economic Development and a staff member of Brookings Institution. He also serves as a member of the advisory committee on economics to the Committee on International Economic Policy. Slichter is a member of the American Economic Association (he was vice-president in 1937 and president in 1941), the American Association of University Professors (of which he was vice-president in 1936), Delta Sigma Rho, and Phi Beta Kappa. He belongs to the Cosmos Club in Washington, D.C., the Harvard Club in New York, and the Cambridge and Harvard Faculty clubs in Cambridge. Mrs. Slichter, to whom he was married June 6, 1918, is the former Ada Pence; their children are William Pence and Charles Pence. Slichter has brown eyes and white hair; his height is five feet ten and a half inches, his weight is 175 pounds. He is an Episcopalian. *Time* once quoted him as considering himself politically "a Wisconsin liberal—a conservative liberal that does not go off half-cocked."

Who's Who in America, 1946-47

SMALLENS, ALEXANDER Jan. 1, 1889-
Conductor

Address: h. "The Mallows," Wallack's Pt., Stamford, Conn.

Alexander Smallens, who has had a long and successful career in the United States as a conductor of symphony, opera, and ballet music, has earned a reputation as a sound, technically dependable, and musically conscientious leader. Associated with the Philadelphia Orchestra for more than eighteen years, Smallens has also been heard as guest conductor with virtually every major symphony orchestra in America, and with several of the leading European opera companies. In June 1947 he

became musical director of the Radio City Music Hall in New York.

A native of Russia, Alexander Smallens was born at St. Petersburg (later to become Leningrad, U.S.S.R.), on January 1, 1889. His parents, Dr. Pantaleimon Ossipowitch and Anna (Rosovski) Smolensk, simplified the spelling of their family name to Smallens upon emigrating to the United States in 1890. (Smallens was to become a naturalized citizen in 1919.) After receiving a standard New York public school education, the boy matriculated at the College of the City of New York, from which he received his B.A. degree in 1909. Meanwhile, young Smallens had begun his study of music at the age of eleven, attending the Juilliard School of Music in New York and, from 1905 until 1909, the Institute of Musical Art; he thus was graduated from both the institute and from college in the same year. It was in Paris at the Conservatoire National (1909-11) that added polish to his musicianship was acquired. Interestingly enough, the outstanding student in the class there was the composer Darius Milhaud⁴¹, some of whose ballet music Smallens was to introduce about three decades later.

Upon his return to the United States in 1911, Smallens joined the newly organized Boston Opera Company as assistant conductor. He remained with the group three seasons (1911-14), until World War I broke out and the company disbanded. That year (1914) he spent in New York conducting the Century Opera Company in its short-lived "opera-in-English" venture. This attempt having failed, Smallens resumed conducting opera in original languages with the Boston National Opera Company. The organization, comprised of members of the dissolved Boston Opera Company, toured the country from 1915 until 1917. Anna Pavlova, who had heard of the young conductor's work, then engaged him to direct the orchestra for her South American tour (the itinerary included Central America and the West Indies). Discussing Smallens' two and a half years (1917-19) with the great ballerina, Olin Downes once said: "I think that some of his finest conducting was done for Pavlova and there is no question that she danced most gloriously when Smallens was leading the orchestra. . . . He seemed to possess some superlative authority that she respected."

Withdrawing from the Pavlova company to accept another engagement in opera, Smallens joined the Chicago Opera Company to serve as its conductor during 1919-22. For a short period in 1923 he conducted the Volksoper and Staatsoper in Berlin and the opera at the Teatro Royale in Madrid; the first North American to conduct opera in these two cities, Smallens was later to be the first of his countrymen to appear as guest conductor at the Teatro Colón in Buenos Aires. His next post, following the European tour, was with the Philadelphia Civic Opera Company from 1923-30, as musical director of the group throughout its seven-year life. During part of this period Smallens worked, too, with Leopold Stokowski⁴² as assistant conductor of the

Philadelphia Orchestra (1928-30). For the four years that followed Smallens conducted that symphony orchestra as an associate conductor. He was later, in 1934-35, to be co-conductor with Fritz Reiner⁴¹ of the Philadelphia Orchestra opera presentations. Smallens' association with the Philadelphia Orchestra was to continue until 1947: on June 30 of that year he succeeded Charles Previn as musical director of the Radio City Music Hall in New York. In this capacity Smallens has complete charge of the theater's musical organization, which includes a *corps de ballet* and a choir in addition to the orchestra.

Probably entitled to be called one of the most active summer season conductors in the world, Smallens has conducted the Philadelphia Orchestra at the Robin Hood Dell in that city since 1930. He was musical director there for his first five seasons but resigned the post in order to fill summer engagements with other orchestras. The year 1946 marked his seventh season as guest conductor of the National Symphony Orchestra at the Watergate Concerts in Washington, D.C. He had previously appeared with the Essex County Symphony Orchestra at three of its annual spring festivals (1938, 1939, and 1940) held in Newark, New Jersey.

As a guest conductor at Lewisohn Stadium in New York (the stadium is on the campus of his alma mater, City College) since 1934, Smallens has directed summer performances of operas, ballets, and symphonies of the New York Philharmonic Orchestra. The association has been a source of "musical delight" to the critics who write of the conductor's "customary zeal and ability." He reads music, say the critics, "with keen understanding, spirit, and nicety of detail," being "totally devoid of exhibitionistic appeal." Elaborating upon this point, Robert Bagar of the New York *World-Telegram* wrote: "Mr. Smallens has no affectations. He does not pose, nor, by the same token, is he the diffident interpreter. . . . He devotes himself completely to [the musical work] and, to borrow a term from the lexicon of gag men, 'makes the pitch' sans fanfare, sans personalized notions, and, thanks be, sans overtures to the oh, so pedantic ideas of the pseudo esthetes." In *Dictators of the Baton* David Ewen has written his opinion of Smallens as a conductor: "Resourceful, intelligent, versatile, a master of all the technical resources of the baton, he may not have the personal dynamism, or the capacity to project intensity, passion, or soaring beauty which other conductors possess. But . . . he is a valuable conductor with an extraordinary span; our country is all the richer for his participation."

It has also been said that Smallens has one of the most extensive and most varied repertoires among living opera conductors, knowing more than one hundred and fifty scores by French, Italian, German, Spanish, Russian, and American composers, representative of every school and musical idiom. Many of the compositions in this group have received their American or world debuts under Smallens' baton. At composer Virgil Thomson's⁴⁰ re-

J. Abresch

ALEXANDER SMALLENS

quest, he directed the world première of *Four Saints in Three Acts* (in 1934); it was Serge Prokofiev's⁴¹ wish that his opera *The Love of Three Oranges* also be introduced to American audiences by Smallens. The conductor worked closely with George Gershwin from the time that the score of *Porgy and Bess* was completed, and directed that opera for both the original Broadway run in 1935 and for the revival engagement of three years from 1941 to 1944. Counting performances played to audiences while *Porgy and Bess* was on tour, Smallens has conducted more than one thousand performances of what he has termed his "favorite American folk opera." Smallens has come to be considered one of the foremost interpreters of Gershwin and has been called upon to conduct numerous all-Gershwin concerts—he has been a guest conductor with almost every major symphony orchestra in the United States. Many of these guest performances have been broadcast. Smallens has also appeared on the Atwater Kent program, the *Ford Sunday Evening Hour* (two seasons), the *General Motors Hour*, and the *Sealtest Hour* (twenty-six weeks), and has conducted the National Broadcasting Symphony Orchestra. He has made a considerable number of recordings for RCA and Decca.

Since his early days as conductor of ballet with Pavlova, Smallens has had occasion to appear with several other companies, notably the Ballet Theatre (1939-40) group in New York, with which he "gave an object lesson in how to conduct for terpsichoreans." Among the ballets which he introduced there was *Création du monde* by Darius Milhaud, his former classmate at the Paris Conservatoire. Believed by one critic to be "at his best with French music," Smallens has been particularly effective in the interpretation of Milhaud's works. As musical conductor of the Interna-

SMALLENS, ALEXANDER—*Continued*

tional Ballet (1944), the first company to have its home in America, Smallens made the orchestra "the company's brightest spot." Henry Simon of *PM* continued: "Under Alexander Smallens, it sounds better than any other ballet orchestra we have had here recently." In Hollywood in 1940 Smallens directed music for the United States Government filming of Pare Lorentz's ⁴⁰ *Fight for Life* (score by Louis Gruenberg); he had previously conducted two other Government films, *The Plow That Broke the Plains* and *The River* (scores of both by Virgil Thomson), as well as documentary films for other agencies. Smallens, who conducted for the Philadelphia Society for Contemporary Music, belongs to the League of Composers of New York, and is an American member of the International Section of Contemporary Music. In 1937 the College of the City of New York awarded him the Townsend Harris medal for distinguished postgraduate achievement and, two years later, made him an honorary member of Phi Beta Kappa.

Smallens first met Gilbert Seldes when he conducted the incidental music of the latter's version of *Lysistrata*. When Seldes later planned to produce *Hamlet*, Smallens was again called upon to conduct the orchestra, the music in this instance being composed by Ruth White Wertheim. Irving Drutman of the New York *Herald Tribune* reported, "Smallens says he married her [Mrs. Wertheim] so she wouldn't be able to object too strenuously to suggested changes in her score." Married on May 15, 1935, the Smallens have a son, Alexander. Smallens was "done up neatly in counterpoint" as one of the five "musical portraits" in Virgil Thomson's *Suite for Orchestra*: while therein portrayed as a "fussy" fugue, Smallens is, in fact, a calm man, heavy-set, with dark hair and dark eyes. A constant playgoer, the musician says of himself, "I suppose I'm a conductor who is happiest when he is going to the theater."

SMITH, GEORGE ALBERT Apr. 4, 1870-
President of the Church of Jesus Christ of
Latter-day Saints

Address: b. 47 E. South Temple St., Salt Lake
City, Utah; h. 1302 Yale Ave., Salt Lake City,
Utah

The spiritual leader of the Mormons is
George Albert Smith, a native of Utah. He fell

heir to the eighth presidency of the Church of Jesus Christ of Latter-day Saints (or Mormon Church) in May 1945, one week after the death of Heber J. Grant, the seventh president; Smith had formerly been an apostle, then president of the Quorum of Twelve Apostles, before assuming his present eminence. He is well known outside Mormon circles for his work with youth groups. In July 1947 Smith's denomination celebrated the centenary of its establishment in the Valley of the Great Salt Lake, in what was to become the State of Utah.

George Albert Smith was born in Salt Lake City on April 4, 1870, one of eleven children of John Henry Smith and of the first of his two wives, Sarah (Farr) Smith. The Smith family was important in the affairs of the Mormon Church and of Utah; George Albert Smith's great-grandfather, a native of Derryfield (now Manchester), New Hampshire, was an uncle of Joseph Smith, the prophet-founder of the Latter-day Saints Church; his grandfather was one of the pioneers who came to Utah with Brigham Young in 1847 and became Young's counselor; John Henry Smith, who attained the office of apostle in the church, participated in the State's civil life and was a leader of the State's Republican party. Among Smith's many New England ancestors are Edward Winslow, who sailed for America on the *Mayflower* and was to be governor of Plymouth Colony, and a number of forebears who fought in the American Revolution (one was an aide to George Washington). A product of Salt Lake City public schools, George Albert was also educated at Brigham Young Academy in 1883-84 and at the University of Utah in 1887-88.

When still fairly young, he took a job as implement assembler and salesman at Grant Odell & Company and the Co-op Wagon and Machine Company; at the age of thirteen he began work in the Zion's Cooperative Mercantile Institution and Clothing Factory, where he made overalls for a salary of two dollars a week. Later he was employed for a period as a member of a surveying party for the Denver and Rio Grande Western Railroad, but dust, heat, and desert sun impairing his vision, he resigned. These jobs he held until 1891, taking time out only to attend the State university, where he was unable to continue with his studies since he was obliged to earn his living. About this period, too, he was a sergeant of Troop C of the First Cavalry of the Utah National Guard.

The Mormon Church, which *Time* described as "one of the most tightly organized and smoothly functioning organizations on earth," has no clergy, as that term is understood; it does, however, have a "vast pyramid of lay orders to which every male is expected to belong and to which a full 250,000 do." A devout individual, Smith was to live up to his church's expectations of its members by distinguishing himself in its work and in his adherence to its tenets. In 1891 he became secretary of a Mormon mission in the Southern States, where he remained until 1893. While he was in the Alabama backwoods, Smith ex-

perienced some of the non-Mormon hostility toward the Mormons. A mob surrounded and shot at the cabin in which were Smith and his helpers. "The Lord will take care of us," Smith reassured his companions. Speaking of the occasion afterwards, he stated: "I knew I was safe as long as I was preaching the word of God." (The Woodruff Manifesto of September 1890 withdrew church "sanction from the further solemnization of plural marriages," a declaration which gradually ended the religious and economic persecution of the Latter-day Saints.) On his return to Utah, Smith became a wholesale salesman, and in time, a director at Zion's Cooperative Mercantile Institution. For six years he also acted as a United States receiver of public moneys and a special disbursing agent for the State of Utah, being first appointed to the post in January 1898 by President William McKinley and later reappointed, in 1900, by Theodore Roosevelt.

Smith's religious work also included in those years an active part in the Sunday schools of Salt Lake's seventeenth ward and of Salt Lake Stake. Positions as a president of the Third Quorum of Seventy and afterward as a stake superintendent of the Young Men's Mutual Improvement Association followed. Then, in October 1903, at the age of thirty-three, Smith was named to membership in the Quorum (sometimes called Council) of the Twelve Apostles, which, with two counselors in presidency and with the president of the church, constitutes the Mormon hierarchy. Concurrent with his position in the Quorum, Smith also served as president of the church's European mission, with headquarters in Liverpool, England, during the years 1919 to 1921. Beginning in 1921, he was able to continue his interest in youth welfare work in the Mormon church, as general superintendent of the Young Men's Mutual Improvement Association; his connection with the Y.M.M.I.A. ended "when all the general authorities of the church were released as heads of the auxiliary organizations" (1935).

Smith's activities during the first four decades of the twentieth century were not confined solely to business and religious pursuits. To George Albert Smith, the problems concerned with agriculture and irrigation were also of primary interest, especially since they were to a great extent, in Utah, Mormon problems. The basically agricultural Latter-day Saints had introduced irrigation into the United States in order to make the arid Salt Lake Valley fertile. Smith in 1916 was elected second vice-president of the National Irrigation Congress, held in Sacramento, California. The following year he became president of both the International Irrigation Congress (El Paso, Texas) and of the International Dry Farm Congress (Peoria, Illinois). When these last two organizations were amalgamated in 1918 into the Combined International Farm Congress, convened in Kansas City, he was again elected to the presidency.

After his more than fifty years of service in the Church of Jesus Christ of Latter-day Saints, and his forty years membership in the Quorum, George Albert Smith in July 1943

Lignell & Gill

GEORGE ALBERT SMITH

became president of the Quorum. In May 1945 he became president of his church, succeeding Heber J. Grant, president of the Mormons for twenty-six years. (In accord with Mormon tradition, the leader of the Quorum of Apostles has invariably been elevated by the Quorum to the Mormon presidency when a vacancy occurs.) To assist him in his duties, Smith, as one of his first official acts, retained the two counselors of the former president: Reuben Clark, Jr., former United States Ambassador to Mexico, and David O. McKay.

As president of the Mormon Church, Smith assumed religious leadership over one million communicants (the membership, in 1847, had been twenty thousand), including four thousand missionaries. Mormon congregations are to be found in every State of the United States, Hawaii, Canada, and in Europe. In Utah there are four Mormon temples (only Mormons in good standing may enter them), and others are to be found in the States of Idaho and Arizona and in Alberta (Canada). Salt Lake City, the headquarters of the Mormon Church, is, however, 60 per cent Gentile (the Mormon term for all non-Mormons). Smith will also preside over the church's new "welfare plan," which is to be a bulwark against any future depression. The church maintains its old policy of setting aside the first Sunday of each month as a fast day for the relief of needy Mormons. These "unfortunates" have been fed from the "bishops' warehouses" in each of the church's 1,220 parishes.

Since the fortunes of Utah are said to be bound up in the fortunes of the Mormon Church, President Smith has much to do with the economic future of the State and the surrounding regions in the West. The Mormon Church owns one-fourth of the stock in Zion's Cooperative Mercantile Institution (Smith became its president shortly before he was elected

SMITH, GEORGE ALBERT—*Continued*

church president), the largest department store in the State capital. It also owns the Hotel Utah and Temple Square Hotel (directed by the Hotel Utah Company, of which Smith is also president), two of Salt Lake City's "top-rung" hostelrys; controls *Deseret News*, a daily newspaper, and radio Station KSL; and possesses large tracts of real estate. Other church-controlled organizations of which Smith is president are the Utah State National Bank, Zion's Savings Bank & Trust Company, Zion's Securities Corporation, the Beneficial Life Insurance Company, the Utah Home Fire Insurance Company, and the Utah-Idaho Sugar Company.

At a quarterly conference in May 1947 of the New York Stake of the Mormon Church. President Smith declared that if the tenets of the Church of the Latter-day Saints were more widely understood, more individuals would find that they held Mormon beliefs. He stated, too, "The people of the earth will find no peace worthy of the name unless they turn to the ways of God." Two months later, the president led the ceremony commemorating the Mormon centenary in Utah and dedicated the 300,000-dollar monument celebrating the establishment of the church in the Salt Lake Valley.

George Albert Smith is also president of Heber J. Grant & Company and of the board of Brigham Young University; a director of Western Airlines, Inc. (he is a pioneer airplane passenger), and the Salt Lake City Union Depot and Railroad Company; a vice-president and director of the Utah Savings Bank. In the past he has also been a director of the Salt Lake Theater, Libbey Investment Company, and the Mutual Creamery. During World War I he served as member of the State Council of Defense and as chairman of the Armenian and Syrian relief committee. In addition, Smith has held offices in the Sons of the American Revolution, of which he is a member: in 1918-19 he was president of the Utah Society of the S.A.R.; in 1923 he was elected national vice-president general of the society and was re-elected to office seven times. Organizer in 1930 and president of the Utah Pioneer Trails and Landmarks Association, he is also an honorary life member of the Oregon Trail Memorial Association. During his long service with the Society for the Aid of the Sightless, of which he has been president since 1934, he supervised the transliteration of the *Book of Mormon* into Braille. The Utahian, too, has gained country-wide recognition for his activities in behalf of the Boy Scouts of America: he has been a member of the Salt Lake council for more than twenty years; in 1929 he was appointed to the national executive board, and has also served on committees, including that on programs and resolutions, of the national council. For his achievements he was honored with the Silver Beaver Award (1932) and the Silver Buffalo Award (1934). The year 1938 saw Smith touring Australia, New Zealand, Hawaii, Tonga, and Samoa, visiting Boy Scout councils, and while in these places, Mormon missions.

The clubs to which President Smith belongs are the Rotary, Lions, and Sons of Utah Pioneers. His political affiliation is Republican. On May 25, 1892, he was married to his boyhood sweetheart, Lucy Emily Woodruff (who died in November 1937), the daughter of Wilford Woodruff, Jr., former (fourth) president of the church and author of the Woodruff Manifesto. Their children are Emily (Mrs. Robert Murray Stewart), Edith (Mrs. George O. Elliot), and George Albert, Jr., professor in the Harvard University Graduate School of Business Administration. A tall lean man, more than six feet in height and 150 pounds in weight, Smith has blue eyes and gray hair. His recreations in his youth were fishing and hunting; his hobby now is collecting canes. Described as a kindly, "polite, deeply religious" man and the Mormon Church's "ambassador of good will," Smith, according to the article about him in the Mormon *Improvement Era* by John D. Giles, "has preached the gospel of honest work, of thrift, of good homes, of education, and of progress. . . . His leadership is of the kind that leads by both precept and example."

SNOW, GLENN E. Mar. 23, 1900- Educator; education association official

Address: b. c/o National Education Association, 1201 16th St., Washington 6, D.C.; c/o Dixie Junior College, St. George, Utah; h. 99 S. 1st East, St. George, Utah

The president of the National Education Association of the United States for the 1947-48 term is Glenn E. Snow, president of Dixie Junior College in St. George, Utah. In the N.E.A. post he succeeds Pearl A. Wanamaker⁴⁶ of the State of Washington. As a State Senator for four years, Snow took part in formulating school legislation for Utah, where he has been a teacher and school administrator since 1922.

Born March 23, 1900, in St. George, Glenn E. and his brother, Grant B. Snow were the second pair of twins among the seven children of Joseph S. and Olive (Bleak) Snow. (Their twin elder sisters are now deceased; they have an elder brother who also became a teacher, an elder sister, and a younger sister.) The father,

son of Erastus Snow, a prominent Utah pioneer, had married the daughter of a local historian, scholar, and Mormon religious leader. Active in civic affairs, Joseph Snow was elected to the State House of Representatives, and served on the Utah Public Service Commission. Glenn Snow has said that, next to the immediate family, he was probably influenced most strongly by a maiden aunt, Maude R. Snow, whom he describes as "a great schoolteacher." He also credits his maternal grandfather, James G. Bleak, "who possessed a good library and was kindly and encouraging," as having affected his choice of lifework.

From the age of fourteen until he was twenty, young Glenn lived on a farm. Graduated from high school in 1919, he entered the co-educational Dixie Junior College, also in his home town, where he became president of the student body. At the University of Utah he majored in political science and history, was elected to the honorary scholastic fraternity Phi Kappa Phi, and was graduated with high honors in 1925, receiving a B.S. degree. The summers of 1924 through 1927 he spent doing forestry work as a fire and recreation guard.

Snow's teaching career had begun in 1922, three years before he completed his university studies, when he became a sixth-grade teacher in Toquerville, Utah. In 1923 and 1924 he taught the seventh and eighth grades in the Alamo (Nevada) elementary school, and in 1925 the new baccalaureate holder began three years as teacher and principal of the elementary and junior high schools of that town. (He was married to Laura Gardner, schoolteacher, in September of 1925.) Principal Snow continued his studies at the University of Utah, doing graduate work in history and political science and receiving his M.S. degree in 1929. In that year the educator was appointed principal of the Hurricane (Utah) elementary and high schools. After four years in that town, he accepted a similar position in Parowan, also in Utah. His later studies, in the field of education, include pedagogical courses at the universities of California and Chicago, and at Brigham Young University.

In 1932 Snow was president of the Washington County Teachers Association, in 1933-34 he headed the teachers association in Iron County, and in 1935-36 he was chosen for the presidency of the Southern Utah Teachers Association. A Democrat in politics, Snow was elected to the Utah State Senate, which convenes once every odd-numbered year, for the four-year 1937-41 term of office. While he served in the upper house, he was a proponent of educational legislation. His chief contribution was in the field of teacher retirement for the State's educators: he sponsored a retirement bill which was subsequently passed during his incumbency, the first measure of its kind to be accepted. He also worked actively for "State support of education directed particularly to school equalization through additional State support and equalized burden on the taxpayers."

While he was still a legislator, in 1939 Senator Snow returned to Dixie Junior College,

Chase-Statler Photo.

GLENN E. SNOW

this time as its president, a post he has since retained. Three years later the administrator became president of the Utah State Education Association, which includes all the teachers in the State, and during 1943-47 he served as an executive committeeman of the National Education Association.

The N.E.A. presidency came to the Utah educator in July 1947, when he was chosen from among three candidates for election by the 2,235 delegates to the N.E.A. representative assembly at Cincinnati. Snow thus became head of an organization of which the operating budget for the entire group was more than two million dollars in 1947, and the membership, as of 1946-47, was 386,643, an increase of 45,670 over the preceding year. Among the resolutions passed at the convention which elected Snow were those favoring Federal aid for education without Federal control (the association has supported the Taft⁴⁰ 150-million-dollar aid bill); advocating "uniform exemptions from Federal income tax on 'all retirement incomes'"; recommending expansion of the teacher-exchange program and extension and improvement of foreign language study in elementary and secondary schools; supporting higher standards for teachers and betterment of their salaries and working conditions, and provision of scholarship aid to competent, prospective teachers.

Snow has written numerous articles pertaining to specific school problems of legislation and the like, which have appeared in State, local, and Utah professional papers. His writings in behalf of the Utah Education Association have appeared in the *Utah Education Association Journal*. During World War II he acted as Washington County chairman of war loan campaigns. Snow was formerly member and past president of the local Lions; he belongs to the Rotary Club of the city, of which

SNOW, GLENN E.—*Continued*

chapter he also was once president, and to Phi Delta Kappa, honorary education fraternity. Like the majority of Utah residents, Snow is a member of the Church of Jesus Christ of Latter-day Saints. He and Mrs. Snow are the parents of four children, Glenn Gardner, Karl S., Sandra L., and R. J. Snow. The educational administrator, who has blue eyes and brown hair, is six feet two inches in height, weighs two hundred pounds. He finds his recreation in the outdoors, in hunting, fishing, and hiking.

SOEKARNO (sōō-kār'nō) 1902- President of the Indonesian Republic

Address: Jogjakarta, Java

The Republic of Indonesia, established during the seventieth revolt against Dutch rule in three hundred years, is under the presidency of Soekarno. The opportunity for successful culmination of the East Indian Nationalist movement came with the capitulation of the Japanese invaders of the Netherlands East Indies in 1945, when a six weeks' interval before the return of European authority allowed the Indonesians, led by Soekarno, to consolidate their hold on the civil and military administration of the islands. Main republican strength was concentrated in Java, the most densely populated of the three thousand islands of the Netherlands East Indies archipelago; and Soekarno,

Press Assn., Inc.

SOEKARNO

who had seen twenty years of revolutionary activity and imprisonment in Dutch concentration camps, was able to mobilize more popular support there than on the adjacent islands. Of these, Sumatra gave nominal allegiance to the Indonesian Republic; the others returned to Dutch administration.

Soekarno, who, according to Javanese custom, bears only his given name without a surname, was born in Surabaya, on the eastern tip of Java, about 1902. With the intention of becoming an architect, he obtained his higher education at the Technical Institute of Bandung, from which he received a degree in civil engineering. His political activities began about 1926, when a Leftist-inspired revolt was suppressed by the Dutch authorities. Through Soekarno's efforts, the other native parties were fused into a single nationalist organization, which was modeled after the Congress party in India, and which emulated the Indian tactics of boycott and non-cooperation. At this time Soekarno's political philosophy was Marxist, an ideology that was apparently too extreme for the mass of Indonesians. When Soekarno's agitators were arrested by the Dutch authorities, Soekarno organized "fighting squads." For this action he was subsequently tried by a native tribunal and imprisoned in a Dutch concentration camp on the island of Flores.

This sentence proved to be the first of three: the last, in 1940, exiled Soekarno to the island of Sumatra, where he was found by the Japanese invasion forces in 1942. Soekarno, who had previously asked the Dutch to evacuate him from his island prison because his anti-Japanese sentiments were well known, was persuaded by the Japanese to collaborate. According to *Amerasia* and the *Nation*, Soekarno's cooperation with the Japanese military administration and his election to the presidency of the Java Central Council in 1943 were dictated by political considerations, for he was thus able to maintain contact with the Javanese underground. (Twice during the occupation he was arrested by the Japanese, it was stated in the *New Republic*.) One of Soekarno's duties in the puppet administration was the recruitment of Indonesian laborers for Japanese projects. At the invitation of the invaders, Soekarno was able to visit Japan, where he was granted an audience with the Emperor, who bestowed the order of the Sacred Treasure, Second Class, upon him. In 1944 Poetara, the political party of which he was the leader, became part of the Japanese National Service Organization. "Every Javanese understands why I collaborated with the Japanese," he has said. "The Japanese tried to use the Indonesians for their own purposes and let us prepare for our independence under false promises. But we turned the tables on them. We prepared for the hour of liberty . . . no power on earth can take it away from us."

Shortly before their capitulation, the Japanese proclaimed a republic in Indonesia, of which Soekarno assumed the presidency on August 17, 1945, several days after the Japanese surrender. Before the arrival of British troops, acting in behalf of the Dutch to disarm the Japanese and protect Dutch nationals, Soekarno and the Nationalists were able to make secure their position. (In October, British troops and, in addition, several Indonesian guards had saved Soekarno from an assassin.) A Nationalist convention in October 1945 founded a Central National Committee, of which Soekarno was elected presi-

dent, to act as an interim administration until the Indonesian People's Congress could be elected. For a month, the Cabinet appointed by the President was responsible to him; this group rejected Dutch offers to give Indonesia dominion status in a Dutch commonwealth of nations. Because of the refusal of the Dutch to negotiate with Soekarno, an ex-collaborationist, as the Indonesian Republic's representative, it was necessary to modify the Cabinet in November 1945, by appointing Sjahrir the Premier.

While Soekarno retired to Central Java, Sjahrir entered into negotiations with Hubertus van Mook⁴², the Dutch representative. The clashes between Allied and Indonesian forces, which had been intermittent ever since the liberation of the islands, continued. Dutch offers to recognize Java as a republic within a Dutch commonwealth were carried to Batavia by Van Mook in April 1946, but by June negotiations had broken down, and Soekarno appealed to the Indonesians to mobilize against the Dutch. "In order to force their unreasonable proposals on the Indonesians," he said in a radio speech on June 8, 1946, "the Dutch are increasing their military strength and attacking us more severely each day. If the Dutch will not recognize the sovereignty of our country and attempt to force their will on us, we will have to answer them with force." President Soekarno assumed dictatorial powers at the end of that month, when Premier Sjahrir was kidnaped and held prisoner for five days (allegedly because he had exceeded his powers in his negotiations with the Dutch). Soekarno denied any responsibility for the abduction.

At the Malino conference, held about July 15, 1946, in the Celebes, Van Mook reached an agreement with representatives of the "Great East," those islands, other than Java and Sumatra, where the Netherlands Indies Civil Administration was in control. This agreement provided for the establishment of a United Indonesian Federation, composed of Java, Sumatra, Borneo, and the Great East, which would exercise a substantial measure of autonomy in domestic affairs and remain within the Dutch hegemony for a trial period of ten years. A temporary truce between the Indonesians and the Dutch was reached four months later, in October 1946. Although Sjahrir acted for the Indonesian Republic, Soekarno's influence on the proceedings was evident. "There can be little doubt," observed Nathan Broch in the *Christian Science Monitor*, "that while the Dutch were trying to come to terms with the allegedly moderate Mr. Sjahrir, they were really talking to Soekarno all the time—and seem to have known it."

Subsequent to the Malino conference, a further parley between the Dutch and the Indonesians at Cheribon in November 1946 moved toward the *de facto* recognition of the Indonesian Republic. The establishment of a United States of Indonesia (on a sovereign basis with the sovereign state of the Netherlands) and its conjunction with the proposed Netherlands Indies Union, would, however, be dependent upon a constitutional revision by the Netherlands States General. The joint interests of

the two states, specified by the Cheribon agreement, were to be foreign relations, defense, and financial, economic, and cultural matters. Dutch delay in ratifying the agreement caused a deterioration of relations between the Dutch and the Indonesians around the turn of the year (1946-47). It was not until March 25, 1947, that the Cheribon (sometimes called the Linggadjadi) agreement, recognizing the Indonesian Republic, was signed. "The signing of the unembellished accord," said Soekarno in his first public statement on the agreement, "is proof that we wish to cooperate with the whole world."

For the second time in a year, President Soekarno assumed full power in June 1947, when Premier Sjahrir was forced out of office because of his policy of cooperating with the Dutch. Soekarno asked the leaders of the four largest political parties (Socialist, Islamic, Nationalist, and Labor) to form a coalition Cabinet. An American diplomatic note urged the immediate formation of an interim Government, as demanded by the Dutch, who also specified the alternatives of forming the Government within a certain length of time or reopening hostilities. The dispute between the Dutch and the Indonesians over the operation of an interim Government until January 1, 1949, led to a new outbreak of warfare in July 1947, soon after Soekarno had accepted former Defense Minister Sjarifuddin as Premier. The point of dispute was the founding of a joint Indonesian and Dutch *gendarmerie* for Java, which the Indonesians rejected and which Soekarno repudiated in a radio broadcast. The Dutch military action against the Javanese specifically violated one of the provisions of the Linggadjadi agreement which committed the two states to arbitration as a method of settling disputes. Over the radio, Soekarno appealed to the United States to bring about a "peaceful settlement." A cease-fire order was given by both the Dutch and the Indonesians on August 4, in accordance with a plea from the United Nations Security Council. In communications to the Security Council, each side accused the other of violating the truce.

Three times in the middle of August Soekarno was visited by the American consul, Walter A. Foote, who offered the "good offices" of the United States in settling the dispute. These offers were rejected by the Indonesians, who reiterated their desire to continue their action before the United Nations Security Council and to obtain the decision of an international arbitration commission. A resolution to that effect was offered before the Security Council by the Australian delegate, Colonel Hodgson, on August 22. The Indonesians, meanwhile, before accepting any form of U.N. mediation, demanded withdrawal of Dutch troops to their pre-hostilities position.

To determine the truth of the accusations made by both sides, the Security Council ordered the European and Chinese consular representatives in Batavia to report upon the facts of the violation of the August 1 cease-fire order. The outlawing of Republican authority in many districts was accomplished by the Netherlands Indies Government late in

SOEKARNO—*Continued*

August, when it declared that only a 150-mile radius around Jokyakarta would be considered as under Republican control. By December both the Dutch and Indonesians had accepted (with conditions) a United States proposal for the establishment of a demilitarized zone between the two combatants' areas; all forces in this region were to be withdrawn to their respective areas of command.

Soekarno in his youth was an enthusiastic reader of the works of American writers and philosophers. His major hobby at the present time is the collection of Indonesian paintings, among which is a portrait of his second wife, the mother of his infant son. About five feet eight inches tall, Soekarno has been described by Martha Gellhorn as having a "serene, portentous face." He professes the Moslem faith.

SOPHOULIS, THEMISTOCLES (sōf-ōō'lis thē-mīs'tō-klēs) 1860- Greek Premier
Address: c/o Ministry of Foreign Affairs, Athens

In September 1947 the fall of the Greek Cabinet brought back to the head of the Government the veteran Liberal Republican leader, Themistocles Sophoulis, often referred to as the "grand old man of Greece." He had last been Prime Minister before, in 1945-46, and has been a figure in Greek politics from 1900, having led the revolts against the Turks on Samos in 1908 and 1912; and in 1917 he was one of the leaders in the Salonika coup which forced Greece to join the Allies.

Themistocles Sophoulis was born at Vathy, on the island of Samos, one of the Anatolian group, in the year 1860. His father was Panayotti Sophoulis, who was prominent in Samian political circles during the period of autonomous Government after 1832. Themistocles Sophoulis was educated in Athens and in Germany, specializing in archaeology, in which subject he holds a doctor's degree. Among his writings on archaeology were two which appeared in 1884 and 1887, one in the German language, the other in Greek. Returning from Germany, he became a lecturer at the University of Athens, and he also conducted archaeological excavations in various parts of Greece. This phase of his career ended with the close of the century, when Sophoulis turned to politics.

The forty-year-old professor formed his own political party; and in the next Samian parliamentary election in 1900, it was able to garner enough votes to put him at the head of the Government. Samos, at that time, was a more or less autonomous part of the Ottoman Empire, ruled by a Turkish-appointed governor, designated "Prince of Samos," and a Greek council and assembly supposedly guaranteeing internal freedom in accordance with the Turk-

ish Organic Decree of 1832. However, in the years following the granting of the decree, the powers of internal administration had become concentrated in the hands of the Turkish governor, who had become virtual dictator of the island. The platform which brought Sophoulis to power called for the restoration of complete internal liberty and for union with Greece rather than with Turkey. Around that issue events were to revolve for the next decade and a half.

The first severe crisis occurred in 1908. In December 1907 the Turkish Porte had appointed a new Prince of Samos in the person of Andreas Kopassis, a Moslem Cretan. Kopassis refused to call the Samian parliament into session and was supported in his refusal by the Porte, to the extent of its sending Turkish troops to strengthen Kopassis' garrison. Open conflict began on May 12, 1908, and the resulting struggle made it necessary for Turkey to dispatch additional army and navy units to Samos. Sophoulis was forced to flee, and was afterwards condemned to death *in absentia* by a high Turkish tribunal. During the next four years, while Kopassis was becoming master of the situation in, and dictator of, Samos, Sophoulis lived in exile in Athens. Then, on March 9, 1912, Kopassis met his death at the hands of a Greek assassin activated, said informed sources, by the resentment still held by both Samians and Greeks over the treatment accorded Sophoulis and his party four years earlier. Sophoulis seized the opportunity, gathered his forces, and in September 1912 landed on Samos with a revolutionary band.

Numerous clashes occurred between the Sophoulis and Turkish forces, but, aided by the fact that Turkey was then at war with Italy (over possession of the provinces of Tripoli and Cyrenaica in Northern Africa) and that both the French and British gave moral support, Sophoulis succeeded in freeing the island of Turkish rule. On September 18, 1912, Turkey began evacuating her forces from Samos. A constitutional assembly was then convened, and Sophoulis elected its president. His first act was to draw up a memorandum outlining a new charter for the former Turkish principality. Shortly afterward, when Greece, as one of the Balkan Allies pledged to liberate Macedonia from Turkish rule, declared war on Turkey (October 18, 1912), the constitutional assembly of Samos, under the leadership of Sophoulis, proclaimed the union of Samos with Greece. Thereafter, until April 1914, Sophoulis served as head of the island's new Government.

The Treaty of London had ended the war over Macedonia on May 30, 1913. In 1914 Sophoulis was appointed Governor-General of Macedonia by the Greek Government. It was this post which was to bring him into the politics of Greece proper, through his support of the liberal faction of Prime Minister Eleutherios Venizelos. On March 18, 1913, Constantine I, as a result of the assassination of his father, George I, had ascended the Greek throne. During World War I, Constantine's sympathies were with the Germans, while those

of Venizelos were with the Allies; in April 1915, notwithstanding the fact that Venizelos had the support of the majority in parliament and of the Crown Council, a body composed of the leaders of all the nation's political parties, he dismissed his Prime Minister for proposing Greek cooperation with the British fleet and at the same time dissolved the parliament. At this turn of events, Sophoulis in protest resigned his position as Governor-General of Macedonia. New elections were held in June. The Venizelists were returned to power, and Sophoulis became a member of parliament, representing Samos.

In November 1915, when Venizelos proposed Greek aid to Serbia, about to be invaded by Bulgaria, he was again dismissed and the parliament dissolved. Bulgaria soon invaded Macedonia, but Constantine, seeking advantageous terms on which to abandon his neutrality, continued to refuse to join the Allies. Matters were forced to a head in the following August, when Rumania joined the Allies. Going to Macedonia, Venizelos, Sophoulis, and other Greek Liberal leaders set up a provisional Government at Salonika and began preparations to enter the war. By December 1916 they had obtained Allied recognition, and in June 1917 Constantine was deposed in favor of his son Alexander. The Venizelos Government was recalled to Athens, and the parliament of 1915 was reconstituted. War against Germany, Turkey, and Bulgaria was formally declared by Greece on June 29, 1917. In the provisional Government of Venizelos, Sophoulis was given the portfolios of Ministers of the Interior and War. With the reconstitution of the parliament, he was elected president of that body.

In the general elections of November 14, 1920, held primarily over the question of Constantine's return to the throne, the Venizelist forces were heavily defeated, and Venizelos and many of his Ministers, including Sophoulis, went into exile. The return of Constantine, however, was refused legal sanction by the Allies, and for the next three years they isolated Greece financially and politically. Internally, meanwhile, the country was experiencing one disturbance after another, and from 1921 to 1923 she was at war with Turkey. Then, early in 1924 the results of a plebiscite transformed Greece into a republic, and for three months in 1924 Sophoulis was Prime Minister. In June 1925 dictatorial power was seized by General Pangalos, and after his downfall in November 1926 a Government, composed of the chiefs of all the political parties except the Communist, came into power. Sophoulis served as president of the parliament under this Government until the return of Venizelos on May 29, 1928, when he became Army Minister in the new Venizelos Cabinet. It was at this time (May 1928) that he was officially recognized as vice-president of the Liberal party. As a result of the elections of 1930 and 1932, he continued to represent Samos in parliament and to act as president of that body.

The years between 1932 and 1936 were crisis years financially and politically, with Venizelos

THEMISTOCLES SOPHOULIS

in and out of office and a return to monarchical status in November 1935. In 1936 both Venizelos and Kondylis, the Royalist leader, died. Sophoulis succeeded Venizelos as Liberal party chief, but it was General John Metaxas⁴⁰, whose party had received only 9 seats to 135 for the Liberals and 125 for the Royalists, who took over the Government. He dismissed parliament and for four years, until his death on January 29, 1941, ruled the country as absolute dictator. In these years, and the Nazi occupation which followed, Sophoulis had no part in the Government. During the last several months before the liberation, he was imprisoned by the Nazis.

The liberation of Greece by the British became a reality at the end of 1944 but also precipitated a year or more of civil war between Greek Government forces and the forces of the extreme Left, the EAM, whose armed units were the ELAS. Archbishop Damaskinos⁴⁵ was acting as Regent in the absence of King George II⁴³, and changes of Government were frequent. On November 22, 1945, Sophoulis was charged with forming a Government. Like those before it, his Government was intended to stay in office until general elections could be held and the will of the people determined. But unlike the others, it succeeded in remaining in office, in spite of economic unrest, renewed armed clashes, and strong opposition by the EAM to the holding of the elections on the date set (March 31, 1946) on the ground that conditions (including the fact that many of its adherents had been imprisoned or exiled) were overly favorable to a Royalist victory. Prime Minister Sophoulis himself regarded the continued unrest in Greece as not conducive to a fair expression of the popular will, but, he said, he had promised that the elections would be held and would not retract.

(Continued next page)

SOPHOULIS, THEMISTOCLES—*Cont.*

With the Royalist victory Sophoulis was succeeded by Constantin Tsaldaris⁴⁶.

The Government of Premier Tsaldaris remained in power through early 1947, while unrest and civil strife continued. The plebiscite of September 1, 1946, had restored the monarchy. Several times, Sophoulis, as head of the second largest, and opposition, party, was asked to come into the Government, but having been opposed to the return of George II and favoring a more moderate treatment of the Leftist elements, he refused. In 1947 Demetrios Maximos headed a relatively short-lived coalition Cabinet (January-August), and when it fell Tsaldaris again took office. (While Maximos was Premier, George II died and was succeeded by Paul I.) With Tsaldaris' return to office, a two-week crisis ensued, at the end of which Sophoulis was persuaded to head a Liberal-Populist (Royalist) coalition, with Tsaldaris as Vice-Premier and the Cabinet posts distributed in the ratio of eleven to fourteen for the Liberals and Populists respectively, with the disputed Ministry of War going to the Populists and a coordinating council of two men from each party set up under the chairmanship of Tsaldaris. This Cabinet was sworn in on September 7, 1947, and for the first time gave Greece a coalition of its two principal parties, the one traditionally Republican and the other traditionally Royalist, ending a political feud of thirty-seven years.

Soon after taking office, Sophoulis declared a full amnesty for all those engaged in guerrilla warfare, provided that they surrendered by October 15; but few of the Leftist guerrillas took advantage of it. In the economic sphere Sophoulis ordered the establishment of an austerity program, calling for favorable rates of exchange for exporters, minimum luxury imports, and a balanced budget, all of which were necessary to maintain the self-sufficiency of the Greek nation. In order to impress the United States with the grave military and financial state of Greece, Sophoulis in December dispatched Sophocles Venizelos to the United States as his personal representative, to secure arms and equipment for fifty to one hundred battalions. About the same time, antistrike legislation, carrying the death penalty for violation, was enacted.

An *aide-mémoire* presented to Prime Minister Sophoulis by the United States chargé d'affaires in Athens in December reminded him that the United States expected cooperation between the Liberal and the Populist parties; this note had been precipitated by rumors current in Greece that the Populists were attempting to secure the downfall of the coalition Cabinet because of differences of opinion between the two groups over the treatment of guerrillas. One phase of the solution of the argument, evolved by Sophoulis at the end of the year, was to restore laws enacted by the Venizelos Government in 1929 against Communist plotters; he also ordered the suspension of those Communist newspapers which were still being published.

According to *World Report's* correspondent John Mowinckel, Sophoulis, after a divorce from his first wife, married again in 1930. He is a short, somewhat stout man, who (said the Scripps-Howard correspondent) looks and acts years younger. Mowinckel writes further of the octogenarian statesman: "He is on a strict diet, but delights in horrifying his doctors by eating what pleases him, including heavy dishes such as octopus, one of his favorite delicacies. . . . His small eyes reflect his excellent sense of humor. When 73-year-old Demetrios Maximos was appointed Prime Minister, Sophoulis' only comment was, 'He's much too old for the job.'"

SPEICHER, EUGENE (EDWARD)

(spī'kēr) Apr. 5, 1883- Painter

Address: 165 E. 60th St., New York 22

Eugene Speicher, whose portraits and landscapes have been purchased by museums and collectors throughout the United States for more than twenty-five years, received a one-thousand-dollar award from the National Academy of Design in April 1947 for his canvas *Consuela*. A lucid, precisely painted work, *Consuela* illustrated the principles that Speicher expressed in "My Credo," the introduction to a monograph on his work. "My look and feel of the thing I am painting," he wrote, "my imagining and thinking about it, is what I try to express. . . . Something that will be a tonic to stir the imagination, a pleasure to the eye, and reflect my sense of quality in life. Above all, it must have rare pleasure and grace, be warm, simple, and well-ordered."

Eugene Edward Speicher, whose parents were Charles A. and Louise (Jehle) Speicher, Americans of German descent, was born in Buffalo, New York, on April 5, 1883. He showed aptitude for drawing as early as the age of four, when he sketched a floral design on a blackboard for a teachers' convention. Throughout his school days, however, he showed more interest in athletics than in art, an interest that continued after he was graduated from high school in Buffalo and had begun to work in a lumberyard in that city. After his daily ten hours at the yard, Speicher played basketball regularly and spent portions of his evening for four years—from 1902 to 1906—studying painting under Hitchcock and Wilcox at the Buffalo Art School.

Upon winning the Albright Scholarship in 1906, Speicher was able to go to New York to continue his studies in the antique, life, and portraiture at the Art Students' League, from which he received the Kelley Prize a year afterward for his portrait of a fellow student, Georgia O'Keeffe⁴⁷. His first instructor at that school was William Chase, and his second, Frank Vincent Dumond. A third teacher, Robert Henri, added his influence when

Speicher entered evening classes in life and composition at the Henri School of Art in 1908 for a year's study. At that time, the Henri classes were also attended by George Bellows, Edward Hopper, Guy Pène du Bois⁴⁶, and Rockwell Kent⁴². Speicher's career as a portraitist began soon afterward, when he found that he could command twenty-five dollars for portraits done in three sittings during weekends.

In 1910 Speicher went abroad to familiarize himself with the works in the galleries of England, Germany, France, Spain, and Italy. On his return to the United States in 1911, he received the Thomas R. Proctor Prize for his portrait of Miss Helen Appleton (executed in a dark, Henri-esque style) from the National Academy of Design in New York, being elected at about the same time to an associate membership in the National Academy. Other prizes followed in the ensuing years—the Salmagundi Club's Isadore Portrait Prize (1913), the National Academy of Design's third Hallgarten Prize (1914) and first Hallgarten Prize (1915), the silver medal of the Panama-Pacific International Exposition (1915). By 1920, when he received the Beck Gold Medal for Portraiture from the Pennsylvania Academy of the Fine Arts, critic Homer St. Gaudens said that Speicher "was first among our native portrait painters." During this portrait-painting period, Speicher received two awards from the Carnegie Institute in Pittsburgh, the third prize in 1921, the second prize in 1923.

For several years Speicher devoted himself entirely to portrait painting, limiting himself to six or eight clients a year. After 1926 (the year the painter received the Potter Palmer gold medal from the Art Institute of Chicago) he sold his work chiefly through the Rehn Galleries in New York. His subjects were drawn from his friends and from the neighbors in the up-State New York village of Woodstock, where he spends his summers. In 1928 his *Girl in White Dress* received the Second Clark Prize from the Corcoran Art Gallery, in Washington, D.C. The portraitist traveled through France and Italy for the second time in 1926 and for the third time in 1929, visiting England, Austria, Germany, Hungary, and Holland as well. Of his 1929 exhibition at Rehn's, Stark Young observed in the *New Republic*: "There are two points on which Mr. Speicher should be persecuted by his admirers, of whom I am one. One of these is that trick of his in managing the eye. . . . At first it is engaging, full of character implications . . . but . . . when we go on to the next canvas . . . what we thought was character comes to be only a mannerism. The other concern is that arrangement he gives to seated human figures from their waists down . . . a sudden shooting down in the planes of the lower half of the figure. . . . These two defects are all the more to be remedied because there must be few painters in whom one may find more delicious textures here and there."

Speicher's next one-man show was held in 1934, when a new group of his work was again shown at the Rehn Galleries. Frederic Thomp-

Art Digest

EUGENE SPEICHER

son, critic for *Commonweal*, found that the Speicher "nudes and draped figures have a pure loveliness both in treatment and in the God-given circumstance of their beauty. . . . They are young women caught in a calm, elevated, and impersonal mood, with the freshness and poignancy of their youth delicately stated in its reality." The opinion of the critic Laurie Eglington, of *Art News*, was (of this exhibition which included Speicher's *Babette*) that "it is nothing less than amazing to see what Speicher does with a little academic foundation, a facile brushstroke, some well-chosen subdued colors and a diluted pigment."

To a comprehensive exhibition of American art shown by the Modern Museum of Art in 1937, Speicher contributed one of his paintings of Red Moore, the village blacksmith at Woodstock, who often sat to him. (One of these, *The Blacksmith*, had been awarded the First Clark Prize of \$2,000 and the Corcoran Gold Medal in 1935.) Later, in the following year his *Marianna* received the Temple Medal at the Pennsylvania Academy's annual exhibition, and his *Peach Jacket* the John Barton Payne Purchase Prize and award from the Virginia Museum of Art in Richmond. A retrospective one-man show of his work over thirty years was presented at the Rehn Galleries in March 1941, including, among his later and more colorful canvases, *White Fichu*, *Pattie*, *Pigtails*, *Jean and Lydia*. James W. Lane of *Art News* observed: "That Speicher's new style, tonic in its portrait color, subtle in its grasp, has caught on, is shown by markings other than paint. The red stars [signifying sales] are out in force." The technical accomplishments of the works exhibited were summarized in the review by Margaret Bruening (New York *Journal-American*): "The superb draftsmanship, the surety of touch, the unfailing painting quality, the evenness of the

SPEICHER, EUGENE—Continued

texture of design, the brushwork, now powerful, now caressing; the varied richness of textures, the fusing of color pattern with design."

A group of Speicher's landscapes, on which he had been working for three or four years, were brought to New York in 1943; they were characterized by the New York *Herald Tribune* reviewer as "direct, objectively handled studies, generally done in a restrained key." Of the drawings shown, the same writer said, "Mr. Speicher is truly a distinguished draftsman, the master of a strong, fluent, and individualized line." Two years later, another of Speicher's portraits of Red Moore was honored by the three-hundred-dollar Walter Lippincott Prize at the 1945 annual of the Pennsylvania Academy of the Fine Arts. He received the National Academy of Design's thousand-dollar award for his *Consuela* in the spring of 1947. The portrait was "executed with his customary impeccable craftsmanship," according to Margaret Breuning's verdict in the *Art Digest*. "If it seems somewhat hard, it may be due to the neutral gray and dull gold of the dress that replace the usual richness of his palette."

Speicher's palette, for the first grounding of his canvas, which is usually done in a thin wash technique, is white lead, yellow ochre, indian red, light red, terre verte, ultramarine blue, raw and burnt umber. "I think of what I am trying to express," he once wrote, "with as much clarity, sensitivity, and vitality as I am capable of with this limited, fast-drying palette." The final overpainting is based on additions to his spectrum: zinc white, cadmium light, burnt ochre, cadmium red, indian red deep, burnt sienna, emeraude green, alizarine crimson ("only when necessary," he stipulated), and ivory black. "In this last painting," Speicher explained to Ernest Watson, an interviewer representing the *American Artist*, "when most of the important decisions have been made, I start at the heart of the canvas and paint the entire surface in one wet skin until I get exactly what I want for the finished result . . . no part of it is permitted to dry until it is entirely finished. In no case, however, will I go back over the head or any other part, in this final painting, after it has dried."

Examples of Speicher's work are to be found in museums throughout the United States. In New York, his paintings are owned by the Modern Museum of Art (which has displayed his portrait of Katherine Cornell), the Metropolitan, Whitney, and Brooklyn Museums. In each of the following cities the museum contains a Speicher in its collection: Cambridge, Worcester, and Boston (Massachusetts); Buffalo, Richmond, Galveston, Kansas City, Des Moines, Cincinnati, Cleveland, Toledo, Decatur, Detroit, Minneapolis, and Los Angeles. Others are displayed at the Phillips Memorial Gallery and Corcoran Gallery of Art in Washington, D.C., the Carnegie Institute in Pittsburgh, and the Addison Gallery of American Art at Phillips Academy in Andover, Massachusetts. The American Academy of Arts and Letters in 1945 appointed Eugene Speicher a director; he had been a mem-

ber of the National Institute of Arts and Letters, of which the Academy is the honorary section, since 1925. The painter also served on the 1939 Carnegie International Jury.

The International Society of Sculptors, Painters and Gravers claims Speicher as a member; he also belongs to the Coffee House, the National Arts, the Boston Art, and the New York Athletic clubs. The painter is also one of the six vice-presidents of the Artists Equity Association. During the winter months in New York, Speicher plays tennis and squash at the Athletic Club; his summer sport is golf. He does carpentry and gardening around his house and land in Woodstock. Through his wife, the former Elsie L. Wilson, to whom he was married in 1910, he became brother-in-law to his best friend, George Bellows, who had married Elsie Wilson's sister. (The Bellows' daughter, Jean, has been the subject of several of Speicher's paintings.) Ernest Watson describes the painter as "just a shade under six feet in height; he tips the scales at about 185. He is vigorous and has the ruddy complexion of an athletic man who spends sufficient time out of doors and keeps fit through exercise."

SPELLMAN, FRANCIS (JOSEPH), CARDINAL May 4, 1889- Roman Catholic prelate

Address: 452 Madison Ave., New York 22

NOTE: This biography supersedes the article which appeared in *Current Biography* in 1940.

The election of the Most Reverend Francis Spellman to the College of Cardinals, in the thirtieth year after his ordination to the priesthood, signalized the fourth time that a Roman Catholic Archbishop of New York, the richest See in the United States, had attained the second highest rank in his Church's hierarchy. Francis, Cardinal Spellman had advanced through the ranks of his Church's government by applying his diverse abilities—of intellect, executive powers, and astuteness—to the spiritual and material problems of men.

The son of William and Ellen Mary (Conway) Spellman, natives of the State of Massachusetts and descendants of Irish families, Francis Joseph Spellman was born in Whitman, Massachusetts, on May 4, 1889. The father

of the five Spellman children was the proprietor of a grocery store, in which young Francis worked after classes at the Whitman public school were finished for the day. While at high school, Francis Spellman played shortstop on the school baseball team, and acquitted himself capably in his scholastic duties by winning a prize for an essay on the Battle of Gettysburg. Besides picking up and delivering orders for his father's store, he covered a paper route; later, in 1911, he spent one summer as a trolley car conductor. In 1907 he entered Fordham University in New York City, where he showed an aptitude for English, Latin, and science, and distinguished himself as a member of the dramatic and debating clubs. He also attended the meetings of the Secchi Scientific Society, and, during his senior year, acted as exchange editor for the *Fordham Monthly*. It was not, however, until shortly before his graduation that he decided to enter the priesthood, a decision which he announced to his parents on his day of graduation in 1911.

On the recommendation of Cardinal O'Connell⁴¹ of Boston, Francis Spellman was sent to the North American College in Rome. By the time he received his degree of Doctor of Sacred Theology in 1916, he had manifested an unusual ability as a scholar and had won the friendship of Monsignor Francesco Borgongini-Duca, one of his professors, whose books of devotion he later translated into English. Spellman's ordination took place at the Church of Saint Apollinaris on May 14, 1916, and he celebrated his first Mass at the Basilica of Saint Peter in Rome. His first assignment as a curate was in Massachusetts, at All Saints parish in Roxbury, a suburb of Boston. Two years later Spellman was appointed to the staff of the Cathedral of the Holy Cross in Boston; at the same time, he was named director of literature for the diocese and, subsequently, editor of the *Pilot*, the diocesan weekly newspaper. Cardinal O'Connell made him vice-chancellor of the Boston Diocese in 1922, where he remained three years.

When he was returned to Rome in 1925 to become an attaché in the office of the Vatican Secretary of State, he was the first American to be so honored. While he was serving as official English translator for Pope Pius XI, Spellman improved the efficiency of the Vatican press department by making press releases available in all languages, and by translating the Pope's messages into English for broadcasting after the Vatican radio station was inaugurated in 1931. When, two years earlier, the Papacy had been at odds with the Italian Government over the question of civil versus religious marriage ceremonies, Spellman provided a solution to the problem by suggesting that, as in the United States, a marriage license be provided by the civil authorities and the ceremony be performed under religious auspices.

Meanwhile, in 1926, he had received the title of Monsignor. Several years afterward his friendship with the then Cardinal Pacelli began. Spellman, whose interest in sports had not abated, frequently went mountain climb-

Fabian Bachrach

FRANCIS CARDINAL SPELLMAN

ing in Switzerland with Pacelli, the Papal Secretary of State. A licensed flier himself, Spellman, at Pacelli's suggestion, was ordered by the Pope to be flown to Paris in 1931 in order to release the Pope's anti-Fascist encyclical to the Associated Press for world-wide distribution. The following year Spellman was consecrated Titular Bishop of Sila by Cardinal Pacelli at Saint Peter's Church in Rome, the first American consecrated there. His episcopal ring, of sapphires and diamonds, was the gift of Monsignor Borgongini-Duca.

In that same year (1932) Spellman attended the Eucharistic Congress in Dublin as a member of the papal mission. He was then attached to the diocese of Boston as Auxiliary Bishop to Cardinal O'Connell, rather than as Bishop Coadjutor, a position which would have meant Spellman's automatic succession to the Archbishopric of Boston in the event of O'Connell's death. For several months the new Bishop resided at St. John's Seminary near the city of Boston, but the Church of the Sacred Heart at Newton Center, Massachusetts, was soon allotted to the Auxiliary Bishop as his parish. While he was rector there, Spellman succeeded in paying off all of the church's debt. During Cardinal Pacelli's visit to the United States in 1936 the Boston Auxiliary Bishop accompanied the Papal Secretary of State on his nation-wide tour, pausing to visit the Roosevelts at Hyde Park on the return journey. Spellman himself made a similar tour of observation in 1938, flying twenty thousand miles and visiting all the countries of South America in order to become acquainted with conditions there.

Seven weeks after Cardinal Pacelli was elected to the Papacy (in 1939) to become Pope Pius XII⁴², he appointed his American friend the Archbishop of New York, the office left vacant by the death of Patrick, Cardinal Hayes.

SPELLMAN, FRANCIS, CARDINAL— *Continued*

Comprised in the See of New York, of which the focal point is St. Patrick's Cathedral, are the boroughs of Manhattan, Richmond, and The Bronx (but not Brooklyn and Queens), and Rockland, Putnam, Sullivan, Ulster, Westchester, Dutchess, and Orange counties. Under the Archbishop were four hundred and fifty churches, sixteen hundred priests, and four hundred schools as well as numerous hospitals, homes, monasteries, convents, and orphanages. The Cardinal Hayes High School (The Bronx) for a student body of 2,600 boys, was projected and built under Spellman's guidance when he was Archbishop. According to Thomas B. Morgan, in his *Speaking of Cardinals*, Spellman's administration of the diocese of New York was characterized by efficiency and discipline.

Pope Pius designated Archbishop Spellman Military Vicar of the Armed Forces of the United States in 1939. Thus, throughout the war, the New York prelate was the spiritual director of millions of Roman Catholics in the armed forces and head of 5,370 Catholic chaplains. Several months after the attack on Pearl Harbor—in the spring of 1942—the Archbishop embarked upon an eighteen-thousand-mile inspection tour by plane that embraced the army camps of the United States and Alaska, including the Aleutians, to which no Archbishop had ventured previously. This was only the first of the Archbishop's long war journeys. Although technically an enemy of Italy, Spellman obtained permission from the Italian Government to visit the prisoner-of-war camps in Italy. The first stop on his itinerary, that March of 1943, was at the Vatican: from there, he flew a total of forty-six thousand miles, visiting Spain, French Morocco, England, Ireland, Scotland, Malta, Egypt, Tunisia, Palestine, Lebanon, Turkey, Iran, Iraq, Uganda, Kenya, Mozambique, Madagascar, Mauritius, and South Africa. His account of his war travels, published serially in *Collier's* magazine that fall, aroused some controversy. Called "Action This Day" from the motto on a card that the Archbishop glimpsed on Winston Churchill's desk, the articles (later published with the same title in book form) contained an opinion of Generalissimo Franco, which, in some quarters, was interpreted as friendly to the Spanish regime.

The Archbishop visited Europe again the following year. In Italy he lunched with General Mark Clark⁴² and King George of England⁴². On the heels of General Patch's⁴³ invasion of France, Spellman entered that country, celebrated Mass on the battlefields, visited Paris and the Allied Front. The entire mileage covered by the end of this trip was nineteen thousand miles. August of 1945 found him traveling again, to the Pacific war theater, where he followed the victorious American troops into Tokyo. From Korea, his next stop, the Archbishop went on to China, to spend a day with Generalissimo Chiang Kai-shek⁴⁰ at Chungking, before flying on to Rome and the

United States. (Altogether, Spellman made six visits to Rome during the war.)

At the end of 1945 Spellman was one of the four American Archbishops raised to the cardinalate; the others were the Archbishops Edward Mooney⁴⁴ of Detroit, Samuel Stritch⁴⁶ of Chicago, and John Glennon of Saint Louis (who died soon afterward). In the thirty-two new members selected for the College of Cardinals, representing nineteen countries on six continents, various observers found a new symbolism: that of the reorientation of the Church from a European, and particularly an Italian, viewpoint, to a world-wide one. It was felt that limiting the Italian membership of the Pope's advisory council, from which future Popes are chosen, increased the possibility of the election of a non-Italian to the Papacy.

A retinue of thirty-five relatives and friends, for whom previously shipped food was provided, accompanied the Cardinal-designate to Rome in mid-February 1946; among them were Spellman's two sisters and two brothers. Cardinal Spellman received his red hat (the one used in the ceremony served for all the new Cardinals) at a public consistory held in the basilica of Saint Peter's on February 21, 1946, and witnessed by twenty thousand laymen and ecclesiastics. Actually Cardinal Spellman did not receive his own red hat—one worn by the Pope when he was Cardinal—until it was delivered to him at his quarters in the American College, where he was also notified formally of the titular churches under his pastorate in Rome. The tradition of assigning Roman churches to each of the Cardinals dates from the days when all the princes of the Church were resident in Rome and able to officiate in their parishes. Shortly before returning to the United States, Cardinal Spellman was the one North American Cardinal, of the four who were invited, to attend a dinner given by the Spanish Ambassador to Rome. His return to New York on March 5, 1946, was marked by a popular demonstration along the route from the airport to St. Patrick's Cathedral.

The activities of the Cardinal included, early in 1947, inaugurating the nation-wide campaign of the American Cancer Society, and opening a two-million-dollar drive for the Catholic Charities of the Archdiocese of New York. The prelate in June attended the Marian Congress in Canada, from which he returned in time to consecrate Our Lady of Victory, the newest Roman Catholic church in New York's financial district. (This was one of the completed structures which is part of the Cardinal's twenty-five-million-dollar building projects, also included the Alfred E. Smith memorial wing at Saint Vincent's Hospital.)

At the Provincial Eucharistic Congress held in Buffalo, New York, in September 1947, the Cardinal summarized Roman Catholic theory on capital and labor in one of his sermons. A denunciation of bigotry (particularly in relation to the controversy over the school bus problem) by the New York prelate aroused the board of directors of the Council of Churches of Syracuse and Onondaga County, Inc., to issue a statement of protest, which was circu-

lated to all the Protestant churches in the country. This was followed shortly afterward by a denunciation of secularism, drafted at a meeting of the Catholic Bishops of the United States in mid-November and signed by Cardinal Spellman and other American prelates.

Besides writing articles for *Collier's*, *The American*, *Cosmopolitan*, *Good Housekeeping*, and other magazines, and the book, *Action This Day* (1943), Spellman is author of *The Road to Victory* (1942), *The Risen Soldier* (1944), *No Greater Love* (1945), and *Prayers and Poems* (1946). (A selection of prayers and poems recorded by the Cardinal was issued also in 1947.) His translations of the works of Cardinal Borgongini-Duca are *The Word of God* and *In the Footsteps of the Master*. Sale of the Cardinal's wartime books reached three hundred thousand copies, and from these and the sale of his poetry and articles he received \$250,000, which he donated to charity. The Cardinal is not only a supporter of Roman Catholic charities, but has contributed to the United Jewish Appeal as well, which has earned him the public thanks of Representative Sabath⁴⁶. When the Stratton bill (to admit one hundred thousand displaced persons to the United States) was presented to Congress in June 1947, Cardinal Spellman urged its passage.

Universities which have given Cardinal Spellman honorary degrees are Fordham and Notre Dame (LL.D.), Marquette (D.Litt.), Georgetown (LL.D.), Duquesne (LL.D.), New York (L.H.D.), Loyola (LL.D.), and John Carroll (LL.D.). He has received similar honors from Manhattan (LL.D.), Saint Francis (LL.D.), and from Jefferson Medical (LL.D.) colleges. Spellman, who was the first American bishop to be made a member of the Knights of Malta, received the Grand Cross of that order in 1934. From the American-Irish Historical Society, he received a gold medal in 1945. Secretary of War Robert P. Patterson bestowed the Medal of Merit upon him in 1947. The Cardinal is also a trustee of the New York Public Library, a vice-president of the New York Blind Association, protector of the Catholic Central Verein, and an honorary citizen of Sainte-Mère Eglise, France. With Bernard Baruch, Cardinal Spellman was one of the distinguished citizens honored by the Boy Scouts of America in 1947: he received its highest award, the Silver Buffalo. At the formal closing of the welfare center operated for the six war years by the National Catholic Community Service, the Cardinal received a certificate of achievement from the United States Navy for the work accomplished by the center.

In describing the Cardinal, writers frequently use the words "cherubic" and "benign." At the time of his election to the College of Cardinals, the *New York Times* characterized him as a "retiring, mild-mannered . . . humble, democratic little man, with a round face and bespectacled, kindly eyes." In his Newton Center parish, Roger Butterfield reported in *Life*, Spellman "won his parishioners' hearts with his friendly, democratic ways. The previous rec-

tor had used a chauffeur; Spellman often drove his own Chevrolet coupe on his trips into the city." Butterfield also remarked that the Cardinal has "distinguished himself by an ability to get things done quickly and a personal talent for winning friends."

SPORBORG, CONSTANCE AMBERG
See Sporborg, Mrs. W. D.

SPORBORG, MRS. WILLIAM DICK
July 11, 1879- Civic leader; women's organization official
Address: h. The Oliver Cromwell, 12 W. 72d St., New York 23

Mrs. William Dick Sporborg, civic leader, has been active in social work and in national and international affairs for many years. In 1947 she holds about fifteen official, semi-official, and organizational posts, among them that of representing the international General Federation of Women's Clubs on the United States Commission for Liaison with UNESCO.

Constance Amberg, the future Mrs. William Dick Sporborg, was born July 11, 1879, in Cincinnati. One of four children of Louis and Rose (Winkler) Amberg, she comes (in her words) "from a long line of teachers, physicians, and ministers." At the suggestion of Mrs. Amberg, whom her daughter has described as a woman of great social vision, the girl invited a group of settlement house children to her twelfth birthday party. Later she organized a club for them, and at fifteen she became a volunteer worker at the settlement house.

Graduated from the Walnut Hills High School in her native city, eighteen-year-old Constance Amberg entered the University of Cincinnati. There she majored in languages, completed the requirements for a B.S. degree in three years, and won the medal for Latin. This was in 1900. The next year the Ambergs moved to New York City, where the young woman became a volunteer at the Chrystie Street Settlement House, and also headed the first junior auxiliary of the National Council of Jewish Woman, New York section, during 1901-4. In June 1902 the twenty-two-year-old social worker was married to attorney W. Dick Sporborg, who died in July 1933. (Their children are Elizabeth [Mrs. Morse] and William Dick, Jr.)

After the birth of their first child, the Sporborgs moved to Port Chester, in the suburban

Blackstone Studios, Inc.

MRS. WILLIAM DICK SPORBORG

township of Rye, New York. There, in 1912, Mrs. Sporborg helped to found the Port Chester Woman's Club Neighborhood House and to establish the first public nursing service in the community. Mrs. Sporborg's five years as president of the Woman's Club, 1916-21, were concurrent with five years as president of the New York section of the National Council of Jewish Women; the last two years (1920-22) were also concurrent with her vice-presidency of the new Westchester County Federation of Women's Clubs. A major activity of the National Council of Jewish Women was caring for and reorienting unprotected immigrant women and children, regardless of creed. In this activity Mrs. Sporborg helped to direct the council's work at Ellis Island and raised funds to send a professional social worker to Europe to aid such emigrants.

When the New York State Conference of the council was organized, Mrs. Sporborg was its president (1923-26), and in the latter year she became president of the national organization for a one-year term. Meanwhile, she rose from the presidency of the New York City Federation of Women's Clubs (1925-27) to head the State federation (1930-32). During this period she became closely associated, as a fellow official and friend, with Carrie Chapman Catt⁴⁰, leader of the campaign for woman suffrage and the movement for world peace. Naming Mrs. Catt as the second great influence in her life, after her mother, Mrs. Sporborg has said that this friendship led her to be "actively interested in social vision for the whole world through better international understanding geared to the outlawing of war."

From 1929 to 1935 the women's leader was recording secretary of Mrs. Catt's National Committee on the Cause and Cure of War, and in 1935-39, under chairman Josephine Schain⁴⁵ she headed its Pan American Com-

mission. In this capacity, Mrs. Sporborg accompanied Secretary of State Cordell Hull⁴⁰ to the 1938 Inter-American Conference at Lima, Peru, heading the delegates from national women's organizations of the United States. The previous summer (1937) she had spent three months with a seminar group, studying at first-hand the conditions in nine European countries. Since 1938 Mrs. Sporborg has been on the executive committee of the Women's Pan-Pacific Association, American Branch; since 1940, a consultant to the Unión de las Mujeres Americanas (United Women of the Americas); and since 1943, an executive on the United States liaison committee to the Inter-American Commission on Women, an official body set up by the 1928 Pan American Conference.

Active in State affairs, in 1932, while president of the State Federation of Women's Clubs, Mrs. Sporborg organized the Women's Joint Legislative Forum, which meets in Albany during the New York State legislative session to discuss pending bills and prepare a weekly information bulletin for its membership. During the same period Mrs. Sporborg organized consumer education forums to make homemakers better informed as buyers. In December 1934 she was named chairman of the consumers advisory council for the International Trade Fair; and Governor Lehman⁴³ appointed her to advise the research committee which prepared data for the Constitutional Convention on Public Welfare and Consumer Interests.

In the General Federation of Women's Clubs, with member organizations in thirty-one countries, Mrs. Sporborg was, successively, chairman of the resolutions committee (1932-35), of the department of legislation (1935-38), and of the war housing committee (1941-44). In the State federation, she became in November 1936 head of the department of crime prevention and social maladjustment, founded by her when president to replace the penology and prisons committee. She helped also, in her State federation capacity, to gather evidence forming the basis of a State law prohibiting marathon dances. The civic leader also organized a vigorous campaign against the use of marijuana cigarettes. Joining forces with the Federal Narcotics Commissioner, Harry Anslinger, to campaign on a national scale, she helped secure the passage of a uniform narcotic drug act by eleven States within two years. Mrs. Sporborg organized community surveys of jails in forty-six counties, worked in association with the Department of Justice for a Federal law against the possession of unlicensed pistols and revolvers, and with the Department of Labor for increased power to deport criminal aliens.

Working through the Golden Rule Foundation, in April 1939 she organized a committee which obtained the signatures of five million mothers in six weeks to a pledge to teach their children, by example, respect for the rights of all others. Russell Sage College awarded Mrs. Sporborg the L.H.D. degree for her organizational work in that year.

Vice-chairman of the Westchester County League of Women Voters in 1939-41, and chair-

man of the Women's Voluntary Participation Defense Council in 1940, she was one of the two women appointed by Governor Lehman to the Westchester Defense Council in the latter year. In 1941 she became vice-chairman of the Women's Action Committee for Victory and Lasting Peace, and in 1942 Mrs. Sporborg accepted membership on the executive committee of Women in World Affairs. Since 1943 she has been a member of the advisory committee to the National Women's Forum, in which year she also began a five-year term as chairman of the international relations committee of the New York City Federation; and in May 1944 was appointed head of General Federation's department of internal relations by the president, Mrs. LaFell Dickinson⁴⁵. After her work in the last-mentioned position ended in 1947, she began a three-year term as GFWC consultant.

At the United Nations San Francisco Conference on International Organization in April 1945, Mrs. Sporborg was an official consultant to the United States delegation. (At this time she was also international relations chairman of the Women's Press Club of New York from 1945 to 1947—her writings include a New York *Herald Tribune* series, *Congressional Trends of Interest to Women*.) When the U.N. convened in New York in September 1946, Mrs. Sporborg was appointed to Mayor O'Dwyer's⁴⁷ hospitality committee, and was accredited as an observer at Security Council meetings. In 1946 she began her service as a national board member of the American Association for the United Nations. Early in 1947 she became a member of the policy committee of the National Conference on the German Problem, formed by Eleanor Roosevelt⁴⁶ and Edgar Ansel Mower⁴¹.

Meanwhile, in 1947, Mrs. Sporborg was appointed to represent the GFWC on the ninety-member United States Commission on Educational, Scientific, and Cultural Cooperation, headed by Milton Eisenhower⁴⁶, created by an Act of Congress. Its function is to advise the State Department on cultural and educational policies, and to act as liaison with UNESCO, the intergovernmental agency affiliated with the U.N. Economic and Social Council. At the first national conference on UNESCO, in March 1947, she drew applause when she asked that UNESCO "give priority to . . . an objective study of the tensions existing between the United States and Russia."

Following the conference, Mrs. Sporborg spent about three months on a speaking tour of New England, from time to time attending meetings of the Security Council. Among other activities, she has since 1927 been vice-chairman of the New York City Federation Hotel Center for Self-Supporting Students; in 1932 she was in charge of an exhibit at the Chicago Exposition; in 1935 she organized, and until 1939 headed, the East Coast Preview Committee of eleven hundred volunteers, which sent its motion picture reviews to women's organizations in each State. Blue-eyed and white-haired, and wearing eyeglasses, Mrs. Sporborg is five feet four inches tall and weighs 150 pounds. Her religious faith is Jewish, her

politics she lists as independent. Formerly a golfer, in 1947 she named her hobbies as travel and international cookery.

SPRINGER, ADELE I. December 30, 1907- Lawyer; former president of law association

Address: b. 60 Wall St., New York 5; h. Hotel Pennsylvania, New York 1

The president of the National Association of Women Lawyers for 1946-47 was Adele I. Springer, a student of international law and the only woman admiralty lawyer in the United States. Foremost among the cases that Miss Springer has handled was the suit on behalf of the S.S. *Morro Castle* survivors. Later she helped to draft and lobbied for the Sirovich bill, which amended the outmoded shipowners' liability laws. As president of the National Association of Women Lawyers, Miss Springer directed its campaign for cooperation with the United Nations, and, in the domestic sphere, for the appointment of more women to higher judiciary positions.

Adele I. Springer was born in Brooklyn, New York, on December 30, 1907. Her parents were Cecelia (Palew) Springer and Nathaniel Springer, a real estate broker. She received her elementary schooling in her native borough; and her secondary school diploma, also, came from a school there, the Girls Central High School (1927). For a while, she was undecided about which career to follow and vacillated between the theater and social work; but, eventually, she rejected both choices and entered St. John's University, Brooklyn, as a student of law. At St. John's she became vice-chancellor of the Phi Alpha Pi sorority and president of the women's division of the Justice Brandeis Society, an honor society. Miss Springer obtained both her LL.B. (1930) and her LL.M. (1931) from St. John's Law School.

After being admitted to the New York State Bar in 1931, Adele Springer entered the law firm of Battle, Levy, Van Tine, and Fowler, with which she was associated for eight years. From 1931 until 1933, the young attorney studied writing at Columbia University in order to be able to write cogent and expert briefs. During 1933 she pursued advanced courses at the School of International Studies in Geneva, Switzerland, and also perfected her knowledge of French, German, Spanish, and Italian at the University of Geneva. The following year was spent at the Academy of International Law at The Hague.

On her frequent transatlantic voyages, Miss Springer had an opportunity to observe seamen's working conditions and provisions made for securing the safety of passengers. "So," the *American Magazine* summarized, "she boned up on engines, ship construction, seamen's problems; set out to change the law. Then Miss Springer went into action against Washington's ship lobby. After a series of ship fires and wrecks in 1934, she wrote and

Underwood & Underwood

ADELE I. SPRINGER

forced the passage of the Sirovich bill to make shipowners liable for deaths and injuries of passengers at sea. Also got behind laws requiring better ship inspection and granting merchant sailors an eight-hour day."

The two sea disasters that stimulated Miss Springer's interest in admiralty law were the *Morro Castle* and *Mohawk* shipwrecks in 1934. Since one of the *Morro Castle* victims was a friend and client of the lawyer's, she entered a suit on behalf of the victim's four surviving children. From this developed Miss Springer's retention as counsel for the *Morro Castle* Survivors Association in 1935 and her appointment as admiralty counsel to the United States Senate Sub-Commerce Committee investigating the two sea calamities. (The New York lawyer was the first woman ever to be retained as counsel to any United States Senate inquiry.) In 1936 she served as admiralty counsel to the House of Representatives Committee on Patents, which was then investigating patent pooling. Among the lawyers representing the *Morro Castle* claimants, Miss Springer was the only one to obtain an indemnity of one hundred cents on the dollar.

Since opening her own office in 1939, Miss Springer has frequently had divorce suits on her calendar. The paucity of women on the superior bench is a serious shortcoming in trying these cases, Miss Springer believes, especially when the custody of children is involved. In New York State, retired judges (who are often bachelors, she says) act as referees in divorce actions, conducting hearings and making reports, to which the superior court judges usually defer in their rulings. Miss Springer has said that "there's probably no one in the general population who knows less about a child than an old bach. I have personally known of some gross miscarriages of justice in New York which a woman's

sympathetic feeling of responsibility for children might have avoided."

On being elected president of the National Association of Women Lawyers, a forty-seven-year-old organization with a membership of ten thousand, Adele Springer instituted two campaigns: one for cooperation with the United Nations and the other for the appointment of more women to the judiciary bench. Of the first, she wrote in the *New York Post*: "We're going all out for cooperation with the U.N. We've been accredited by the State Department as an official observer. We're establishing a section on international relations. There'll be a division on the U.N. and in that division there'll be committees, each treating with a separate phase—the status of women, human rights, narcotics, world health organization, trusteeships, world court, atomic energy. Do you know that there is not a single woman from any nation on that Atomic Energy Commission? And if it came to atomic warfare, women and children would be the most affected—not the men on the battlefields." Of her second objective, she remarked: "Justice is usually personified by a woman. Notwithstanding that, there are very few women judges in this country and only one woman judge in the Federal Courts. We're working for more women on the bench."

Under Miss Springer's leadership, the National Association of Women Lawyers established more than one hundred new committees to study pending legislation, United Nations documents, and national and international affairs; a committee on American citizenship was also formed. Subsequently, when rent controls were relaxed (in July 1947), Miss Springer, acting for the association, appointed a committee on real estate law and housing. On behalf of the association, Miss Springer criticized several recent films for misrepresenting the characters of women lawyers. A domestic relations clinic, designed to avert divorces, was opened in September 1947 at the national headquarters of the association, because, explained Miss Springer, several cases had been brought to its attention through its juvenile delinquency clinic, established several months before. At the national convention of the association late that month, Miss Charlotte E. Gauer was chosen president to succeed Miss Springer, who became delegate to the American Bar Association.

Miss Springer is a member of the American Bar Association, the New York State and New York County Bar associations, and the Federal Bar Association of New York, New Jersey, and Pennsylvania. She also belongs to the New York County Lawyers' Association, of which she is a member of the Federal courts committee. Before becoming president of the National Association of Women Lawyers, she was national chairman of its administrative law committee (1939-45), and first vice-president (1945-46). A Democrat, Miss Springer has been on the board of governors of the Grover Cleveland Democratic Association of the Fifteenth Democratic District of New York; she was, in 1936, organizer and national director

of the pioneer women lawyers' division of the Democratic National Committee, organizer and president of the National Pro-Roosevelt Association of Lawyers, and secretary of the National Women's Pro-Roosevelt League. At that time, Miss Springer was also chairman of the women's division of the New York State Young Democrats and national director of the Voters' Legal Aid Bureau. Another association to which Miss Springer belongs is the National Taxpayers and Property Owners Association, of which she is a member of the board of governors and chairman of the women's division. Besides her activities in civic and political organizations, the New York attorney has been a member of the board of governors of the young men's and women's division of the Federation for the Support of Philanthropic Societies of New York. For law periodicals she has written articles on the amendments to Federal laws fixing the liabilities of shipowners and on administrative law. (An article on the latter subject was reprinted in the *Congressional Record*.)

Traveling is Miss Springer's favorite recreation—she has frequently visited Europe and the Near East. She enjoys listening to opera. Five feet four inches tall, weighing 130 pounds, Miss Springer has been described as a "serious young woman with big, very intense gray-blue eyes. She generally wears black, for its dignity value in the courtroom, and piles her dramatic [reddish-blond] hair in rolls on top of her head."

STAINBACK, INGRAM MACKLIN
(stān'bāk) May 12, 1883- Governor of Hawaii

Address: b. Iolani Palace, Honolulu, T. H.;
h. Washington Pl., Honolulu, T.H.

The Territory of Hawaii, the group of twenty islands which lie at the junction of main shipping routes in the Pacific, is administered by the United States Department of the Interior. Ingram Macklin Stainback, the Governor of the Territory of about six and a half thousand square miles, had come to the Hawaii in 1912, and thirty years later was appointed chief administrator of the islands. Stainback, who helped to obtain the restoration of civil rights in Hawaii after the outbreak of World War II, is a strong advocate of statehood for the Territory.

Ingram Macklin Stainback was born in Somerville, Tennessee, on May 12, 1883, to Charles Ashley and Laura (Blakely) Stainback. After completing his secondary education he became a student at Princeton University, receiving his B.A. degree in 1907. For a time he taught school, first at the Battle Ground Academy, Franklin, Tennessee, in 1907-8, later at the Rugby School, New Orleans, in 1908-9. He then went to the University of Chicago to study law, and was graduated in 1912 with the

Wide World Photos

INGRAM MACKLIN STAINBACK

degree of J.D. Stainback went from Chicago to Hawaii in 1912 to begin his practice of law in Honolulu. Two years later he was appointed Attorney General of the Territory of Hawaii, a post he held from 1914 to 1917. During that three-year period he was a member of the Territorial Board of Health. He served as a major in the United States Army during World War I, from 1917 to 1919. On his return to civilian life he became a member of the Public Utility Commission of Hawaii, serving during 1919-21. In 1934 he was appointed United States Attorney, District of Hawaii, a position he held until November 1940, when he became United States District Judge. During those years he continued his private law practice.

On December 7, 1941, when the Japanese bombed Pearl Harbor, Joseph Boyd Poindexter⁴², Governor of the Territory since 1933, immediately proclaimed martial law and delegated his powers to the commanding general of the United States Army's Hawaiian Department. It was while Hawaii was still controlled by a military government that President Roosevelt named Stainback in July 1942 to succeed Poindexter.

Stainback's appointment did not meet with universal favor in Hawaii. The Honolulu *Advertiser* commented editorially that "if Stainback's appointment were dependent on the will of the people as expressed by popular vote, he'd have to wait some time before assuming this high office." Stainback chose as Secretary of the Territory Ernest Kai, a popular Chinese-Hawaiian, who was president of the Hawaiian Civic Club. Next he requested all Cabinet members to resign, replaced some, and reappointed others. As Attorney-General, he chose J. Garner Anthony, a lawyer known for his anti-martial law attitude. This appointment was considered a clear indication that Stain-

STAINBACK, INGRAM MACKLIN

—Continued

back intended to press for the return of civilian government in the islands.

In anticipation of action by Stainback, Lieutenant General Delos C. Emmons⁴², in command of the military department of Hawaii, journeyed to Washington to present the Army's views. Governor Stainback also went to Washington in December 1942, to set forth the civilian point of view. A quick and amicable settlement was the result. On March 10, 1943, all powers in local government, except those affecting military defense of the islands, were restored to civilian authorities and a "Restoration Day" ceremony was held in Iolani Palace. While martial law remained in effect and the right of habeas corpus continued to be suspended, in all other ways local courts were allowed to function normally, aside from those cases which involved military personnel. More than a year and a half later, in October 1944, President Roosevelt issued a proclamation ending military rule and restoring the privilege of the writ of habeas corpus. Finally, in February 1946, the United States Supreme Court ruled that military courts established under martial law in Hawaii had no power to try civilians. Stainback's attitude toward military government was summed up in his "Restoration Day" address: "Especially in the midst of war . . . we must not lose sight of the fundamentals for which we fight." One result of the temporary martial law was that the return of civilian administration did not restore certain powers enjoyed by sugar and pineapple interests, such power being transferred to Federal bureaus established to exert a measure of control over the islands' economy.

In leading the campaign for the return of civilian powers, Stainback became a figure of strength and popularity to the man on the street. He was to veto an antilabor bill; he provided that labor be well represented on the War Manpower Board. In his handling of industrial disputes, labor thought him a fair, unbiased judge, who did not allow racial issues to influence his decision. During the war years, labor had emerged in Hawaii as a new, articulate, middle class, conscious of its political power and of the individual rights of its members. By 1945 the Congress of Industrial Organizations had become influential in the election of several legislators and was able to bring about passage of the Hawaii Employment Relations Act, popularly known as the "Little Wagner Act." Signed by Governor Stainback in July 1945, the law opened the way for unionization of all plantation labor by extending collective bargaining protection to agricultural field workers. The act placed a number of restraints on labor as well as on management.

With the end of war Hawaii once more resumed her efforts to achieve statehood. Hawaii was annexed by the United States in 1898, and a number of times since 1900, the year in which Congress had made the islands an incorporated Territory, its residents had sought the rights of statehood. Those opposed declared that the islands were too far from the

mainland; that powerful commercial interests would interfere with satisfactory operation of State government; that the mixed racial composition would be a military hazard in war and a political hazard in peace. Those in favor of statehood replied to these objections: Hawaii, 2,100 miles west of California, is only twenty-six hours by air from New York and twelve from San Francisco; economic domination by large corporations had been offset to some extent by the war; the people of Hawaii had "demonstrated beyond question not only their loyalty and patriotism but also their desire to assume the responsibility of statehood." In 1945 Secretary of the Interior Harold Ickes⁴¹ and Governor Stainback formally supported statehood for Hawaii. Early the next year, in January 1946, a Congressional committee conducted hearings in the throne room of Iolani Palace, the Government offices. At these hearings, Stainback called attention to the plebiscite on the eve of the war which had shown Hawaii to be two-to-one in favor of statehood. The war itself, he said, was "the most crucial test of loyalty endured by any member of the Union." Not a single act of sabotage by Japanese had been attempted in Hawaii, according to the F.B.I. Thousands of Nisei had volunteered after Pearl Harbor, and some of their units were among the most decorated in the Army for valor and patriotism. The Governor, pointing out that Hawaii paid a higher Federal income tax than fourteen States, spoke of "taxation without representation."

On January 3, 1947, Joseph R. Farrington, nonvoting delegate to the United States Congress from the Territory of Hawaii, introduced HR 49, a bill to make Hawaii the forty-ninth State. Stainback testified in its favor: "Our percentage of citizenship population has increased to 85 per cent. The Caucasian population has increased until it equals that of Japanese descent," about one third each of Hawaii's population of 519,503. The House of Representatives took action on HR 49 on June 30, voting 196 to 133 for statehood for Hawaii. It remained for the Senate to concur and the President to sign to bring the forty-ninth State into being. Should the bill become law, Stainback will be the administrator during the new State's organization, since he began his second four-year term as Governor in July 1946.

Ingram Macklin Stainback is a Democrat, a member of the Bar Association of Hawaii, of Phi Alpha Delta, and of Phi Beta Kappa. He belongs to the Waialae Golf Club and the Pacific Club. In May 1922 he was married to Cecile B. White.

STANLEY, W(ENDELL) M(EREDITH)

Aug. 16, 1904- Biochemist

Address: b. c/o Rockefeller Institute, Department of Plant and Animal Pathology, Princeton, N. J.; h. 160 Hodge Rd., Princeton, N. J.

One of the three winners of the Nobel chemistry prize in 1946, W. M. Stanley, in-

ternationally known biochemist of the Rockefeller Institute for Medical Research, first gained recognition in 1935, when he published findings which marked a turning point in the field of virus research. The results of his experiments at the Rockefeller Institute's Princeton laboratories not only displaced the long-held idea that viruses were submicroscopic organisms but led many to wonder whether these infectious agents, with their properties of mutation and reproduction, might not be "a bridge between living and nonliving matter." During World War II Stanley was also responsible for the development of a centrifuge-purified influenza vaccine, which is reportedly ten times more successful in combating influenza than any earlier vaccine. Dr. Stanley was chosen by the University of California late in 1947 to head its new laboratory for virus research; he will take his new post in mid-1948.

Wendell Meredith Stanley did not seriously consider a career in science until he was about to be graduated from college and was on the way to becoming a football coach. As a boy in Ridgeville, Indiana, the town in which he was born on August 16, 1904, it was his task to help his parents, James G. and Claire (Plessinger) Stanley in publishing the local newspaper. After school he would, at times, gather news, assist in getting the paper on the press, deliver newspapers, and perform other odd jobs. Upon his graduation from the Richmond Indiana High School (his family had moved from Ridgeville in about 1920) young Stanley entered Earlham College, where he majored in chemistry and mathematics and was active in extracurricular activities—particularly in football. Captain of the football team in his senior year and selected for the Indiana All-State College Team, he was interested in securing a job as an athletic coach. In the spring of 1926, however, only a few months before he was to receive his B.S. degree, these plans were suddenly changed. A visit to the University of Illinois, at Urbana, where he met and spoke with chemistry professor Roger Adams opened his eyes to the possibilities of chemistry as a profession. This resulted in his enrollment at the university's summer school immediately after his graduation from Earlham.

Majoring in organic chemistry, with physical chemistry and bacteriology as minors, Stanley, whose grades as an undergraduate had "reflected his many extracurricular activities," now seriously applied himself to his studies and was rewarded with teaching and research assistantships. He published thirteen papers during his four years at the University of Illinois. In the summer of 1928 the young chemist supplemented his courses with some industrial experience at the Du Pont Experimental Station. After receiving his M.A. (1927) and Ph.D. (1929) degrees, he remained for a year at the University of Illinois as research associate and instructor, continuing his work with Roger Adams on the synthesis of antileprocidal agents. "It was undoubtedly Roger Adams," wrote Ralph L. Shrinier, chemistry department chairman at Indiana Univer-

W. M. STANLEY

sity in 1946, "who exerted the greatest influence on Dr. Stanley's future career." Under "Professor Adams' firm and friendly guidance," Stanley first became interested in the application of chemistry to medical research; this had an important bearing on the direction which his work as a scientist took.

In 1930 Stanley went abroad to the University of Munich on a national research fellowship. There, working with Heinrich Wieland, he carried out experiments on the isolation of sterol compounds from yeast and was successful in solving a problem which had preoccupied him while at Illinois, that of preparing a resolvable disubstituted diphenyl derivative. (He had first attempted this during investigations with Roger Adams in the stereoisomerism of diphenyl compounds.) On his return to the United States in 1931, Stanley, unable to find a good teaching post during the depression, was fortunate in obtaining a position at the New York Rockefeller Institute for Medical Research. For a year he worked with Dr. Osterhout, who was then doing research on the permeability of the valonia (a large one-celled plant) cell wall; Stanley prepared a model semipermeable membrane across which electrical currents could be measured and which permitted the passage of sodium and potassium ions, the potassium ions accumulating preferentially with respect to the sodium ions. Describing the method used by Stanley to make this model, Vincent du Vigneaud of Cornell University Medical College has written: "Again a problem set before him was solved by forthright, direct thinking and experimentation"—Stanley's characteristic approach.

In 1932, Doctors Flexner and Kunkel, who, unlike other pathologists, advised chemical rather than biological studies on viruses, invited Stanley to join their staff at the Rockefeller Institute's Department of Plant and Animal Pathology at Princeton, New Jersey.

STANLEY, W. M.—*Continued*

Knowing little about viruses but interested in applying chemistry to medical problems, Stanley began the work which resulted late in 1934 in his isolation of a crystalline material (later identified as a nucleoprotein) possessing the properties of tobacco mosaic virus. This development challenged the prevalent belief that viruses were submicroscopic organisms. That a chemical substance could undergo reproduction and mutation (the virus exhibits these properties only in the presence of living tissue) also altered fundamental ideas concerning the nature of living matter. "In the light of Stanley's discovery," declared a New York Times writer shortly after the biochemist published the results of his experiments in June 1935, "the old distinction between life and death loses something of its validity." To convince skeptical pathologists, Stanley, after much experimentation which confirmed his first conclusions, embarked upon a series of lectures in the United States and England and gained almost complete acceptance of the ideas he had advanced.

In Stanley's laboratory, from which scientists have gone forth to establish other centers of virus research, further investigation revealed that the viruses of numerous plant and animal diseases, isolated in pure form, were, like the tobacco mosaic virus, nucleoproteins of high molecular weight; and in each case the "virus activity was found to be a specific property of the nucleoprotein." Aiming to learn the nature of virus reproduction and mutation, Stanley and his co-workers also conducted experiments which "not only provided confirmation of the view that virus strains actually differ in chemical structure, but also provided the first information concerning the nature of some of the chemical differences that exist between the strains of a virus, and hence of the changes in chemical structure that must accompany the mutation of a virus." This work, augmented by a series of experiments in which changes in the chemical structure of tobacco mosaic virus were produced in the laboratory test tube, was regarded as of possible importance for the advancement of knowledge concerning mutation in higher organisms.

During World War II, Stanley and his colleagues suspended work on plant viruses to devote themselves to research of more direct benefit to the war effort. As director of a project sponsored by the Committee on Medical Research (of the Office of Scientific Research and Development), Stanley developed a centrifuge-purified influenza vaccine. In connection with this he carried out basic studies on the influenza virus, which greatly clarified existing knowledge about it. The vaccine, accepted by the Army in April 1945 proved to be about 75 per cent effective in Army tests. Stanley expressed the belief that the work on influenza virus and vaccine in his own and other laboratories had provided the means "for preventing or at least reducing the intensity of influenza epidemics in the future." The biochemist, who was appointed a consultant to the Secretary of War and a member of the Army Commission

on Influenza, also investigated methods for the production of vaccines against Japanese encephalitis.

In the third of his four Silliman lectures at Yale University in the fall of 1947, Stanley advanced the hypothesis that, because of the chemical similarity between viruses and genes, the hereditary pattern of living organisms may some day be altered by chemical products of the laboratory. Stanley based this opinion on research which had shown that the activities of the tobacco mosaic virus, which caused disease, could be changed by altering the chemical make-up of the virus. Near the end of 1947 he was appointed to establish and direct a new laboratory for virus research at the University of California, with his appointment to take effect in July 1948.

Stanley became a member of the Rockefeller Institute for Medical Research in 1940. Sigma Xi national lecturer in 1938, he also held the Hitchcock professorship at the University of California in October 1940, was visiting professor of chemistry at Earlham College in May 1941, and in 1942, Messenger lecturer at Cornell University and Vanuxem lecturer at Princeton University. He is the author of numerous articles on virus research, published in various scientific journals, and in the fall of 1946, was reported to be writing a book on virus diseases. In recognition of his contribution to man's knowledge of viruses, he has been awarded many prizes: the American Association for the Advancement of Science prize of one thousand dollars in 1937; the Isaac Adler prize of two thousand dollars by the Harvard University Medical School in 1938 and in the same year, the Rosenberger Medal by the University of Chicago, and the John Scott Medal, certificate, and premium of one thousand dollars by the city of Philadelphia; the gold medal of the American Institute of the City of New York in 1941; the Copernican Citation by the Copernican Quadricentennial National Committee in 1943, the William H. Nichols Medal by the New York group of the American Chemical Society, and the Willard Gibbs Medal of its Chicago section. In 1946 he shared the Nobel chemistry award with John H. Northrop⁴⁷. (The other half of the prize was won by James B. Sumner⁴⁸.) Earlham College as well as Harvard and Yale universities have conferred upon Stanley the honorary D.Sc. degree (1938), a degree which he also received from Princeton University in 1947. Stanley was the recipient of an honorary LL.D. degree in 1946 from the University of California. He delivered the Edgar Phas Smith Memorial lectures at the University of Pennsylvania.

Elected to membership in the American Philosophical Society in 1940, and in 1941 to membership in the National Academy of Sciences, and in 1947 to the presidency of Sigma Xi, the biochemist is also a member of the American Chemical Society, the American Phytopathological Society, the Harvey Society (honorary), the American Society of Biological Chemists, the American Association for the Advancement of Science, the New York Acad-

emy of Sciences, the American Society of Naturalists, and the Society for Experimental Biology and Medicine. Stanley's wife is the former Marion Staples Jay, who was also a graduate student of Roger Adams' at the University of Illinois; they were married in June 1939, with the professor acting as best man. Their four children are Wendell Meredith, Jr., Marjorie Jean, Dorothy Claire, and Janet Elizabeth. Gray-eyed and gray-haired, Stanley is five feet ten inches tall and weighs 175 pounds.

STANWYCK, BARBARA July 16, 1907-
 Actress

Address: h. Beverly Hills, Calif.

Barbara Stanwyck entered the motion picture field after having successfully starred on the stage in Arthur Hopkins' *Burlesque*. Since 1929 she has been in a wide variety of film roles, ranging from lightly entertaining portrayals to serious characterizations, three of which won her Academy Award nominations.

Of Scotch-Irish descent, Barbara Stanwyck was born Ruby Stevens in Brooklyn, New York, on July 16, 1907. Ruby was orphaned when she was four; thereafter the child, the youngest of the five Stevens children was reared by her sister, Mildred, who boarded her with friends and, at one time, enrolled her in a private school for small children. She received much of her formal education, completed when she was graduated from elementary school, in Brooklyn. During her school years she played on the basketball team, appeared in school plays, and taught Sunday school. At the age of thirteen Ruby Stevens obtained her first job, as a bundle wrapper for a Brooklyn department store. Subsequently she held positions as a telephone operator, a pattern cutter, a file clerk, a receptionist. While engaged in these, she took dancing lessons. In 1923 she made her first stage appearance in a musical comedy, after having danced at the Everglades and the Club Anatole, two New York night clubs. In that same year Miss Stevens joined the touring company of *Ziegfeld Follies of 1923*. She was also in the chorus of *Keep Kool*. During this early period Miss Stevens received encouragement from John R. Powers⁴⁶. Again, in 1925, she appeared in the *Follies*, this time the New York summer edition. During these early years she was in the dancing chorus of *A Night In*

A. L. Whitey Schafer

BARBARA STANWYCK

Spain, A Night in Venice, and George White's *Scandals*, and continued her night club engagements.

It was to a night club in Atlantic City at which Ruby Stevens was appearing that Willard Mack, a Broadway producer, came to look for a girl to play the role of a cabaret dancer in *The Noose*. Attracted by Miss Stevens, Mack assigned her the part. Before opening night she had, at Mack's suggestion, changed her name to Barbara Stanwyck (it was suggested by a billboard notice, "Jane Stanwyck in *Barbara Fritchie*"). *The Noose* part was a small one, but some notice was taken of the new actress: *Theatre* magazine thought her a "real discovery." While appearing in *The Noose*, which ran for nine months on Broadway, Barbara Stanwyck was tested by MGM—the result was "disastrous." In 1927 Miss Stanwyck read for the leading role in *Burlesque*, which Arthur Hopkins was to produce. Hopkins recalled, in his autobiography, "She seemed to have the quality I wanted, a sort of rough poignancy." Thus Barbara Stanwyck received the role of Bonny in the play; Hopkins pronounced that "she at once displayed more sensitive, easily expressed emotion" than he had seen in any actress since Pauline Lord. The producer credited Miss Stanwyck and the male lead, Hal Skelly, with the success of the play. Stark Young wrote, "In perfunctory moments that served the needs of the entertainment rather than expressed the heart of the character, she was quite unconvincing. . . . But when her feeling was stirred or a dramatic crisis was to be conveyed, Miss Stanwyck played with . . . sincerity and pathos."

As a result of her success in *Burlesque*, "Hollywood offers kept coming" and, in the opinion of Hopkins, "one of the theater's great potential actresses was embalmed in celluloid." Her only other appearance on Broadway was

STANWYCK, BARBARA—*Continued*

in 1933 in *Tattle Tales*, a revue co-authored by Frank Fay⁴⁸, to whom Miss Stanwyck had been married August 26, 1928. Miss Stanwyck's first motion picture was *The Locked Door*, released by United Artists in 1929; later that year she was starred in *Mexicali Rose*. Both of these films were failures. Through the influence of Fay, Miss Stanwyck was assigned to a third film, Columbia's *Ladies of Leisure*, in which she proved to be "a picture person to reckon with." (This film, too, was the first real success for its director, Frank Capra.) In the next three years Miss Stanwyck was seen in other Capra-directed vehicles: *The Miracle Woman* (1931), *Forbidden* (1932), and *The Bitter Tea of General Yen* (1933). While working on these films she also played leading roles in Warner Brothers⁴⁹ pictures: *Night Nurse* (1931), *So Big* (1932), and *The Purchase Price* (1932).

Miss Stanwyck continued her association with Warner Brothers through 1933 and 1934. During those years she was starred in *Ladies They Talk About*, *Baby Face*, *Ever In My Heart*, *The Secret Bride*, and *A Lost Lady*. In the last she was a success in a part which gave the actress "great scope for the dramatic portrayal of a woman whose love life and ideals are shattered." In 1935 Barbara Stanwyck played "a new kind of characterization," which, in the words of the *Detroit Evening Times*, gave her "a chance to do something more than complain about a worthless socialite husband which is her usual lot in pictures." The critic was praising the actress' portrayal of Annie Oakley in the RKO-Radio picture of that name. In 1936 and 1937 Barbara Stanwyck and Robert Taylor appeared in *His Brother's Wife* and *This Is My Affair*. (Four years after her divorce from Fay, Miss Stanwyck and Taylor were married, on May 14, 1939.)

It was in the year 1937 that Barbara Stanwyck gave the performance which won her her first nomination for a Motion Picture Academy Award: the title role in *Stella Dallas* "in the Stanwyck hands, falls into the Juliet-Hedda Gabler-Candida class: a 'must' role for serious actresses," wrote a critic for *The Digest*. Together with some of the original Abbey Theatre players, Barbara Stanwyck and Preston Foster were starred in RKO-Radio's version of *The Plough and The Stars*. In that year (1937) movie-goers also saw Miss Stanwyck in *Breakfast for Two* and in 1938 and 1939, respectively, in *Always Goodbye* and *The Mad Miss Manton*.

In 1939, also, Barbara Stanwyck was the star of the film version of Clifford Odets'⁴¹ play *Golden Boy*. Franz Hoellering (*Nation*) commented about her performance, "Barbara Stanwyck, working in understatement, reveals, without talking about it, the whole life of a girl tossed from pillar to post." The star was also one of the attractions in Cecil B. De Mille's⁴² (Paramount) extravaganza, *Union Pacific*. Miss Stanwyck renewed her association with Frank Capra when she was co-starred with Gary Cooper⁴¹ in *Meet John Doe*. Her second Academy Award nomination was a re-

sult of her work in *The Lady Eve*, written and directed by Preston Sturges⁴¹. Wrote Don Herrod in *Scribner's Commentator*, "This *Lady Eve* is the best thing Barbara Stanwyck has ever done."

For the sixth time in her motion picture career Barbara Stanwyck appeared with Joel McCrea, this time in *Great Man's Lady*. (The other McCrea-Stanwyck films were *Gambling Lady*, *Banjo On My Knee*, *Internes Can't Take Money*, and *Union Pacific*.) *Time* thought that the leading role in *Great Man's Lady*, which spanned the years from youth to old age, too demanding on the actress. More successful was her appearance with Gary Cooper in *Ball of Fire* (1942), into which she put, as one critic phrased it, "all of her oomph." *The Gay Sisters* completed the star's 1942 schedule. Barbara Stanwyck and Charles Boyer were the stars in one of the sequences in *Flesh and Fantasy*, and Miss Stanwyck played the lead in *Lady of Burlesque* (1943).

Double Indemnity (Paramount, 1944) won Miss Stanwyck wide acclaim and her third nomination for the Academy Award. Also winning praise from those reviewers who, in the past, had been less complimentary about her performances, Miss Stanwyck's acting evoked comments such as that of Alton Cook (New York *World-Telegram*). His was, "My own memories of the long career of Barbara Stanwyck don't include a single thing about a bad performance and not much about a better one than she offered as the earthly, vicious woman of *Double Indemnity*." Miss Stanwyck's characterization in *Double Indemnity* was one of the five outstanding performances of 1944 in the opinion of Otis L. Gernsey, Jr., a New York *Herald Tribune* critic.

Having been signed in 1945 by Hunt Stromberg for Paramount, Miss Stanwyck played another "heavy" role for that studio in 1946. (She had, in the meantime, appeared in *My Reputation*, *Christmas in Connecticut*, *Hollywood Canteen*, and *The Bride Wore Boots*.) On this occasion she was the villainess of *The Strange Love of Martha Ivers*. "It is Barbara Stanwyck, as the most complex character of the story," stated William Hawkins, a New York film critic, "who gives the most interesting performance in the challenging role of Martha Ivers. Instead of playing her as an utterly cold creature, she portrays a woman whose normal desires are so powerful as to become minuscule in attainment when compared to her ruthless methods." Barbara Stanwyck appeared for the first time in Technicolor in a Paramount Western, *California*, in which she played opposite Ray Milland⁴⁶. Other pictures, starring Miss Stanwyck, released in 1947 included *Cry Wolf*, *The Other Love* (United Artists), and *The Two Mrs. Carrrolls* (Warner Brothers). A number of critics feel that Miss Stanwyck has been miscast in some of the nearly sixty films in which she has been starred. "She has little range as an actress," wrote one reviewer, concurring with some of his colleagues in the judgment that comedy or "frothy" roles are not well suited to Miss Stanwyck's talents. These, say such critics, are better displayed in dramatic roles.

In 1944 Barbara Stanwyck's name headed the Treasury Department's list of the highest-salaried women in the United States; she has been considered "consistently one of Hollywood's top money-makers." The actress is one of the charter members of the Hollywood Republican Committee. Mr. and Mrs. Taylor and an adopted son, Tony (his name Dion was changed at his request), have a home in Beverly Hills. She is five feet three inches in height, weighs 110 pounds. Usually described as having auburn hair, she herself classified her hair color as brown with a gray streak. She prefers tailored clothes (her wardrobe, reportedly, has been modeled by Edith Head⁴⁵, motion picture fashion designer) and either on or off screen, wears little make-up. For recreation, she rides horseback, swims, or reads—one of her hobbies is to collect first editions.

STARR, LOUIS E(DWARD) Mar. 17, 1897- Former veterans organization head; lawyer

Address: b. Failing Bldg., Portland, Ore.; h. 3510 N.E. 19th Ave., Portland, Ore.

After more than twenty-five years' membership in the Veterans of Foreign Wars of the United States, during which time he held various executive posts, Louis E. Starr, an attorney of Portland, Oregon, was elected to the post of commander in chief of the V.F.W. in September 1946 at its forty-seventh national encampment. After his election to this one-year office, Starr was occupied with enlarging the membership of the V.F.W., campaigning for adoption of a beneficial veterans housing program, and urging all organizations in the United States, veterans and others, to a vigorous stand against "subversive elements." In September 1947 Starr was succeeded by Ray H. Brannaman⁴⁷ as head of the V.F.W.

Louis Edward Starr, the son of George Washington M. and Anna S. (Miller) Starr, was born in Frazeyburg, Ohio, on March 17, 1897. The Starr branch of the family is directly descended from Dr. Comfort Starr, who (according to the *National Cyclopædia of American Biography*) came to America from Ashford, Kent, England, in 1632, settled first in Warren, Connecticut, and then, two years later, in Cambridge, Massachusetts. Starr's maternal ancestry is of colonial stock also, his mother's grandfather, with the surname of Albaugh, having been a soldier in the American Revolution. Young Louis Edward was reared in the State of his birth, where he obtained

his early education, and afterward, in the State of Oregon, to which his family had moved.

Following the example of his father, a railroad accountant, Starr began his career as an employee of a railroad (1915). His first job, in a clerical capacity, was at Myrtle Point, Oregon. One year later he went to Coquille, in the same State, as a telegraph operator. In 1917 he became cashier for the American Railway Express Company at Marshfield, Oregon, working in the company's local office. His career was interrupted in March of 1917 when, at the age of twenty, he enlisted in the Oregon National Guard. After becoming a corporal, he was sent overseas, serving for almost eighteen months in France, where he was wounded and hospitalized (October 1918). Starr, five months later (March 1919), was sent back to the United States and discharged with the rank of sergeant.

Starr returned to the American Railway Express Company, again as a cashier, stationed this time at Eugene, Oregon. After this post he held that of assistant route agent at Eugene (1920-21), and from 1921 for several years following, that of agent at Hoquiam, Washington. During his off-duty hours the Oregonian had been taking courses in accounting and business administration. These courses were to stand him in good stead when he was advanced to an auditorship in the American Railway Express Company, and then, in 1926, when he obtained the position of accountant for the Portland (Oregon) Public Schools. It was during this period, too, that Starr began to prepare for the legal profession. With a private tutor he studied the courses which would enable him to pass the examinations for entrance into a law school. He recalls that his reading of biographies of early leaders in America had perhaps the greatest influence upon him in the ultimate choice of his lifework. For the next seven years, while engaged as school accountant, Starr was to be elected and serve as director of education for the Portland public schools and to take legal courses at the Northwestern College of Law, being graduated with an LL.B. degree in June of 1933. Since then he has maintained a private practice in Portland.

In the course of these years of work and study from 1925 on, Starr was active, too, in reserve defense units and in one of the larger and older American veterans organizations, the Veterans of Foreign Wars of the United States, established in 1899. Nearly seven years after Starr had been discharged from the World War I Army, in February 1926 he was commissioned a second lieutenant in the Oregon National Guard. In this capacity he was to serve for three years. In 1929 he entered the Officers Reserve Corps, where he was unit instructor, advancing to the rank of captain in the Infantry, until the United States entered World War II. (During the previous years he had also taken several military courses.) One year before he had entered the Oregon National Guard, Starr joined Veterans of Foreign Wars Post No. 1325, which was organized in Portland in February 1925. (He has since been

LOUIS E. STARR

made a charter member of the post.) In 1938 he was appointed post commander, becoming in subsequent years judge advocate of the Department of Oregon, senior vice-commander of the department and, during 1941-42, commander of the Department of Oregon.

Captain Starr of the Officers Reserve Corps volunteered for active duty overseas in World War II, but his petition was denied because of a disability incurred during his former war service. In the fall and winter of the year 1944, however, he undertook an inspection tour of the advanced Pacific-area combat lines. Meanwhile, Starr continued to work for the veterans and for postwar benefits for servicemen of World War II. His knowledge in this field resulted in his being chosen, in 1945, a consultant in San Francisco to the American delegation at the United Nations Conference on International Organization. In addition, he was to be the first chairman of the United Nations Veterans Conference.

When forty-eight-year-old Louis E. Starr was elected to the highest office in the V.F.W., its commander in chief, at its forty-seventh national encampment in Boston in September 1946, he had already had experience in such V.F.W. national posts as those of judge advocate general, national chief of staff, and junior and senior vice commander in chief. He won the election by acclamation (*New York Herald Tribune*, September 7, 1946). At the convention the V.F.W. adopted, among other proposals, resolutions advocating United States "exclusive" retention of the "formula and processing methods in the development of atomic energy," extension of the draft, universal military training, and the maintaining of a military organization able to carry out United States international commitments; urged "compulsory Americanism orientation courses for the armed forces"; endorsed the Wagner "41-

Ellender '46-Taft '40 housing bill, an action later called invalid by Starr, who objected to the bill as socialistic (*New York World-Telegram*, October 24, 1946); recommended that the Communist party be withdrawn from all United States ballots; supported exchange of both students ("preferably war veterans") and athletic teams, and "communication media" (films, books, radio broadcasts, etc.) between the United States and Soviet Russia as a means of "easing international friction"; and voted against increased immigration. Starr promised that he would, while in his new post, help to increase the V.F.W.'s 2,500,000 membership to 5,000,000; and the conventioners voted for a more efficient, decentralized, larger-staffed V.F.W.

After he assumed the office of commander in chief, the Portland lawyer expounded his organization's, and sometimes his own, views on national and international affairs. He declared that the V.F.W. national service committee had requested President Truman⁴⁵ "to give naval officers under ban to refrain from public opposition to the Army-Navy unification measure since December 1945 the same freedom to talk about service unification that Army officers have." After supporting (December 1946) the Administration's removal of most veterans housing program controls, Starr announced the V.F.W.'s official housing program providing for the "channeling of materials and labor into housing; curtailment of non-housing construction on a reasonable basis; wiping out legislation, regulations, etc., discouraging current building of rental housing, and a recommendation for long-term [fifty years] low-interest [2 per cent] housing loans for multi-family housing" to be supplied by the RFC. The V.F.W. also has proposed the establishment of a veterans reconstruction finance corporation as part of the Government's housing and employment program for servicemen. Other actions taken by Starr included his approval of Truman's dismissal of Henry A. Wallace⁴⁷ as Secretary of Commerce and his statement in April 1947 that Wallace's passport be revoked because of his controversial 1947 European lecture tour. One month earlier before the House Committee on Un-American Activities, Starr testified that the V.F.W. favored two measures, concerning the outlawing of the Communist party, then being considered by the House committee (*Christian Science Monitor*, March 27, 1947) and also favored return of atomic energy control to military authorities.

In June 1947 Starr reported that the Veterans Administration, "visualizing a future major real estate price drop," had set up a "property-management division to handle defaulted home loans under the GI Bill of Rights." The veterans leader, one month later, charged that new Congressional legislation prevented the Reconstruction Finance Corporation from purchasing GI loans from small loan companies and banks which were "unable to carry all these loans to veterans for the purchase of homes"; this state of affairs, Starr declared, had "limited the oppor-

tunities of veterans to purchase homes under liberal financial terms provided by the Government." Another of his actions (in August) was to urge other veterans organizations to request an investigation by the House Veterans Hospital Subcommittee into what he termed the stalling of the proposed construction of new VA hospitals. In regard to foreign affairs, Starr in September urged the President to call a special session of Congress which would consider the allocation of appropriations to rebuild the United States armed forces and the mobilization of the aircraft industry. The reason he gave for making this request at the forty-eighth encampment of the Veterans of Foreign Wars, in Cleveland, was that he was "gravely apprehensive over the truculent policy which Russia insists upon pursuing." Starr in the same month was succeeded by Ray H. Brannaman as commander in chief of the Veterans of Foreign Wars.

Louis E. Starr has also been active in child and community welfare programs in Portland. Legal organizations to which he belongs are the Multnomah County, Oregon State, and American bar associations, and the Delta Theta Phi law fraternity; he is permitted to practice law in all States and Hawaii, and before the United States Supreme Court as well. In the past he has been a member of the Portland Board of Education and in 1947 was serving as secretary-commissioner of the Boxing Commission. Another organization which claims his attention is the Al Kader Shrine. A communicant of the Presbyterian Church, Starr lists his political affiliation as Republican. The lawyer and his wife, Eva May Starr, married in August 1919, are the parents of a son and daughter, Harold Edward and Diana Mae. Starr has brown hair and eyes, is almost five feet eleven inches tall, weighs 172 pounds, and finds his recreation in the sport of fishing.

STOKES, THOMAS L(UNSFORD, JR.)
Nov. 1, 1898- Journalist

Address: b. c/o United Feature Syndicate, Inc., 113 National Press Bldg., Washington 4, D.C.; h. 2019 Hillyer Pl., N.W., Washington 4, D.C.

More than one hundred newspapers throughout the United States carry the syndicated columns of Thomas L. Stokes. *Time's* evaluation of him as "one of the nation's shrewdest, most diligent, and forthright political reporters" has been seconded by other journalists, who awarded the Washington newspaper correspondent the Pulitzer (1939), the *Saturday Review of Literature* (1944), and the Raymond Clapper⁴⁰ (1947) reportorial awards.

Thomas Lunsford Stokes, Jr., was born in Atlanta, Georgia, on November 1, 1898, the son of Thomas Lunsford and Emma (Layton) Stokes. His father, of Scotch-Irish descent, was part owner of an Atlanta department store (formerly Davison-Paxon-Stokes, now the Davison-Paxon Company, Stokes having retired). His mother, who was of English descent, died in 1913, when he was fourteen. Both sides of the family had been in America

since pre-Revolutionary days; among Stokes's ancestors are included soldiers who fought in the Revolution and in the Confederate Army of the Civil War. Young Stokes was reared in Atlanta, with a brother, Morris, and a sister, Frances. There he attended Boys High School for two years, and the Peacock School for one year, from which, after an extracurricular career of debating, and playing basketball and baseball, he was graduated in 1917.

Stokes was then enrolled at the University of Georgia. There the English, history, and foreign languages major continued debating, as the Phi Kappa Literary Society sophomore declaimer and as a member of the honorary Senior Round Table. Stokes was also a member of the Gridiron Club (honorary), a member of Alpha Tau Omega (social), editor of *The Georgian* (the literary monthly), and a writer on *Red and Black* (the college weekly). As sports and college news correspondent for the *Atlanta Constitution* and for the *Atlanta Georgian* (now extinct), Stokes gained both journalistic experience and pocket money; he also worked in the college library. After three years' study Stokes was graduated from the University of Georgia in 1920 with a B.A. degree, and a Phi Beta Kappa key for his high scholastic standing. In the year that followed the twenty-two-year-old Georgia newspaper reporter covered the water front and railroad beats and filled general assignments for the *Savannah Press* (June-October 1920); covered the courts and served as the State news editor for the *Macon News* (October 1920-March 1921); and reported the local news and sports events and acted as city editor for the *Athens Herald* (May-September 1921). After this apprenticeship Stokes, according to *PM*, borrowed two hundred dollars from his father to go to New York. He was destined to get no further north than Washington.

Stopping off at the nation's capital in September 1921 for what he assumed would be a short excursion, Stokes found a job with the United Press taking dictation from reporters over the phone. He remained long enough to become a reporter himself, covering the White House, the House of Representatives, the Senate and the various Government departments, as well as the Presidential conventions and campaigns of 1924, 1928, and 1932. By the time Stokes left U.P. in August 1933, he had also served as copy editor. In that month he joined the Scripps-Howard chain's New York *World-Telegram* as Washington correspondent covering general news in the capital. Then, in June 1936 he was transferred to the Scripps-Howard Newspaper Alliance as a national political correspondent reporting general politics, the national conventions, and Presidential campaigns. Stokes's following had increased throughout the years and, upon leaving Scripps-Howard in December 1944 to join the United Feature Syndicate as a Washington political columnist, his by-line was well known to the readers of the hundred-odd newspapers publishing his commentaries. (Scripps-Howard newspapers in 1947 constituted ten of the subscribers.) "A veteran Washington correspond-

THOMAS L. STOKES

ent whom nobody can call a trained seal . . . [Stokes] writes what he sees regardless of what the boss thinks," noted *Time*. Thus he remained, said *Time*, "the bluntly liberal and frankly New Dealish Stokes" in the frankly anti-New Dealish Scripps-Howard papers.

In his autobiographical *Chip Off My Shoulder* (1940), Stokes reviewed American politics and government from 1921 until 1939. "After watching and listening for nearly two decades, Mr. Stokes is disillusioned but hopeful. His book," continued R. L. Duffus (in the *New York Times*), "is a mature and interesting explanation of how he arrived at this state of mind. . . . [However] it could be much shorter and still be as good or better." Wrote C. McD. Puckette (in the *Saturday Review of Literature*): "The volume is a good source book on democratic processes. He [Stokes] is not uncharitable to near-statesmen who are merely human, but he reserves his admiration for men of courage and conviction who fight for what they believe to be the common welfare." Stokes also wrote the chapter on Congress in *While You Were Away* (1946), which book was described by H. G. Kelly (in the *Library Journal*) as a "capsule recapitulation of civilian thought and action [which] is a well edited [by Jack Goodman], refreshing, and liberal picture of the United States under stress." Articles by Stokes have appeared in such magazines as the *Nation*, *Look*, *Collier's*, *Forum*, the *Congressional Digest*, *State Government*, and *Common Sense*.

When Stokes first entered the journalistic field he learned that good reporting was half head work and half leg work; he spends as much time traveling in different parts of the United States as he spends in Washington. A number of his transcontinental researches have resulted in important exposés, which in turn have led to political reforms. One such un-

covering of political exploitation, in the Works Progress Administration of Kentucky at the time of the 1938 Senatorial campaign, brought Stokes the one-thousand-dollar Pulitzer Reporting Prize for the most "distinguished example of reportorial work" that year. In October 1944, by poll of Washington correspondents, Stokes was chosen for the *Saturday Review of Literature* Award, his work having been "measured in terms of reliability, fairness, and ability to analyze the news." The journalist's name was chosen for the District of Columbia American Veterans Committee Honor Roll in 1946; in December of the same year he was chosen for the *Chicago Defender* Honor Roll of Democracy as one who, in 1946, had contributed to better interracial relations. The third annual five-hundred-dollar Raymond Clapper Award (of the White House Correspondents Association) went to Stokes in March 1947 for his general excellence as a Washington reporter and for carrying out the "crusading spirit" of the late Raymond Clapper. The citation praised him "for willingness to tackle controversial issues, for going after tough national questions in the best journalistic tradition, for the fairness in reporting both sides of controversial questions." (It is from Clapper, who had been night manager of the United Press Bureau when Stokes first came to Washington, that Stokes says he "really learned all . . . about politics and what makes it tick.")

The former chairman of the Standing Committee of Correspondents (which governs the Congressional press galleries) holds club cards to the Gridiron, Overseas Writers, and National Press; he is also a member of the Phi Beta Kappa Associates and of the Washington Golf and Country Club in Virginia. Golf, along with horse racing and baseball, are his favorite sports—"I play the first, watch the other two." Stokes was married to Hannah Hunt on January 10, 1924. They have a son, Thomas Lunsford Stokes, 3d; their daughter Layton is deceased. The Southerner, who has a "rich Atlanta accent," has been described in *PM* as "fit and easygoing, with a drought season crop of gray [once black] hair." *Time*, using three adjectives to do so, described him as the "tall [he is six feet one, weighs 165 pounds], amiable, crinkle-eyed [they are brown] Tom Stokes."

STOOPNAGLE, COLONEL Oct. 4, 1897-
Radio comedian; writer

Address: b. c/o Hesse & McCaffrey, 501 Madison Ave., New York 22; h. Wilson Point, South Norwalk, Conn.

Since the year 1930 Colonel Stoopnagle—the professional name of F. Chase Taylor—has held a place in the top ranks of radio come-

dians. The colonel, for many years, was heard in partnership with Budd Hulick; later, he appeared alone. An "inventor and a lexicographer," Stoopnagle has recorded in four books and a number of magazine pieces his inutile inventions, "daffynitions," spoonerisms, and comic verse. Life, to the colonel, who is a strong exponent of the theory that "people have more fun than anybody," is "the tilt of a cuckoo's wing."

Frederick Chase Taylor, the name Colonel Stoopnagle discarded when he became a radio comedian, was born (in the words of Fred Allen⁴¹ in an introduction to a Stoopnagle book) "in a small prefabricated cabin which he helped his father to send for. He was not brought by the stork . . . [but] by a man from the Audubon society personally." The apocryphal cabin was in Buffalo, New York; the date October 4, 1897. Young Chase's parents were Horace F. Taylor, a British-descended lumber merchant, and the former Sara Chase, a member of the D.A.R., one of whose family was Salmon P. Chase, the Ohio statesman. "The fact that I started life as an infant," Stoopnagle once wrote, "and eventually turned out to be a radio comedian is one of the phenomena of my strange existence; many infants turn out to be people." The boy's early education was received at the Nichols Preparatory School in Buffalo, and at the Montclair Academy in Montclair, New Jersey. At these schools he was active in football, swimming (he held the all-round swimming championship at Montclair for two years), and on the school publications. According to a CBS release, young Taylor "discovered the value of comedy when he forgot his words while singing a solo at a school function and 'blah-blahed' the chorus." After graduation from secondary school in 1915, the youth enrolled at the University of Rochester for the liberal arts courses. There he continued his activity in extracurricular affairs: he was captain of the football team, a member of Alpha Delta Phi fraternity, and "proms manager."

In 1917 (on April 12) Taylor left college to join the Navy. "He disclaims responsibility for sinking the entire German Navy," his publisher has pointed out, and the CBS biography attributes to him the invention of an upside-down lighthouse for submarines. Returning to civilian life, the future comedian entered the family lumber business. He started at Taylor and Crate, Inc., as a bookkeeping clerk; in 1921 he became a salesman, and in 1923 he assumed charge of soft wood purchases and sales. In 1929 Taylor "shifted to the brokerage business," he has said, "to get out on my own." He chose the wrong year, however, for the firm of Pistell, Deans, & Company, of which he had become vice-president, did not survive the stock market crash ("Things did things to the brokerage business").

Some years before this, in 1925, the businessman had appeared on a radio program. *Nip and Tuck*, broadcast by the Buffalo station WMAK. After the brokerage failure Taylor ventured into radio, as a production man for the same station, a CBS affiliate. On October

COLONEL STOOPNAGLE

10, 1930, a gale damaged the network transmission facilities, and on short notice Taylor and a WMAK announcer, Budd Hulick, went on the air to fill a fifteen-minute gap. Their impromptu humor was an immediate success. Thus it came about that "Colonel Lemuel Q. Stoopnagle was born during a storm." In 1931 Stoopnagle and Budd were heard on the CBS network as *Gloomchasers*; in 1932, on the *Ivory Soap Program*; from 1932 to 1934, on the *Pontiac Program*; in 1934, on the *Camel Caravan*, the *Schlitz Spotlight Revue*, and *The Gulf Program* (also heard for a period over the NBC Red network); in 1935, on the *Devoe and Reynolds Show* and the *Ford Program*; in 1936-37 on *Town Hall Tonight* (over NBC Red), and *The Minute Men* (over NBC Blue).

Stoopnagle and Budd were also seen as a team in vaudeville, and in a Paramount short subject. In 1937 Taylor and Hulick dissolved their partnership: *PM* believed that their "lunacy" was "too subtle and highbrow." Hulick continued his career as a master of ceremonies and an actor, and Stoopnagle remained a comedian. In 1938 he was featured on the *Bromo Seltzer Show* over the Yankee network; in the summer of 1938 on *Town Hall Varieties* (NBC Red); in 1939-40 he was "quizmaster" of the *Quixie Doodle Contest* (over Mutual). During 1940-47 Stoopnagle was heard on several summer replacement shows. On October 4, 1947 (his fiftieth birthday), he began a new engagement as a featured entertainer on the *Vaughn Monroe Show*. During his radio career, Stoopnagle has made numerous guest appearances on other radio shows.

Stoopnagle has been the author of short pieces in several magazines (*Mademoiselle*, *Saturday Evening Post*, *Reader's Digest*) and in the *New York Journal-American*. In these he has set down some of his spoonerized recipes and words of advice to householders ("How to

STOOPNAGLE, COLONEL—*Continued*

Low the Mawn", "How to Chicassee a Fricken," "Hiss-Hold Hounts"); his "daffynitions" ("Gasoline is stuff that if you don't use good in your car, it doesn't run as well as if"); and descriptions of some of his inventions ("a blotter that, when you blot stuff on it, it's forward"; an alarm clock with half a bell to wake only one person in a room; a goldfish bowl surrounded by post cards so that the fish think they are going somewhere).

Colonel Stoopnagle's first book was *You Wouldn't Know Me From Adam*, published in 1944. In a series of fictionized anecdotes, Stoopnagle meets many people, among them the man who made railroad coach windows impossible to open; "the man who doesn't touch 'the candy that's never touched by human hands'"; the man who wrote the sol-fa syllables to the scale and composed the three-note chimes heard hourly over the NBC network. Stoopnagle also described how he ran for ex-office, how he recovered the missing Empire State Building. He gave instructions on how not to buy a pumpkin, presented some of his "vice verse," and, throughout the book, suggested fantastic indoor and outdoor games for every occasion.

Critical opinion of *You Wouldn't Know Me From Adam* was, in general, favorable. "It's dangerous business for a professional zany to confine his humor to the printed page," wrote a Springfield *Republican* reviewer, "but in *You Wouldn't Know Me From Adam*, the redoubtable Colonel Stoopnagle of radio fame proved that dangerous business is his meat." H. G. Kelley (*Library Journal*) disagreed: "Somehow it's funnier on the radio." In collaboration with Lawrence Lariat, Stoopnagle wrote *Father Goosenagle*, a book of humorous verse published in 1945. Stoopnagle has also written *My Tale Is Twisted* (1946), a series of fables in "spooner" form, and *My Back To the Soil* (1947), in which he expounds agricultural theories.

Stoopnagle has made benefit appearances for the YMCA and various veterans' organizations. In South Norwalk, Connecticut, where he has his home, he was chairman of the gasoline committee of the OPA during World War II. He is entitled to the rank of colonel, having been commissioned a Kentucky colonel on December 22, 1933. In Buffalo he belongs to the Saturn Club, in New York to the Dutch Treat Club. In political thinking, Taylor is a Republican; his church is Presbyterian. He has brown hair and brown eyes. His five-foot, ten-and-a-half-inch frame is "well-padded" (he weighs 195 pounds). Frederick Chase Taylor, Jr., is his son by his first marriage, in 1919. After it was terminated by divorce, he was married to Kay Bell, on February 15, 1936. Mrs. Taylor acts as his secretary. Stoopnagle enjoys watching sports events (football, baseball, boxing, wrestling), participating in golf, tennis, softball, bowling, and fishing. According to Fred Allen, Stoopnagle's hobby is collecting old echoes.

STRAUSS, LEWIS L(ICHTENSTEIN)
(strôz) Jan. 31, 1896- United States Government official; former financier

Address: b. c/o United States Atomic Energy Commission, 1901 Constitution Ave., N.W., Washington 25, D.C.; h. The Shoreham, Washington, D.C.; 40 Central Park South, New York 19

In October 1946 the philanthropic Wall Street banker, Rear Admiral Lewis L. Strauss, disposed of his securities and resigned all his business connections to accept appointment to the United States Atomic Energy Commission, which is all-powerful in its field.

One of two sons, Lewis Lichtenstein Strauss was born in Charleston, West Virginia, on January 31, 1896. His parents were Lewis S. Strauss, president of a wholesale shoe company, and Rosa (Lichtenstein) Strauss, an artist, both natives of Richmond, Virginia. Lewis was reared in Richmond, where he attended the public schools. A high school physics textbook by Millikan⁴⁰ and Gale attracted his attention to the new field of radioactivity, to which the authors had devoted seven pages. Forty years later, Strauss was to tell an interviewer that he really wished to become a physicist, but was unable to afford the necessary college training. Instead he went to work as a salesman for his father's firm, Fleishman, Morris, and Company, and soon rose to be vice-president.

In March 1917 the twenty-one-year-old Southerner joined Herbert Hoover's⁴³ Belgian Relief staff. After his country entered World War I in April 1917, Hoover became head of the United States Food Administration, for which Strauss made some economic studies which aroused Hoover's interest. The future President made Strauss his secretary, a position in which he moved in high military and official circles and received decorations from the Governments of Belgium, Poland, Czechoslovakia, Italy, Rumania, and Finland. Since 1920 Strauss has been a member of the Belgian-American Educational Foundation set up to distribute the Belgian Relief Commission's multimillion-dollar surplus, and he has been prominent in later relief work in those countries. As a friend of Hoover, he accompanied his former chief on speaking tours and was one of Hoover's advisers in his later campaigns as Republican candidate for the Presidency.

Twenty-three-year-old Lewis Strauss was one of the four American delegates who conferred with German representatives at Brussels in March 1919 and concluded the final Armistice terms. Two months later, in Paris, he was offered a position by Mortimer Schiff, head of the Wall Street banking house Kuhn, Loeb, and Company, who was in Europe on a mission

for the American Red Cross. From September 1919 until his withdrawal from the business world in 1946, Strauss remained with Kuhn, Loeb, which *Fortune* has described as being "very near the top" among domestic bankers, and as having "a long and honorable record of general activity in American business." In March 1923 he was married to Alice Hanauer, daughter of a Kuhn, Loeb partner, Jerome J. Hanauer. Strauss received power of attorney for the firm in that year, and on the last day of 1928 was taken into partnership.

Strauss's other business connections have included membership on the executive committee of the United States Leather Company directorate, the finance committee of the United States Rubber Company board, and on other boards of directors. In March 1932 he was elected to directorship of the General American Transportation Company, which manufactured tank cars; four years later he became a director of the Commercial Investment Trust Company, and in September 1938 he joined the board of the Hudson and Manhattan Railroad Company, which operated tubes under the Hudson River.

Like his elder partners, Strauss has been active in educational, religious, cultural, and charitable work. Among his many offices in the field of Jewish activity, he has been an American deputy on the administrative committee of the Jewish Agency for Palestine, has served on the executive committee of the American Jewish Committee, has been treasurer of the Jewish Theological Seminary and chairman of the Joint Distribution Committee's relief work in Russia. The financier's relief activities include charitable work for American children; he has been elected to the boards of the Institute for Crippled and Disabled, the Foreign Service Educational Foundation, the Metropolitan Opera Association, and the college-level Hampton Normal and Agricultural Institute for Negroes in his home State.

Financier Strauss reportedly became "fast friends" with eminent physical scientists, including Robert A. Millikan, and Niels Bohr⁴⁶ of Denmark. During the thirties he established a fund in memory of his parents to make grants in aid of cancer research (Strauss was on the board of the Memorial Cancer Hospital). At his suggestion and with his backing, work on a surge generator to produce radioactive isotopes for medical use was undertaken by Millikan and a California Institute of Technology colleague, Professor Charles C. Lauritsen. This, however, was brought to a halt by World War II.

Strauss, who had entered the Naval Reserve in January 1926 with the rank of lieutenant commander, was ordered to active Navy duty in the Bureau of Ordnance in February 1941. Ten months before Pearl Harbor Strauss thus became staff assistant to the Chief of Ordnance, a post he filled until December 1943. In this post, to quote a Navy release, Commander Strauss "pioneered the consolidation of the several material inspection services in the Navy in 1941 and originated the plan subsequently approved by the President of the United States

U.S. Navy

LEWIS L. STRAUSS

for an incentive program to stimulate production of ordnance material." His plan—to award the Bureau flag with an "E" pennant to industrial plants which had filled Navy ordnance contracts with outstanding efficiency—increased production to such an extent that it was adopted by all bureaus of the Navy and later by the Army. Strauss is credited also with helping to design and develop certain items of ordnance, including the "almost human" radar proximity fuse, which selects its own target while in flight.

Appointed assistant chief of the Office of Procurement and Material in December 1943, Captain Strauss was given the task of organizing a new bureau of contract termination and disposal of surplus property, a category which included billions of dollars' worth of all sorts of items; his work in this connection earned the Legion of Merit. Concurrently, Strauss was one of the advisers of Under Secretary of the Navy Forrestal⁴² and of the vice-chief of Naval Operations. In August 1944, three months after Forrestal had succeeded to the Navy Secretaryship, the financier was named special assistant to him and also Navy member of the Joint Army and Navy Munitions Board, while continuing his additional duty in Operations. A three-month study conducted by him and his Army "opposite number," beginning in November 1944, led to the setting up of joint procurement procedures in items for which the War and Navy Departments spent several billion dollars each year and brought Strauss an Oak Leaf Cluster in lieu of a second Legion of Merit, this one from the Army.

Near the war's end, in July 1945 Captain Strauss was promoted to commodore—equivalent to a brigadier general—and in November 1945 President Truman made him a rear admiral, one of the few reservists ever to attain flag rank. The French Legion of Honor and

STRAUSS, LEWIS L.—Continued

a Gold Star in lieu of a third Legion of Merit came to him in 1946. He had also earned the American Defense, Asiatic-Pacific Area Campaign, and American Area Campaign medals (he already had the Naval Reserve medal for ten years' honorable service). Admiral Strauss represented the Navy on the Interdepartmental Committee on Atomic Energy until his release from the service in December 1945, and was appointed afterward to the Navy's Civilian Research Advisory Committee. According to the *New Republic*, "Former Rear Admiral Lewis L. Strauss is one of the few men who served in the self-exalting atmosphere of the highest Navy echelon . . . [and yet] demonstrated . . . that rare perspective which can distinguish between a sturdy defensive arm and a militaristic tentacle. . . . During the war he repeatedly and effectively fought to keep the military in its proper relationship to the rest of the nation."

Strauss had been back in civilian life seven months when the McMahon⁴⁵ Atomic Energy Act of 1946 was signed into law. The nature of its demands on the five commissioners was "almost monastic," requiring them to divorce themselves entirely from any other business or vocational interests whatever: Before accepting the President's appointment to a two-year term at a Cabinet-size salary of fifteen thousand dollars a year, Strauss had to resign his Kuhn, Loeb partnership and his directorships and to dispose of his stock holdings. "I feel like a man who is amputating his own leg," he told an interviewer.

Strauss's fellow members were: chairman David E. Lilienthal⁴⁶, former TVA chairman and chairman of the State Department committee which worked out the Government's policy on international control of atomic energy; Professor Robert F. Bacher⁴⁷, young nuclear physicist, a key figure in making the atomic bomb; W. W. Waymack⁴⁸, Midwestern newspaper editor, Pulitzer Prize winner, worker for peace, part-time Federal official; and wealthy, self-termed "leftish Republican," former SEC commissioner Sumner T. Pike⁴⁹. Stressing the nonpolitical nature of the appointments was the fact that there was a majority of Republicans among the five men to whom, collectively, a Democratic President had given complete and exclusive ownership and control of all production and research into atomic energy, all fissionable materials, land containing source deposits—and of an Army-developed atomic-bomb project on which two billion dollars had been spent and forty-four thousand persons, including some of the world's most eminent scientists, were then at work in thirty localities.

"Opinions ranging from those of Henry A. Wallace⁵⁰ and the Federation of Atomic Scientists to conservative columnists and members of Congress," reported William H. Stringer, "have agreed that here was a team of well-rounded, experienced, and devoted Americans." The *New Republic* had nothing but praise for the selections. *Time* magazine described Admiral Strauss as a "close friend" of Judge Samuel Rosenman⁵¹, known to the public as

one of President F. D. Roosevelt's⁵² advisers, and *PM* wrote that Strauss was "an associate of the conservative John M. Hancock [industrial banker and former Navy careerist] who has been working with Bernard Baruch⁵³ on U.N. atomic energy matters. . . . He may be regarded in some ways as the War-Navy Department candidate on the commission, but first information obtainable on him was that he was a good choice in that category." The *New York Times* said editorially that the country was fortunate to have such men available for "this almost inconceivably important work."

Strauss and his fellow commissioners worked several hours each day between sessions of the Senate Committee on Atomic Energy, which opened hearings on the nominations in January 1947. During eighty-four days of Senatorial disputes over Lilienthal's qualifications, the entire AEC sat silent in the first row. Finally, in April, they were endorsed by the committee (unanimously, in the cases of Strauss, Bacher, and Waymack) and were overwhelmingly confirmed by the Senate. The first disagreement on a major issue, according to "reliable sources" cited by *New York Times* writer Anthony Leviero, occurred when Strauss found himself in a minority of one against the plan to distribute radio isotopes for medical research in other countries; the commissioner is said to have held that Soviet scientists might misuse the isotopes. According to a *New York Times Magazine* article for November 30, 1947, AEC has a "rather remarkable record for unanimity." This is attributed to "Mr. Lilienthal and to an operating procedure that AEC, alone of Washington agencies, follows. Every decision is made by all five commissioners operating as a unit. There is no 'farming out' of problems for special study and recommendation by a single member."

Interviewed by the *New Yorker* shortly after his appointment, Strauss expressed the hope that he might be permitted to retain two nonprofit posts: vice-chairmanship of the Institute for Advanced Study, to which he had recently been elected, and presidency of the Reformed Jewish congregation of Temple Emanu-El, which he had held for a number of years. The interviewer described the balding, six-foot appointee as "an impeccably dressed man . . . with a large head, a patrician bearing, and a mellow voice." Other adjectives applied to Strauss are "well-set-up," and "urbane," and he is described as "an easy and penetrating talker." Admiral Strauss, as his staff calls him, has belonged to many professional groups and to a half-dozen social clubs in New York, Washington, and Richmond. He and Mrs. Strauss have one child, Lewis, who studied physics at Harvard and once served on a wartime naval technical mission to Europe. Thomas Whiteside has written of the senior Lewis Strauss: "He goes all out to solve a problem in the quickest time, with the least effort and a minimum of lost motion. . . . The time is long since past when . . . he could go out to his country place in Culpepper County, Virginia, and take care of his horses

and cattle of a week end." A *United States News* report described him as "courteous and courtly to the point of being apologetic about giving orders to subordinates."

STREET, JESSIE (MARY GREY) 1889-
 United Nations official

Address: b. c/o Commission on the Status of Women, United Nations, Lake Success, N.Y.; h. 2 Greenoaks Ave., Darling Pt., Sydney, Australia

The vice-chairman of the United Nations Commission on the Status of Women is Australian delegate Mrs. Jessie Street, who has been called "one of Australia's best known women and a spearhead of social reform in her native land." She was the only woman among the twelve Australian delegates to the United Nations Conference in San Francisco in April 1945.

Jessie Mary Grey Street, née Lillingston, was born in 1889 in Chota Nagpur, India, of English parents. Her father, C. A. G. Lillingston, at that time was stationed in India with the British Civil Service. The child lived in India until the age of seven, when she was taken to "Yulgibar" on the Clarence River in New South Wales. This was the home of another branch of her family, the Ogilvies, one of the pioneer families of Australia. Thus, noted Vera Hamilton in the *Christian Science Monitor*, Jessie Lillingston "was born to affluence." The girl was sent to England for her elementary and secondary education at the Wycombe Abbey School. She attended college, however, in Sydney, Australia. As an undergraduate at the Women's College of Sydney University, Jessie Lillingston formed the women's sports association of the college and organized the university's first hockey team for men and women students, of which she was secretary and coach, respectively. The degree she received from Sydney University was that of Bachelor of Arts. (She serves as a member of the council of the Women's College.)

After being graduated from college, in 1908 Jessie Lillingston became owner and operator of a model farm: "She wanted to prove to her district," wrote Vera Hamilton, "that scientific methods of pasturing and supplementary feeding, plus good breeding would produce more milk of a higher butterfat content than the somewhat haphazard methods habitually employed on dairy farms in that period." Accordingly, she introduced into her district the first milking machines, which she imported

from Sweden, and established a milk-testing laboratory in her dairy for the use of the community. After proving her point about the virtues of scientific dairy farming, she sold the farm in 1911. In that year she became a member of the Conference on the International Council of Women, which met in Rome. Later she attended other women's and social workers' conferences at Genève, Paris, and Zurich, and in Great Britain, India, and the United States. (In Geneva she attended meetings of the League of Nations in 1930 and 1938; she had been a founder of the League of Nations Union in Sydney in 1918.)

The young Australian came to the United States in 1915, where she trained as a social worker for six months at the New York Social Hygiene Association. Upon her return to Australia, she did pioneer work in the establishment of the Social Hygiene Association in that country. (Mrs. Street, who was married in 1916, spent the years that followed bringing up a family of four children.) During the depression years, from 1928 to 1932, Jessie Street served as a member of the Housing Committee for Sydney. She was, according to the *Christian Science Monitor's* account, "one of the most active members behind that committee's comprehensive plan for slum clearance, designed to eliminate some of the 'sore spots' in Sydney. The scheme was never carried out owing to supposed lack of funds, and Sydney's slum areas still remain a blot on this country of 'wide open spaces.'" In 1938 Mrs. Street returned to the United States to study that country's systems of social insurance. After viewing the English, Russian, and the methods of other European countries as well, she formulated a plan for Australia encompassing old age, invalid, children's, accident, sickness, maternity, and unemployment benefits to be subsidized by the national Government. The plan was rejected as being "too radical"—it would have cost the Australian Treasury six million pounds a year.

Having been active in various women's organizations in Australia, Jessie Street attempted to draw the groups together by calling the first Australian Women's Charter Conference in 1943. Chairman of the initial meeting, she was also to preside over the second conference three years later. In the interim, her participation in the first Australian Women's Charter Conference resulted in her choice by the Australian Government as a member of its delegation to the San Francisco Conference on International Organization in April 1945. She took a prominent part in working for the inclusion of the principle of equal rights for women in the Charter of the United Nations, and in advocating the appointment of a Commission on the Status of Women.

Afterward Mrs. Street was to serve as vice-chairman of the fifteen-member commission, one of the commissions under the Economic and Social Council of the U.N. The purpose of the commission, to extend the political rights and further the advancement of women, was formulated in a resolution unan-

JESSIE STREET

imously passed by the General Assembly of the United Nations in December 1946.

"I believe we should give equal status to all people, irrespective of race, color, creed, or sex," Mrs. Street told Mary Braggiotti of the *New York Post*. "It is only by this policy of nondiscrimination that any country can avail itself of the full wealth of its human resources. . . . I believe there's a wonderful opportunity for women, under the United Nations Charter, to take part in a concerted move to remove restrictions on women all over the world." Mrs. Street expressed the hope to another interviewer (Dorothy Dunbar Bromley of the *New York Herald Tribune*) that more of the women who run homes and raise families might enter politics. Those women who do not remain "within their four walls" are the ones, Mrs. Street pointed out, to raise the educational, housing, and welfare standards of their communities, through political action. Her own interest in politics dates from the time when a cousin, a woman, "was put in jail for asking for the vote." A member of the Australian Labor Party since 1939, Jessie Street was endorsed by that party in the national elections of 1943 and 1946, at which times she contested, unsuccessfully, the Wentworth (New South Wales) seat in the Australian Parliament.

Chairman of the Australian monthly *Women's Digest*, Mrs. Street gives as her other organization affiliations the United Association of Women (she was the first president of the group in 1929 and served in that capacity again in 1943), the Russian Medical Aid and Comforts Committee of New South Wales (she has been chairman since 1941), and the Amalgamated Iron and Munitions Workers Union of Australia (she is a member in good standing). During several of the World War II years, Mrs. Street had worked on the assembly line of a shell factory; although no longer

employed in the trade, she continues to pay dues and to attend the meetings of her union.

Mrs. Street's husband is the Honorable Mr. Justice Kenneth Whistler Street of the Supreme Court of New South Wales. The mother of two boys and two girls (and a grandmother), Mrs. Street has stated that she is "all right with babies, but no good at cooking," much as she admires women skilled in the culinary arts. Her taste in reading inclines to political and economic subjects; she is fond of listening to music and of seeing good plays. Mary Braggiotti has said of the United Nations official: "Her forthright manner and erect carriage give the impression that she is taller than she really is." She uses no make-up, and her short brown hair is worn in a simple style.

SULLIVAN, GAEL (E.) Nov. 28, 1904-Democratic party official

Address: b. c/o Democratic National Committee, Mayflower Hotel, Washington, D.C.; h. Raleigh Hotel, Washington, D.C.

In February 1947 Gael Sullivan was named vice-chairman and executive director of the Democratic National Committee by chairman Robert Hannegan⁴¹. A former college teacher, public administrator and Army officer, Sullivan hopes to create a closer liaison between Democratic national and State leaders. As the Second Assistant Postmaster General, Sullivan had previously worked in close cooperation with Postmaster General Hannegan to introduce a number of improvements in the postal service. When Senator J. Howard McGrath of Rhode Island succeeded Hannegan as chairman of the Democratic National Committee in September 1947, he retained Sullivan as his vice-chairman.

Gael E. Sullivan's birthplace is Providence, Rhode Island. He was born there on November 28, 1904, to Mary Agnes (Carroll) and Timothy Joseph Sullivan. His entire education through collegiate level was received in Providence schools: he was a member of the De La Salle High School class of 1922 and of the Providence College class of 1926. (He was in 1947 to receive a degree of Doctor of Political Science from that college.) For postgraduate studies Sullivan attended Thomas Aquinas University, a seminary in River Forest, Illinois, from which he received his M.A. degree in 1930. For a year or so afterward, Sullivan was an associate professor and lecturer on political economics and ethics at De Paul University in Chicago, before joining, in 1932, the staff of B. A. Holway and Associates, an advertising firm, as a contact executive.

From 1933 to 1935 Sullivan was a liaison officer with the Century of Progress Exposition in Chicago. In 1935 he entered Government service when he accepted the post of associate State director of the Federal Housing

Administration for Illinois, with which he remained for four years; during the same period he lectured at Loyola University in Chicago on a part-time basis, teaching public administration. On the invitation of Mayor Kelly, whom Sullivan had met while he was on the De Paul University staff, the young executive served in the Mayor's office for two years, beginning in 1939 as an administrative assistant. He returned to the employment of the Federal Government in 1941, being promoted, in the Federal Housing Administration, to Illinois State director. At the same time, he lectured at Northwestern University on mortgage financing.

In 1943 Sullivan entered the United States Army and was appointed executive officer to Deputy Quartermaster General Harold A. Barnes. For his contributions to methods of procurement and control, the Chicago officer subsequently received a citation from Quartermaster General Edwin B. Gregory⁴⁵. Eighteen months of Sullivan's army career were spent overseas in North Africa and Italy. There he was appointed port officer for Cagliari (Sardinia), the third largest port on the Mediterranean for Allied shipping; later he acted as personal aide to General William O'Dwyer⁴⁷ while the latter was on a special economic mission to Italy; and Sullivan himself prepared special demographic reports on Italian economic conditions which he delivered to the Combined Chiefs of Staff in the United States in December 1944. From February 1945 until V-J Day, Sullivan was chief of labor relations for the Sixth (Detroit) Service Command of the Army Service Force.

On September 29, 1945, Sullivan (who held the rank of major) was released from the Army in order to accept a Federal appointment as Second Assistant Postmaster General at a salary of ten thousand dollars a year, under Postmaster General Robert E. Hannegan. In this position Sullivan was responsible for all air mail, and for international postal matters handled by the Post Office Department. Under his direction the Postal Transport Bureau of the Post Office Department was reorganized, helicopter experiments for the delivery of mail were inaugurated in Los Angeles, Chicago, and New York, and the first mobile post office units for rural delivery and urban collection pickup service were projected. Sullivan also directed the expansion of the air mail pickup feeder service and developed the "Air-Letter"—similar in form to V-Mail—for world-wide distribution at ten cents an ounce.

Within seven months after his appointment to the Post Office Department, Sullivan completed a report entitled "The Future of Air Mail Transportation." In this he recommended drastic reductions of foreign as well as domestic air mail rates (particularly for newspapers and periodicals), and development of a comprehensive domestic air parcel post system at a minimum of forty-five cents a pound. Sullivan urged the formation of a joint committee of officials from the Post Office and Commerce Departments, the Civil Aeronautics Board, and the aviation industry to meet regularly for the discussion of mutual problems;

GAEL SULLIVAN

in addition, he recommended that an Assistant Secretary of State for Air be appointed to negotiate operating rights with foreign countries.

While he was in the Post Office Department, Sullivan also conducted the first nationwide Railway Mail Conference (April 22-25, 1946) and initiated studies for the improvement of railway mail cars. As director of the United States delegation he attended the fifth annual congress of the Postal Union of the Americas and Spain, held in Brazil in September 1946. The following month the first flying post office—a project of Sullivan's—began service. Sullivan made two trans-Atlantic flights and one global flight in the interests of international postal matters. On the latter, accompanied by Postmaster General Hannegan, he returned by way of Rome, where Pope Pius XII⁴⁴ made him a Knight Commander of the Order of Saint Gregory.

Because Robert Hannegan was then not in good health, Sullivan resigned from the Post Office Department on February 12, 1947, in order to become executive director of the Democratic National Committee, of which Hannegan was national chairman; a month later, on the resignation of Oscar R. Ewing, Sullivan became vice-chairman. His salary reportedly was larger than that he had received as a Government official. *PM* conjectured that Sullivan was appointed because of his staunch liberal opinions (which, said *PM*, had led to his refusal of a lucrative job in private industry) and his conviction that the future of the Democratic party lies in its adherence to liberal policies, supported by Northern independent and labor votes.

When, in March 1947, Sullivan issued an invitation to B. Carroll Reece⁴⁶, chairman of the Republican National Committee, to join him in a bipartisan statement supporting Presi-

SULLIVAN, GAEL—*Continued*

dent Truman's⁴⁵ Greek-aid policy, the Democratic vice-chairman's proposal was criticized by Senators Vandenburg⁴⁶ and Connally⁴¹, as well as by columnist Arthur Krock⁴³. Shortly before Sullivan joined the Democratic National Committee, Chairman Hannegan had launched a campaign for the re-election of President Truman in 1948. A controversial element concerning the support that the President might receive from Henry A. Wallace⁴⁶ and Claude D. Pepper⁴¹, with both of whom the Chief Executive had differed over foreign policy, was resolved by a statement made by Sullivan in April 1947. "The unifying forces around President Truman's candidacy," he said, "will be broad enough to include men like Wallace and Pepper on the one hand and Jim Farley⁴⁴ on the other." To increase the Democratic turnout in the next election, Sullivan sponsored a series of conferences between Democratic State leaders and Democratic national leaders in the hope of bringing voters to the polls in 1948.

During the early part of 1947, Sullivan made several statements on national policy. He blamed the "basic manufacturers" for inflationary prices and held that retailers were willing to reduce prices but were prevented from doing so by the producers of heavy capital. The problem of either extending or eliminating rent controls drew the attention of the Democratic executive director in May; he characterized proposed Republican legislation on rents as "a hole in the dike to allow skyrocketing costs." Sullivan's absence from a Jackson Day dinner held in California in June aroused adverse comment from its Democrat sponsors, some of whom had criticized the "Truman Doctrine." Under Sullivan's leadership the Democratic National Committee organized a nation-wide radio rally in September on which the country's Democratic leaders spoke.

By the middle of September, Sullivan's name was frequently mentioned in the press as a possible choice to succeed Robert Hannegan, whose health was not good. To Sullivan was ascribed the closer working relationship between the President and the Democratic party national organization. The Democratic executive director's personal conduct of the coast-to-coast radio rally, early in September, according to some observers indicated his "bid" for the national chairmanship. On September 27, Hannegan submitted his resignation: his successor, as Democratic National Committee chairman, was Senator J. Howard McGrath of Rhode Island. Sullivan retained his position as executive director.

During his years in Illinois, Sullivan was a technical consultant to the Chicago Plan Commission, a consultant to the commissioner of subways and traction in Chicago, a planner of the Neighborhood Redevelopment Act and a lobbyist for its passage in the 1941 session of the Illinois legislature, and a member of Governor Horner's Flood Control Commission. He also prepared a relief survey for the United States Conference of Mayors. In October 1940 the Chicago administrator was selected by

President Roosevelt to be his personal representative at the New York *Herald Tribune* forum. Committees to which Sullivan has belonged are the Air Coordinating Committee of the Federal Safety Council (by Executive Order of the President) and the Technical Committee on the Design of Aircraft of the Army Air Forces, Air Transport Association. Sullivan has also belonged to the American Society of Public Officials.

Gael and Anne (Burke) Sullivan (they were married in 1930) have four children: Gael Michael, Bede Carroll, Sheila Ann, and Brenda Mary. A Roman Catholic, Sullivan is a Knight of Malta. "Smooth-looking, smooth-talking, and energetic," the Democratic vice-chairman is six feet tall, weighs 160 pounds, and has blue eyes and black-gray hair.

SUMNER, JAMES B(ATCHELLER) Nov. 19, 1887- Biochemist

Address: b. Dairy Bldg., Cornell University, Ithaca, N.Y.; h. 119 Heights Ct., Ithaca, N.Y.

For the first time in history, in 1946 four out of the five Nobel awards went to nationals of one country, seven out of the eight recipients being Americans. In chemistry, one-half of the prize recognized the pioneer achievements of James B. Sumner, professor of biochemistry at Cornell University, in the study and isolation of enzymes. In October 1947 he was appointed director of that university's laboratory of enzyme chemistry, established by the trustees in recognition of his work.

James Batcheller Sumner was born November 19, 1887, in Canton, Massachusetts, to Charles and Elizabeth Rand (Kelly) Sumner, and named after his mother's uncle, James Bowler Batcheller, a mathematician and linguist who was known as the "walking encyclopedia of Marblehead, Massachusetts." On both sides of his family Sumner is descended from English colonial stock, the Puritan Sumners having emigrated from Bicester in Oxfordshire to Boston in 1636, and the Kellys having come from Devonshire to found the town of Newburyport, Massachusetts, at about the same time. Young James was reared on the family estate, a combination farm and cotton factory, in Canton, where skating, iceboating, and sailing, fishing, swimming, and roaming the woods were his diversions.

At thirteen he was sent to the Roxbury Latin School but soon found that he was bored by every subject except physics and chemistry. Much of his time, consequently, was spent in making explosives and constructing induction coils, magnets, and other physics apparatus. Then, in 1904 an accidental gunshot wound suffered on a hunting expedition necessitated the amputation of his left arm, and, since he was left-handed, this meant relearning to do everything with his right hand. But he overcame the handicap, even finding in it a stimulus to athletic achievement. He was graduated from the Roxbury School in 1906 and four years later received his B.A. from Harvard University.

After graduation from Harvard in 1910, Sumner went to work in the family cotton factory, ten hours each day, for five dollars a week. "This was dirty work, and uninteresting," he has said. He stayed at it until January 1911, when he accepted an offer to become temporary professor of chemistry at Mt. Allison College in Sackville, New Brunswick, Canada. Much to his surprise, for he had "shuddered at the idea of teaching" and had "previously disliked the bookish life," the next six months proved a "delightful experience," and he began to realize, he says, that his temperament was not, as he had heretofore thought, incompatible with the academic profession. Hence, in the fall of 1911 he accepted a research assistantship then open at Worcester Polytechnic Institute.

Early in 1912, having definitely decided upon his career, Sumner gave up this assistantship to enter Harvard University Medical School to study biological chemistry under Professor Otto Folin. Despite the warnings of his professors that a one-armed man could not become a successful chemist, he persevered, receiving his M.A. in 1913, and, having written his thesis on the formation of urea outside of the liver, his Ph.D. in 1914. Then, together with a classmate, Richard Harkness Patch (later associated with E. F. Houghton and Company of Philadelphia), he sailed for a European vacation. He was in Switzerland when World War I broke out in August. For a short while he was stranded there, but later he managed to return to the United States where an assistant professorship of biochemistry was awaiting him at Cornell University Medical School.

Sumner was assistant professor at Cornell for fifteen years, until he was promoted to full professor's rank in 1929. He was later transferred from the Medical College to the College of Agriculture, but this, he has said, made no appreciable difference in the courses he was called upon to teach. From time to time, also, he received leaves of absence to pursue graduate work in European institutions. In 1921-22 he was a fellow of the Belgian American Educational Foundation, studying at the University of Brussels; in 1929, a graduate student at the University of Stockholm; in 1937-38, a Guggenheim fellow, studying at the University of Uppsala, Sweden. His primary investigations dealt with enzymes, but he also worked on methods for the analytical determination of sugar, phosphorus, urea, and other substances.

Press Assn., Inc.

JAMES B. SUMNER

The history of the isolation of enzymes goes back to 1917, to the early years of Sumner's association with Cornell. (Enzymes are defined by the *Columbia Encyclopedia* as "any of a number of chemically complex substances which act in all plant and animal digestion to change insoluble food materials into soluble forms . . . known largely . . . by the chemical action which occurs when they are brought into contact with carbohydrate, protein, or fat.") Sumner's purpose was, in his own words, "to find out what life is, what makes things grow, what makes the whole thing click." He hoped to be able to isolate an enzyme and to discover the chemical composition of these hitherto mystifying substances. After nine years, in 1926, he succeeded, obtaining the enzyme urease in the form of microscopic octahedral crystals slightly larger than human red blood corpuscles in diameter and of protein composition. He thus produced the first enzyme ever isolated in the chemical laboratory..

At first, however, Sumner's claim of having isolated an enzyme was ridiculed and his work attacked by students of Richard Willstätter, the celebrated German organic chemist. Then, four years later, the enzyme pepsin was crystallized by John H. Northrop of the Rockefeller Institute for Medical Research in Princeton, New Jersey, and later, with a colleague, Kunitz, Northrop isolated both trypsin and chymotrypsin. At the present time (1946), Sumner has noted, some thirty enzymes have been crystallized. Eventually even Willstätter admitted that the isolation of these substances had been accomplished. For his pioneer part in the work, the Swedish Academy of Science, which makes the selection, on November 14, 1946, awarded to Sumner one half of the 1946 Nobel prize in chemistry. (The other half was divided between Northrop and his Rockefeller Institute colleague Wendell M. Stanley. All three men

SUMNER, JAMES B.—*Continued*

had been working in the broad field of protein molecule investigation.)

In 1946 the scientist reported that he was directing graduate research in the purification of coenzyme I, lipoxidase, and saccharase. He is the author of about one hundred research articles, many of them published in the *Journal of Biological Chemistry* and *Archives of Chemistry*; of *Textbook of Biological Chemistry* (1927); and with George Fred Somers, *Chemistry and Methods of Enzymes* (1943) and *Laboratory Experiments in Biological Chemistry* (1944), the former the first work in the English language to present a general survey of all classes of enzymes. In 1937 the Swedish Chemical Society rewarded work he had done at Cornell with its Scheele gold medal. Sumner is a member of the American Society of Biological Chemists, the American Association for the Advancement of Science, the Society of Experimental Biology and Medicine, and the honor societies Sigma Xi and Phi Kappa Phi.

In politics Sumner is a Republican; in religion, a Unitarian. He has been married three times, to Bertha Louise Ricketts of Jackson, Mississippi (in 1915; divorced), to Agnes Paulina Lundkvist of Stockholm, Sweden (in 1931), and to Mary Morrison Beyer (in 1943). Roberta, Nathaniel, Prudence, James, and Frederick are the children of his first marriage; John is the child of his third marriage. The scientist is five feet nine inches tall, weighs 162 pounds, and has brown hair and blue eyes. He has traveled much in Canada and Europe, lists his favorite recreations as tennis, canoeing, shooting, and skiing, and his favorite composers as Beethoven and Brahms.

SZILARD, LEO (sī'lārd) Feb. 11, 1898-Physicist

Address: b. c/o University of Chicago, Chicago, Ill.; h. 5816 Blackstone Ave., Chicago, Ill.

Prominent among the atomic bomb scientists who have attempted to guide the world to a new type of international thinking in an atomic age is Leo Szilard, nuclear physics pioneer who was one of the first to try to interest the United States Government in the production of an atomic bomb. During the war a member of the Metallurgical Laboratory of the atomic bomb project, he is now associated with the Institute of Nuclear Studies of the University of Chicago.

Leo Szilard, one of the three sons of Louis Szilard, a construction engineer, and Thekla (Vidor) Szilard, was born in Budapest, Hungary, on February 11, 1898. Even as a boy he was unwittingly preparing for his present role in the battle to prevent the misuse of atomic energy. One of the most profound and lasting influences on his life, he told a New York *Post* interviewer, was a book which he read at the age of ten, the famous Hungarian dramatic epic *The Tragedy of Man* by Imre Madách, which he now sees as applicable to the atomic era. "In that book," he told Oliver Pilat, "the devil shows Adam the history of mankind with the sun dying down. Only Eskimos are left and they worry chiefly because there are too many Eskimos and too few seals. The thought is that there remains a rather narrow margin of hope after you have made your prophecy and it is pessimistic. That is exactly the situation in regard to the atomic bomb. We must concentrate on that narrow margin of hope."

Young Szilard received his elementary and secondary education in Budapest and then enrolled at the Budapest Institute of Technology as a student of engineering, intending to enter his father's profession. He attended from the fall of 1916 to the fall of 1919, with, however, one year, 1917-18, given over to service in the Austrian army. Then, in February 1920 he became a student at the Technische Hochschule at Berlin-Charlottenburg, and it was during the year that he spent here that his principal interest gradually changed from engineering to theoretical physics. For this, he has said, the presence of Max Planck, Max von Laue, Albert Einstein⁴¹, and other famous physicists and the general scientific atmosphere of Berlin were responsible. In 1922 Szilard received his Ph.D. from the University of Berlin, where he had been working toward his doctorate in theoretical physics since early 1921, and was appointed an assistant in the Institute of Theoretical Physics of the university, at that time directed by von Laue. This post he held until 1925, when he was made *Privatdozent*. During these years, and until the early thirties, he divided his time between theoretical and experimental research in thermodynamic statistics and problems of X-rays at both the university's laboratories and the Kaiser Wilhelm Institute in Berlin-Dahlem, and was closely associated with von Laue and Einstein.

When Hitler came to power in March 1933, Szilard left the country for Vienna. Six weeks later he went to London, where he spent several months trying to make up his mind what to do, meanwhile working with organizations engaged in placing refugees from German universities. In the summer of 1934 he became a member of the staff of the physics department of the medical college of St. Bartholomew's Hospital in London, and it was here that he began his work in nuclear physics, pursuing lines of investigation opened up by the experiments of Enrico Fermi⁴⁵, James Chadwick⁴⁶, Frédéric Joliot-Curie⁴⁶, and others in induced and artificial radioactivity. Early in this work, together with T. A. Chalmers, a colleague at St. Bartholomew's, he evolved a new principle of isotopic separation of artificially radioactive elements, which he explained in *Nature* of September 22, 1934. In June 1935 he left St. Bartholomew's for the Clarendon Laboratory of Oxford University, where he continued his researches in nuclear physics until December 1937. Back in 1931 it had been his intention to emigrate to the United States, but after a short stay he had gone back to Germany to wind up his affairs there. An arrangement with the Clarendon Laboratory permitted him to spend six months of each year in the United States, and after Munich he decided not to return to England but to remain permanently.

A short three months after Szilard had made his decision, in January 1939 Lise Meitner⁴⁵ startled the scientific world by announcing that the unexpected appearance of the element barium in the 1938 Berlin uranium experiments (conducted by Otto Hahn, Fritz Strassmann, and herself at the end of the year) had been the result of the actual splitting of the atom. Immediately, scientists throughout the world set to work to check the discovery. Confirmation of fission had already been obtained when Szilard, having borrowed two thousand dollars and brought over from England specially constructed equipment for the purpose, performed the experiment which settled beyond a doubt that the emission of neutrons accompanied the release of energy from uranium. This he later described in the *Nation*: "On March 3, 1939, Dr. Walter Zinn and I, working on the seventh floor of the Pupin Building at Columbia University [where they were research guests], completed a single experiment to which we had been looking forward rather eagerly. Everything was ready, and all we had to do was to lean back, turn a switch, and watch the screen of a television tube. If flashes of light appeared on the screen, it would mean that neutrons were emitted in the fission of uranium, and that in turn would mean that the liberation of atomic energy was possible in our lifetime. We turned the switch, we saw the flashes, we watched them for about ten minutes—and then we switched everything off and went home. That night I knew that the world was headed for sorrow."

Because of the military significance of the results obtained, leading British and American scientists, heeding the behests of Szilard, Fermi, E. P. Wigner, Niels Bohr⁴⁵, and others in the

LEO SZILARD

United States, voluntarily agreed to stop further publication of atomic data. In France, however, Joliot-Curie misunderstood—and with the publication of his conclusions the atomic race was on. Therefore, in July 1939, after Fermi in March had failed to arouse more than a cursory interest in the matter from the Navy Department, Szilard, Wigner, and Albert Einstein decided to approach President Roosevelt⁴². Although Einstein declined to act as emissary as the others wished, he agreed to write a supporting letter, and this, together with a detailed description of the work already done by Fermi and Szilard and another memorandum by Szilard in layman's language, was presented to the President on October 11 by the New York economist Alexander Sachs. The Advisory Committee on Uranium then appointed by Roosevelt met for the first time on October 21, with Szilard, Wigner, and other scientists present ex officio. The Szilard memorandums were used as the basis of discussion, but the conclusion reached was that the project was premature and could best still be left in the hands of the universities. Not until the summer of 1940, after repeated pleas from Sachs and Einstein, was the work reorganized under the National Defense Research Committee. Then, the first contract was let to Columbia University under the general leadership of George B. Pegram, with Szilard and Fermi in direct charge, and until the end of 1941, Szilard recalled, they suffered from an excess of official recognition.

A change came after British scientist Marcus L. Oliphant had visited the United States and freely criticized the project. Early in 1942 the Columbia group was transferred to the University of Chicago, where the "Metallurgical Laboratory" was established under the general direction of Arthur Holly Compton⁴⁰ and researches in the manufacture of plutonium were begun and carried out. It was here that on De-

SZILARD, LEO—*Continued*

ember 2, 1942, the first chain reaction was obtained from the first plutonium "pile"—"a huge spherical lattice of graphite bricks in which small lumps of the natural uranium mixture . . . [were] imbedded at regular intervals," as proposed jointly by Fermi and Szilard—erected on the squash court beneath the university's athletic stadium. (This is described in detail by William L. Laurence⁴⁵ in the *New York Times Magazine* of December 1, 1946.) Shortly afterward (construction on production units, after the summer of 1942 organized under the "Manhattan Engineering District" of the War Department, having been undertaken simultaneously with the experimental work in Chicago), Fermi was transferred to Los Alamos as chief of the advanced physics department of the bomb production laboratory headed by J. Robert Oppenheimer⁴⁶. Szilard remained with the Metallurgical Laboratory in Chicago, which now concentrated on the problem of devising a commercially feasible method of extracting the plutonium produced by bombarding uranium with neutrons.

For much of the time Szilard and many of his colleagues had been afraid that Germany was ahead in the race to the atomic bomb. The realization of their purpose early in 1945 changed their fears from what Germany might do to the United States to what the United States might do to other countries. Discussions on this subject began in Chicago in March 1945, among about sixty scientists, and were only intensified by the dropping of the bombs on Hiroshima and Nagasaki in August. But through September, erroneously believing that negotiations concerning the bomb were in progress among the Big Three, the scientists expressed no opinions on its political implications. Early in October, however, on a visit to Washington Szilard secured a copy of the May⁴¹-Johnson⁴⁶ bill for the drastic control of atomic energy, and this, together with newspaper reports that the bill had received only one hearing in committee, spurred them into action. The group at Chicago united as the Atomic Scientists of Chicago and began a campaign against the measure by issuing a manifesto calling for adequate Congressional hearings on the question. With groups from the other bomb installations, they formed first the Federation of Atomic Scientists and then the Federation of American Scientists, which has as its purpose educational work on the application of science to the national welfare and the influencing of legislation. Szilard was among the leaders of each movement and a spokesman in Washington.

On the whole, the scientists advocated sharing the atomic "secrets," because they could not in any case be kept hidden long and made the United States feared by other countries; recommended civilian rather than military, international rather than national, control; and vigorously opposed the proposed restrictions on free scientific research. Regarding the last mentioned, Szilard testified before the House Military Affairs Committee on October 18, 1945, that scientists at Chicago had found it necessary to break security regulations in order

to proceed with their work and the United States would have had the bomb eighteen months sooner if these restrictions had not interfered. In May 1946, when they found that their views were making no impression in Congress, nine of the scientists, including Szilard, Hans A. Bethe⁴⁰, Edward U. Condon⁴⁶, and Harold C. Urey⁴¹, and led by Albert Einstein, formed the Emergency Committee of Atomic Scientists to help arouse the world to the fact that "the unleashed power of the atom" threatened "unparalleled catastrophe" unless mankind learned to think on an international level. Their first campaign was for two hundred thousand dollars. In November 1946, after the atomic energy control bill which permitted the Army and Navy to make atomic weapons with Presidential approval and provided the death penalty for serious violation of security regulations had been enacted into law, they inaugurated a second campaign for one million dollars to carry on their work. As reported by the newspapers and stated in special magazine articles by the scientists, they believe that only a supranational government, sincerely entered into by all nations and with powers adequate to maintain peace as well as to attack the causes of world friction on an economic and cultural level, can solve the problem of the atomic age; and that the lead in its creation must be taken by the United States.

Szilard caused a stir when he addressed an open letter (first published in a fall issue of the *Bulletin for Atomic Scientists*) to Russian Premier Stalin suggesting that he broadcast to the American people Russia's stand on atomic control, while President Truman similarly inform the Russian people on the stand of the United States. There was much press comment when the scientist, recalling an old Federal law prohibiting a private citizen from addressing, without permission, an official of a foreign government on a matter of controversy, requested that permission from the United States Attorney General. A letter from the State Department refused sanction for the proposed letter; the Department of Justice would not venture an opinion on the legality of it.

Szilard, who in 1947 is associated with the Institute of Nuclear Studies of the University of Chicago, was one of the seventeen contributors to *One World or None*, described by Lewis Gannett of the *New York Herald Tribune* as "an effort, by some of the greatest scientists of our scientific century, to awaken their country and ours, their world and ours, to the facts of life." Szilard became an American citizen in 1943. His hobby, if he has one, he says, is "baiting brass hats," in keeping with his opposition to military control of atomic energy. Standing five feet six inches and weighing 170 pounds, he says, "I am satisfied I could reduce if I wanted to eat less, but I have never put it to a test." Nevertheless, wrote Oliver Pilat in the *New York Post*, the brown-haired, brown-eyed scientist "is not the sort of man to travel to the other end of town to try a good restaurant. When working he can skip lunch and dinner, can even go without sleep."

TAGLIAVINI, FERRUCCIO (tä"lyä-vē'nē fâr-rōōt'chō) Aug. 14, 1913- Opera singer
 Address: b. c/o Columbia Concerts, Inc., 113 W. 57th St., New York 19

"A quantity of listeners limited only by the fire laws took Tagliavini to their hearts almost immediately, and he responded by charming their hearts away with the beauty of his voice and the artistry of his singing." In these words, Irving Kolodin, the New York *Sun* critic, described the January 1947 Metropolitan debut of the Italian tenor Ferruccio Tagliavini, who came to the United States heralded by a wave of spontaneous publicity after a public career of six years in Italy.

Ferruccio Tagliavini, son of Erasmo and Neviani (Barbara) Tagliavini, was born in the northern Italian manufacturing city of Reggio Emilia on August 14, 1913. Because his father was employed as overseer on an isolated estate situated between Reggio Emilia and Bologna, for his first twelve years young Ferruccio did not go to school but was tutored with the children of the manor house. Later sent to school in Reggio Emilia, he determined to become an electrical engineer—he is licensed in that profession—although his father was urging him toward music. That he was a musical youth had been evident from an early age when he began lessons on the violin and learned famous tenor arias by ear. In school, between the acts of operettas, during which he played in the orchestra, he would entertain with his singing, and at least once he stepped into a leading operetta role at the last moment. Also a favorite as a church chorister, he soon gained the nickname "il piccolo Caruso." But he consistently refused to consider taking vocal lessons.

When Tagliavini was in his early twenties, his father, still certain that operatic fame awaited the youth, managed to lure him to Parma, a few miles distant from Reggio Emilia, at a time when open competitions were in progress at the city's conservatory. There the elder Tagliavini dared his son to sing for the judges. Though untrained, his voice made such an impression that he was immediately offered a scholarship. He refused, however, to give up his position as an electrical engineer and could only be persuaded to take lessons in his spare time from Maestro Italo Brancucci. After a short time these were discontinued, and then any decision about his career was postponed by several years of compulsory military training. In 1938 Tagliavini entered the local contest leading to the important Florence May Festival competition and, singing "O Paradiso" from Meyerbeer's *L'Africaine* each time, he won the local, regional, and national events. This decided him, and he began a seven-month period of intensive study with the internationally known tenor Amadeo Bassi. On October 28,

1939, he made his debut, as Rodolfo in Puccini's *La Bohème* at the Teatro Comunale in Florence.

In the following seasons in Florence, Tagliavini sang the leading tenor roles in such operas as Mascagni's *L'Amico Fritz*, Bellini's *La Sonnambula*, Massenet's *Manon* and *Werther*, and Donizetti's *L'Elisir d'Amore*. In 1940, during his first performance in Palermo, Sicily—in *L'Amico Fritz*—he met and fell in love with Pia Tassinari, the soprano singing opposite him as Suzel. (They were married on April 30, 1941.) Francesco Cilèa, accepting his criticism of the action of *L'Arlesiana* as too hurried at one point, added pages of music and text to the opera. In a few years Tagliavini became an artist of recognized stature at the San Carlo Theatre in Naples, the Royal Opera in Rome, La Scala of Milan, and a favorite throughout Italy. He also became a film star during these years, making, in all, five films, including *Voglio Vivere Così*, *No Tanta Voglia di Cantare*, *The King's Jester*, based on Verdi's *Rigoletto*, and the *Barber of Seville*. The last-mentioned, an uncut version of the opera as presented on the operatic stage except for the use of deeper settings and close-up shots, was made, at Tagliavini's own suggestion, in order to bring opera to the potential audiences in the towns and villages which rarely saw a performance.

When the Allies took over in Italy, Tagliavini toured army camps, and American GI's brought back to New York enthusiastic reports of their newest favorite. Interest in having the young tenor appear at the Metropolitan Opera was further stimulated by the first shipment of Cetra recordings to the United States in September 1946, discs which sold rapidly even at three times the price of domestic records. Tagliavini himself, meanwhile, had left Italy for summer engagements in Central and South America, twenty appearances which included *Tosca* at the Teatro Colon in Buenos Aires; *Werther* opposite his wife as Charlotte, *La Bohème* opposite Bidu Sayao⁴², and *Tosca*, at the Teatro Municipal in Rio de Janeiro; *Lucia* and *Rigoletto* opposite Lily Pons⁴⁴, and *Tosca* opposite Stella Roman, at the Opera Nacional in Mexico City. The tenor's North American debut occurred in Chicago on October 2, 1946, as Rodolfo in *La Bohème*. Before making his Metropolitan debut as Rodolfo on January 10, 1947, he also sang in *Madama Butterfly* and *Tosca* with the Chicago Civic Opera Company.

Advance publicity brought out a record attendance for Tagliavini's first appearance in New York, a nonsubscription performance; many persons were turned away. Critics reported the noisiest demonstrations they had heard in many years and added that for the most part the applause was well merited. Wrote Robert A. Hague of *PM*: "He has a beautiful voice—a true lyric tenor, fresh and warm of timbre, effortlessly produced and always under control. It is not a big voice, but it carries perfectly without forcing; even his pianissimo (which he uses with ravishing effect) can be clearly heard. His style of singing is florid

FERRUCCIO TAGLIAVINI

and fervent in the Italian manner, but not exaggeratedly so, and he knows how to shape a phrase nicely and can hit a high note fearlessly on the nose. He's not much of an actor, but he showed sincerity of feeling and a natural understanding of the role." Howard Taubman of the *New York Times* called him "the real thing as far as a lyric voice of the Italian school is concerned." Robert Bagar told his *New York World-Telegram* readers that if Tagliavini was not quite the "Caruso" anticipated, he was "a very good tenor . . . who sings Italian opera as it should be sung, naturally, comfortably, musically, and with feeling."

During the remainder of the 1946-47 season Tagliavini sang six times at the Metropolitan, revealing his interpretations of Almaviva in *The Barber of Seville*, Edgar in *Lucia*, Alfredo in *La Traviata*, and the Duke in *Rigoletto*. For the most part his notices continued to be highly favorable. On February 24 he made his American radio debut, appearing on the National Broadcasting Company's *Telephone Hour*. After this one broadcast, *Musical America's* nation-wide poll of critics placed him third in the category of "male singers occasionally featured." Before his January 3, 1947, Metropolitan debut, his Italian film *Voglio Vivere Così* ("I Live as I Please") had begun an eight-week run in New York. On May 5, *The Barber of Seville*, newly supplied with an intermission commentary by Deems Taylor⁴⁰, began an engagement in the same city. Both films were generally well received by the reviewers. The tenor also filled a limited number of concert engagements, some jointly with Pia Tassinari, and was re-engaged for the summer of 1947 for opera in South America and for the 1947-48 season for recital appearances in the leading American and Canadian cities. Pia Tassinari made her Metropolitan debut in

December 1947, singing the role of Floria in *Tosca* opposite her husband's Cavaradossi. This was the first time he had sung the part at the Metropolitan.

Of lighter complexion than many Italians—fair skin, wavy brown hair, and green-blue eyes—Tagliavini is short, stocky, and broad-shouldered, and has been described as having an ebullient personality. When he talks, interviewer Ira Peck reported, he uses small gestures which need no translation—though his English still does. He has not lost his enthusiasm for things mechanical; he enjoys straightening out a complex system of circuits in need of repair. Other recreation he finds at the movies and in sports: high on his list of personal pleasures is football, which he knows in the Italian variety of soccer and about which he has written for Italian magazines; swimming, for which he won a cup as a boy; and prize fighting, in which he used to spar with the Italian middleweight champion Buonvaldi (he greatly admires Gene Tunney). He is also something of a painter and sculptor. He recalls that his first conversation of any length with Pia Tassinari was carried on in a Sicilian air raid shelter in the middle of the performance during which they met. Questioned by *Opera News* as to the most trying part of life during the war, he answered thoughtfully, "To keep out of politics and remain on an even keel."

TALMADGE, HERMAN E(UGENE) Aug. 9, 1913- Political leader; lawyer
Address: b. State Capitol, Atlanta, Ga.; h. Lovejoy, Ga.

Early in 1947 an unprecedented political situation in Georgia provided a subject for headlines in many papers throughout the United States. There were two claimants for the governorship of Georgia. Herman Talmadge, son of the late Governor-designate whose death precipitated the unusual circumstance, was one of the men who was called "Governor of Georgia," his claim resting on having been so chosen by the State Legislature. The lawyer, who, if his claim were upheld by the State's Supreme Court, would be Georgia's youngest Governor, had worked closely with his father,

Eugene Talmadge⁴¹, both in law practice and in various political campaigns. M. E. Thompson⁴⁷ was the other gubernatorial claimant. In March 1947 the State's Supreme Court denied Talmadge's claim.

When Herman Eugene Talmadge was born on August 9, 1913, Eugene Talmadge, his father, was a practicing lawyer in McRae, Georgia, Herman's birthplace. Eugene Talmadge also farmed land adjoining that owned by his wife, the former Mattie Thurmond Peterson. Young Herman was reared in McRae, the Telfair county seat, and, until his senior year, attended high school there. In 1930 Herman Talmadge enrolled at the Druid Hills High School in Atlanta, Georgia, and was graduated from that school a year later. At the University of Georgia he joined Sigma Nu, his father's fraternity, and was a member of the debating team. Having gone on from the university's liberal arts college to law school, in 1936 he was awarded a law degree and was admitted to the bar.

Two years later Eugene Talmadge, who had already served two terms as Governor of Georgia, entered the Senatorial primary against senior Senator Walter F. George⁴³ and a Roosevelt-supported candidate. The Democratic nomination in a Southern State where the party has an overwhelming majority is tantamount to election. The management of his campaign, in which the ex-Governor promised a "homestake and a grubstake for the unemployed," and expansion of the CCC, was assigned to Herman Talmadge. In 1940 Eugene Talmadge, who had been defeated, decided "to stick to Georgia" and to run for Governor for the third time; Herman was again assigned the task of winning the primary for his father. This time Talmadge defeated E. D. Rivers, the incumbent.

In April 1941 Herman Talmadge was commissioned an ensign in the United States Naval Reserve and was called to active duty the following September. He was assigned to the Sixth Naval District (Charleston, South Carolina) and was later transferred to the Third District in New York City. Having applied for sea duty, in February 1942 he reported to the Midshipmen School at Northwestern University. Shortly afterward he took part in the invasion of Guadalcanal, in the U.S.S. *Tryon*. Stationed in New Zealand from June 1943 to April 1944, he was flag secretary there to the Commandant of Naval Forces. As executive office in the U.S.S. *Dauphin* he again took part in encounters with the Japanese Fleet and in the battle of Okinawa, and his ship was one of those which entered Tokyo Bay on V-J Day. In November 1945 Lieutenant Commander Talmadge was relieved from active duty.

Having returned to his father's law firm of Talmadge, Fraser, and Camp, Herman Talmadge also supervised the work on his Henry County farm. When his father entered the gubernatorial primary in May 1946, young Talmadge was again campaign manager. Competing with Rivers and James V. Carmichael (favored by the incumbent, Ellis Arnall⁴⁵), the Talmadges promised to restore the white pri-

HERMAN E. TALMADGE

mary, which had been declared unconstitutional by the United States Supreme Court. Although Carmichael received the largest number of popular votes, Talmadge was named the Democratic candidate—the party considered each county a unit allotted a specified number of votes, and Eugene Talmadge had led in the number of unit votes. By election day, in November, the nominee was seriously ill. When, on that morning, it was called to the attention of his supporters that a clause in the State constitution provided that the State Legislature might, under certain circumstances, select the man to fill a vacancy, a one-day campaign was undertaken to secure write-in votes for Herman Talmadge. As a result the Governor-elect's son received 675 votes, more than Carmichael, Bowers, the Republican candidate, or any of the other names written in on the ballot.

Eugene Talmadge died on December 21, 1946, twenty-one days before the date set for his inauguration. Invoking a clause in the State constitution which stated that a Governor remain in office until his successor has been elected and duly qualified, Arnall announced that he would retain the governorship. Herman Talmadge based his claim to the office on the provision that, when no person had a majority, the State Legislature choose between the two candidates receiving the greatest number of votes: his contention was that his father, being deceased, was no longer a person. On January 15, 1947, the State House of Representatives by a vote of 161 to 87 chose Herman Talmadge as the Governor. Three days later M. E. Thompson, who had been elected Lieutenant Governor, was sworn into that office and, because Arnall had announced that he would resign when Thompson had qualified as Lieutenant Governor, Thompson also took the oath as Acting Governor. For ten minutes there were three claimants to the governorship of

TALMADGE, HERMAN E.—*Continued*

Georgia; then, Arnall, apprised of Thompson's action, resigned.

To resolve the problem, six separate suits were filed in the Georgia courts; acceptance of the final decision was promised by both claimants. ("Who is Governor of Georgia today?" at this time became a serious question to those on the State payroll or those required to deal with the officials of Georgia.) In March 1947 the Georgia State Supreme Court declared Talmadge's claim to the governorship invalid and designated Thompson as Governor. Talmadge, accepting the court's decision, indicated that he would run for office in 1948, when a new election would be held. His platform, he said, would be the same as that offered by his father in 1946: white supremacy, more rural roads and hospitals, extended old-age pensions, greater aid to veterans, rigid economies in administration expenditures.

While awaiting final court decision, the Legislature, in which Talmadge had been able to maintain a slight majority, had been considering Talmadge-sponsored legislation. Most important was the proposal to make the Democratic party a private club and therefore permit it to restrict voting on its policies and officers (the purpose of the bill was to exclude Negroes from voting in the primaries and therefore virtually to disenfranchise them). Talmadge pointed out that the adoption of the measure meant a return "to the system of our fathers and grandfathers." He stated: "I want to see the colored people get jobs and earn money and be educated. If I knew they would vote individually I would be in favor of their voting, but I know they would vote in blocks. More than 90 per cent of the Negroes in Georgia voted for the same candidate for Governor in the last primary." This act canceled the county-unit system of nomination, the State soldier-vote law, and limitations on campaign expenditures. When the measure was passed and signed by Talmadge, in February, a reorganization of Georgia's Democratic party was announced by a group of the claimant's opponents; the insurgents, stemming from the Aroused Citizens of Georgia, which had been formed to fight the white primary bill, read Talmadge and his followers out of the party. Thompson, who, when his right to the governorship was established, was required to reconsider all bills passed by the legislature, vetoed the white primary measure.

"Today," wrote Wenzell Brown in an *American Mercury* article, "Georgia is the nerve center of the conflicting ideologies of the South." Talmadge actively campaigned, throughout 1947, with a view toward the 1948 gubernatorial election (scheduled for July 14). When the Thompson faction read Talmadge and his followers out of the Democratic party, the ex-Governor's son formed a group, which he claims to be the legal party (the Democratic National Committee, however, recognized the Thompson group). Carl Levin, in the first of his two articles on Georgia politics for the *New York Times*, observed, "Even his enemies are now resigned to the fact that 'the boy' will

be a major political factor in Georgia for a long time."

Herman Talmadge, who is a Baptist, has been called "more urbane than his father." He is six feet tall, brown-eyed. Levin has stated: "He has the same straight mouth that his father had, the same dark hair, parted on the side and falling over his forehead. His cigar is 'Old Gene's' brand." Talmadge was married on a three-day Navy leave in December 1941 to Elizabeth Shingler; they have two children, Herman Eugene and Robert Shingler. Most newspapers and magazines have adapted the Southern pronunciation of "Herman" in print: the Georgian's name is widely seen as "Hummon" Talmadge.

TAYLOR, F(REDERICK) CHASE See Stoopnagle, Colonel

TAYLOR, GLEN H(EARST) Apr. 12, 1904- United States Senator from Idaho

Address: b. Senate Office Bldg., Washington, D.C.; h. 129 S. 10th Ave., Pocatello, Idaho

The senior Senator from Idaho, "Singing Cowboy" Glen H. Taylor, has attracted nationwide interest at the outset of his 1945-51 term. A member of the liberal Democratic bloc, Taylor has been described in terms ranging from "real Taylor ham" and "the least effective member of the Senate" to "crusading" and "one of the greatest speakers of our time."

Glen Hearst Taylor, twelfth of the thirteen children of the Reverend Pleasant John Taylor and Olive Oatman (Higgins) Taylor, was born April 12, 1904, in Portland, Oregon. His father, a minister of the Christian Church, who was active in Democratic politics, had been the youngest Texas Ranger in history. Because of his outspoken sermons, his son told an interviewer, P. J. Taylor was relieved of his church in the village of Kooskia, near the small Taylor ranch. Glen left school in the eighth grade to earn his living. At thirteen, after a period as shepherd in the Bitterroot Mountains, he became "manager" of two primitive silent moving picture theaters (three miles apart), owned by an elder brother. In 1919, when he was fifteen, the youth became a sheet-metalworker's apprentice, and two years later, when his brother Ferris sent for him, he joined Ferris' traveling dramatic stock company.

The troupe presented four plays each week. At first young Glen Taylor played villains; later he exchanged roles with Ferris for the hero parts. Glen was a partner in the Taylor Players by 1922, when he was eighteen. Married that year in New Mexico, he was separated from his wife in 1926 and divorced in 1929. (A daughter, Olive, was born of this marriage.)

From 1926 Taylor was, in his words, "owner and manager of businesses in various branches of the entertainment field." While in Great Falls, Montana, with the Slade Musical Com-

edy Company, the baritone-voiced actor met Dora Marie Pike, chief usher of a local theater, with whom he went into partnership, forming the Glendora Players in 1930. In March 1931 they were married. At first they had a company of twenty, including another of Taylor's brothers and the brother's wife; but the troupe grew smaller as it ran into financial difficulties, caused by the advent of talking pictures and by the world-wide depression. Taylor was to tell the Senate, that, during this period, he "would have signed for twenty-five dollars a week for life" to provide his family with necessities.

So as to understand the cause of the widespread distress, Glen Taylor began to read "everything he could get his hands on" about economics. Stuart Chase's ⁴⁰*A New Deal* (1932), which furnished a campaign slogan for Governor Franklin D. Roosevelt ⁴², became the foundation of Taylor's thinking on economic questions. He was inspired also by King C. Gillette's *The People's Corporation* (1924). Meanwhile, the Glendora Players had become the Glendora Ranch Gang—the four Taylors had learned to play musical instruments and specialized in cowboy songs. Glen Taylor was billed as "The Crooning Cowboy." In 1935 he attempted to organize a farmer-labor party in the mountains of Nevada and Montana.

Seeking election to the House of Representatives in 1937 and to the Senate in 1938 and 1940, Taylor was faced with the opposition of the local political machine. In 1938, when he won the primary, the county chairman resigned and threw his support to the Republican candidate; in 1940 Taylor defeated that former chairman for the nomination. Between campaigns he worked as a painter's helper in a California war plant.

After his second Senate campaign, Taylor worked for eighteen months in San Francisco as a sheet-metal mechanic, and wrote three thousand longhand letters to Idaho residents. When the 1944 campaign season opened, he returned to Pocatello without the horse and cowboy regalia he had used in 1940. With only seventy-five dollars as a fund, Taylor confined his campaign to speeches throughout the State on two main issues: the need for a strong international organization to preserve peace, and for Federal aid to construct a Columbia Valley Authority on the model of TVA. After he defeated the local machine for the third time, and the incumbent Senator D. Worth Clark, the Democratic State Committee gave him its support. Forty-year-old Taylor then defeated former Governor C. A. Bottolfsen by 107,096 votes to 102,373.

Those who looked askance at having an entertainer represent Idaho in the Senate shuddered as he obliged newspapermen by mounting the Capitol steps and singing a parody about his difficulty in finding a home. Taylor became, reportedly, one of the hardest-working "freshman" Senators. He was assigned to seven committees, one of them the Claims Committee. The New Dealer acquired a reputation for being "never at a loss for words on any subject, however controversial," and his maiden

Press Assn., Inc.

GLEN H. TAYLOR

speech, an endorsement of Henry Wallace ⁴¹ for Secretary of Commerce, made something of an impression. One of the most active sponsors of the Murray ⁴⁵-Wagner ⁴¹ Full Employment bill, he won the praise of labor publications by warning that jobs for all were necessary to the preservation of the private enterprise system. "If we refuse to allow any changes to take care of changing circumstances, and the Socialists take over," Taylor added, "I will try to help the Socialists make socialism work."

Taylor has stated that little attention was paid by the press to this speech, or to the resolution which he introduced in October 1945 to strengthen the U.N. "toward the ultimate goal of establishing a world republic based upon democratic principles." He has made other efforts to increase the power of the U.N., has espoused the Zionist cause, and in April 1946 made a broadcast urging his country to break relations with Franco ⁴² Spain. Originally a supporter of the four-billion-dollar loan to Britain, he reversed his stand upon hearing that it might lead to an Anglo-American economic bloc competing with a Soviet bloc. Taylor has frequently stated that, to avoid an eventual "shooting war," the country would have to "get rid of the militarists" in the War and State Departments, which he called "the State of War Department." One of the few public men to oppose President Truman's ⁴⁵ several-hundred-million-dollar program of financial and military contributions to Greece and Turkey, Taylor called it "not a relief plan but an oil grab," and cosponsored an alternative plan to turn the question over to the U.N.

During most of Senator Bilbo's ⁴² anti-FEPC filibuster of January 1946, Taylor was the one FEPC supporter who remained in the Chamber. As a Banking and Currency committee-

TAYLOR, GLEN H.—*Continued*

man, he had a part in all legislation affecting foreign loans, price control, rationing, and housing, and he unsuccessfully sought to continue and expand the Roosevelt program in these fields. Taylor, it is said, never "ducked" a vote—he risked the wrath of Idaho's farmers and ranchers by going on record against lifting agricultural price ceilings. In January 1947, however, he made representations to Agriculture Secretary Anderson⁴⁶ about the need for potato dumping to maintain "support" prices.

Another of Taylor's continuing interests has been antimonopolism. As a member of the Special Committee on Small Business, he paid particular attention to seeing that there was as wide a dispersal as possible of the ownership of FM broadcast stations. Also endorsed by him was a provision freeing radio stations from liability for libel actions in connection with political campaign broadcasts. The Idahoan asked the Senate in August 1946 to investigate alleged wartime profiteering by railroads at the Government's expense, found by a Budget Bureau committee. He has sought investigation also of the real estate and other lobbies, of radio manufacturers, of investment banks, particularly the Morgan house. Citing examples of news suppression, distortion, and sensationalizing, he termed the commercial press "the biggest, blackest villain the world ever saw." In another connection, Taylor has said, "When the day comes that my constituents read an editorial in a Boise paper praising me, they'll know that I'm no longer the man they elected to office."

In June 1946 Taylor asked that the Senate take action against Senator Bilbo⁴², who was publicly urging that "any means" be used to prevent Negroes from voting; and when the Eightieth Congress convened under Republican leadership in January 1947, Taylor "stole the Republicans' show" on the Bilbo issue by introducing Senate Resolution 1 to bar his seating. The hour-long speech Taylor made was described by Marquis Childs⁴³ as "perhaps the most impressive and sweeping indictment of Bilboism delivered since 'the Man's' case came before the public."

Other bills introduced by the senior Senator from Idaho called for the coinage of fifty-dollar gold pieces, for a modified Townsend Plan old-age pension, and for the publication of a complete tabulation of the voting records of all Senators, with an explanation of the issues involved. "The only thing wrong with his idea is that it is entirely too good," wrote Lowell Mellett⁴² in discussing its being pigeonholed. Taylor endorsed the Capper⁴⁶ bill to ban national advertising of liquor; and in July 1947 he joined in sponsorship of the Pepper⁴¹ bill for Federal aid to State maternal and child health services. In that month, Senate president Vandenberg⁴⁰ named Taylor one of the seven Senators on a joint Senate-House committee to investigate the housing shortage.

With American Labor party's Vito Marcantonio, Taylor introduced an antifilibuster measure which would have allowed a maximum of three hours' debate for any one Senator. Six

months later, in June 1947, Taylor joined Senator Claude Pepper and Wayne Morse⁴³ in a filibuster to prevent overriding of the Taft⁴⁰-Hartley⁴⁷ Labor Act veto, in the hope that public reaction would change the Senators' minds. Taylor held the floor for eight hours and twenty minutes of an all-night session.

Appearing on the *Town Meeting of the Air* broadcast early in November 1947, Taylor said: "The Americans who do most to block the spread of communism are those of us who strive to protect civil liberty and insure decent incomes for the great majority of our people at home and who offer nondictatorial assistance abroad, through the instrumentalities of the United Nations." In order to arouse interest in his opposition to the State Department's foreign policy, Taylor started to ride horseback across the continent late in October, but desisted in mid-November with the explanation that he had "bit off more than he could chew." After the opening of Congress, an amendment by Taylor to the interim aid program for Italy, France, and Austria was accepted; this amendment, providing that no part of the \$597,000,000 to be granted to those countries should be used for armaments, was passed on November 29. A subsequent amendment to the bill, to administer the interim aid funds through a United Nations agency, was rejected, after which Taylor was one of the six Senators to vote against the short-term measure in the December balloting. It was about this time that the Idaho legislator received an offer from Henry A. Wallace⁴⁷ to join his third party ticket as a candidate for the Vice-Presidency.

"Taylor has the tall, straight figure and the lean, pleasant face of movieland's western cowboy, a role he likes," commented one *Business Week* writer. Mrs. Taylor is one of his two secretaries, and their sons, P. J. (for Paul Jon) and Glen Arod ("Dora" spelled backward), are often found in their Senate office. The youngest Taylor is Gregory Alan, born in 1946. In the house they purchased near the Capitol, in Washington's Southeast section, the Taylors hold family "jam sessions" with the six musical instruments they brought from Pocatello. On the Senate floor, according to John Gunther⁴¹ (*Inside U.S.A.*), "Taylor's language is excellent . . . his mood . . . a subtle combination of formality and charm."

THOMAS, J(OHN) PARNELL Jan. 16, 1895- United States Representative from New Jersey; insurance broker

Address: b. House Office Bldg., Washington 25, D.C.; c/o Thomas and Godfrey, 67 Wall St., New York; h. 4636 Garfield St., N.W., Washington, D.C.; Allendale, N.J.

J. Parnell Thomas, the only remaining member of the original Dies⁴⁰ Committee, is, in 1947, chairman of the House of Representatives Committee on Un-American Activities. Co-owner of a Wall Street insurance brokerage house, the Republican Congressman began to represent New Jersey's Seventh District in Congress in 1936. Another committee assignment placed him on the Military Affairs Committee, now the Committee for the Armed Services.

Born in Jersey City on January 16, 1895, John Parnell Thomas was originally named John Parnell Feeney, Jr. His father, John Parnell Feeney, was a Democrat who, until his death, held public office for twelve years as police commissioner of Jersey City, and for a time as a State legislator. Through his mother, Georgianna (Thomas) Feeney, the Congressman is a direct descendant of Noah Webster. Reared in Allendale, New Jersey, from an early age, young Parnell was graduated from the Allendale Public School and from Ridgewood High School, where he played on four athletic teams. At the University of Pennsylvania's Wharton School of Finance and Commerce, which he entered at nineteen, the youth was secretary-treasurer of his class. He played football, took part in track, and was pledged to Psi Upsilon fraternity. In 1916 he transferred to New York University Law School, remaining there until the United States entered World War I. At that time Parnell Feeney enlisted in the Army and received officers' training at Plattsburg, New York. Commissioned a second lieutenant of Infantry, he served in the front lines with the AEF, and was discharged in 1918 with the rank of captain.

After the war ended, Feeney became a bond salesman for Kountze Brothers, New York. About this time he obtained a court order changing his surname to Thomas: "My father died when I was a youngster," he has said, "and since I had no relatives on his side, I took my mother's name." Bond salesman J. Parnell Thomas joined the Wall Street investment house of Paine, Webber and Company, and in four years (by 1924) became manager of the bond department.

At the age of thirty, Republican Thomas entered public office, when, in 1925, he was elected to the Allendale Borough Council. This was followed in 1926 by election to the two-year mayoralty term, during which he continued his connection with the Paine, Webber firm. In 1928 he was again chosen mayor of the New Jersey town. From 1931 to 1935 Thomas took part in organization politics as a member of the Bergen County Republican Committee.

Forty-year-old J. Parnell Thomas won election to the New Jersey Assembly in the latter year (1935), and was re-elected in 1936. Bills he introduced provided for a State water authority and for public defenders in each county. According to *Newsweek* (February 6, 1939), he "disagreed so violently with [Republican] Governor Harold G. Hoffman's sales tax theories that he sought Hoffman's impeachment." In 1936 Thomas was sent to the United States Seventy-fifth Congress as Representative of the Seventh District of New Jersey, which he continued to represent in the Eightieth Congress. In 1942 he won by 55,424 votes to his opponent's 25,171 in the strongly Republican district; in 1944, by 86,759 to 44,423; in 1946, by 65,425 to 29,418. A discussion of his activities during those years may be found in the *PM Magazine* for November 30, 1947, in the first of two articles about Thomas.

"'More business in Government, and less Government in business,' has always been attractive to me as a slogan," Thomas said in 1946. "New Dealism to me is . . . not far different from the socialism of Hitler⁴², that of Mussolini⁴², and the communism of Stalin⁴². This does not mean, however, that I am opposed to progress or to liberal ideas. I voted for the original Wage and Hour bill and I shall support . . . a higher floor on a workman's wage." In 1939 Thomas called for the impeachment of Frances Perkins⁴⁰, then the Secretary of Labor. Over the years he has voted "conservatively and reliably" (*United States News*, April 4, 1947) with the Republican leadership. For ten years Thomas was a minority member of the Military Affairs Committee, and served also on the Claims Committee, which handled all claims upon the Government of more than five hundred dollars.

As a Military Affairs committeeman, soon after taking office in 1937, Thomas demanded that the sale of scrapped American merchant ships to Japan be stopped, and that Panama Canal defenses be strengthened. In 1939 he voted against improving Guam harbor and fortifications, protested against the involvement of the United States in foreign entanglements, and voted against lifting the arms embargo. The New Jersey Representative voted for the Selective Service Act in September 1940, for permitting merchant ships to be armed in November 1940, and for Lend-Lease in February 1941. March 1943 found him among the opponents of the War Security bill, which established severe punishment for "willfully obtaining or transmitting any data calculated to

J. PARNELL THOMAS

inform the enemy with respect to the war effort of the United States."

One of seventeen Military Affairs subcommittees, Thomas toured the European battlefronts in November-December 1944. After the war, in 1946, he said, "I pray for the success of the United Nations." That July he emerged as a leader of the opposition to the May ⁴¹Johnson and McMahon ⁴⁵bills for the Federal development and civilian-military control of atomic energy, charging that the latter bill was shaped by "one-world-minded people." Upholding the principle of complete military control, he was the one member of the Senate-House Joint Committee on Atomic Energy who did not agree to the final compromise Atomic Energy Act of 1946. Before the adjournment of the Seventy-ninth Congress in 1946 Thomas voted for the repeal of the OPA, later calling upon President Truman ⁴⁵to convene a special session to do away with price control.

When the House established its Special Committee to Investigate Un-American Activities, under the chairmanship of the Texas Democrat, Martin Dies, in 1938, Thomas was named a member. His particular interest has continued to be combating Communism: "We find this totalitarian bridgehead firmly entrenched in the labor movement, the Government, political parties, the press, radio and films, the schools and colleges, the churches and social organizations" (foreword to *The Communist Party of the United States as an Agent of a Foreign Power*, a 1947 committee report). In a radio broadcast reprinted in the August 1940 *Scribner's Commentator* he charged: "Many Communists and Communist 'fellow travelers' have been appointed to key positions in our Government. . . . Only Communists or those approved by Communists could procure employment on certain Federal projects." Critics have accused Thomas and the majority of the Un-American Activities committeemen of using

the charge of Communism to stigmatize non-Communists (*Civil Liberties Quarterly*).

One of Thomas' magazine articles, in 1940, was an attack upon Attorney General Robert H. Jackson ⁴⁰, who had stated that the Dies Committee's highly publicized activities made the Government's counterespionage work more difficult. Government officials made constant use, however, of the committee files, which the *United States News* (April 4, 1947) called "perhaps the most voluminous record of mildly liberal to forthrightly subversive individuals and organizations ever compiled in this country." "Liberals criticize the use of these files to prove or disprove loyalty," the magazine continued, "because, they assert, the files are the products of slipshod, unjudicial investigation. The liberals contend, too, that many people joined such organizations unaware that they were Communist-dominated, or affiliated themselves with groups that the Communists later penetrated and took over."

In January 1947, when Thomas became chairman of the Un-American Activities Committee in the newly Republican-led Eightieth Congress, *Collier's* commented, "We think the general idea is fine . . . but we feel that most people would like to see this Red hunt conducted by responsible and level-headed persons and agencies. . . . The Thomas-Rankin ⁴⁴Committee has been pretty extremist and excitable." Thomas has said that the old committee was "too melodramatic," that there was too much publicity-seeking and too many "leaks" to the press, and that he intended to be fair and businesslike. He felt, however, that the anti-Communist feeling after World War II vindicated the past record of the committee. Announcing hearings on a bill to outlaw the Communist party, Thomas stated that no Communists would be heard, a position he later reversed. Thomas opposed the bill, maintaining that it would drive the party underground. He himself headed the subcommittee investigating alleged Communism in Hollywood, and he designated a three-man subcommittee to investigate fascism in the United States. Another objective of the committee is to focus attention on Communists and their sympathizers in the Government and in labor unions. Thomas has also proposed a conference of representatives from the legislatures of Western Hemisphere countries to plan "a uniform program of legislation and exposure designed to cope with the Communist danger."

"Nobody can say that the House Committee on Un-American Activities is not putting on a good show," wrote Quentin Reynolds ⁴¹ of the investigation of communism in the motion picture industry in one article of a *PM* series. The committee's chambers were the scene of testimony by Hollywood celebrities, accusations by both sides (Thomas accusing several screen writers of being Communists, witnesses accusing Thomas of violating their constitutional rights). A group of film stars, representative of the specially formed Committee of the First Amendment, mingled among the spectators in protest against the committee's proceedings. *PM* believed, "The purpose is to strike terror into the hearts of the big movie producers and

directors so that these men—few of whom have ever been distinguished for their boldness—will no longer dare to make another picture” controversial in its subject matter; the New York *Herald Tribune*, in one of several criticisms of Thomas, asserted: “Not Hollywood but Congress is being investigated here, and once again the testimony indicates that the system of Congressional investigation committees needs overhauling.” On the favorable side, Arthur Krock of the New York *Times* observed that the critics of this investigation were silent during Congressional investigations of bankers; another supporting comment was, “We cannot afford to ignore a potential fifth column.” One result of the widespread publicity of this investigation, which was suspended early in November and scheduled to resume at an unannounced date, was a resolution introduced by Representative Adolph Sabath⁴⁶ that the committee be abolished.

In the business world, J. Parnell Thomas has, since March 1941, been a partner in Thomas and Godfrey, Wall Street insurance brokers. That October the Congressman was appointed director of State relief for unemployed and dependents in Allendale and five other municipalities. He is a trustee of the Allendale Public Library, a former director of the Allendale Building and Loan Association, a member of civic and veterans' organizations, of the Masonic Order, and of the Black Meadow Shooting Club. His church is the Protestant Episcopal.

Since January 1921 Thomas has been married to Amelia Wilson Stiles, daughter of a Mount Vernon (New York) bank president and newspaper publisher. Both their children, J. Parnell, Jr., and Stiles Delevan, saw active World War II service overseas. Congressman Thomas has gray hair and brown eyes; the New York *Sun* has described him as “short [he is five feet seven inches tall], red-faced, choleric, stocky [he weighs 175 pounds].” Fond of all outdoor sports, Thomas also collects United States stamps and Americana as a hobby.

THOMPSON, M(ELVIN) E(RNEST)
 May 1, 1903- Acting Governor of Georgia;
 educator

Address: b. State Capitol, Atlanta, Ga.; c/o South Georgia Electrical Supply Co., 123 Hill Ave., Valdosta, Ga.

In the November 1946 State elections, M. E. Thompson was elected the first Lieutenant Governor of Georgia; by January 1947 through the death of the Governor-elect, he had become involved in an unusual political controversy as

one of two claimants to the governorship of the State. It was left to the courts of the State to decide whether he would assume the highest political office in Georgia or serve as Lieutenant Governor to Herman Talmadge⁴⁷, his rival for the governorship. It was not until a decision was rendered in March 1947 by the State's Supreme Court that Thompson's right to the governorship was substantiated. The Acting Governor (a new election will be held in 1948) had been prominent in Georgia's education program.

Melvin Ernest Thompson's ancestors (both maternal and paternal) can be traced to the colonists of South Carolina. Born May 1, 1903, to Henry Jackson and Eva (Edenfield) Thompson, M. E. Thompson comes from a family of farmers who early left South Carolina for Georgia. Reared in Millen, Georgia, his birthplace, by his mother, who was widowed in 1905, and his grandfather, a Baptist minister, young Melvin attended the town's high school. There he participated in all athletic activities, debating, and public speaking. After his 1922 graduation from high school, Thompson matriculated at Piedmont College (Demorest, Georgia) and a year later transferred to Emory University. His expenses he earned by waiting on tables and managing a college store.

In 1926, the year he received his Bachelor's degree, he became principal and coach of the Graymont-Summit High School. A year later he filled the same posts at the Hawkinsville (Georgia) High School and within another year he was superintendent of the public schools of that town. From 1933 to 1936 Thompson was State school supervisor with an office at Americus. He was also an instructor at Southwestern University in 1934 and at Georgia State College for Women (in Valdosta) in 1935. Having taken additional courses at the University of Georgia, Thompson received a Master's degree in public administration in 1935. Thereafter he studied at Emory, Peabody College, and the University of Chicago, fulfilling the requirements for a doctorate except for the completion of his dissertation and final examinations. He was aided in his graduate work by two scholarships and was awarded a Julius Rosenwald fellowship in 1939 to study coordination of the educational functions of Government agencies; he did not use the entire grant because he no longer held the State office which made the grant possible.

In 1937 Thompson was appointed assistant State supervisor of schools and director of teacher education and curriculum revision by Governor E. D. Rivers, who later became Thompson's political adviser; he held this position until 1941 (the year in which Eugene Talmadge⁴¹ began his third term as Governor). Subsequently, Thompson was employed by a publishing company. When Ellis Arnall⁴⁸ was elected Governor, Thompson became his executive secretary for about two years (1943-45). (Thompson had become interested in political affairs through his work with school legislation.) In 1945 he became State Revenue Commissioner.

(Continued next page)

Press Assn., Inc.

M. E. THOMPSON

In June 1946 M. E. Thompson was named Democratic candidate for Lieutenant Governor (in Georgia the nomination of this party insures election), and Eugene Talmadge's name was placed on the party's ticket as gubernatorial nominee. A month and a half after election day Talmadge, now the Governor-designate, died; this was twenty-one days before his inauguration. Two conflicting clauses in the State constitution made the succession to the governorship uncertain. Invoking a provision that stated that the incumbent Governor was to remain in office until a successor was elected and qualified, Arnall claimed the office. When Thompson would be sworn in as Lieutenant Governor, Arnall then asserted, he would resign so that Thompson could become Acting Governor until the 1948 election of Assemblymen. But another clause stipulated that the Assembly choose between the two candidates receiving the greatest number of votes in case no person had a majority. Herman Talmadge, son of the late Eugene, who stood highest among the other candidates with 675 write-in votes, asserted that his father was no longer a person (*Newsweek*, January 27 1947).

On January 15 the State Legislature designated Herman Talmadge as Governor, whereupon he took over the offices in the Executive Mansion. Within three days Thompson appeared in the Legislature to take the oath as Lieutenant Governor; before spectators were aware of what was happening, he repeated the oath, this time adding the promise to "faithfully administer the executive duties of the State of Georgia." Some minutes later Arnall resigned (Arnall's support of Thompson rests on constitutional grounds—many newspapers state that he does not agree with Thompson politically.) The State Senate, which had concurred with the House of Representatives in

electing Talmadge, later confirmed the journal recording Thompson's oath as Acting Governor. That same day Thompson persuaded Talmadge to accept the jurisdiction of the State courts in the matter; Thompson also was permitted to maintain offices in the State Capitol. (Talmadge supporters had previously evicted Arnall from the Capitol.) Although Thompson requested the Legislature to adjourn until the final court decision, the Talmadge majority refused. Six suits were filed to determine the legal Governor. (One of these was originally brought by Arnall and then amended in the name of Thompson.)

Heads of State departments reacted differently: Eugene Cook, Attorney General, had recognized Thompson appointees and represented the Lieutenant Governor in court; George Hamilton, the State Treasurer, had refused to accept tax collections or distribute funds to appointees of either man until a Superior Court decision directed him to recognize officials named by Talmadge. The situation remained unsettled until March 1947, when the Georgia Supreme Court recognized Thompson's claim; his official title became Acting Governor of Georgia. On July 14, 1948, voters of Georgia will choose a Governor to fill the unexpired portion of Eugene Talmadge's term.

One of the points on the Democratic platform was the restoration of the white primary which had been declared unconstitutional by the United States Supreme Court. Talmadge had spurred action on a bill which would establish the Democratic party as a private club and therefore enable it to set any voting restrictions. Thompson, however, has favored strengthening the educational requirements: all prospective voters would be required to produce a high school or college diploma or to pass an examination based on the interpretation of the State constitution. When Thompson was confirmed as Acting Governor, he was required to review all bills passed by the State Legislature and signed or vetoed by Talmadge. Thompson almost immediately vetoed the Talmadge-sponsored white primary measure passed by the Georgia legislators. In retaliation, the Legislature adjourned without passing the 3 per cent sales tax bill which would have provided funds for the road, hospital, education, and old-age benefit program which Thompson wished to inaugurate—no further legislation could be enacted until a new session convened after the election in 1948. Thompson thereupon allocated half of the State's income to the schools. The Governor signed the measures outlawing the closed shop, the involuntary checkoff of union dues, and mass picketing.

By the end of 1947 teachers' salaries in Georgia had been raised, and an attempt was made to equalize funds appropriated for the education of Negro and white students. The antitrust action against twenty Georgia railroads was pressed. Thompson in August announced an intensive law enforcement drive; in the same month the method of employment of convict labor on State highways was changed.

In the meantime, political rivalry ran high. Thompson's supporters expelled Talmadge and his group from the Democratic party. As a result there were two Democratic parties in Georgia, the original one and one formed by Talmadge, which also claimed legal status. Since the primary election is the more significant election in Georgia, the decision as to which group is Democratic is important; the Democratic National Committee has recognized the Thompson group, but a court decision is pending. Instead of a "white primary," the Thompson group has decided upon segregation at the polls, a ruling which the Governor himself has found "excellent." Carl Levin, who has written two articles for the *New York Times* on the political situation in Georgia, sees Talmadge gaining in strength. In a 1947 *American Mercury* article on Georgia, Wenzell Brown said: "Thompson, while he is gaining the support of Arnall and the progressives, is not a marked liberal himself. He is a mild conservative who will avoid extremes."

During the course of his career as an educator, Thompson assisted in the writing or edited magazines dealing with curriculum revision problems. He is also co-author of *Georgia Citizenship*, a textbook used in the State's schools. Thompson, who is five feet ten inches tall and weighs 175 pounds, has blue eyes and black hair. He and the former Anne Newton, to whom he was married on March 3, 1927, have one son, Melvin Ernest, Jr. They have a home in Valdosta, Georgia, where Thompson is co-owner of the South Georgia Electrical Supply Company. The Governor attends the Baptist Church. His recreations are hunting, fishing, and golfing.

 Leaders in Education (1941)

THOMSON, SIR GEORGE PAGET 1892- Physicist

Address: b. c/o Imperial College of Science and Technology, University of London; h. 15 Stanley Gardens, London

As scientific adviser to Sir Alexander Cadogan¹⁴, chief British delegate to the United Nations Security Council and the United Nations Atomic Energy Commission, Great Britain in 1946 chose Sir George Paget Thomson, one of her most eminent physicists and, like his celebrated father, winner of the Nobel prize for work with the electron.

The only son of the late dean of British physicists, Sir Joseph John Thomson (who was awarded the Nobel prize in physics in 1906 for his discovery of the electron), George Paget Thomson was born in Cambridge, England, in 1892, while his father was Cavendish Professor of Physics in Cambridge University. His mother was a daughter of the late Sir George Paget, Regius Professor of Medicine at Cambridge, and the child was named for his maternal grandfather. He received his early education at the Perse School for Boys in Cam-

bridge, going thence to the university with which his family was so closely connected. There, at Trinity College (of which his father was afterwards master), he took first class honors in both the mathematical and natural science tripos in 1914. Immediately following his graduation that year he was appointed a fellow and lecturer on the faculty of Trinity's sister college, Corpus Christi.

World War I, however, interrupted his academic career before he had fairly gotten started. In 1914-15 he served in France with the First Queen's Regiment, in which he was given a commission. Then, from 1915 to 1919 he was attached to the Royal Air Force in an experimental capacity, working principally on aerodynamical problems. (He published the results of his investigations in 1920, in a volume entitled *Applied Aerodynamics*.) During 1918, also, he had been a member of the British War Mission to the United States. Returning to Corpus Christi College in 1919 to take up his post as fellow and lecturer, Thomson devoted most of his time during the next three years to research in the Cavendish Laboratory, acting also as an examiner for the mathematics tripos. He left Cambridge in 1922, becoming professor of natural philosophy in the University of Aberdeen, which post he held until 1930, when he was appointed to his present position as professor of physics in the Imperial College of Science and Technology of the University of London.

Professor Thomson's work has been in both theoretical and experimental physics, the latter predominating. Most of his early researches revolved in some way about the nature of positive rays, a field in which he made a number of valuable contributions. Sir William Bragg, in presenting him with the Hughes Medal of the Royal Society in 1939, pointed out in particular that it was Professor Thomson who discovered "that the small-angle scattering of protons in hydrogen could not be accounted for by treating the protons and electrons as point charges obeying the inverse square law of force." Thomson's most important contribution in the realm of atomic physics, for which he shared the 1937 Nobel prize with Clinton J. Davisson of the Bell Telephone Laboratories in New York, was the experimental verification by diffraction methods of Prince Louis Victor de Broglie's theory associating wave systems with moving particles. Not only was proof provided for De Broglie's theory, but the entire field of the structure of matter in surface layers, thin films, and gases was opened to scientific investigation because, once their diffraction characteristics had been established, the electrons were revealed as ideal tools to probe surface properties where the too-penetrating X-rays are capable of exploring only the depths.

According to an account in *Nature*, both Davisson and Thomson began intensive investigation of the nature of electrons about the same time, but independently of each other and with little reference to the theory formulated by De Broglie in 1924. Puzzled by certain anomalous results observed in experiments with

British Official Photo.

SIR GEORGE PAGET THOMSON

electrons and protons in helium and other gases conducted by themselves and others, Thomson and the late A. Reid, working in Aberdeen, were led to study the scattering of fast electrons in thin films of metal. In the June 18, 1927, issue of *Nature* Thomson and Reid published their initial report of the diffraction of cathode rays by a thin film of celluloid, but drew no conclusions. In the December 3, 1927, issue of the same periodical, Thomson's letter on the diffraction of cathode rays by thin films of platinum related his experiments to the De Broglie wave-particle theory, and in a longer report published by the Royal Society the scientist confirmed and extended his results.

How Thomson and Reid arrived at their conclusions was described by *Science* in its issue of October 12, 1928. In aiming the cathode rays or electron beams at a thin film of celluloid, platinum, or gold, they knew that the molecules in these materials would act as a lattice or diffraction grating from which the electrons would rebound. Particles hitting such a screen would scatter at all angles, producing a conical effect on a photographic plate exposed behind the screen. Waves, on the other hand, would bend, or be diffracted, at certain preferred angles, producing on the photographic plate a central dark spot surrounded by concentric rings. In the case of the cathode rays, the dark core represented the bulk of the electrons and the concentric rings the wave diffraction. To prove that these were not light waves, Thomson introduced a strategically placed magnet which, as would not happen with light waves, deflected the electrons from their courses and disturbed the photographic pattern. Since those historic experiments Thomson's work has centered in the application of these diffraction techniques in an intensive investiga-

tion of surface layers, thin films and gases, a field in which he is credited with being the first to see the enormous possibilities.

The scientist is the author or co-author of several important volumes in the literature of physics, dealing chiefly with his later work in electron diffraction and wave mechanics, but including a popular account of atomic physics as it had developed up to 1930, *The Atom* (revised in 1937). In collaboration with his father he prepared the third edition of the elder Thomson's *Conduction of Electricity Through Gases* (Vol. 1, 1928; Vol. 2, 1933), said by Sir William Bragg to be "the most important work there is on the subject." In the autumn of 1929 Thomson was George Fisher Baker nonresident lecturer in chemistry at Cornell University, and *Wave Mechanics of the Free Electron*, the published version of his talks, appeared in 1930. In 1939, together with William Cochrane, he published *Theory and Practice of Electron Diffraction*.

From 1937 to 1941 the professor of physics was a member of the Advisory Committee for Aeronautics of the British Air Ministry. After the beginning of World War II and while it was still doubtful that atomic energy could be employed for military purposes, he headed a committee of scientists coordinating the preliminary researches which by the summer of 1941 indicated that an atomic bomb could be expected before the end of the war. In 1943-44 he was again a scientific adviser to the Air Ministry. In 1946 he was named chief scientific adviser to Sir Alexander Cadogan, British delegate to the United Nations Security Council and Atomic Energy Commission. He has been quoted as fully supporting the United States plan for a world atomic energy authority and favoring, once control has been established, the utmost international cooperation to develop atomic energy for peacetime purposes. When President Truman announced his decision to release radioactive isotopes to other countries early in September 1947, Thomson declared that he was particularly aware of the importance of this decision: "This is one of the greatest contributions made in the last generation to the progress of biology and medicine."

Thomson was knighted in 1943. He has been a fellow of the Royal Society since 1930, is an honorary fellow of Corpus Christi College, Cambridge, and holds an honorary D.Sc. degree from the University of Lisbon. He and Kathleen Buchanan Smith, the daughter of the Very Reverend Sir George Adam Smith, principal of Aberdeen University, were married in 1924. (Mrs. Thomson died in 1941.) The Thomson family includes two sons and two daughters. Reporter Jack Werkley, who interviewed him for the *Herald Tribune* when he came to New York for the U.N. atomic energy discussions, described him as "a thin, gray-haired man dressed on conservative British lines—blue shirt, tie, and suit—working out the British position on scientific questions in a book-filled hotel room."

THORP, WILLARD L(ONG) May 24, 1899- United States Government official; economist

Address: b. Department of State, Washington, D.C.

One of the members of the "Roosevelt Faculty" of university professors was Willard L. Thorp, called by the New York *Herald Tribune* (November 17, 1946) "one of the few professors brought to Washington in the first year of the New Deal who is still there, and rising." President Truman⁴⁵ appointed him Assistant Secretary of State for Economic Affairs in November 1946. An economist of repute, Thorp is the author of texts in the field. Thorp represents the United States on UNESCO and is an alternate to the U.N. General Assembly, to both of which posts he was named in 1947.

Willard Long Thorp was born of New England stock on May 24, 1899, the son of Susan Gertrude (Long) and the Reverend Charles Nicholas Thorp. Reverend Thorp, a Congregational clergyman, had a pastorate in Oswego, New York, where his son was born; in Chelsea, Massachusetts, where his son went to grammar school; and in Duluth, Minnesota, where his son attended high school. Young Willard Thorp was president of his class at Duluth Central High School, from which he was graduated in 1916. In that year, Thorp was enrolled at Amherst College. (His brother is also an Amherst man; their sister Margaret is supervisor of music in the Summit, New Jersey, public schools.) Willard Thorp's college career, like that of many other young men of that period, was interrupted by World War I. In 1918 he was commissioned a second lieutenant in the Infantry of the United States Army, later assigned as a personnel officer in the motor corps training detachment at Pittsburgh, Pennsylvania. After demobilization, he returned to Amherst, where his studies brought him prizes for translating Latin poetry into English verse and for debating, two prizes in mathematics, and one for the best essay on the topic of commencement. Extracurricularly, Thorp was captain of the tennis team, leader of the musical club, banjo player in a dance orchestra, and a fraternity brother of Chi Phi. His high scholastic standing also brought him membership in Delta Sigma Rho and in Phi Beta Kappa by the time he received his B.A. degree in 1920.

In his senior year at Amherst, Thorp had planned to major in mathematics and political science. The courses, however, conflicted; the only solution which would meet the college requirements and fit into his schedule was to substitute economics for political science. Until

Press Assn., Inc.

WILLARD L. THORP

then, Thorp had agreed that economics was a "dismal science," but now he was exposed to such economists as Wilton H. Hamilton, Ernest Barker, and R. H. Tanney. Thorp wrote: "Professor Hamilton soon showed me that mathematics could be used through statistics as a tool in economics." By giving Thorp special assignments, Hamilton prepared him to accept an offer to teach at the University of Michigan, an appointment which the professor had arranged. Thorp received his M.A. degree there in 1921 with the acceptance of his thesis, *Correlation and the Price of Coal*; his doctoral dissertation was *The Integration of Industrial Operation* (1924), for which Columbia University awarded him his Ph.D. degree in 1924. His one honorary degree, an LL.D. from Marietta (Ohio) College, came eleven years later.

Following an instructorship in the department of economics at the University of Michigan (1920-21), Thorp returned to Amherst, where he taught as an instructor in economics and social institutions (1921-22) and later as a professor of economics (1926-34). The intervening years (1923-26) were spent in New York on the research staff of the National Bureau of Economic Research, with which he remained for an additional seven years, until 1933. He was also chief statistician for the New York State Board of Housing during 1925-26. It was Thorp's reputation as an economist that brought him to Washington as a "brain truster" of the Roosevelt Administration. When he was first named for a post in the Department of Commerce in 1933, Thorp was rejected by a Senate committee which suspected him of either having been a Republican or of having once voted Republican. (Thorp affirms that he was then and is now a Democrat.) In 1933-34 Thorp directed the United States Bureau of Foreign and Do-

THORP, WILLARD L.—*Continued*

mestic Commerce, a "much deflated" section of the Department of Commerce when he took over; concomitant with this was his membership on the Federal Alcohol Control Administration (1933-35). In 1934 Thorp became consumers' division director of the National Emergency Council, serving in the same year as chairman of the advisory council of the National Recovery Administration.

Although he continued to serve the Roosevelt Administration in an advisory capacity, Thorp returned to private enterprise, for ten years beginning in 1935, as director of economic research for Dun and Bradstreet, Inc., and as editor of the monthly *Dun's Review*. In 1938 he was director of studies for the Temporary National Economic Committee: on one occasion *Newsweek* wrote, "Dr. Thorp's testimony . . . to the TNEC . . . contrasts sharply with the business-baiting speeches of such New Dealers as Secretary Ickes⁴¹ and Solicitor General Robert Jackson⁴². Businessmen hailed it as an indication that sound, objective thinking on economic problems was still possible in Washington." Thorp was also a special adviser on economic studies to the Secretary of Commerce at the time (1938), later becoming economic adviser to the Secretary of Commerce for 1939-40.

In the State Department Thorp served as deputy to the Assistant Secretary for Economic Affairs in 1945-46, before succeeding William L. Clayton⁴³. (Clayton became Under Secretary of State for Economic Affairs.) Thorp, who was named by President Truman on November 8, 1946, was confirmed by the Senate as Assistant Secretary of State for Economic Affairs on January 17, 1947. He is thus charged with general responsibility in the field of economic affairs, examining and making policy recommendations on developments which affect the economic foreign policy of the United States. Early in 1947 Thorp was also chairman of a Government committee which conducted hearings on the proposed International Trade Organization. In the course of his State Department duties Thorp had been adviser on economic matters to the United States delegation at the Paris Peace Conference in the fall of 1946, continuing in that capacity for the American delegation at the Council of Foreign Ministers when it met in New York later that year. In addition to his work with the State Department, Thorp was made American representative to the United Nations Economic and Social Council in 1947, and alternate representative to the United Nations General Assembly. (He was chosen for the UNESCO position after Francis Biddle⁴⁴ refused the nomination.)

While attending the July 1947 session of the United Nations Economic and Social Council, Thorp abstained from the voting which granted Hungary membership in UNESCO. At a later meeting of the same body Thorp indicated that the United States had no intention of abandoning the Truman doctrine of military aid to countries threatened by communism. When the International Bank for Reconstruc-

tion and Development and the International Monetary Fund sought affiliation with the United Nations as specialized agencies in August 1947, the Soviet Union opposed the move. "I can't think of anything," said Thorp in respect to this, "that will undermine the Economic and Social Council more than not to make agreements with these agencies." The measure was later approved by a vote of 13 to 3.

The United States delegation to the Washington conference on coal in August 1947 was headed by Willard Thorp. Concerned mainly with Ruhr coal production and its relation to European rehabilitation under the Marshall Plan, the talks, however, also considered the British economic crisis and the ability of the British to contribute to the refinancing of the Ruhr mines. The British-American agreement, reached in September 1947, provided for joint control of the mines, for improvements in housing, transportation, personnel methods, labor relations, and for installation of new machinery in the Ruhr area. The question of nationalization of the mines was not solved. Of this Thorp said, "The United States still disagrees with Britain's attitude on socialization."

At a meeting of the Joint Economic, Financial, Social, Humanitarian, and Cultural Committee of the U.N. General Assembly in October, Thorp replied to charges made by Amazasp A. Arutiunian, Russian delegate to that body, who alleged that agreements among the International Bank, the International Monetary Fund, and the United Nations were in violation of the Charter. In his rebuttal Thorp denied that the draft agreements would in any way infringe the authority of the U.N. since the membership of the special agencies, to a great extent, paralleled that of the U.N. itself. It was about this time that the Assistant Secretary of State took over the activities formerly supervised by William L. Clayton, Under Secretary of State for Economic Affairs, who resigned in October.

Economist Thorp told a meeting of New England business and industrial leaders (in November 1946) that the United States foreign policy is not only frequently limited by domestic policy, but "in the very broadest terms, our domestic policy is basic to our foreign policy." It is his belief that "the oversimplification which implies isolation between domestic and foreign policy problems is not only untrue, but it is dangerous." He has expressed his economic views in lectures at colleges, in addresses at meetings, in forums on the radio, in articles for magazines, and in his books, *Business Annals* (1926), and *Economic Institutions* (1928). He is editor of *Economic Problems in a Changing World* (1939), co-author of the monograph, *The Structure of Industry* (1941), and is a contributor to the volumes *Recent Economic Changes* (1921), *America's Recovery Program* (1934), *Economic Essays in Honor of Wesley Clair Mitchell* (1935), and *Science and Social Changes* (1939). He has also contributed material on economics to the *Encyclopedia of the Social Sciences*.

Formerly a trustee of the Associated Gas and Electric Corporation (1940-45), Thorp's business affiliations in 1947 include the offices of director of the General Public Utilities Corporation and director of the Associated Electric Company. He is a trustee of Amherst College, and is also chairman of the executive committee of the Social Science Research Council, a fellow and director of the American Economics Association, and in January 1947 he succeeded Isador Lubin⁴¹ as president of the American Statistical Association; he at one time belonged to the Trade and Commerce Bar Association. Thorp presided over meetings of the International Statistical Conference in September 1947 and spoke before the First Hemispheric Stock Exchange Conference that same month.

Thorp was married to Hildegard Ellen Churchill, an Amherst girl, on August 24, 1923; their children are Barbara Ellen, Robin, and Jeffrey. This marriage was terminated by divorce in 1947. Subsequently Thorp became the husband of Clarice F. Browns, an attorney. The official attended the First Congregational Church in Amherst, was a member of the Massachusetts State Congregational Conference, and was once a trustee of the Annuity Fund of Congregational Ministers. For several years Thorp called square dances nearly every Saturday night for the "Lyons Plains Hillbillies" of Connecticut. In addition to square dancing, tennis and golf keep the brown-haired, brown-eyed official's six-foot-one, 192-pound physique in condition. The *Herald Tribune* found Thorp the "husky, athletic type—as he needed to be one day . . . when he sat in a commission session at the Paris Peace Conference for twenty-four hours without a break."

TOGLIATTI, PALMIRO (tôl-yă'tê päl-mě'rô) Mar. 26, 1893- Italian Government official; Communist party leader

Address: b. c/o Communist Party Headquarters, Rome

Since returning to his native Italy in March 1944 after eighteen years of exile, a great part of which was spent in Russia, Palmiro Togliatti, Italy's Communist political chief, has helped to consolidate the position of the Italian Communist party as a strong political force in the country. There are, according to official sources, 2,200,000 Italians who are members of the Communist party. Togliatti is one of the seven top leaders of European Communism, and is viewed by some observers as the "most acute political mind in Italy." He is well known as Ercole Ercoli, his pseudonym.

Because of Palmiro Togliatti's long exile and his years as an underground revolutionary, his life history up until the time he re-entered Italy in 1944 has many blank pages. It is known that he was born in Genoa on Palm Sunday, March 26, 1893, and thus was given a first name which signifies palms. His father was a bookkeeper for the Government. Young Togliatti studied at Turin University, winning a scholarship in law, and later, received a Ph.D. degree in jurisprudence. It was while he was at the university that he joined the Socialist party and began to devote his time to writing for Socialist publications. In 1921 he was one of the Left-wing leaders who seceded from that party to form the Italian Communist party. When the Fascists marched on Rome in 1922, he was imprisoned; after his release he worked with the Communist underground, using the name of Ercole Ercoli. In 1926, pursued by the Fascist police, he escaped from Italy and went to France.

During the next eighteen years, Togliatti wrote, as Ercoli, for radical publications and was active in the Communist Third International (Comintern), the central organization of the Communist parties of the world. Between assignments abroad he lived and worked in Moscow, from whence he, again as Ercoli, made anti-Fascist broadcasts to Italy. He was reported to have become (as Comintern Executive Committee member, *Time*, May 5, 1947) "one of the few Western Communists who can truthfully boast of Stalin's personal trust and friendship."

Togliatti was chief of the Comintern in Spain during the Spanish Civil War, participating actively in the Loyalist cause. He was placed in prison for a period by two Popular Front generals, Miaja and Casado, who made their peace with Franco, but was released when a group of soldiers in the International Brigade stormed the jail. After making his way to France, he returned later to Barcelona and the Loyalists' "last-ditch fight," then went to Morocco, and finally back to Moscow. In 1943 Togliatti (as Ercoli) was one of the seventeen high-ranking Communists signing the decree which dissolved the Comintern. In a speech short-waved to Italy, Togliatti reported that the action permitted "a greater adaptability of the fundamental program and favored the

Press Assn., Inc.

PALMIRO TOGLIATTI

organization of more independent movements adapting each party to the character, traditions, and customs of each people." This was in line with the so-called "conservative" trend of the Communist party—a trend which characterized the political activities of Togliatti up to 1947. In that year the Italian Communist was named as a representative to the newly organized Cominform (Communist Information Bureau).

After the declaration of the Italian armistice in September 1943, Togliatti reportedly left Moscow for Italy, but for reasons unknown he returned to Moscow (*Christian Science Monitor*, November 15, 1943), where he broadcast an appeal to the Italian people to unite in a common effort to drive the Germans out of Italy. It was not until March 1944, that, through the intervention of Andrei Vishinsky⁴⁴, the Allied Military Government granted Togliatti permission to return to his native country. He went to Naples. Once in Italy, he succeeded, in April, Eugenio Reale as Communist party leader. He immediately announced his intention to support the monarchy and the Badoglio⁴⁰ Government and the same month (April) was appointed Minister without Portfolio. He gave his reason for supporting this Government, which admittedly still had Fascists within its ranks: "We wanted Italy to have a government that would assure our participation in the fight against Germany. . . . The formation of the Badoglio Government meant complete acceptance of the armistice and . . . the participation of Italy in the war against Germany."

In June 1944, when the liberation leaders of Rome refused to serve under Badoglio because of his former Fascist association, Togliatti helped to effect Badoglio's resignation and the establishment of a Government under Ivanoe Bonomi⁴⁴. Togliatti explained his party's participation in a Government which was de-

scribed in the *New York Times* for December 13, 1944, as "hardly more than an administrative arm for the Allied Commission," by indicating that if the Communists had not joined, the "Fascist reactionary forces would have encountered less resistance to their maneuvers." Not many months later Togliatti (a Minister without Portfolio in the Bonomi Cabinet), strengthened by an alliance with the Socialist party, one of whose leaders is Pietro Nenni⁴⁷, began to demand a change in the Government. In December the second Bonomi Government was formed and Togliatti was appointed Vice-Premier. By the spring of 1945, however, Togliatti together with other Leftist leaders began to demand the resignation of Bonomi, whom they declared represented reactionary forces. This resulted in the establishment in June 1945 of a fourth Government for Italy. Ferruccio Parri⁴⁵ was named Premier, and Togliatti became Minister of Justice. The Cabinet represented all the various political factors in Italy—Labor Democrats, Socialists, Communists, Liberals, Action Party members, and Christian Democrats.

The next year, the general election of June 1946 placed the Christian Democrats at the head of the Italian Government, with Alcide de Gasperi⁴⁶ as Premier, and the plebiscite of the same month put an end to the reign of the House of Savoy. Even though the Christian Democrats had polled more than eight million votes and were judged at the time "the strongest single party in Italy," they were not so strong as the Communists and Socialists combined. Togliatti refused to accept a position in the De Gasperi Cabinet, but the Communists held four Cabinet positions, leaving Togliatti free to criticize the Government from the outside and to consolidate the Communist position. The party platform at that time called for private property rights, individual liberty, and religious freedom.

Communist and Socialist disapproval of the De Gasperi Government was heightened during the debates on the Italian peace treaty. At the Paris conference in August 1946, Togliatti was reported to have conferred with the Russian Foreign Minister Molotov⁴⁰ "primarily to advise him on his speech," which scorned De Gasperi's plea for a more lenient treatment from the Allies. Molotov's speech followed closely the Communist criticism of the Italian Government by remarking that De Gasperi's position was merely "a justification for claims of aggrandizement of the old Italy." In the Italian Constituent Assembly debate on ratification of Italy's peace treaty, in July 1947, Togliatti revealed himself as opposed to its acceptance. Although the vote taken at the end of the debate was secret, there were indications that the Communists were among the eighty abstainers (*New York Herald Tribune* and *New York Times*, for August 1, 1947) since they were not sure of Moscow's attitude toward the treaty at the time. Togliatti was also active in the discussions of the Trieste question. He made a trip to Belgrade in November 1946 and received from Tito⁴³ the promise of a willingness to discuss the ex-

change of the city of Gorizia for settlement of the Yugoslavian claims on Trieste. When Tito's suggestion was passed over and Trieste was established as a free city, Togliatti accused De Gasperi of conspiring with the United States and Great Britain in the controversy. Early in 1947, in the Communist national paper, *L'Unità*, Togliatti accused De Gasperi of using Italian independence "as an article of trade" when he came to the United States to seek funds for Italian rehabilitation. He also demanded that the Government nationalize immediately the "monopolistic industries in general, especially in the field of electricity."

In March 1947 the Communist party aided the Roman Catholic Christian Democrat party to introduce the Lateran Pacts of 1929, which re-established relations between the Italian Government and the Vatican, into the proposed republican Italian constitution. The new constitution containing the Lateran agreement was adopted, thus making the Roman Catholic the state religion in Italy and its teachings obligatory in all educational institutions. In answer to questions concerning his stand on the Lateran Pacts in the new constitution, Togliatti replied that he believed such a course would make for religious peace in Italy. Only the Socialists, Republicans, and Actionists opposed the religious clauses of the new constitution.

The coalition among the Communists, Socialists, and Christian Democrats ended in June 1947 and De Gasperi, still supported by a vote of 279 to 234, decided to govern Italy without the Communists or Socialists. This was the first time since the liberation that the Left-wing parties were not in the Government. Since then the opposition of the Communists has intensified and the fear of violence in Italy has mounted. Togliatti maintained, in past utterances, that his party's immediate goal is the "conquest of power," but that it was to be attained by democratic, non-violent methods. In the *New York Times* for September 8, 1947, he was reported, however, as threatening to use "30,000 well-armed Partisans" to fight the De Gasperi Government if the latter did not soon give "proof of its democratic spirit." He was to declare that "there is a will for revolution in large strata of the Italian people. . . . Revolutions are not declared and not made by parties. Parties only direct them, and if they are strong and well organized and have a majority of the people, direct them to victory." He has also charged the United States with interference in Italian affairs, with trying to "spread another war." Originally he had supported the Marshall Plan, "provided," according to Arnaldo Cortesi (*New York Times*), "it was not used against Russia," and according to another report, as long as it did not "create blocs or subject Italy to capitalist interests." Hunger marches and country-wide strikes in farms and factories, culminating in a short-lived general strike in December 1947, marked the Italian political scene after the split. Several times during the last months of 1947 Togliatti tried unsuccessfully to unseat De Gasperi, who then obtained several votes of confidence.

While an underground worker in Italy, Togliatti was married, sometime between 1922 and 1926 to Rita Montagnana, a former seamstress who now heads Italy's Communist women. Their son, Aldo Togliatti, is said to have returned to Italy from Russia in September 1945. Togliatti is described as quiet in manner and speech; he usually wears a double-breasted blue business suit. Small in stature, with graying brown hair and a "studious look behind horn-rimmed glasses," the Communist leader is an intellectual with an interest in music and classical Greek literature. In his speeches he often quotes from the Bible, Dante, and Lincoln. He enjoys watching soccer games, and likes to bowl and play *scopone*, a card game. To his co-workers, he is known as "Il Migliore" ("The Best").

TOUREL, JENNIE (tōō-rēl') June 22, 1910- Opera and concert singer

Address: b. c/o Metropolitan Musical Bureau, Columbia Concerts, Inc., 113 W. 57th St., New York 19; h. 200 W. 58th St., New York 19

The most famous Carmen and Mignon in France during the 1930's, Jennie Tourel, mezzo-soprano of the Paris Opéra-Comique and the Metropolitan in New York, has since 1941 been acclaimed by American critics as the "greatest recitalist to come up in a decade" and as a "singer who has set a new height in the standards of recital giving."

Of Russian parentage and French training, Jennie Tourel (whose professional name is an adaptation of her teacher's) was born on June 22, 1910, in Montreal, Canada, while her parents were on a business trip. At about the age of one year she was taken to Paris, where the family settled and she received her education. Music was an important part of her life from the very beginning. Her mother, possessed of an appealing singing voice, used to sing to her baby daughter in Russian, and at the age of two the child was already repeating many of these songs. She was always singing during her childhood, in Russian, although she knew French equally well. Her formal musical instruction, under private teachers, began when she was six, with lessons on the flute. Two years later she began to study the piano, but, she told Mary Braggiotti of the *New York Post* in 1946, she was lazy about practicing and continually slighted the left hand: she never had the patience to work at the instrument because she played fairly well by ear.

It was said that she might have been a pianist had her voice not been recognized as unusual when she was about sixteen. Vocal lessons began for her in 1926, with the Russian soprano Anna El-Tour, who had come to Paris to teach at the Eastern Conservatory the year before

De Bellis

JENNIE TOUREL

with a reputation acquired in Moscow and Berlin. The young singer studied with Mme. El-Tour for the next two years, but, she was almost ashamed to admit in 1946, no longer. Because at the time she felt that her "own brain" could be her best teacher and that she was expending too much effort on what should have been a pleasant occupation, she chose to work instead with a coach on repertoire and to perfect her vocal techniques by observing and imitating the best singers then in Paris. This she was able to do because she already had acquired complete mastery of the fundamentals of good singing, the secret of which, she insists, is proper breath support.

Miss Tourel's big chance came in April 1933, after a member of the Paris Opéra-Comique had heard her singing at a party and suggested that she come to one of the Opéra-Comique's regular Monday auditions. Among the thirty-two would-be artists auditioned that day, she was the last, and the only one to be engaged. Because she lacked stage experience, however, she did not at once receive a contract. Instead, the management allowed her to make her debut as a guest in the title role of *Carmen*, intending to judge her more fully on this performance. By the end of the first act, it is related in *Etude*, the audience was "interested"; at the end of the second she received an ovation; at the end of the third the manager appeared to offer her the coveted contract for leading roles at the Opéra-Comique. Gradually she gained experience and built up a repertoire embracing all the leading mezzo-soprano parts, including many unfamiliar to American audiences, such as Charlotte in Massenet's *Werther* and the title roles in Rossini's *La Cenerentola* and Bizet's *Djamileh*. Her greatest successes she achieved in Bizet's *Carmen* and Thomas' *Mignon*, in each of which she had sung more than two hundred times when she fled Paris

abruptly in 1940, having been for five years the city's only Mignon and virtually its only *Carmen*.

When the Nazis entered Paris in June 1940, posters were up announcing another Tourel *Carmen*, but she never sang that performance: she had gotten out of the city just two days ahead of the invader, leaving most of her possessions behind. Arriving in Lisbon, she fell ill, and, consequently, it was not until January 1941 that she arrived in the United States to begin her career anew. Then her first thought was of the Metropolitan—where she had sung Mignon and *Carmen* in the spring season of 1937, with excellent notices—but the Metropolitan already had apportioned all roles for the remainder of its season. The Metropolitan's conductor Wilfred Pelletier⁴⁴, however, offered her an opportunity to sing *Carmen* and Mignon under his baton in Montreal, and after that she was engaged for these and other roles in Havana, Chicago, Toledo, Philadelphia, Boston, Toronto, and Baltimore. But the event which really launched her career in the United States occurred in October 1942.

For some time Arturo Toscanini⁴² had been searching for a mezzo-soprano soloist for his projected performance of Hector Berlioz's dramatic symphony *Roméo et Juliette* with the New York Philharmonic-Symphony Orchestra on October 7, 9, and 11, 1942. A friend of a friend, she has said, succeeded in getting her an audition with the maestro, and the critics did the rest after the concert. In the words of Virgil Thomson⁴⁰ of the New York *Herald Tribune*: "One was definitely aware when Miss Tourel sang that the house was sitting up and taking notice of some magnificent vocalism. Miss Tourel was a joy. She is a singer in the great tradition. Her voice is beautiful, her diction clear, her vocalism impeccable and her musicianship tops." Asked later how it felt to sing under the baton of the great Toscanini, Jennie Tourel replied: "When you walk out with Toscanini on the platform you are not nervous—you are ecstatic. Before me was Toscanini. Behind me was the Westminster Choir. It was like a holiday."

The engagement opened the way for Miss Tourel. In rapid succession she was heard with the Boston Symphony Orchestra under Serge Koussevitzky⁴⁰ in both Boston and New York, with Leopold Stokowski⁴¹ and the NBC Symphony in the American première of Serge Prokofiev's⁴¹ *Alexander Nevsky Cantata* in March 1943, again with Stokowski as soloist in Bach's *St. Matthew Passion*, presented at the Metropolitan Opera House on April 9, 1943. Her next appearance in New York was at Lewisohn Stadium on July 31, 1943, when the critic of the New York *Times* observed significantly: "Miss Tourel's voice and art are well known. She was in excellent form last night." On November 13 came her New York recital debut at Town Hall, on which occasion Virgil Thomson wrote: "Miss Tourel is mistress of a wider range of coloration in all ranges and at all volumes than any other singer I have ever heard. Her pitch is perfect in the most difficult modern music. Her legato skips

are the kind of *bel canto* one dreams about. . . . Her musicianship in every domain is so thorough that from the whole technical and intellectual aspect her work belongs clearly with that of the great virtuosos of music."

Jennie Tourel's second, and official, Metropolitan debut was made as Mignon on March 16, 1944, critics and public approving. On this occasion the reviewer from *Musical America* wrote: "It would be oversimplification to set Miss Tourel down as a miniaturist, but it is true that her greatest accomplishments lie in exquisitely wrought detail, highly polished minutiae of musical as well as histrionic expression and sensitivity to the finer points of interpretation. Some of these small-frame accomplishments inevitably are lost upon the audience in a theater as large as the Metropolitan, but even those in the farthest reaches of the top balcony were persuaded by the elfin charm and the subtlety of nuance with which she recreated the wild, gypsy creature to the life. Her voice, while not large nor even remarkably colorful, is a joy to hear because it is so perfectly produced and is deployed with such unmistakable mastery of technique."

When she next appeared as Carmen, on March 24, 1944, Herbert Peyser corroborated his colleague's observations. "The writer of these lines, who obtained his first experience of the Tourel Carmen at the Opéra-Comique in Paris, can vouch for the unwavering consistency of the impersonation from year to year. Except for the enhancement of nuances and the deepening of certain details the artist has adhered with unvarying logic to her fundamental conception. Its keynote is simplicity and the avoidance of far-fetched or flamboyant effects. It has the charm of French style, an unceasing vitality, and a richness of well contrived detail that falls effortlessly into its place in the general scheme. . . . It is an exquisitely sensitive rather than a prodigiously sensational accomplishment. Mme. Tourel sang the music with the unfailing beauty of her finished vocalism and the full sensuousness of her seamless scale."

The singer's other roles at the Metropolitan have been Adalgisa in *Norma* and Rosina in *The Barber of Seville*, first heard on December 15, 1944, and March 14, 1945, respectively. In the latter case she was setting a Metropolitan precedent, because, although this coloratura role was originally written for mezzo-soprano voice, it had always been sung by a soprano at the Metropolitan. (Back in 1941, it is interesting to note, Miss Tourel had sung a soprano role, Lisa in Tchaikowsky's *Pique Dame* with the New Opera Company.) At the close of her first season with the Metropolitan, in the summer of 1944, she left for first appearances in opera and concert in Mexico and Brazil, where she sang in *Norma* and Verdi's *Masked Ball* as well as in *Carmen* and *Mignon*, gave an extra two performances in *Carmen* to satisfy popular demand, and on the occasion of her first Brazilian recital was forced to repeat al-

most her entire program before the concert broke up with the singing of the "Marseillaise" in honor of the liberation of Paris earlier that day. With the 1945-46 season and her second transcontinental tour, Miss Tourel began to devote herself more exclusively to recital, winning critical superlatives at every appearance. The year 1947 found her back on the Metropolitan's roster, and she was also engaged to sing the lead in Rossini's *La Cenerentola*, the Christmas spectacle planned for Covent Garden, in London.

Jennie Tourel's voice has the even, velvety texture which the critics have always found so rare among singers, great flexibility, and a range extending from low G to high C, three notes wider than the average mezzo-soprano's. In an interview published in *Etude* of March 1943, she has set forth what she believes to be the basis and *sine qua non* of all good singing. Behind beautiful tone, meaningful phrasing, correct resonance, perfect pitch, and clear diction, she has stated, lies one cardinal factor, proper breathing. "In my opinion, the secret of good vocal production lies in a complete mastery of breath support. Vocal problems (as distinguished from musical problems) may be classified in a most general way into those of production and those of flexibility. The former have to do with the emission of tone; the latter, with the technical equipment that enables the tone to obey the wish of the singer. Both are indispensable to good singing—but production must come first! . . . Most of all, concentrate on breath support—all errors of production can be rectified by the fundamental correctness of support."

Short, dark, and vivacious, Jennie Tourel, an American citizen since December 1946, says she sings as an outlet for her emotions, which are "always burning." An extraordinary linguist, able to capture the intrinsic color and rhythm of a language with amazing speed, she can if the occasion warrants it sing (and converse) in seven languages—French, Russian, English, German, Italian, Spanish, and Portuguese, the last the language of the Villa-Lobos⁴⁶ songs which she has made so peculiarly her own. Said Virgil Thomson of this gift: "She moves around in each tongue as if it were a whole new landscape and climate, untranslated, untranslatable and unique." But singing forms only a part of Jennie Tourel's interests. Her tastes embrace books, museums, paintings, the theater, and the movies. The latter she saves up for her spare hours on tour; plays and concerts are her fare in New York. Her constant companion, even on tour, is her French poodle Minos, who would have been left behind in France had his mistress not made him sit up and beg to be permitted to accompany her on the plane for Lisbon.

TOYNBEE, ARNOLD J(OSEPH) (toin'-bē) Apr. 14, 1889- British historian

Address: b. c/o Royal Institute of International Affairs, Chatham House, St. James's Sq., London; h. 45 Pembroke Sq., London

In 1934 the first three volumes of *A Study of History* by Arnold J. Toynbee, research professor of international history at the University of London and director of studies at the Royal Institute of International Affairs, were published, and in 1939 a second three appeared. Although the work is (in 1947) not yet com-

ARNOLD J. TOYNBEE

pleted, the London *Nation* commented, "Students of history have concluded that for freshness, originality and boldness of concept, Toynbee's work is a major contribution to modern thought." Despite certain faults, *Nation* also stated, it deserves to rank with such accepted classics as Gibbon's *The Decline and Fall of the Roman Empire* and Spengler's *The Decline of the West*. New interest in the work was stimulated in 1947 by the publication of an authorized one-volume abridgement by David C. Somervell, which in two months climbed to second place on best-seller lists.

Arnold Joseph Toynbee was born in London on April 14, 1889. His father was a social worker, and his mother one of the first women in England to receive a college degree. An uncle, Arnold Toynbee, sociologist, economist, and author of *The Industrial Revolution*, gave his name to Toynbee Hall, the first social settlement in England, established in the East End of London in 1884. Young Arnold attended Winchester and Balliol College, Oxford, at both of which he was a Scholar, and received what he has called "an old-fashioned education in Greek and Latin classics." The year after leaving Oxford he spent partly as a student in the British Archaeological School at Athens, partly on a walking tour among

the ancient ruins of Greece. His Greek sojourn had two effects on him, he has indicated: in the cafes of Athens he became aware of current international affairs through hearing discussions on the foreign policy of Sir Edward Grey, then Great Britain's Secretary of State for Foreign Affairs; and, contemplating the ruins of ancient civilizations, he began to ponder upon their relationship to his own times. In 1912 Toynbee returned to Balliol as a fellow and tutor in ancient history, remaining in that post until 1915, during which period he began his career as an interpreter of the contemporary scene: he contributed articles to the *Nation* and wrote two volumes, both published in 1915 and received with mixed reviews, entitled *Nationality and the War* and *The New Europe*.

In 1915 Toynbee entered the service of the Government, working for a time in the Political Intelligence Department of the Foreign Office and in 1919 serving as a member of the Middle Eastern section of the British delegation to the Peace Conference at Paris. After World War I, in 1919 he was named Koraes Professor of Byzantine and Modern Greek language, literature, and history at the University of London. There he became research professor of international history in 1925. Also in 1925, he was appointed director of studies in the Royal Institute of International Affairs in London. During the Greco-Turkish War (1921-22), Toynbee took a year's leave of absence to act as correspondent for the *Manchester Guardian*. Upon his return he wrote *The Western Question in Greece and Turkey* (1922). Reviewers called it a fair and objective appraisal, the *New Republic* saying: "The title is a neat epitome of the contents. The Eastern Question, that insoluble deposit left by the dissolution of the Ottoman Empire, is analyzed from the standpoint . . . of Greeks and Turks; and is correctly renamed the Western Question because shown to have been mainly produced by the interference, partly unconscious, partly covetous or merely inept, of the great Western powers." In 1923 Toynbee investigated for *Asia* the changes which had taken place in Turkey since his visit of 1921.

Together with Veronica M. Boulter, who has been his partner in the undertaking from its inception to the present, the historian was also preparing at this time the first volume in a series of international yearbooks issued, beginning in 1924, by the Royal Institute of International Affairs. Entitled *A Survey of International Affairs, 1920-23*, it was received, in the words of the *Spectator*, as "a masterly and penetrating study in a short compass." The second volume in the series, *Survey* said in 1925, "combines in a peculiarly happy manner a factual summary of international events with an objective interpretation which in almost every instance skillfully avoids even a suggestion of partisanship." Toynbee's *The World After the Peace Conference*, published in 1925, was intended to constitute a prologue to his book, as well as an epilogue to the Royal Institute's *History of the Peace Conference*

of *Paris*, to volume six of which he had contributed the chapter on non-Arab territory of the Ottoman Empire. *Journey to China*, published in 1931, was a somewhat less serious undertaking, a record of Toynbee's impressions on a six months' trip—across Europe and the Middle East, by ship to the Far East, and back to the West via the trans-Siberian railway—which he took when invited to attend a conference of the Institute of Pacific Relations in Japan. The essays appeared first as a series of articles in the *London Nation* in 1929 and 1930.

Toynbee's magnum opus, the still uncompleted (in 1947) *A Study of History*, dates back to 1922, when he jotted down the core of his project on half a sheet of writing paper. In the ensuing two years, he has said, he "got the entire shape of it outlined in notes," and he has been writing it ever since. (In general, he has remarked, he tries to work on the *Survey of International Affairs* in the winter, on *A Study of History* in the summer.) The first three volumes were published in 1934, the second three in 1939, and he expects to have the final three ready for publication by 1950. The complex thesis of *A Study of History* is set forth in the *Christian Science Monitor* in these words: "Toynbee studies the courses of twenty-six civilizations that, by his reckoning, have existed, and . . . draw from their geneses and growth, their decline, disappearance or petrification . . . such main hypotheses as that the progress of a civilization is, up to a point, in direct ratio to the difficulties presented by its environment [either materialistic or human]; that the 'source of action' is in the creative individual, or in small minorities of individuals; that the criterion of growth is not to be found in military, political, or technical accomplishment, but in an ability to respond adequately to a succession of less material challenges [he sees the one hope of Western civilization in a re-birth of the Christian spirit]; and that a 'breakdown,' resulting in decline, arrested development, or a despotic 'Universal State,' has always occurred through a failure on the part of the minority, which becomes either mechanical-minded or tyrannically urgent and produces social disunity."

Reception of the several parts of the work varied. In general its scope and magnitude received high praise. "As a contribution to human knowledge it bids fair to be one of the most influential books of our generation," wrote Ellsworth Huntington in the *Saturday Review of Literature* in a 1934 issue. "Arnold Toynbee has given us by far the most significant contribution that any historian has made in the twentieth century toward the understanding of ourselves and of our own age," Christian Gauss declared in the *New York Herald Tribune* in 1940. It was when the reviewers began to consider it in detail that many of them expressed doubts. Leonard Woolf wrote in the *New Statesman and Nation* in 1940 in a typical statement: "A work of this nature challenges criticism as a whole and not merely in its several parts, and it is when the reviewer takes up this challenge that he begins to feel

intimidated, for he can no longer honestly confine himself to cries of hosanna and he has to disagree with Professor Toynbee. The more one reads his book the more doubtful one becomes of the legitimacy of his general method and the soundness of his general conclusions." A synthesis of the two viewpoints was reached by the *Manchester Guardian* in discussing the one-volume abridgement made by David C. Somervell, assistant master in the English public school of Tonbridge, and published in 1947: This "admirable abridgement . . . enables the student to concentrate more easily on the argument which is too often lost in the rich labyrinth of the original. . . . And yet, after reading it, one is tempted to say that the argument is the weakest part. The high qualities of Mr. Toynbee's great work lie rather in his poetic vision, in his freedom from the trammels of time and space, and in the Olympian sweep of his glance across the centuries."

Toynbee is likewise the compiler of the anthologies *Greek Historical Thought* (1924) and *Greek Civilization and Character* (1924), editor of *British Commonwealth Relations* (1934), co-author with K. P. Kirkwood of *Turkey*, in the *Nations of the Modern World* series (1926), and has contributed chapters to other volumes. In 1945 he began working on a history of international relations in the decade 1939-49 under a grant from the Rockefeller Foundation. Since 1920 he has also been a frequent contributor to such periodicals as *International Affairs*, the *London Nation*, *Asia*, *Contemporary Review*, the *New Republic*, the *Atlantic Monthly*, *Harper's Magazine*, and others. During World War II he served the British Government as director of foreign research and press service of the Royal Institute of International Affairs (1939-43) and director of the Research Department when it became an organ of the Foreign Office (1943-46). He holds honorary D.Litt. degrees from the universities of Oxford, Princeton, and Birmingham; he was made a Fellow of the British Academy in 1937. In March 1947, shortly before the publication date of Somervell's abridgement of *A Study of History*—March 20, 1947—Toynbee arrived in the United States (his fifth trip) for a series of six lectures, "Encounters Between Civilizations," at Bryn Mawr College. *Study of History* was a Book-of-the-Month Club selection, and *Publishers' Weekly* reported in May that it had "made one of the spring's more spectacular sales records all over the country." Professor Toynbee is scheduled to deliver the Bampton Lectures in America at Columbia University in the spring of 1948.

The historian has been described as "a slim, pale man with a long face and clipped, wispy white hair." He and Rosalind Murray, daughter of the classical scholar Gilbert Murray, were married in 1913 and are the parents of three sons. (One of them is Philip Toynbee, the novelist.) This marriage ended in divorce in 1954, and Toynbee was subsequently married to Veronica M. Boulter. Toynbee is said to think almost as readily in classical Greek as in English. Asked about his approach to history, he has said: "I see things from the point

TOYNBEE, ARNOLD J.—*Continued*

of view of an Ancient Historian, looking at the modern Western World from the outside. I feel a great concern to see and express the point of view of the non-Western peoples. I believe in studying living history and interpreting past history in the light of this."

TRUMAN, BESS (WALLACE) *See* Truman, Mrs. H. S.

TRUMAN, MRS. HARRY S. Feb. 13, 1885- Wife of the President of the United States

Address: The White House, Washington, D.C.

"Pursuing an honest life pattern of her own design," the First Lady of the Land, Mrs. Harry S. Truman, has tried to continue the Trumans' simple home life in the White House. "She is the average American woman," Helen Weigel Brown told *Liberty* readers, and "differs little from . . . the big businessman's wife who manages a household staff, shares in community activities, and completes the circle of her husband's social and business life."

Mrs. Harry S. Truman was born Bess Wallace, on February 13, 1885. The daughter of Madge (Gates) and David Millock Wallace, she grew up in Independence, Missouri, her birthplace, where the Wallaces were prominent. Schoolmates recall her holding her own in boys' games—"she could bat a ball as far as any boy in the neighborhood," and beat them at mumble-the-peg. The girl who was graduated from Independence High School (1901) in the same class with Harry Truman, however, was no longer the tomboy whistling through her teeth, but a dignified young lady. After graduation she remained at home for a few years and learned the fundamentals of managing a household from her mother and grandmother; contrary to reports, she did not become a teacher. From 1904 to 1906 Miss Wallace attended the Barstow School for Girls, a finishing school in Kansas City, Missouri, where she studied literature and languages. Active in social affairs, she also maintained her prowess in athletics, becoming an expert horsewoman and excelling in the shot-put event on Barstow's annual field day.

In 1917, after five years of "keeping company," Bess Wallace became engaged to Harry Truman, who had carried her books when they were classmates in grammar school—"she was his first and only sweetheart." (Mrs. Wallace is said to have disapproved of their courtship at first.) Their engagement was announced just before Truman joined the Army and went overseas with the AEF during World War I.

Upon his return in 1919, they were married and went to live with Mrs. Wallace in the Gates Victorian "mansion." (The house, where the bride had resided with her mother and three brothers since her father's death in 1903 had been built in 1860 by her grandfather, George Porterfield Gates, a successful flour miller. Later, when the Trumans were residents of the White House, that home became the summer White House.)

While Truman was a partner in a haberdashery business in near-by Kansas City, Mrs. Truman helped in planning their advertising signs, taking inventory, and going over the books at night; she backed her husband's decision not to file a bankruptcy petition, when the business failed during the 1921 deflation, and for fifteen years they saved to pay off their debts. Truman, having entered public life, rose during that time from county commissioner to presiding judge of the Jackson County Court (a sixty-three-hundred-dollar-a-year post), to United States Senator. In these years, while she was occupied with rearing their daughter Mary Margaret, who had been born in 1924, Bess Truman continued to share in her husband's work, discussing his problems with him, and after he entered the Senate, acting as his secretary.

The Trumans moved to Washington following Harry Truman's election to Congress in 1934. Unable to find domestic help, his wife took care of the housework in their five-room apartment and at the same time helped the Senator with his correspondence, speeches, and research. Although it is not uncommon for a Government official without private means to employ a member of his family, the discovery that Mrs. Truman was receiving forty-five hundred dollars annually as a clerk on the Senate payroll created comment among newspaper columnists. "She earns every cent of it," vehemently asserted Truman. "I never write a speech without going over it with her . . . and I never make any decisions unless she is in on them." Mrs. Truman had no Vice-Presidential ambitions for her husband, who was content in the Senate. When Democratic Party politics swept Truman into the office, however, she continued with her usual household duties and Red Cross work, the only noticeable change in her life being her participation in the Washington social whirl—"invitations poured in upon the Trumans in an avalanche."

Upon Truman's elevation to the Presidency on April 12, 1946, Bess Truman, hitherto little publicized, suddenly found herself in the limelight. Journalists said the new First Lady was "a hard person to write about." Unlike her predecessor, Eleanor Roosevelt⁴⁰, who was active in public affairs and held weekly press conferences, she preferred to remain in the background, seldom expressing her opinions on political occurrences and maintaining her relations with the press through two secretaries. The First Lady aroused comment, however, when she attended a tea given for her by the D.A.R. after that organization had refused to allow Hazel Scott⁴¹, Negro pianist, to perform in D.A.R.-

owned Constitution Hall. "I deplore any action which denies artistic talent an opportunity to express itself because of prejudice against race or origin," she asserted, but having accepted the tea invitation before the action against Miss Scott was taken, she "had no idea other than to keep this engagement."

During the first formal social season at the White House after the Roosevelts' wartime curtailment of elaborate entertainment, Mrs. Truman was "a gracious hostess" to diplomats, newspaperwomen, Government officials, and other groups. "Conservative informality," reported the *New York Times* "was the keynote of the White House's social reconversion." Mrs. Truman also entertained some of her old Independence friends, inviting the town's Tuesday Bridge Club, of which she had been a member for many years, for a four-day stay at the White House.

As First Lady, Mrs. Truman was guest of honor at teas and lunches, and at times accompanied the President to such functions as Pan American Day ceremonies and the opening session of the United Nations General Assembly. Averaging two or three engagements daily outside the White House during the season, she opened the 1945 United Nations' Relief Bazaar and the Christmas Seal Campaign and was a member of the National Committee of the Emergency Food Collection as well as similar organizations. She was one of the sponsors of the new National Mental Health Foundation in 1946 and also opened the campaign to raise funds for a memorial home and headquarters in Washington, D.C., in honor of the nurses and medical women of World War II. In January 1947 she participated with Mrs. Eleanor Roosevelt in a special radio broadcast on behalf of the National Foundation for Infantile Paralysis "March of Dimes" campaign. In April of that year she became an honorary commander of the American Cancer Society. When the food conservation program was launched in the fall of 1947, the President and Mrs. Truman announced that all state dinners for the winter season would be canceled; austerity marked even the December reception for the diplomatic corps.

Mrs. Truman has been active in the Washington USO canteen for British girl clerks and in the Red Cross activities of the Senate Ladies and the Congressional Club. In 1945 she accepted honorary chairmanship of the English Classics Collection of Books organized by the Russian War Relief to replace books destroyed by the Nazis in the Soviet Union; as First Lady she is honorary president of the Girl Scouts, the Women's National Democratic Club, and the Home Hospitality Committee of War Recreation Services, and also holds honorary membership in other groups. She is a charter member of the P.E.O. Sisterhood in Washington, an educational and social society. While the President is a Baptist, his wife and daughter are Episcopalians.

With her healthy complexion and blue eyes, Mrs. Truman, despite her plumpness, impressed a *Newsweek* reporter as giving a much more

Press Assn., Inc.

MRS. HARRY S. TRUMAN

distinguished appearance in person than in photographs. She wears small modish hats over her gray waved hair and dresses inconspicuously, very often in blue or green. Her Washington friends describe her as a considerate person and find her good-humored small talk entertaining. With Mary Margaret, she accompanied the President on his visit to Canada in June 1947 and his visit to Brazil in August 1947. Often her husband's guide to a good book, Mrs. Truman told Emma Bugbee of the *New York Herald Tribune* that she prefers Dickens (Barnaby Rudge is her favorite) and Scott to modern authors, whose novels she thinks are "a waste of time." The recipient of a Cuban award "for the love, friendship, and fraternity she has shown to Pan American countries," she is an apt student of Spanish; each week she meets with wives of other Government officials for lessons conducted in the White House Green Room. The Trumans are a music-loving family: they own a large and varied collection of records, and both the President and his daughter play the piano. Mrs. Truman, accompanied by Margaret, hears concerts at Washington's Constitution Hall and was, according to the recollections of old opera-goers, the first President's wife ever to have attended the opening night of New York's Metropolitan Opera season, in the fall of 1945. The first time Mrs. Truman heard her daughter sing in public was at Margaret's Pittsburgh concert debut in October 1947. The First Lady does not smoke, and has been praised for refusing cocktails in favor of tea or orange juice.

TSCHIRKY, OSCAR (MICHEL) (chîr'-kê) Sept. 28, 1866- Maître d'hôtel: hotel executive

Address: b. c/o Waldorf-Astoria Hotel, Park Ave. & 50th St., New York

The Waldorf-Astoria Hotel in New York has been internationally famous since 1893; and Oscar Tschirky, better known as "Oscar of the Waldorf," has been a part of the institution from the time of its opening. *Who's Who in America* records that Tschirky, now the executive adviser of the institution, who gained his reputation as maître d'hôtel there, "is said to know more people from all over the world than any other person in America." His culinary innovations (the Waldorf salad is the most famous) are to be found on menus everywhere.

E. P. Dutton & Co.

OSCAR TSCHIRKY

Oscar Michel Tschirky was born September 28, 1866, at Locle, in the French-speaking canton of Neuchâtel, Switzerland. Locle, a small village built about a Swiss chalet or hotel, lived on tourist trade, one of the main sources of the country's income. The boy's father, August Tschirky, originally from Saint-Gall, was a steamship agent; his artist mother, the former Antoinette Fassbind, came from a family of well-to-do carriage makers in Lucerne. When Oscar was two, his family moved to Chaux-de-Fonds; it was there he attended secondary school. The boy later became a student in a school at Fribourg. An otherwise average student, Oscar was particularly interested in languages; he spoke French and German, and was learning English.

On May 14, 1883, Oscar and his mother arrived in the United States, his father following shortly after. On his first day in America, Oscar applied for his citizenship papers—he became a citizen in 1888—and began work as a bus boy in the Hoffman House. While still

in Switzerland, Oscar Tschirky had some acquaintance with the food business as a thirteen-year-old errand boy in a confectionery store—he had eaten himself sick the first day there. The job as bus boy he had obtained with the help of his brother Brutus, who had come to the United States earlier to work as a chef. In his four years at Hoffman House in New York, young Tschirky advanced from an eighteen-dollar-a-month bus boy to a private dining-room waiter and bartender. After this apprenticeship, he went on as a waiter to Delmonico's, "the choice of all the wealthy and social leaders of New York" for dining out. There he advanced to dining-room steward, later becoming manager of the private dining rooms and of the hotel's catering service.

Learning of plans for a new hotel which was to be called the Waldorf, Oscar applied for a position there before it had been built, submitting a letter of recommendation signed by famous people he had served as a waiter. The signers included "Diamond Jim" Brady, Lillian Russell, and other colorful figures of the period. On the basis of this letter, the twenty-six-year-old was hired as headwaiter in 1893 at two hundred and fifty dollars a month. Before starting to work there January 1, 1893, Tschirky took a temporary post with the Hoffman House at its financial district annex in order to acquaint himself with the commercial and business world—it was expected that the Waldorf would attract "the Wall Street man." Shortly after the opening he was indelibly dubbed "Oscar of the Waldorf" by newspaper reporters, the title by which he has since been known. (Twenty years after it opened, Oscar refused the position of the hotel's manager, preferring to remain the headwaiter.)

In 1897 the thirteen-story Waldorf was joined to a seventeen-story partner, the Astoria Hotel, built alongside it and, at first, managed as a separate hotel. Not long afterward the name became the hyphenated Waldorf-Astoria. The "old" Waldorf-Astoria changed ownership in 1918, and ten years later abandoned the Fifth Avenue site, where it had been a landmark for thirty-five years. The "new" Waldorf-Astoria is situated on Park Avenue. A forty-seven-story building, one of the highest in the world, it was opened in 1931 with Oscar as maître d'hôtel and head of the catering service. After his fiftieth year with the Waldorf, in 1943, he "abdicated" as host to take an advisory position with the hotel.

Although many people think of Oscar of the Waldorf as a chef, he has, in fact, done very little cooking, and that over a chafing dish. (As a waiter, he invented a machine to handle four chafing dishes at one time.) He believes it more difficult to order a good meal than to prepare one; accordingly, he has made an art of composing menus for banquets, intimate dinners, and functions of all types. As maître d'hôtel he also supervised the marketing, preparation, and serving of the meals. The military discipline observed by his corps of waiters in attendance upon large banquets became legendary. In supervising his chefs, he incidentally originated new dishes such as the Oscar sauce.

cantaloupe à la mode, and the Waldorf salad (originally made with cubed apples and celery mixed with mayonnaise, served on lettuce—now made with assorted fruits and nuts). Although he has concocted exotic dishes, for himself Oscar favors a simple meal—boiled beef with horse-radish sauce and a boiled potato. His *Oscar of the Waldorf's Cookbook* (1903) was accepted as final authority by a Federal judge when the United States Department of Agriculture brought legal proceedings against manufacturers of French ice cream who refused to label their product "custard"; the book called the dessert "French ice cream," thus deciding the case.

Of the successful operation of a hotel Oscar says: "The guest is the buyer, [and] the employees of the hotel are the seller. Buyer and seller are constantly together, and every moment of the guest's stay at the hotel he must be 'sold' over and over again." Oscar learned that five factors were indispensable to efficient hotel service: hot water in unlimited quantities, politeness, particularly to women guests (they are to be listened to at all times), conviction that the guest is always right (whether he inhabits a five-dollar room or the royal suite), precise obedience to every order, and memorizing of every guest's name. Another of his dicta is discretion: in a review of his biography, *Oscar of the Waldorf*, one writer regretted that the hotel and food authority had not allowed himself to "spill the beans."

Since the Waldorf has always had an international clientele, Oscar from the first hired waiters who spoke French, German, and English. In the interests of sanitation, Waldorf waiters of 1899 were ordered to shave off their mustaches, thus precipitating a labor dispute in which the entire country is said to have taken sides. In the same year forty of his waiters left after asking for higher wages; Oscar broke the strike by answering a union delegation with replacements ready for every waiter who wished to leave in protest.

Oscar has received recognition from many of the royal guests of the luxurious hotel: he has been made a chevalier of the Crown of Belgium and of Rumania, and is a *Chevalier de Mérite Agricole* of France. He is also honorary president of the Geneva Association in New York. When he was younger he won the Gotham Wheel Association Championship and many other trophies for bicycle riding. His model of a Swiss chalet, executed in wood, took first prize in the 1938 Waldorf-Astoria Arts and Crafts Exhibition of employees' work. Oscar, who once wanted to be a wood carver, still enjoys cabinetmaking and working with tools on his thousand-acre farm near New Paltz, New York.

In September 1897 Oscar was married to Sophie Bertisch, whom he had met when she was employed as cashier in her brother's restaurant; Mrs. Tschirky died in 1939. Their three children are August, Leopold, and Clover. The octogenarian, a grandfather, likes to smoke, enjoys an occasional cocktail. He shows his age in a slight stoop to the shoulders. "Glad-hander" and friend to some of the world's

important people, Oscar of the Waldorf, whose portrait (painted by Paul Trebilcock) has hung in "Peacock Alley" of the Waldorf-Astoria since January 1936, maintains: "Through it all, I still wear the same size hat."

UNDEN, BO OSTEN (ōon-dān' bōō ū'stēn) Aug. 25, 1886- Swedish Government official; United Nations delegate, jurist; educator

Address: b. Foreign Office, Stockholm, Sweden

In writing about Bo Osten Undén, Sweden's Minister for Foreign Affairs in the present Labor party Government, the *Christian Science Monitor* (October 13, 1945) described him as a "statesman to be reckoned with" among the "prominent figures in European politics today." His long experience in international affairs, and in domestic politics as a member of the Social Democratic Labor party, his legal knowledge and ability, and his service to Swedish education have all helped to gain for Undén his eminent reputation both in his own country and abroad. Formerly a Swedish representative to the League of Nations, Undén headed his country's delegation to the United Nations in November 1946 when Sweden became officially a member of that international body.

Bo Osten Undén, the son of Viktor and Beate (Kaijser) Undén, was born on August 25, 1886, in Karlstad in the province of Värmland, Sweden, where he spent his childhood and youth. Viktor Undén was a pharmacist. Seven children comprised the Undén household: Osten has three brothers, one of whom became a diplomat and another a secretary of the Swedish Carnegie Foundation, and three sisters. After attending secondary school and junior college in his native city of Karlstad, young Osten went on to pursue graduate studies in law at the University of Lund. From this university the student received the M.A. degree in 1905, and five years later, the LL.B. degree (1910). For his thesis written for his LL.D. degree (1912), Undén, who had been interested in the labor movement for some time, discussed collective labor agreements (*Kollektivavtalet*). It was during his student days that Undén became affiliated with the Swedish Social Democratic Labor party, cofounded—in 1889—and directed by Karl Hjalmar Branting, Socialist statesman and Nobel peace prize winner.

Undén's career began in 1912: he was appointed assistant professor of civil law at the university from which he was graduated. In 1917 he was made professor of civil and private international law at the University of Upsala, a chair he has held since. Then the professor in 1929 was advanced to the post of rector (president) of the University of Upsala, a position of three years' duration. From October 1917, when Undén was launched into Gov-

Dagens Bild, Stockholm

BO OSTEN UNDEN

ernment service as Minister without Portfolio in Branting's Cabinet, his work henceforth was to combine legal activities both in the field of education and Government. As Minister without Portfolio, which post he retained until March 1920, Undén's responsibilities involved those of advisory legal expert. For a brief period in 1920 (March to June) he served as Minister of Justice, from October 1924 to June 1926 as Minister for Foreign Affairs in Branting's Cabinet, and from September 1932 to June 1936, again as Minister without Portfolio in Per Albin Hansson's "2 first Cabinet until its resignation in the latter year. The role of Cabinet legal expert, according to Allan Kastrup of the Swedish-American News Exchange, assumes particular importance in the times during which the Government is occupied with legislation for social reforms, as was the case during much of Undén's tenure. In the meantime the Swedish scholar was special counselor at the Foreign Office in matters concerning international law, a post which he held during the periods from 1920 to 1924, from 1926 to 1932, and again from 1936 to 1945.

The post-World War I trend toward the enforcement of world peace by law provided other opportunities wherein Undén, an advocate of world cooperation, employed his legal knowledge. One of Sweden's delegates to the League of Nations Assembly in Geneva, he participated in its meetings from 1927 to 1936 and at intervals afterward until 1939. He also represented his country, replacing Branting, as a nonpermanent member of the League of Nations Council for the years 1924 to 1926; and his aid was sought by the League's International Committees on Arbitration and Mediation on a number of occasions to settle questions of legal technicalities in inter-nation affairs. It was Undén, then Foreign Minister of Sweden, who in 1925 presented to the Assembly the Scandinavian

country's plan for a "system of arbitration more elastic than the Geneva Protocol" (*A History of Sweden*, by R. Svanstrom and C. F. Palmstierna [1934], translated by Joan Bulman). Three years later (1928) the "General Act," a treaty in which the Swedish ideas were incorporated, was accepted.

On a number of occasions in his international work, Undén was obliged to manifest courage, both personally and as representative of his Government. One such occasion was that of February 1926, when Germany applied for membership in the League with the stipulation that she be granted a permanent seat in the Council, as had been promised her. Other countries, among them Spain, Poland, and Brazil followed suit, thus precipitating an international wrangle over the matter of additional seating in the Council. Sweden believed Germany should be accorded equal status with the Great Powers; and Undén argued that granting permanent seats in the Council to nations not as influential in position as the larger powers would "lead to an increase also in the number of nonpermanent seats. The Council would finally become so numerous that it would no longer be able to maintain its standards of unanimous decision." The Swedish delegate adhered to this stand despite threats by Spain to abrogate her commercial treaty with Sweden and by another country to revoke a large order for Swedish telephones.

Undén has been an active supporter of international arbitration. The establishment of the Permanent Court of International Justice (World Court), the professor asserted in a Stockholm address ("Recent Developments in International Law," printed in an abridged form in *The New World Order* [1932], edited by F. S. Marvin), presaged "a new era in international relations." During one phase of his career, the jurist sat as chairman of an international tribunal in its hearings on disputes between Italy and Venezuela in 1930, and between France and Switzerland in 1933; the year previous (1932) he had been arbitrator in a Bulgarian-Greek disagreement.

Despite a growing seriousness in the European and world-wide situation as the 1930's advanced, Undén retained his optimistic belief in the League's ability to preserve peace although he was cognizant of the organization's defects. Some years before World War II, Undén, involved in a debate in the Swedish Riksdag, replied thus to a member who stated that the League would come to an end in a major war: "Some people like to think of such an opinion as realistic. I for my part would rather characterize it as romanticism. It does not take into account the law of evolution, nor the fact that the destinies of the world are formed by human individuals and human masses." His work in the international field became widely acclaimed and led one British newspaper to call him "Sweden's League of Nations soldier, who, with his perfect composure, is one of the most impressive members of the Assembly. . . . He has become well-known for the tenacity with which he defends principles he considers right."

Much of Undén's work in domestic and world affairs and in law includes his writings. He is the author of *Internationell Aktenskapsrätt* ("International Family Law") 1922, and *Svensk Sakrätt* ("Swedish Property Law"), in three volumes—1927, 1936, and 1940. Other of his published works are *L'Affaire Martini, une sentence arbitrale internationale* (1933), *L'Article 181 du traité de Neuilly, une sentence arbitrale internationale* (1933), and those whose titles, translated into English, are "Studies in International Family Law" (1913-15, in two volumes), "Easements" (1915, 1923), "Swedish Patent Law" (1915), "Bills of Exchange" (1915), "Parents and Children" (1921), as well as the book "Jurisprudence and Politics" published in 1927. In addition the Swedish jurist and educator has written numerous essays, articles, and the like on various phases of his activities and legal interests.

During World War II Undén re-entered the Riksdag as a member, becoming chairman of the Foreign Affairs committee. At this time, he was and remained chancellor of the Swedish universities, the highest educational post in the social-democratic Scandinavian kingdom to which he had been appointed in 1937. An internationalist in sympathy and an advocate of "social justice, democracy, international justice, and peace," Undén in December 1940 discussed in a speech (reprinted in the *American-Scandinavian Review*, Spring 1941) his view that the Axis members' assertions about establishing a "new order" expressed simply their desire to gain proprietorship over smaller states. "To suppress and strangle a formerly free nation can never, according to our nation," declared Undén, "be defended by invoking the interest of a Great Power. A permanent peace can never be built on such a subdivision of the living quarters of the world that the smaller nations will be forced to become charity lodgers in the living space of some Great Power." In this speech in which Sweden's reasons for maintaining its "armed" neutrality were given—"Sweden will have greater opportunities to make contributions of value both to ourselves and to our northern neighbors if we are able . . . to remain outside the war"—Undén, anti-Nazi and pro-Allied, revealed that he had opposed permission to German soldiers for "on leave" travel through Sweden between Norway and Germany. Later in the war when Sweden was considering the idea of a postwar Nordic bloc Undén expressed his favor of the plan if it would be "merely a part of a world organization."

In July 1945 Undén was appointed Foreign Minister in Premier Hansson's Social Democratic Labor Party Cabinet, formed by him after the dissolution of the World War II coalition Cabinet. (This political party has had the administration of the Government, except for brief intervals, since 1932.) When Hansson died in October 1946 Undén for a short while served as acting Premier until his party selected Tage Erlander as its new leader and, as a result, as Sweden's new Premier. (Undén, despite membership in this political faction, is described as being "above party.") With the defeat of

Germany and the end of danger from that source Sweden began to enter into closer relations with Soviet Russia. In November 1946 after several months of negotiations a reciprocal trade pact with Russia was signed, Undén being one of its supporters. Under this treaty Sweden granted the Soviet Union purchasing credit of one billion kronor to be employed until 1951. In exchange for raw materials and petroleum products from Russia, Sweden was to export machinery, among other articles, to her neighbor. This pact making Russia a "most favored nation" in Sweden's international commerce was protested earlier by the United States (*World Report*, September 17, 1946).

Sweden, meanwhile, was preparing to become a member of the new security organization, the United Nations. Undén, aware of the U.N.'s weaknesses, pointed out that it "cannot function in the event of a war among permanent members of the Council" and in such an event Sweden's "return to neutrality might again be the only way out." Urging acceptance of the U.N. and stressing Sweden's refusal to side with any combination of powers against another, however, he warned his countrymen also against assuming a resigned or skeptical attitude toward the security league or taking for granted its eventual failure. When, in March 1946, the Government presented to the Riksdag a bill, later adopted, permitting Sweden to apply for membership in the U.N., Foreign Minister Undén asserted that his country "was fully prepared to carry its fair share in the Security Council's military burden and all the consequences." In the middle of November 1946 Sweden, along with Afghanistan and Iceland, became a new member of the United Nations; Undén headed his nation's first delegation to it. Addressing the Assembly in French he remarked that "Sweden was accepting serious limitations on her freedom of action for the sake of united effort to ward off threats to peace," remonstrated against pessimism, and upheld tolerance between nations.

Three months later, in February 1947, Minister for Foreign Affairs Undén averred in an address in Gothenburg: "Our country has promised to support the aid to refugees [in connection with the International Refugee Organization] with fifty million kronor of Government funds, and this will be paid out as soon as possible." He also discussed his nation's attitude toward the Bretton Woods agreement and the International Trade Organization, and added "Considering the extent to which Sweden has obligated herself for foreign credit grants, our country would not be able to join the two institutions today without heavily taxing its holdings of foreign exchange." (Sweden, wrote *World Report* for August 5, 1947, "has extended almost half a billion dollars in loans and credits to Britain, Norway, Denmark, and other nations of Western Europe.") The Scandinavian country was one of the United Nations members to adopt the Marshall Plan (European Recovery Program). In connection with this, Undén, in an August speech, declared that Sweden stood for peace and for a foreign policy independent of

UNDEN, BO OSTEN—*Continued*

the great powers or of any attempt to "curry favor" with both camps of the great powers.

During the U.N. debate on the veto in the latter part of September 1947, Undén in a brief address stated that "no change of the Charter, no ingenious redrafting of paragraphs" were substitutes for the needed cooperation among the great powers as a requisite for peace. The Swedish Minister in the following month recommended that the U.N. General Assembly appoint a special committee for the purpose of ascertaining the "underlying causes" of the disputes between Greece, and Yugoslavia, Albania, and Bulgaria.

In addition to his other activities, the Swedish Minister for Foreign Affairs has been serving, since 1938, as chairman of the board of the Swedish Pharmaceutical Institute and of the Swedish Institute in Rome and is an honorary member, too, of a number of other national and Scandinavian societies and academies. Like most Swedes, he is a member of the Lutheran (Swedish State) Church. Sturdily built and two inches less than six feet in height, Undén has blue eyes and graying dark hair. In 1912 he was married to the former Agnes Jacobsson who died in 1935; Mrs. Undén held the M.A. degree. Their two daughters are Karin and Inger. Undén's "unusual combination of learning, realism, and common sense, together with his honesty and natural modesty, have won him," according to the *Christian Science Monitor*, "the respect and confidence of the whole nation." Although he is too much the scholar to become what is known as "popular," said Kastrup, Undén still "is able to talk to the people in a language they understand, not seldom in a vein of quiet humor."

VALLEE, RUDY July 28, 1901- Singer; orchestra leader

Address: b. c/o Rudy Vallee Orchestra Unit, Inc., 6253 Hollywood Blvd., Hollywood, Calif.; h. 7430 Pyramid Pl., Hollywood 46, Calif.

Among perennial radio favorites in the United States is Rudy Vallee. Once the matinee idol of the "flapper," Vallee has retained his popularity for more than twenty years of radio, stage, and screen performances. Of Irish,

French, and English descent, he was born Hubert Prior Vallee, one of the three children of Charles Alphonse and Katherine (Lynch) Vallee. (His brother, William Lynch Vallee, later became a writer for magazines, and his sister, Kathleen Vallee Lenneville, a music teacher.) Hubert Vallee was born at Island Pond, Vermont, on July 28, 1901. Some years later the family moved to Westbrook, Maine, where the elder Vallee, a pharmacist, opened a drugstore. Young Vallee dropped out of the Westbrook High School to join the Navy in 1917 when the United States entered World War I, but was discharged when it was discovered that he was under age.

Returning to his high school classes and to after-hour clerking in his father's store, the erstwhile sailor prepared for a pharmacist's career. He also ushered at the local movie house in order to learn how to run the projection machine. Meanwhile, music was becoming of more interest to him than pharmacy, but there was no adequate teacher in the neighborhood for his chosen instrument, the saxophone. He improved his technique by using records of Rudy Wiedoeft's playing as a guide. By practicing five or six hours a day on the saxophone he had rented from the theater's chief electrician, Vallee was able to appear as a soloist at the Strand Theater in Portland in less than a year. While studying at the University of Maine in 1921, the year after his graduation from high school, Vallee continued his practice on the saxophone, and played the trumpet, drums, clarinet, and piano. It was at the University of Maine that he was nicknamed "Rudy," because of his admiration for Wiedoeft.

Upon transferring to Yale University the following year, Vallee became one of the three saxophonists with the Yale Collegians, an orchestra that toured the vaudeville circuits. For nine months in 1924 the young American played with the Savoy Havana Band at the Hotel Savoy in London; while there, he also made broadcasts and recordings. He returned to Yale in 1925 to continue his major study of Spanish and play with the Yale football band, with which he was soloist. After receiving his Ph.B. degree from Yale in 1927 (Vallee's orchestra engagements had paid for his support while in college), the young man joined Vincent Lopez' orchestra as third saxophonist, but left the next year to form his own group, the Connecticut Yankees. Using the first "mellow-sax" unit of any American band, the Connecticut Yankees opened at the Heigh-Ho Club in New York early in 1928. The Connecticut Yankee style evolved by Vallee was based on rendering the choruses of each composition in varied tempos and types, without repetition of any chorus, and without playing any two successive tunes in the same key. Since the Heigh-Ho Club was small, the personnel of the band was limited, and it was the emphasis on the band's two violinists, two saxophonists, and one pianist that caught the public's attention. At the club Vallee first used his greeting of "Heigh-ho, everybody" (followed by announcements in the manner of

Yale's William Lyon Phelps^{'43}), and the practice of singing through a megaphone.

The month of February 1928 marked Vallee's premier American broadcast, over Station WABC, sponsored by Herbert's Blue-White Diamonds. By October of the succeeding year, under the auspices of the Fleischmann Yeast Company, the Connecticut Yankees had begun their Thursday night stint, which remained among the ten top radio programs for ten years. On this hour and his other radio hours, Vallee introduced performers who were later to become stars in their own right: Edgar Bergen^{'45}, Bob Burns, Alice Faye, Frances Langford, and Joan Davis^{'45}. The radio variety show, featuring guest stars, was a Vallee innovation in 1932, and his subsequent series of programs over stations WMCA, WOR (of MBS), and WJZ (of NBC), produced by Sealtest Milk, Standard Brands, Drene Shampoo, and Philip Morris cigarettes, starred Beatrice Lillie^{'45}, John Barrymore, Helen Hayes^{'42}, Katharine Hepburn^{'42}, Fanny Brice^{'46}. In the meantime Vallee and the Connecticut Yankees filled several stage engagements, appearing first at the Palace Theatre in New York, then for ten weeks at the New York and Brooklyn Paramount theaters in the spring of 1929, to which they returned the following October for a twenty-one-month run. This tour grossed an average of eighteen thousand to twenty thousand dollars a week for Vallee, which was, at that time, an unusually high figure.

Vallee's talents were not, however, limited entirely to radio and night clubs. He made his first motion picture, *The Vagabond Lover*, in 1929. Two years afterward, he appeared in the stage version of George White's *Scandals*, which was adapted for the motion pictures in 1934. The 1936 stage production of the *Scandals* also starred Vallee. Other films in which he appeared were *Sweet Music* (1935), *Gold Diggers in Paris* (1938), *Second Fiddle* (1939), *Time Out for Rhythm* and *Too Many Blondes* (1941). *The Palm Beach Story*, which he made in 1942, revealed Vallee as "the picture's biggest surprise," said Bosley Crowther (New York Times), "in the role of a stuffy millionaire—John D. Hackensacker 3d—which he performs with amusing pomposity." In 1943 Vallee was seen in the film, *Happy Go Lucky*.

Vallee terminated his radio engagements in 1943, a year after his enlistment in the Coast Guard. At first a chief petty officer and later a lieutenant (s.g.), Vallee was conductor of the Eleventh Naval District Coast Guard Band. Previous to assuming full-time duties with the auxiliary service, Vallee had donated the salary from his radio program to the Coast Guard Welfare Fund. The service band, under his direction, appeared at hundreds of war bond rallies and became known as one of the finest military bands in the country. Vallee was placed on the inactive list in 1944, subject to recall to duty.

The singer returned to commercial radio that year. Although obtaining a fairly high Hooper rating for his program, *Villa Vallee*, in the ranks of the top fifteen programs, Val-

NBC Photo

RUDY VALLEE

lee was criticized by *Variety*. His new program, wrote *Variety*, was "poorly produced and written." Later the entertainment trade journal amended this judgment when the Hooper rating rose to 10.1, by explaining that, despite Vallee's two-year absence from the air, he still retained a following and "had garnered consistent fan mail" while in the Coast Guard. The show's average rating for the season was 12, which was not considered unfavorable. An adjunct to Vallee's radio activities was his establishment of the Rudy Vallee Music Company, underwritten by Broadcast Music Incorporated; afterward (in 1945) he formed the Ruval Music Company, affiliated with ASCAP on a nonparticipating basis. In 1945 he also formed Saint Enterprises, Incorporated, with Leslie Charteris, the author of the "Saint" mystery stories.

The *Villa Vallee* broadcast went off the air in August 1946. A succeeding program, inaugurated in September 1946, was discontinued in March 1947, when the radio star entered upon the first personal appearance tour he had made in eight years, booked to appear at a Chicago night club at a salary of seventy-five hundred dollars a week. For release in 1947 he had also made a motion picture, *The Bachelor and the Bobby-Soxer*, co-starring Cary Grant^{'41}, Myrna Loy, and Shirley Temple^{'45}. Earlier motion pictures in which he had appeared after his discharge from the Coast Guard include *Man Alive* (1945), *It's In The Bag* (1945), and *People Are Funny* (1946). In 1947 Vallee was in the cast of *I Remember Mama*, playing a "straight" role.

Other engagements that Vallee has filled in his long career were at various ballrooms and hotels throughout the country, including New York's Hotel Pennsylvania Grill and Roof, the Hotel Astor Roof, the Hollywood Restaurant, and Los Angeles Cocomat Grove. In 1937

VALLEE, RUDY—*Continued*

Vallee and the Connecticut Yankees appeared in a London engagement celebrating Coronation Week. Vallee's autobiography, *Vagabond Dreams Come True*, was published in 1930; the radio star has also written a series of articles for *Radio Digest* (1937) and for *Radio Stars*, as well as numerous guest columns. His professional affiliations are with the American Federation of Musicians, the American Society of Composers, Authors, and Publishers, the American Federation of Radio Artists, the Academy of Motion Picture Arts and Sciences, the Amateur Cinema League, the National Association of Performing Artists, and the Screen Actors' Guild. In 1937 he was president of the American Federation of Actors. Other organizations to which he belongs are the American Arbitration Association, the American Legion, La Société des 40 Hommes et 8 Chevaux, and the fraternity Sigma Alpha Epsilon. His clubs are the New York Athletic, the Lambs, the Friars, the Elks, and the Yale (New York City). In 1933 the singer served as lieutenant commander on the staff of Governor Brann of Maine. Texas and Kentucky have both made him an honorary colonel. From Suffolk Law School, of which he is a trustee, Vallee received the degree of Master of Arts in 1936. He is a Roman Catholic. With other representatives of the entertainment profession, Vallee sponsored the Hospitalized Veterans National Radio Foundation in 1947, for the purpose of supplying patients in veterans hospitals with bedside and pillow-type radio receivers.

The singer's hobbies are tennis, motoring, and colored motion picture photography. His height is five feet eleven inches and a half, weigh 170 pounds, and he has gray eyes and brown hair. Vallee has been married three times: to Leonia Cauchors, Fay Webb, and Jane Greer. (The first marriage was terminated by annulment, the others by divorce.) Vallee has greatly enjoyed the legend that pictures him as a Vagabond Lover and a millionaire host with a checkroom. It has been said of him that he "worries with the rest of the citizens around the fifteenth of March, is an open-handed host, and an appreciator of the pretty ankle like every normal, unattached male."

VANDERBILT, ARTHUR T. July 7, 1888- Lawyer; educator
Address: b. 744 Broad St., Newark, N.J.;
 h. Hobart Ave., Short Hills, N.J.

Arthur T. Vanderbilt is seen as carrying out in his own career the belief that every citizen should participate in public affairs. An attorney

and a professor of law, he has also served on Governmental research and investigating committees, and has taken an active part in the recasting of New Jersey's constitution. Among his activities, his opposition to Mayor Frank Hague of Jersey City is one of the most noteworthy. Vanderbilt's November 1947 appointment as a judge of the New Jersey district court was in preparation for his appointment, a few weeks later, as Chief Justice of the State's new Supreme Court, which will be established under a new constitution in September 1948.

Born on July 7, 1888, in Newark, New Jersey, the city in which he now practices, Arthur T. Vanderbilt is the son of Lewis and Alice H. (Leach) Vanderbilt. (The family is not related to the family of financiers.) After graduation from Barringer High School in Newark, young Vanderbilt attended Wesleyan University in Middletown, Connecticut, receiving both his Bachelor's (1910) and his Master's degrees (1912) from that school. Having completed his law studies at Columbia University in New York in 1913, he was admitted to the New Jersey bar in that year. The following year, at twenty-six, the attorney became a professor of law at New York University, a position he held until 1943 (when he became dean of the School of Law). During these years he maintained a private practice and was active in public affairs. Since 1922 Vanderbilt has been the counsel for Essex County, New Jersey. For ten years (1930-40) he was chairman of the Judicial Council of New Jersey; from 1933 to 1937 he was chairman of the National Conference of Judicial Councils, and he has been chairman of the executive committee since 1937. Practicing in New Jersey, he has specialized in insurance and corporation law.

Before Vanderbilt was elected president of the American Bar Association in 1937, he was on that group's general council (1932-34), chairman of its insurance law section (1933-34), a member of the executive committee (1934-35), and on the board of governors (1935-37). During his one-year administration, the American Bar Association advocated simplification of the Federal Courts, and criticized the quasi-judicial Federal administrative agencies. At the 1938 convention of the association, Vanderbilt warned, "Everyone realizes that to commit all executive, legislative, and judicial powers to one man or body of men would spell despotism, but too few have sensed the drift in that direction from an increasing number of administrative bodies working together or under a common leadership." Not wholly disapproving of these agencies in principle, he also said on the same occasion, "There are those who still dream of their abolition. Such dreams are in vain . . . the administrative tribunals are here and here to stay because they serve, or can be made to serve, useful purposes. So is the automobile here to stay. But the law requires that the automobile be operated by a competent and experienced driver. It is equipped with brakes as well as a motor." At the same convention the A.B.A. made plans to appoint a nine-man commission to assure ade-

quate counsel to any citizen who reported a violation of his civil liberties by Mayor Frank Hague of Jersey City. The A.B.A. also cooperated with the American Civil Liberties Union and the CIO in their attempts to curb Hague. In May 1947 Vanderbilt was unanimously elected director of the A.B.A. Carnegie Foundation survey of the legal profession, to extend over three years.

Vanderbilt himself became more directly involved in the court action against the mayor of Jersey City when Norman Thomas⁴⁴, Socialist party leader, retained the lawyer to defend his right to free speech. Thomas had been twice stopped from speaking at public meetings, and had been "deported" from the community by Jersey City police. Since the main issue was the constitutionality of the city law requiring all persons who wished to speak at a public gathering to apply for a permit three days in advance, the case was heard by the United States Supreme Court. In 1939 the highest tribunal declared the ordinance void. In connection with his efforts toward reform in New Jersey, Vanderbilt was a member of the New Jersey State Constitutional Revision Commission (1941-42) and served as a special assistant (1942-43) to the attorney general of the State to defend the validity of the referendum on the constitution. The vote of the people of New Jersey sent a constitution, which allowed the Governor to appoint his own cabinet and which cut down on the number of administrative departments, to the State legislature for ratification. After modification by that body, the final draft appeared on the November 1944 ballot. In that election the revised constitution was defeated.

Three years later the New Jersey voters approved the convocation of a new constitutional convention. Vanderbilt felt that the constitution which was finally formulated called for too many executive departments and too long terms of office. The constitution was adopted in the November 1947 elections. Vanderbilt was named to the New Jersey district court to fulfill the requirement of the new constitution that members of the Supreme Court be chosen from among those already on New Jersey's benches. With this technicality observed, Vanderbilt was then appointed Chief Justice to take office when the sections of the constitution pertaining to the courts become effective on September 15, 1948.

Arthur T. Vanderbilt has served on groups to improve on procedures in the Federal Government. For a year (1938-39) he was chairman of a committee appointed by the United States Attorney General to confer with a group of senior circuit court judges appointed by Charles Evans Hughes⁴⁵, then Chief Justice of the Supreme Court. They were to draft a bill providing for an administrative office for the Federal courts. For two subsequent years, the attorney was a member of the Attorney General's Committee on Administrative Procedure, which recommended the establishment of an office of federal administrative procedure to gather information and to make studies directed toward uniformity, improvement, and

ARTHUR T. VANDERBILT

simplification of national administrative agencies. Since 1941 Vanderbilt has been chairman of a Supreme Court advisory committee to draft rules of criminal procedure for Federal courts. Because of criticisms from both Congress and private agencies, the War Department in 1946 created the civilian Advisory Committee on Military Justice to investigate court-martial procedure and charges of harshness and injustice. Vanderbilt was named chairman of the group, which in 1946 held public hearings in cities all over the country. The group's report, stated a New York *World-Telegram* writer, "stressed the need for taking away from field commanders authority to appoint court-martial and review their verdicts." The War Department, however, in planning its new procedure, did not adopt all of the proposals of the Vanderbilt group. The chairman of the National Committee on Traffic Law Enforcement since 1938, the lawyer was a member of the President's Highway Safety Conference which, after meeting in Washington in May 1946, recommended an intensive traffic safety campaign.

Deploring the "division and sub-division of labor in the professions," in 1946 Vanderbilt, who by this time was in his third year as dean of New York University's School of Law, proposed the establishment of a law center. He asserted that, because of these divisions, law "is a profession ill-equipped to meet a period of rapid change such as we are experiencing today, when our possibilities are not only national but international. In international affairs, indeed, we are unprepared emotionally as well as intellectually." The first step toward actually organizing a law center was taken when a New York University committee was formed to seek three million dollars for the project. Carrying his idea a step further, he has also advocated the establishment of an inter-American

VANDERBILT, ARTHUR T.—*Continued*
law institute. "Much has been done to eliminate misunderstanding and to insure hemispheric improvement in economics, engineering, industry, journalism, medicine, politics, and the arts," he pointed out at a 1945 National Foreign Trade Convention, "but very little has been done in the legal field. . . It is both illogical and wasteful to pave the way for facilities in inter-American commerce and then leave formidable barriers on the road in the form of judicial and procedural conflicts, anomalies, anachronisms and misunderstandings." In 1947 New York University's own Institute of Inter-American Law was opened.

Vanderbilt has deplored the failure of law to make improvements as rapidly as do the sciences: "One of the causes of this is the failure of the social sciences to develop a working philosophy of modern society. Another is the failure of the social scientists to arm their students, before they enter law school, with the essential facts of our economic, political, and social life. Law cannot be developed or taught in a vacuum. It must be developed in the light of social actualities." Vanderbilt was one of a committee named to plan the Inter-Professions Conference on Education for Professional Responsibility, to be sponsored by the Carnegie Corporation and to meet in the spring of 1948.

Vanderbilt has charged American colleges with partial responsibility for the "government by default, by ignorance, by purchase, by propaganda, by pressure, by complexity, by concentration, and by evasion and disregard of constitutional rights," which, he has declared, is rampant in the United States. Still stronger is his assertion that "the plain but unpalatable truth is that it was the failure of the colleges of the democratic countries in the period between two wars to face the facts and to train their students as citizens and to inspire them to become the political leaders of tomorrow that was a great cause of our unpreparedness for war, if not, indeed, itself a cause of war." Reiterating the importance of college graduates becoming interested and active in public life, he has written in the *General Magazine and Historical Chronicle*, "The plain but disagreeable truth is that we as a people have been conditioned from childhood in our homes, our schools, and our churches to look down on politicians and to avoid all possible participation in public life with the result that civic virtue has become, in the words of William James, 'the rarest form of virtue.' Distaste has led to indifference and indifference to ignorance of the political facts of life, and all of this in a day when it must be manifest to everyone that we live in a world of nations and can no longer dwell apart." That members of the legal profession should study and understand international politics and relations has also been the theme of some of Vanderbilt's articles and speeches, which have appeared in education and political science periodicals.

The attorney has not confined his activities to law. A member of the Republican party, Van-

derbilt has participated in some party affairs. Delegated to the Republican National Convention in 1936, he supported the nomination of Alfred M. Landon⁴⁴ and served as vice-chairman of the Republican Presidential campaign executive committee in New Jersey. When asked by *Current History* as to whom he would like to see nominated in 1940, he favored Thomas E. Dewey⁴⁵. In 1944 Vanderbilt was again a delegate to the party's national convention. He has also served as director and counsel for the Savings Investment and Trust Company, and chairman of the board of the Pepsi-Cola Company (1938-39) and serves as director and general counsel for that corporation.

The holder of a number of honorary LL.D. degrees (from Wesleyan, Tulane, Western Reserve, University of British Columbia, Tusculum College, American University, Northeastern University, and the universities of Pennsylvania, Michigan, and British Columbia) and a D.C.L. from Boston University, Vanderbilt is president of the board of trustees of Wesleyan University, and a trustee of the National Foundation for Education and of the National Foundation for Education in American Citizenship. He is also a member of the governing board of the Institute of Public Law and Administration at New York University, a director of the National Probation Association, and of the American Arbitration Association, a life member of the American Law Institute, an honorary member of the Canadian Bar Association, and a member of the American Political Science Association. His fraternities include Phi Beta Kappa (he was president of the Phi Beta Kappa associates in 1939-41); Delta Kappa Epsilon, of which he was honorary president from 1939 to 1940; Phi Delta Phi, legal fraternity, and honorary membership in the Order of the Coif awarded him by George Washington University in 1938. Vanderbilt is the editor and a contributor to the book *Studying Law*, published in 1945.

When in New York, Vanderbilt may visit the University, Lawyers, or New York University Faculty clubs; in Short Hills, New Jersey, where he has his home, he is a member of the Short Hills and Barustol clubs, and in Newark, of the Essex, Down Town, and Newark Athletic clubs. Vanderbilt was married to Florence A. Althen in September 12, 1914. The couple are the parents of five children: Jean Althen (now Mrs. Christian L. Swartz), Virginia Elizabeth (now Mrs. Lemuel Bannister, Jr.), Lois Dorothy (now Mrs. George C. Brainard, Jr.), Robert Althen, and William Runyon. The "distinguished-looking" lawyer is a member of the Methodist Church.

WAITT, ALDEN H(ARRY) Dec. 22, 1892- United States Army officer

Address: b. c/o Office of Chief of Chemical Corps, Department of the Army, Washington, D.C.; h. Medford, Mass.

The development of chemical and biological weapons for the United States Army is the responsibility of the Chemical Warfare Corps, the branch of the War Department of which Major General Alden H. Waitt is the chief. He was appointed in November 1945, after the close of World War II. His first observation of gas warfare had been on the Western Front of France in World War I. Until and during World War II Waitt devoted himself to study and experimentation in the field of chemical warfare.

Alden Harry Waitt, descendant of a family from New England, was born in Orlando, Florida, on December 22, 1892. His parents were Emma Reed (Hutchinson) and Alfred Fernald Waitt; his father was a broker. The boy was reared in the suburbs of Boston and was graduated from the public schools of Medford, Massachusetts. When he reached the age of twenty-three, Waitt was graduated with a B.S. degree from the Massachusetts Institute of Technology. For the two years following (1915-17), he was an instructor in chemistry at the University of Kentucky, but left to enter the Gas Defense Service in 1917, receiving the temporary commission of first lieutenant in the Sanitary Corps. He was appointed a first lieutenant in the Engineer Corps in the year of 1918. After having been trained in Washington, D.C., for several months, Waitt was sent to Camp Zachary Taylor in Kentucky to become chief gas officer of the Eighty-fourth Division. Six months before the Armistice, in June 1918, the young officer was promoted to captain in the Engineers and was sent overseas for further gas defense instruction at Chaumont, France.

His subsequent assignment was as chief gas officer of the Twenty-ninth Division, from which he went to the Chemical Warfare Service's headquarters in France. In 1920 he decided to enter the Regular Army; after receiving his commission as a first lieutenant, he was ordered to Boston as assistant chemical officer of the First Corps Area. He remained there until March 1921, when he was appointed secretary and instructor to the Chemical Warfare School at Edgewood Arsenal, Maryland. Waitt returned to Boston in January 1924 to act as executive officer of the First Chemical Warfare Procurement District. During the next three years he also obtained his M. Sc. from M.I.T. (1926) and did research on the staff of the research laboratory of applied chemistry of that school.

In October 1927 Waitt was ordered to Washington again for duty in the Office of the Chief of Chemical Warfare. Slightly less than four years afterward he was in command of Company A of the first separate chemical battal-

U.S. Army Signal Corps

MAJ. GEN. ALDEN H. WAITT

ion, assigned to Schofield Barracks in Hawaii, and for a year was chemical officer of the Hawaiian Division. The year 1933 saw him at Edgewood Arsenal once more, an instructor in the Chemical Warfare School, of which he became secretary in July 1934. For further training, Waitt was sent to the Command and General Staff School at Fort Leavenworth, Kansas, in August 1935. After being graduated the following June, Waitt attended the Air Corps Tactical School at Maxwell Field, Alabama, for a year, becoming a teacher there after his course of study was completed, and, in September 1937, chief of the school's chemical warfare section.

Waitt was appointed as the chemical officer of the First Armored Corps at Fort Knox, Kentucky, soon after World War II broke out in Europe. His return to Washington took place in February 1941, when he reported for duty with the Operations and Training Division of the War Department General Staff (G-3) and shortly was named chief of the branch of G-3 which handled Air Corps matters. Exactly a year later he became chief of the Plans and Training Division in the Office of the Chief of Chemical Warfare. Waitt's third assignment to Edgewood Arsenal occurred within the next eight months; in August 1942 he was named commandant of the Chemical Warfare School and in September appointed a brigadier general. By October 1942 he had been reassigned to Washington and made assistant chief of the Chemical Warfare Service in charge of field operations, in which capacity he served until the end of the war. Brigadier General Waitt was chosen the acting chief of the Chemical Warfare Service in November 1945, being nominated to the rank of major general by President Truman⁴⁶ at the same time. (He succeeded Major General William N. Por-

WAITT, ALDEN H.—*Continued*

ter⁴⁵.) At the end of that month, Waitt's title was confirmed. An inquiry into the faulty 4.2 mortar shells, a weapon developed by the Chemical Warfare Service and manufactured by the Garsson brothers' munitions combine, required Waitt's testimony before the Senate War-Investigating Committee in July 1946. (He stated the failure of the shells might be ascribed to faulty fuses rather than faulty manufacture of shells.)

Chemical warfare, General Waitt has pointed out in his various books and articles, is not, as popularly believed, merely the diffusion of poisonous gases; it also includes flame and smoke throwers, biological agents and anti-agents, and chemical mortars. Since the United States has never ratified an anti-gas treaty, General Waitt believes that the use of poison gas to defend the nation is justifiable for either offensive or defensive purposes. The combat chemicals, General Waitt explained in an article in *Scientific American*, "may be employed tactically to produce casualties, to harass, for screening, or as incendiaries."

No chemical weapon has yet been developed that would, in ten necessary respects, merit the title of "perfect." (Waitt made this statement in the December 1935 issue of *Scientific American*.) The hypothetically perfect war gas would be inexpensive to manufacture, easy to produce in large quantities, procured from accessible raw materials, transported with facility, reducible to liquid form, safe to transport, noncorrosive to its container, stable for storage, heavier than air and difficult to detect by odor, color, or taste. Until the beginning of World War II, mustard gas and lewisite were still the most effective chemical combat agents; but the even more destructive chemical munitions developed by the United States, Japan, and Germany in wartime research were not used, for fear of instant retaliation by the enemy. The tremendous gas casualties of World War I, according to General Waitt's article in the May 1942 issue of the *American Journal of Nursing*, were not necessary and could have been reduced by proper care, such as the immediate neutralization of the chemical on the skin.

The use, in warfare, of toxic agents of hitherto unrealized potency was not viewed as inhumane by General Waitt. He was quoted in the *Reader's Digest* as saying: "I believe it to be a practical form of warfare that has great potentialities. It is neither consistent nor intelligent to talk about the horrors of gas and biological warfare, and then condone atomic warfare. I am entirely out of sympathy with talk about the humanity or inhumanity of a weapon. The thing that really is inhumane is war itself."

Lethal agents (such as botulinus toxin, the most highly toxic substance known) were not the only products of the Chemical Warfare Service's laboratories during the war. By-products of their research included insecticides, fungicides, rodenticides; specifics against mercury and arsenic poisoning; nitrogen mustard

compounds for the treatment of cancer and Hodgkin's disease; a diiso-propyl fluorophosphate compound which has been used in the treatment of glaucoma; and an antidote for cyanide poisoning. These achievements of the CWS, as well as the development of a toxoid for ptomaine and a vaccine for rinderpest, were made in the same six years that witnessed the development of the atomic bomb.

In a talk before the American Chemical Society in 1947, General Waitt said: "We know that massed bombing with incendiaries or explosives can destroy industrial installations and the accumulated property of generations within a relatively short period of time. But wars do come to an end. The period of reconstruction that follows is long and costly to both victor and vanquished. We are suffering today because of the terrible destruction of buildings, plants, and goods in Europe and Asia. I have always believed that it would be more effective to direct our main effort against men and less against matériel. I have long argued that our target should be the man and not the machine or the structure. It takes only a few months to construct a new factory under wartime pressure, but it takes a generation to raise a man. More important, when the target is personnel rather than matériel, the aftereffects of the war on the victor are greatly reduced. It is only a moral victory that is won if the vanquished must be supported until he can help himself again. The chemical weapon is a personnel weapon and it is effective."

Among the magazines to which General Waitt has contributed articles are: the *Saturday Evening Post*, *Flying*, *Popular Science*, the *American Journal of Nursing*, the *Military Engineer*, the *Coast Artillery Journal*, the *Infantry Journal*, and the *Cavalry Journal*. His book, *Gas Warfare*, published in 1942, has reached four editions. Waitt has also been an editor, serving in that capacity on the magazine, *Chemical Warfare*, for three years (1921-23). In recognition of his services in the Army, he has received the Victory Medal with two clasps, the American Defense Theater, European, and Pacific Theater medals, the Army Commendation Ribbon, the Legion of Merit, and the Distinguished Service Medal. He is an honorary Commander of the Order of the British Empire. Waitt's fraternities are Beta Theta Pi and Pi Delta Epsilon; he also belongs to the Army and Navy Club, the American Legion, the American Chemical Society, and is a member of the division of chemistry and chemical technology of the National Research Council. In July 1947 he was a delegate of the United States to the International Congress of Pure and Applied Chemistry in London. Married to the former Kathryn Elizabeth Trapp since 1917, the chemical warfare chief is the father of two children: Betty Alden and Thomas Meredith.

WALKER, MILDRED May 2, 1905- Author

Address: h. Great Falls, Mont.

"Writing, to me," says Mildred Walker, "is one way of living and savoring life more deeply: or, as Rebecca West says of art, it is 'a cup in which you can lift life to the lips and taste it'—even if the cup is sometimes a battered tin one. . . . I do my writing between the goings and comings and demands of three vigorous children and a doctor husband. It must, therefore, be done in small pieces of time between the interruptions, but I realize that the advantages of writing in the midst of a busy but tolerant household far outweigh the advantages of any ivory tower."

Mildred Merrifield Walker was born May 2, 1905, the daughter of Walter Milliken Walker, a Baptist minister in Philadelphia, and Harriet Jane (Merrifield) Walker. When she was twelve years old, she decided, not that she wanted to become a writer, but that she already was one. She used up all her allowance in sending out stories, which came back promptly. But she did receive her first recognition—a fifteen-dollar prize in an essay contest on fire prevention. That was in 1917. The parsonage was a good place for an incipient novelist to be growing up in. There, the minister's daughter remembers: "We did not live by bread alone but by faith and humor, and the spoken and written word was vital and thrilling."

From high school in Philadelphia the girl went to Wells College, in New York State, where she was encouraged to keep on writing by Robert P. Tristram Coffin. There, too, she learned something of the hazards of authorship when somebody she had described too obviously in an essay sued her for libel, and something of its rewards when she received the Helen Zachos English prize. For eleven days, after her graduation from Wells College in 1926, Miss Walker taught in the Philadelphia public schools. She escaped gladly to a selling job in Wanamaker's Philadelphia department store, and from that progressed to the advertising department. But any future as a copy writer was ended by her marriage in 1927 to Ferdinand Ripley Schemm, a young surgeon, who took her to a lumbering village in northern Michigan.

Mildred Walker the aspiring author might well have been supplanted by Mildred Schemm, the busy wife, homemaker, and mother of a daughter and two sons. But sturdy Vermont ancestors ("It will take all my life and all my energy to live up to them.") kept her plugging away at her objective. Her opportunity came when her husband went to the University of Michigan to teach in the Medical School, and she entered the university's Graduate School and worked under the guidance of Roy W. Cowden. In 1933 she received her M.A. degree, and at the same time was awarded the Avery Hopwood Prize for her first novel, *Fireweed*, published the following year.

The life around her is a constituent part of all Mildred Walker's novels. She has a keen

MILDRED WALKER

eye for background, whether her theme be the delicate diplomacy required of the woman married to a physician, as in *Dr. Norton's Wife* (1938); the incipient struggle between the rising prohibition forces and the brewery interests, as in *The Brewer's Big Horses* (1940). "Miss Walker must be taken seriously," observed one writer, "not as a 'woman novelist' or as a 'regional novelist,' but purely as a novelist."

Both *Dr. Norton's Wife* and *Winter Wheat* (1944) were Literary Guild selections. The latter, which has been compared to Hamsun's *Growth of the Soil*, is a "gripping story of human conflicts and man's constant struggle to wrest a living from ruthless Nature." Published in 1947 is *The Quarry*, a novel in which Miss Walker has "packed the rich substance of the human drama of an individual, a family, and a town." The author, according to William Soskin in the New York *Herald Tribune*, "is completely absorbed in the spirit of an era." "Mature and intelligent," her book is a "consistently entertaining performance."

Mildred Walker's other novels are *Light from Arcturus* (1935), and *Unless the Wind Turns* (1941). Miss Walker is not a very prolific writer, but in addition to her books she has published stories in the *American Magazine*, *Collier's*, the *Ladies' Home Journal*, and the *Woman's Home Companion*.

For some time now the Schemms have lived on a ranch seven miles from Great Falls, Montana, the city in which Dr. Schemm practices as a specialist in internal medicine. The slender, brown-haired, brown-eyed author weighs 126 pounds and is five feet six inches in height. She has the indispensable attributes of the successful writer—an observant mind, an incisive pen, respect for her language, broad sympathies, and a warm sense of humor.

The author refuses to describe work in progress—"Who can tell what it will be, or

WALKER, MILDRED—*Continued*

whether it will be?" or to keep a scrapbook of her reviews—"lest in my senile seventies I bore all my children by insisting on showing them 'my clippings.'" (The children are Margaret Ripley, George Walker, and Christopher Merrifield.) Her seventies will not be "senile"—not while she keeps her feet so firmly planted on the earth, deals competently with family and household duties while she works at her writing. She lists as her recreations "horseback riding, pack trips, walking, reading, and going through the year with the changing weather."

WALLACE, HENRY A(GARD) (ä'gård)
Oct. 7, 1888- Political leader; former United States Government official; editor

Address: Des Moines, Iowa

NOTE: This biography supersedes the article which appeared in *Current Biography* in 1940.

Henry A. Wallace, an original New Deal philosopher of the Roosevelt⁴² Administration, late in 1947 announced himself to be an independent candidate for the United States Presidency. His thirteen years of service in the Government as Secretary of Agriculture, Vice-President of the United States, and Secretary of Commerce are cited to prove that he is either a "fuzzy-headed dreamer" or the "political messiah" of the twentieth century. One summary of opinion appeared in the *New York Times Magazine*: "To those who detest him he is still the great waster of potential wealth, the man who would plow under little pigs, pay the farmers for not planting, feed a quart of milk to every Hottentot. To those who love him he is also the great upholder of human welfare, the proponent of the century of the common man, the advocate of an expanding economy, the champion of a policy that would create sixty million jobs." After his solicited resignation from President Truman's⁴³ Cabinet in September 1946, Wallace accepted the editorship of the *New Republic* as a weekly forum for his political ideas, resigning at the time that he became a Presidential candidate.

Henry Agard Wallace was born of Scotch-Irish ancestry on a farm in Adair County, Iowa, on October 7, 1888, the eldest of six children. His mother was the former Carrie May Brodhead and his father was Henry Cantwell Wallace, the Secretary of Agriculture under President Harding. The first Henry Wallace (Henry Agard's grandfather), who had been a member of President Theodore Roosevelt's Country Life Commission, was an agriculturist: as a sixty-year-old Presbyterian preacher, he founded *Wallace's Farmer*, a magazine devoted to, in the words of its slogan, "Good Farming. Clear Thinking. Right Living." In his eighties he was "Uncle Henry" to half of Iowa, "the idol of prairie men throughout the West." Henry Cantwell Wallace took over the magazine upon his father's death and

edited it until 1921, when he joined Harding's Cabinet and subsequently "wore himself out in jurisdictional disputes with Hoover's⁴⁴ Department of Commerce."

Young Henry Agard attended the local Iowa grade schools and high school before enrolling at the Iowa State College, where he majored in agriculture. He had already shown interest in farming as a boy, testing "beautiful" prize-winning corn as well as other kinds to prove that the less "beautiful" strains produced higher yields—he pointed out that it was more important to satisfy hungry hogs' large appetites than their aesthetic sensibilities. After receiving his B.S. degree in 1910, Wallace joined the staff as an associate editor of *Wallace's Farmer* and began his study of prices and price trends in agriculture. He produced the first corn-hog ratio charts, which indicated the probable course of the markets and which enabled him in 1919 to predict the agricultural collapse of 1920.

The following year, when his father went to Washington, Wallace expounded many of the same policies of farm relief in the family magazine, policies which the elder Wallace was urging in the nation's capital. After Henry Cantwell Wallace's death in 1924, his son became editor of the magazine, which was later (1929) incorporated with the *Iowa Homestead*. This was a financially unfortunate move, against which Wallace had protested in a cable from Europe, and which led to bankruptcy for *Wallace's Farmer*. Although the journal passed out of the family's control early in the depression, Wallace remained as editor until 1933. It was during this period that Wallace devised a system for forecasting total corn yields on the basis of rainfall and temperature records, and conducted experiments which produced higher yielding strains. His research, described by Paul de Kruif in *Hunger Fighters*, is considered as ranking among the four or five important contributions of two decades (1920-40) to plant genetics. Throughout the corn belt of the United States, farmers used his strains of hybrid corn extensively, the seed being distributed by the Pioneer Hi-Bred Corn Company of which Wallace was organizer, president, and general manager. In 1947 the firm, the first modern seed-corn drying and processing plant in the world, did a business of ten million dollars.

As his father and grandfather had been before him, Wallace was a Republican while editing *Wallace's Farmer*, but in 1928 he supported Al Smith⁴⁴, who, he felt, had social vision. Through Henry Morgenthau⁴⁵ Wallace met Franklin Delano Roosevelt, who was then Governor of New York, whose Presidential candidacy he supported in 1932 against the Republican Herbert Hoover. Wallace is credited with making Iowa tally in "the Roosevelt column" on Election Day, getting an ultraconservative section of the country to support what was regarded as a radical New Deal. Wallace, whose childhood ambition was "to make the world safe for corn breeders," was, because of his farm policies and practical farming contributions, a "natural" for the position of Secretary of Agriculture. After Roosevelt appointed him

to his Cabinet in that capacity, Wallace told reporters: "This department will make good for the farmer or I will go back home and grow corn." He began by evolving the Agricultural Adjustment Act, calling farm leaders together to initiate a program which would raise farm prices. When the Act went into effect it was praised as "the most farsighted and heaven-sent piece of remedial legislation ever conceived by the mind of man" and "damned as the most vicious class-ridden measure which ever saddled some people's burden on other people's backs."

Under Wallace's directives corn and cotton were plowed under, six million young pigs were killed, crops were controlled in order that farm prices could rise above the disastrous low to which they had been depressed; and the Federal Treasury issued farm relief checks which totaled many millions of dollars. When the first AAA was declared unconstitutional, Wallace rewrote the act, stabilizing farm income at high levels and bringing about a better division of this income among farmers through soil conservation, the storage of reserves, the control of price and of production. Strong objections were voiced to the slaughter of the little pigs to which the Secretary of Agriculture responded, "People are more important than pigs." To avoid the repetition of such waste, even as an emergency measure, Wallace and his aid Milo Perkins⁴² worked out the food stamp plan to distribute surplus food stocks to the poor on a Government-subsidized basis. While most people, particularly the farmers, were behind Wallace in this, there were others who opposed the "stuffed warehouses." That these stocks were later used up in shipment to the Allies of World War II was viewed by some as a coincidence.

Although his reorganization of the Department of Agriculture in his years as Secretary (1933-40) had contributed much to the success of the New Deal, Roosevelt's choice of Wallace as his running mate in the 1940 Presidential campaign brought considerable opposition from within the Democratic Party. The choice of Wallace was not unexpected, however, for since 1933 his name had come up as a Presidential possibility: in 1937 Stanley High had written, "A good many people believe that Henry Wallace is Mr. Roosevelt's heir apparent as they believe no other department of the New Deal is so deeply indoctrinated with New Deal ideas or has so faithfully sought to make those ideas work" as Wallace's. After his election on November 5, 1940, Vice-President Wallace became Roosevelt's ambassador of good will, representing the President in Mexico at the inauguration of Camacho⁴⁰ as his first mission, later establishing more cordial relations with the other Latin American countries as a member of the Commission on Inter-American Affairs. Assignments also took him to China, Siberia, Russia, and India.

Wallace was not the accepted stereotype of a Vice-President. In addition to his legally prescribed functions as president and tie-breaker of the Senate, and his chairmanship of such minor committees as the Commission on En-

larging the Capital Grounds, Wallace assumed many emergency duties. Chairman of the Economic Defense Board, he was appointed chairman in September 1941 of the seven-man Supply Priorities and Allocations Board, a coordinating panel of the nation's top defense agencies. After six months that board was superseded by Roosevelt's "War Cabinet" of which Wallace, as head of the Board of Economic Warfare, was a member. This was after the United States had entered World War II and Wallace began implementing Roosevelt's goal of the "Four Freedoms" with the "Four Duties" which would achieve them: the duties of the people to produce to the fullest capacity, to transport as rapidly as possible to the field of battle, to fight with all that was in them, and to build a peace that would be just, charitable, and enduring.

The Board of Economic Warfare (formerly the Economic Defense Board), which had begun as "a fifty-cent edition of Britain's Ministry of Economic Warfare," by April 1942 had survived an attack from the State Department for mixing diplomacy and business in the BEW job of acquiring strategic materials. Wallace had also been involved in several bitter controversies with Secretary of Commerce Jesse Jones⁴⁰ the strong conservative who, as head of the Reconstruction Finance Corporation, financed the BEW's foreign purchases. Roosevelt finally took disciplinary action against the dispute between Wallace and Jones in July 1943 by abolishing the BEW in favor of the Office of Economic Warfare (under James F. Byrnes⁴¹) and by assigning some of Jones's RFC power to the same new agency.

As the conservative element within the party had hoped, Roosevelt did not give Wallace militant support as candidate for Vice-President at the next Presidential convention of the Democratic Party. However, after the 1944 election, Wallace was reputedly offered any Cabinet post except that of the Secretary of the Department of State. Jesse Jones's subsequent dismissal from the Department of Commerce and as head of the RFC to make way for the former Vice-President presaged a fight in the Senate. The RFC, with its thirty-two-billion-dollar investment portfolio, was severed from the Department of Commerce by the George⁴³ "bill of divorcement" before Wallace's appointment as Commerce Secretary gained reluctant Senate approval on March 1, 1945. Wallace later submitted plans to enlarge, reorganize, and revitalize the department in order (1) to stimulate foreign trade, (2) to integrate, expand, and disseminate the department's statistical and technical aids to businessmen—particularly small businessmen, and (3) to implement the Administration's program for a full-employment, high-income economy at the level of sixty million jobs.

There was no time for the long-range plans Wallace made for the Department of Commerce to materialize. Wallace made a politically inexpedient speech at a rally sponsored both by the National Citizens Political Action Committee and the Independent Citizens Com-

Halsman

HENRY A. WALLACE

mittee of the Arts, Sciences, and Professions, in which he attacked the Administration's policy of "getting tough" with the Soviet Union. The incident, which led to considerable embarrassment for President Truman, since the speech was contrary to the foreign policy of Secretary of State Byrnes (then at the Paris Peace Conference), terminated in Truman's request that Wallace resign from the Cabinet as of September 20, 1946. Following the speech and his resignation, a four-thousand-word memorandum which had been written for Truman by Wallace that July was made public. In it Wallace warned against an atom bomb race with Russia and made several charges against the Government's atomic energy blueprint drawn up by Bernard Baruch⁴¹—the plan accepted by the United Nations Atomic Energy Commission in December 1946.

After thirteen years, Wallace was thus the last of the original New Dealers to leave the Administration, Harold Ickes⁴² having resigned from the Truman Cabinet several months before. Wallace, who had announced his intention of continuing his "efforts for a just and lasting peace," returned to journalism in November 1946 as editor and "guiding head" of the liberal weekly, the *New Republic* (circulation 40,594), at the "liberal" salary of \$15,000 a year. By the time he resigned on December 29, 1947, the *New Republic's* circulation had increased by 65,000 (in 1947 it reached 100,000 readers). In the course of his editorship, he wrote articles on his impressions of Palestine and Italy, which countries he visited in October 1947.

Throughout 1947 there was discussion in the press of the possibility of the formation, for the 1948 Presidential election, of a third party: the group would grow from the Progressive Citizens of America, an independent fusion of the National Citizens PAC and the Independent

Citizens Committee of the Arts, Sciences, and Professions, and other liberal groups. But, believing that "it would be simply impossible for a third party to get on the ballot in enough States to make anything approaching an effective challenge," Wallace, as late as September 1947, said, "Unless I am definitely and positively proved wrong, I shall work within the Democratic party . . . to prevent [it] from committing suicide." On December 29, however, Wallace announced that he would accept candidacy for the office of President of the United States, asserting, "The formation of . . . a new party is vital because of the dry rot in the present bipartisan coalition of Republicans and Democrats."

It was strong disagreement with both the major parties' foreign policy which impelled Wallace to leave the Democratic party. In domestic policy the third party remains New Deal. Deploping the Administration's "frequent failures" to cooperate with or win cooperation from Russia, Wallace offered a substitute for the Marshall⁴³ Plan, which in essence would place the administration of foreign aid in the hands of the U.N., disregard the political ideology of the recipient of the aid, and forbid the use of the funds for armaments. The Wallace group opposes the universal military training proposal for the United States and standardization of defenses for Pan America. In an August 4 *New Republic* article, he criticized the first session of the Eightieth Congress as a failure.

Support for Wallace had been growing for several months before the announcement of his candidacy: by mid-December, after the national executive committee of the PCA had chosen him as the third-party Presidential candidate, affirmations came from PCA groups throughout the country. Individual members, however, including some of the officers, resigned in protest to PCA's support of Wallace. While some union leaders and CIO affiliates announced themselves as Wallace supporters, the national CIO opposed the formation of a third party. The fact that Walter Reuther⁴⁴ was re-elected president of the United Auto Workers was seen as a minor defeat for Wallace, who had supported the opposition. The Amalgamated Clothing Workers of America threatened to withdraw from the American Labor party if that group affiliated itself with the third party, which action ALP subsequently took. Editors saw the move as "a boon to the Republicans," "in the long run, helpful to Harry Truman," and *PM* believed a third party impractical. Individual support for Wallace came from Howard Fast⁴⁵, Paul Robeson⁴⁶, William Z. Foster⁴⁷, and Vito Marcantonio. Discussed as a possible running mate for Wallace was Senator Glen Taylor⁴⁸, who at the end of 1947 had not yet stated his position on the issue.

The Roosevelts' opinion of Wallace as a progressive leader in the United States has been reported by Paul Sifton in *Public Men In and Out of Office* (edited by J. T. Salter): Eleanor Roosevelt⁴⁹ called Wallace "the leader of the courageous American people." In 1940, President Roosevelt was said to have regarded him "as life insurance for the New Deal, al-

ready being 'put on the shelf when we took down the atlas of war.'" Roosevelt was also said to have felt that "Wallace alone had the mental breadth and moral stamina to keep the organization and administration of a people's peace on a level that would hold the imagination and hot loyalty of many peoples around the world."

One of the strongest critics of the New Deal, Hugh S. Johnson⁴⁰, once wrote of Wallace: "I disagree with almost every angle of his philosophy and program and doubt if he has the qualities of leadership appropriate to a great crisis, but I would trust his sincerity of purpose as far as that of any man I know in Government." Few of Wallace's opponents doubt his integrity; those who do, offer the following incidents in support of their opinion: Although Secretary of Agriculture Wallace and his department had helped to bring about social and economic reforms in farm tenancy during the depression years, Wallace was accused (reported in the *Nation*, September 18, 1935) of suppressing, under pressure, evidence vital to the program. On November 1, 1945, Secretary of Commerce Wallace made public a statistical report inferring that the United States automobile industry was in a position to grant a 15 per cent salary increase for 1946; after a major strike in the industry (the United Automobile Workers' dispute with General Motors) was negotiated on the basis of these statistics, the Department of Commerce issued a release which was interpreted by many as repudiating the original report. Wallace, in a letter to the *Washington Post*, discussed what he termed a misinterpretation. Another dispute arose when Bernard Baruch claimed that Wallace's criticism of the Baruch Plan for atomic energy control contained errors in fact; Wallace's reply was reported by the *New York Times* on October 4, 1946. The *Saturday Evening Post* (December 7, 1946) discussed these two issues.

A stable economy at a level of sixty million jobs, later reflected in the proposed Full Employment bill of 1946, is one of the concepts supporting Wallace's standing as an economist. A modification of the Beveridge⁴¹ plan for England, the program is designed to function within the framework of the free enterprise system, with the Government taking incentive action for or supplementing private enterprise in the creation of jobs to meet an estimated yearly employment budget. The position is presented in Wallace's *Sixty Million Jobs* (1945), considered one of the most important books of the time. Some of his other economic and political writings (books and collections of papers) have been *America Must Choose* (1934), *Technology, Corporations, and the General Welfare* (1937), *The Price of Freedom* (1940), *The Century of the Common Man* (1943), and *Soviet Asia Mission* (1946). Wallace's early farm texts include *Agricultural Prices* (1920) and *When to Feed Corn; When to Sell It* (1923). The predominantly religious works have been *Statesmanship and Religion* (1934) and *Christian Bases of World Order* (1943, with other authors)—in all of his writ-

ings Wallace uses a Biblical simplicity of style. He is a deeply religious man (he was born a Presbyterian and later became an Episcopalian), and the Bible is his most frequent source of quotation. He tells critics, "The Biblical record is heavily loaded on the side of the Progressive Independents." Wallace received the *Churchman's* award in 1945 "for promotion of good will among people."

In the early days of the New Deal, Wallace was voted "the worst dressed man" in Government circles by newspapermen, who wrote about his "almost ostentatiously untidy" dress, particularly "the knot in his tie [that] always stopped, as if it had met an immovable object, about an inch below his collar." In later years Wallace acquired more of the statesman's sartorial appearance, although much of his casualness and shyness of manner remain: someone once remarked that Wallace spoke English, Spanish, Chinese, and Russian, but never learned to speak the language of the politician. He is a nonsmoker, nondrinker, nonswearer. Always serious, Wallace is said to have begun courting his wife by reading aloud to her from rather weighty books. He and the former Ilo Browne of Indianola, Iowa, were married on May 20, 1914; their children are Henry Browne, Robert Browne, and a daughter, Jean Browne. The blue-eyed, gray- (once brown-) haired Iowan is five feet ten, keeps his weight at a muscular 170 pounds by gardening and exercise. He plays tennis, likes brisk walks and once (to the delight of those who would draw athletic and political parallels) was adept at throwing the boomerang.

WANGER, WALTER (wān'jěr) July 11, 1894- Motion picture producer

Address: b. c/o Walter Wanger Productions, Universal Studio, Universal City, Calif.

A motion picture executive who is identified with the politically progressive members of the Hollywood film colony, Walter Wanger regards films as the foremost medium of com-

WALTER WANGER

munication today—an invaluable instrument in building democracy and promoting international understanding. The veteran producer, now the president of Walter Wanger Productions, became associated with the film industry in 1919, and with such screen offerings as *Gabriel Over the White House*, *The President Vanishes*, and *Private Worlds*, gained a reputation as a "trail-blazer" in the 1930's. In the course of about twenty-five years, Wanger has produced a wide variety of films, ranging from those with a political theme to those like the Technicolor extravaganza, *Arabian Nights*.

Walter Wanger, born Walter Feuchtwanger on July 11, 1894, is the son of Sigmund and Stella (Stettheimer) Feuchtwanger. Reared in his native San Francisco until the age of eleven, he attended the Pacific Heights Grammar School. When he was eleven years old, his father died, and his mother took him East with her three other children to live in New York. Each summer the family went to Europe, and young Walter, now a student at the Cascadilla School in Ithaca, New York, supplemented his education at the Sillig School for Boys in Vevey, near Lake Geneva, Switzerland. For a year he was a student at Dartmouth College, in New Hampshire; and then, after a six-month period at Heidelberg University and a summer at Oxford, he re-entered the New England college. He was already interested in the stage at this time and was active in student theatricals. While at Dartmouth he also became an assistant to the English actor and producer Granville-Barker, who presented a series of Greek plays in colleges during a visit to the United States. Wanger worked with Claude Rains, Barker's stage manager.

A year after leaving Barker, Wanger was working as general manager for Elisabeth Marbury. He negotiated Irene Castle's first film contract at this time, for the feminine lead in *Patria*. The production of *Ception Shoals*,

which ran for about eight weeks in 1917, was Wanger's first independent venture on Broadway. After it closed he enlisted in the Army on June 6, 1917, for service in World War I, and a year later, was commissioned a first lieutenant in the Air Corps. He served under Major Fiorello La Guardia⁴⁰ (later to become Mayor of New York) at the Foggia air base in Italy. Wanger was subsequently assigned to Army intelligence missions; and having learned to speak German, French, and Italian during his education abroad, he was also appointed an attaché to President Woodrow Wilson's American Peace Mission after the Armistice in 1918. The Paris Peace Conference, which taught him something about diplomacy and treaties, together with his experiences while attached to the American Embassy at Rome for a time, stimulated Wanger's interest in a diplomatic career.

Upon his return to the United States, however, in April 1919, he did not enter the Foreign Service. In New York he met Jesse L. Lasky⁴¹ of the Paramount-Famous-Lasky Corporation, who, after testing Wanger's critical abilities on three play scripts, made him his aide and general manager of all film production at Paramount's four studios (in Astoria, Hollywood, London, and Paris). Until his resignation in 1920, Wanger bought most of Paramount's stories, engaged players, directors, and producers, acted as liaison between the studios, executives, and sales departments, and, in addition, supervised experimental stage productions. After leaving Lasky, Wanger, who had been married to actress Justine Johnstone in September 1919, sailed for England. There he converted Covent Garden, the British Royal Opera House, into a motion picture theater, then became managing director of the Provincial Cinema Theaters, headed by Lord Ashfield, whom he also served as adviser. Still in England in 1922 and 1923, Wanger, in association with Frederick Lonsdale, produced such plays as *The Fake* and *Polly Preferred* for the London stage, purchased and negotiated the American presentation of the hit play, *Spring Cleaning*, and arranged the first United States tour of André Charlot's revue, which featured Beatrice Lillie⁴², Jack Buchanan, Gertrude Lawrence⁴³, and other British talent.

Re-engaged by Lasky, who was visiting London in 1923, Wanger returned to the United States to resume his former position, and in the next several years introduced to movie audiences such stars as Claudette Colbert⁴⁴, Kay Francis, Miriam Hopkins, Walter Huston, and the Marx brothers. He remained general manager of Paramount until 1931, when he was dismissed as a result of a disagreement on policy matters. Wanger's next position was as vice-president of Columbia Pictures, where he produced a number of films between December 1931 and February 1933. He resigned from Columbia to become executive-producer at Metro-Goldwyn-Mayer, and while there made *Queen Christina*, starring Greta Garbo, and *Gabriel Over the White House*. The latter film, called "timely, original, and interesting" by one reviewer, and "the most important bad

film of the year [1933]" by another, is said to have been Hollywood's first attempt to incorporate political and economic ideas into its productions.

In September 1934, Wanger returned once more to Paramount, this time as an independent producer. His first picture for that studio's release was another film with a political theme, *The President Vanishes*. Still another production which marked him as an unconventional in the motion picture industry was *Private Worlds*, in which he introduced the serious treatment of psychiatry as screen subject matter. Before leaving Paramount in 1936, Wanger also made *Trail of the Lonesome Pine*, reputedly the first outdoor Technicolor movie, *The Moon's Our Home*, *Mary Burns—Fugitive*, *Shanghai*, *Her Master's Voice*, *Case Against Mrs. Ames*, *Palm Springs*, and others.

For the next five years (1936-41) Wanger was with United Artists, where he independently produced such features as *You Only Live Once*, *History Is Made at Night*, *Fifty-Second Street*, *Trade Winds*, *Stagecoach*, and *House Across the Bay*. In 1940 he concentrated on two productions, which have been described as "the most pretentious ones in his career": the "spine-tingling" *Foreign Correspondent*, directed by Alfred Hitchcock, and *The Long Voyage Home*, a screen adaptation of four one-act sea plays by Eugene O'Neill. Two years before he had completed *Blockade*, a film dealing with the Spanish Civil War, which was intended "as a preachment against war." Its release was preceded by reports of protests from Franco⁴² and threats that it, as well as future United Artists releases, would not be accepted by Spain. The picture, which in the opinion of a number of reviewers was not much more than a spy story that made "one wonder what all the fuss was about," was, according to Wanger, banned in Germany, Italy, Yugoslavia, Bulgaria, Portugal, Latvia, Poland, Czechoslovakia, Peru, Salvador, and Guatemala. Pointing out that "the shadow of increasing censorship [at home and abroad] had bred a fear complex" among Hollywood producers, Wanger urged legal protection for freedom of speech on the American screen as well as retaliatory boycott measures against those countries boycotting an American film company (*Foreign Affairs*, October 1939).

Late in 1941 Wanger organized Walter Wanger Productions, making arrangements with Universal Studio for the release of his films. Among the features which he brought to the screen in the next few years were *Arabian Nights* (1943); *Salome, Where She Danced* (1945); and a number of films with a World War II theme. Among the latter were *Eagle Squadrons* (1942), *We've Never Been Licked* and *Gung Ho* (about Evans Carlson's⁴³ Raiders) in 1943, and *Ladies Courageous* (1944). At the request of the United States Public Health Service and the California State Department of Public Health, Wanger also contributed his services as a producer to the making of a nonprofit, educational film on venereal disease during World War II, a film that was

shown to the public despite opposition from the National Legion of Decency.

Wanger is also the executive president of Diana Productions, which he organized in 1945 with director Fritz Lang and actress Joan Bennett. The company's first film offering was *Scarlet Street*, starring Edward G. Robinson and Miss Bennett. (Joan Bennett became Wanger's second wife in January 1940; they have one child, Stephanie.) In 1946 Wanger, together with actress Ingrid Bergman⁴⁰, formed another independent production company, the En Company, of which he was made president. It is producing in 1947 *Joan of Lorraine* for MGM release, with Miss Bergman in the star role. Other productions on which Wanger was working in 1947 were a screen adaptation of Rosamond Lehmann's novel, *The Ballad and the Source*; *The Lost Moment*, adapted from Henry James's *The Aspern Papers*; and *Tap Roots*. Two previous Wanger productions were *Canyon Passage* (1946) and *Smashup* (1947). When Wanger's contract with Universal for the distribution of his films expired in 1947, the producer concluded a somewhat similar arrangement with Eagle Lion Films. His first film for them will be *The Blank Wall*.

The author of a number of articles appearing in such publications as the *Saturday Review of Literature*, the *Public Opinion Quarterly*, and the *American Journal of Sociology* (his article, "The Motion Picture in the Fight for Freedom" is included in the book, *Treasury for a Free World*), Wanger has repeatedly emphasized the importance of films as a medium of communication and education for democracy. While working toward an increase in the output of factual and ideological pictures, he has, however, maintained, in the face of criticism by intellectuals and liberals of the American movie industry, that "Hollywood" techniques are necessary to meet popular tastes. "Unless we have a picture which appeals to the greatest volume of our people," he has declared, "we frequently lose the purpose for which the production was designed." To offset propaganda against the Hollywood film industry, an industry he feels has achieved good results despite certain shortcomings, Wanger has advocated an annual million-dollar public relations program; he has also urged the establishment of an academy foundation, which would serve as a motion picture museum.

Wanger was president of the Academy of Motion Picture Arts and Sciences for six years (1939-45) and in 1947 was a member of the board of governors of that organization. He was president of the Motion Picture Society for the Americas, which was Hollywood's liaison with the Office of the Coordinator of Inter-American Affairs. He is a member of the board of trustees of Antioch College and the Motion Picture Relief Fund, a trustee of the Georgia Warm Springs Foundation, a member of the board of directors of the American Red Cross and of the Industrial Areas Foundation of the American Council of Race Relations, a member of the advisory committee of the National Tuberculosis Association and of the editorial board of *Public Opinion Quarterly*. He was president of the Dartmouth

WANGER, WALTER—*Continued*

Alumni Association for the year 1946. (He received his B.A. degree from Dartmouth sometime after he left college.) He is a member of Alpha Delta Phi, Players, and Coffee House (New York).

WARREN, EDGAR L(OVETT) Mar. 7, 1904- Former United States Government official

Address: h. 3500 S. Wakefield St., Arlington, Va.

For slightly less than two years (September 1945—August 1947), Edgar L. Warren, as head of the United States Conciliation Service, was responsible for all labor-management mediation undertaken by the Federal Government. His agency provided service and information in every type of labor dispute in which it was asked to concern itself. Under the provisions of the Taft-Hartley⁴⁶ Labor-Management Act, which became operative in August 1947, the United States Conciliation Service was superseded by the Federal Mediation and Conciliation Service.

Edgar Lovett Warren was born in Pittsburgh, Pennsylvania, on March 7, 1904. His father was William Robinson Warren, a minister and editor of religious publications; his mother was the former Susan Alice Kemper, the daughter of the founder of Kemper Military School in Boonville, Missouri, from which Edgar was graduated in 1921. Warren received his Bachelor of Arts degree from Bethany (West Virginia) College in 1926. During 1930 he studied at the Harvard School of Business Administration, during 1934, at the Brookings Institution, and from 1934 to 1937, at the United States Department of Agriculture Graduate School.

In 1927 Warren began a six-year association with the Ralston Purina Company (a St. Louis manufacturer of cereal products), in that year becoming a salesman. Subsequently he was promoted to the position of sales supervisor and later to that of economist. While serving in the latter capacity, he forecast business conditions and made market and industrial analyses, reportedly earning a reputation as "an expert at stripping facts down to fundamentals." For five years (1933-38) Warren was an economist with the Department of Agriculture, working for the Agricultural Adjustment Administration. In 1938 he entered the Labor Department as an economist and director of the Industry Committee Branch of the Wage and Hour Division.

Warren remained with that division until 1942, when he became assistant director of the Wage Stabilization Division of the War Labor Board. He also served as public member of the Wage Adjustment Board for the building construction industry. The following year (1943) Warren was sent to Kansas City to head the Seventh Regional War Labor Board. His

assignment was to establish a wage stabilization program and to settle labor disputes. In Kansas City, according to Delos Lovelace (New York *Sun*), Warren found that labor and management officials were unfriendly to WLB because the preceding chairman had been unfamiliar with local problems; Warren, however, Lovelace reported, "pleased them all." After a year in Kansas City, Warren was transferred to Chicago to perform the same duties, this time as chairman of the Sixth Regional War Labor Board. Chicago, stated *Business Week*, was then "one of the hottest and heaviest spots in the NWLB structure." One of the problems which confronted Warren there was a strike of workers on suburban railroad lines.

Warren had had no previous association with Secretary of Labor Schwollenbach⁴⁵ when he was appointed director of the United States Conciliation Service, of the Department of Labor, in September 1945; he reportedly received the post because he asked for it and was found to qualify. Through its several regional offices (and numerous branches, including one which deals solely with labor relations problems in the rubber industry), the Conciliation Service provided, on request, conciliators who attempt to resolve both major and minor labor disputes; the conciliator, however, had no authority to enforce his recommendations. The function of conciliation and mediation, Warren has said, "is to make certain that each issue in dispute is considered on its merits . . . by both parties; that the divergent points of view of both parties are thoroughly understood by each other; that all possible means including compromise proposals, suggestions based on analogous situations, . . . fact-finding, or . . . voluntary arbitration have been thoroughly explored, and that both parties realize the implications . . . of their failure to arrive at some kind of settlement." In compliance with the recommendation of the President's Labor-Management Conference of November 1945, Warren had prepared a panel of special conciliators (persons prominent in various fields, rather than trained conciliators) to be drawn upon in special cases. Warren had also inaugurated a training course for new conciliators: he hoped that conciliation might come to be regarded as a career.

When both parties were willing, the United States Conciliation Service suggested arbitrators, whose names had been approved by a regional labor-management board. At the disposal of the conciliators, arbitrators, or the disputants themselves were the facilities of the Technical Service, which supplied facts about prevailing practices in the industry, analyzed data, or made studies; it had, in the past, been called upon to make time studies, given advice on incentive payment plans, been consulted on job evaluations, and discussed job description disputes.

Warren had established two committees to advise the Conciliation Service: a Technical Advisory Committee (consisting of four representatives of industry, two of the A.F. of L. and two of the CIO), which worked with the Technical Division of the service, and a Labor-

Management Committee (its eight members represented industry and labor in the same proportion). The latter, in December 1946, issued four recommendations to improve labor-management relations (Warren, it is said, endorsed these): that conciliators outside Government service be used (Warren later adopted this suggestion), that tripartite (industry, labor, Government) mediation boards be set up, that voluntary arbitration be used more extensively, and that fact-finding boards be employed when both parties consent. In December 1946 Warren announced that nine out of ten labor disputes had been settled without work-stoppage or serious difficulty.

More publicized were those cases in which settlements had not come about smoothly. Since assuming his post with the Conciliation Service, Warren was called upon to take a personal part in six nation-wide strikes: a strike of oil workers (October 1945), the General Motors strike (November 1945), a bus strike (November-December 1945), a telegraph employees strike (January 1946), a packing house workers strike (January 1946), a maritime strike (June 1946), and a telephone strike (April 1947). The Labor-Management Act of 1947 (Taft-Hartley Act) removed the Conciliation Service from the Department of Labor and established, instead, the Federal Mediation and Conciliation Service; the change, Warren felt, "marks a major turning point in the administration of the labor relations policy." On August 21, 1947, Warren resigned from his office.

A strong advocate of the use of voluntary methods of settling labor disputes, Warren has written a number of articles and made several speeches expressing this view. "I do not believe that Government can successfully substitute its own decisions for the voluntary agreements worked out over the bargaining table by representatives of labor and management." Discussing the responsibility of various agencies for maintaining labor peace, Warren has written, "The basic problem . . . cannot be resolved solely by improving governmental machinery. Such machinery must be implemented by the determination of employers and unions that collective bargaining shall be made to work in large cases affecting the national economy, as well as the smaller cases." In an April 1946 speech, Warren asserted, "Too often . . . the average newspaper reader is inclined to believe that the use of the strike weapon particularly in a period of emergency . . . is an unmitigated evil. Not only is the right of the wage earner to refuse to work a legal right, it is also a fundamental human right, and it can be argued further that the exercise of this right is a necessary ingredient of a vigorous economy."

Warren is a member of the American Economic Association and Beta Theta Pi. Two of his past affiliations aroused sharp criticism on the part of several Congressmen: before 1938 he was a member of the American League for Peace and Democracy and the Washington Book Shop, organizations which were reported later to have become Communist-dominated. Former public members of WLB and industrialists testified on Warren's behalf, but, in

Press Assn., Inc.

EDGAR L. WARREN

April 1947, the House of Representatives omitted appropriation for his salary in a general appropriations bill. The Senate, however, wrote into the bill a provision for Warren's salary.

In height Warren misses the six-foot mark by half an inch; he weighs 195 pounds. He has brown eyes, bushy black eyebrows, and graying hair. "He is sturdily built," wrote *Business Week*, "not the expansive type, but a good listener and agreeable company." Warren, who enjoys playing tennis, was married to Katharine Cope on December 26, 1928. "When his son [William] and daughter [Marjorie] argue, he just ducks," reported the *American Magazine*, quoting the conciliator as asserting, "Their differences don't come into my field."

WAYMACK, W(ILLIAM) W(ESLEY)

Oct. 18, 1888- United States Government official; former newspaper editor

Address: b. c/o United States Atomic Energy Commission, 1901 Constitution Ave., N.W., Washington 25, D.C.; h. R.F.D. #3, Adel, Iowa

Civically active W. W. Waymack, winner of a Pulitzer Prize for distinguished editorial writing, edited Iowa's largest newspapers until October 1946, when President Truman appointed him to the new Atomic Energy Commission.

William Wesley Waymack, whose ancestors took part in the American Revolution, was born to William Edward and Emma Julia (Oberheim) Waymack on October 18, 1888. His birthplace is Savanna, Illinois. Young Waymack earned his B.A. at Morningside College in Sioux City, Iowa, where he joined the journalism fraternity Sigma Delta Chi. In June 1911 he married and began his career as a reporter on the *Sioux City Journal*. Three years later Waymack was promoted to city editor and chief editorial writer, and in the wartime year of 1918 moved to Des Moines to write editorials for the *Register* and *Tribune*. In 1921 he became managing editor of these newspapers, which are owned by one publisher.

He was in his eighth year as managing editor in 1929, when he headed the Iowa State Air Law Committee; the next year he represented Iowa at the National Air Law Conference. Editor of the editorial section from 1931, Waymack was elected to the board of directors of the *Register* and *Tribune* Company. "WWW," as he is called, has been described by assistant editor R. J. Blakely as a "citizen statesman" who has "contributed to the development of both business and professional ethics" and has "broaden[ed] the concept of self-interest." A Republican, in 1936-37 he served on Democratic President Roosevelt's "42 Committee on Farm Tenancy; in 1937 he helped organize the National Farm Institute, and in 1937-38 served on the Iowa Farm Tenancy Commission. Waymack is on the board of the Farm-Foundation and an adviser to the Friends of the Land.

Runner-up for the Pulitzer Prize in distinguished editorial writing in 1936, Waymack was awarded that journalistic award by Columbia University the next year. In 1937 he had been honored with Drake University's LL.D., and in 1938 Sigma Delta Chi added its award for editorial writing. (Waymack considers that the function of the editorial is to enable the public to "see things whole.") In 1939, the year he was elected to vice-presidency of the *Register* and *Tribune* Company, his activities included membership on the National Committee on Housing and the Commission to

Study the Organization of the Peace. Two years later the Iowan was elected to trusteeship of the Carnegie Endowment for International Peace. He has filled posts also in similar organizations, including the Nonpartisan Council to Win the Peace, the Woodrow Wilson Foundation, Freedom House, and the Americans United for World Organization.

Chairman of the Economic Policy Committee from 1938 through 1941 and a member of the Twentieth Century Fund's committee on debt adjustment, Waymack was chosen in 1941 as one of the directors representing the public on the board of the Federal Reserve Bank of Chicago. From 1942 he was deputy chairman of the board of directors. During 1940-42 Waymack helped make policy for the American Council of the Institute for Pacific Relations, and also for the Committee to Defend America by Aiding the Allies; and in 1941 he studied the Australian war effort on the invitation of the governments of Australia and New Zealand. Three more honorary doctorates came to Waymack in the prewar period: Litt.D.'s from his alma mater in 1939, Parsons College in 1940, and Grinnell College in 1941.

After Pearl Harbor, the fifty-three-year-old editor added to his civic activities. Promoted to editor in chief of the *Register* and *Tribune* (while remaining a vice-president and director), he served in 1942 as a special adviser to the State Department. (Waymack once called for Secretary of State Cordell Hull "40 in an ancient Model-T Ford.) Until his resignation in July he served on the National War Labor Board as an associate public member; he was also on the Midwest committee of the National Resources Planning Board. Waymack became chairman of the Western Policy Committee, was in the United States delegation to the Inter-American Agricultural Conference in Mexico City, and won the distinguished service award of the National Council of Christians and Jews—he was co-chairman of the Des Moines chapter. In that year Waymack accepted election also to the board of the Twentieth Century Fund.

"A public servant who has never sought office," Waymack is said by Blakely (*New Republic*, November 11, 1946) to have discharged his official assignments with distinction. He was one of the War Food Administration's consultants in 1943, and served also in 1943-44 on the board of the National War Fund. In 1944 he terminated eight years as curator of the Iowa State Historical Society and received the American Farm Bureau Federation's award for distinguished service. The year 1945 found editor Waymack representing the American Council at the Institute of Pacific Relations conference, and in March 1946 he represented the United States on the Allied mission to observe the postwar Greek elections, with the rank of Minister. The Drake University chapter of Phi Beta Kappa elected Waymack to honorary membership in that year.

The Des Moines editor has read particularly widely in military history, especially of the naval and air forces, in economics, and in philosophy. "The press," he has written, "is the

No. 1 public utility of a self-governing people . . . a peculiar kind of public utility which cannot safely be regulated by the Government as to its essential service function. (Of course the publishing business can and should be regulated as to wage minima and things like that; but that's another story.)" To solve this problem Waymack recommended: "Get the newspaper into the schools, where its presence is abundantly justified by numberless immediate educational values, and there will immediately begin to develop a critical approach to the press that will become intelligent and constructive."

In basic political philosophy, Waymack deplored the lack of recognition by the press that "the democratic complex is a complex, not a simplicity—that it is essentially a workable, because just, equilibrium of . . . such inherently contradictory concepts as liberty and equality, and an appropriate balance between them in each generation." Waymack has also written of the typical American undervaluing of politicians and officials: "The profession of politics and Government should rank higher than any other," he said in 1944. He deplored the "appalling lack of general education as to the ABC's of economics—a main reason for our frequent inability to comprehend what constitutes 'the general interest.'" Among encouraging developments, he pointed to "the infiltration of scholarly brains into our public affairs."

When President Truman⁴⁵ named William Wesley Waymack to the new Atomic Energy Commission in October 1946, the *New Republic* termed Waymack and former SEC commissioner Sumner T. Pike⁴⁶, a wealthy, progressive Republican, "precisely the types with precisely the backgrounds for a job of such overwhelming importance." Commentators and organs of nearly all degrees of the political spectrum joined in praise of the selections, many remarking that the caliber of the appointees was especially fortunate in view of the difficulty the President had had in finding men competent and willing to take on such difficult and demanding tasks.

In the Atomic Energy Commission he thus became the associate of chairman-designate David Lilienthal⁴⁴, internationally known co-author of the Acheson⁴⁰-Lilienthal State Department *Report on the International Control of Atomic Energy*; of Professor Robert F. Bacher⁴⁷, and of Rear Admiral Lewis L. Strauss⁴⁷. The experts, who went to work immediately, pending Senate confirmation, were described as working "congenially and ably" as a unit on all problems, rather than each commissioner specializing in one aspect of the work. The act which established AEC, stipulated that the commission members must "rigidly, finally, and wholly detach themselves" from all business and vocational interests whatever during their two-year terms at a Cabinet-size fifteen thousand dollars.

At the beginning of 1947, control of the Army's two-billion-dollar atomic energy project, administered by Major General Leslie R. Groves⁴⁸ under the code name of Manhattan District, passed into the hands of the AEC.

W. W. WAYMACK

Its five hundred thousand acres of land holdings, located in eighteen states, were then staffed by a personnel of 43,700, and world-famous scientists were included in its two-hundred-million-dollar annual payroll. Waymack and his fellow commissioners were vested with complete control and responsibility for all atomic-energy work in the United States and all the source materials therefor, even to the power of expropriating all newly discovered deposits of such ores. Inasmuch as the United States had a relative monopoly of the facilities and techniques for releasing atomic energy by uranium fission, these five men stood also as "trustees for the world" of the vast new power—*Time* called them "gods of the lightning."

When examined by the Joint Congressional Committee on Atomic Energy in January 1947, Waymack endorsed the Baruch⁴¹ plan for international control of atomic energy. (The act which set up the AEC provided that it might be superseded by future international agreement.) "I don't shrink from [the necessity of developing further atomic weapons], said Waymack. "The major emphasis now has to be on that side."

During the Senate hearings on the AEC nominations, Waymack was one of the "forgotten four" who sat with Lilienthal and listened to the dispute about Lilienthal. For their part-time consultants, by Presidential appointment, they had leading scientists and engineers, including physicists Oppenheimer⁴⁵, Rabi, DuBridge, and Fermi⁴⁵, and chemists Seaborg and Conant⁴¹. The final endorsement of the nominations by the committee was unanimous in the cases of Waymack, Bacher, and Strauss, and confirmation by the full Senate followed. This was in April 1947, the hearings having begun in January. The newly confirmed appointees soon proceeded to make a more detailed inspection and morale-building tour of

WAYMACK, W. W.—Continued

their "empire," each commissioner covering a different route.

Among the commissioners' problems was the basic one of converting a defense project into a largely medical and industrial research project (although military research was carried on by their Military Liaison Committee). The *United States News* reported that, because of the large proportion of military or military-trained personnel involved, "in effect, civilian control of the commission is largely a matter of veto power." Since there was a shortage of scientists of sufficiently advanced training, the commission embarked on a program of "growing its own" by providing courses of highly advanced instruction at its regional laboratories, and by exchanging professors and students with the associated universities.

The commission's other activities included the production and sale of isotopes. Its members paid much attention to decentralizing and delegating a great deal of their work, and to declassifying from secrecy regulations as much of their information as possible. In July 1947 the House voted the AEC twenty-five million dollars for cancer research. In effect, stated Edward B. Lockett in a November 30, 1947, *New York Times Magazine* article, AEC is responsible to the Joint Congressional Committee on Atomic Energy and to the two (one for each chamber) committees which review its request for appropriations each year. In addition to working under surveillance of the Military Liaison Committee, AEC's work is reviewed by the General Advisory Committee, composed of scientists and technicians, and an Armed Forces Special Weapons Project.

Tall, vigorous, spectacled W. W. Waymack, whose thick hair is streaked with gray, is described thus by his former assistant: "An individualist who believes in private responsibility. . . His outlook is humane, as opposed to technical. Though not a physical scientist, he has long used the scientific method in dealing with social problems. He believes in the potentialities of the human mind and heart." "WWW," who has done much traveling, likes to spend time on the Iowa farm where he raises pedigreed stock and names them after his famous friends. A thirty-second-degree Mason (Shriner), he lists membership in seven clubs and innumerable civic groups in his sixty-six-line entry in *Who's Who in America*. The Iowan lists no church membership, but is on the layman's committee of the Federal Council of Churches of Christ. William and Elsie Jeanette (Lord) Waymack have one son, Edward Randolph.

WEEKS, EDWARD (AUGUSTUS), JR.

Feb. 19, 1898- Editor; writer

Address: b. c/o Atlantic Monthly, 8 Arlington St., Boston; h. 59 Chestnut St., Boston

For twenty-four years Edward Weeks has been associated with the *Atlantic Monthly*, which observed its ninetieth anniversary with the special November 1947 issue. Nine of these years were spent as editor of the Atlantic Monthly Press, the book publishing affiliate of the firm, where he became known as "the editor behind the best seller," discovering the work of Nora Waln, Walter D. Edmonds, Mazo de la Roche, and Agnes Newton Keith. Subsequently, in 1938, on succeeding Ellery Sedgwick as editor of the *Atlantic Monthly*, he continued his predecessor's policy of making the publication "an intelligent and sympathetic extension of the editor's powers and interests." Under Weeks's editorship, the traditionally small circulation of the magazine has been increased to more than 160,000, but not to the extent of negating Sedgwick's concept of the magazine's purpose—"To inoculate the few who influence the many is the *Atlantic's* perpetual formula."

The eldest of Edward A. and Frederica (Suydam) Weeks's seven children, Edward Augustus Weeks, Jr., was born in Elizabeth, New Jersey, on February 19, 1898. His father was a cotton factor and merchant. On his mother's side Edward Weeks is related to Rufus King and the Halsey family of naval fame. He attended the Pingry School and Battin High School in the town of his birth, and, after being graduated from the latter, matriculated at Cornell University "as a bewildered mechanical engineer." During the first part of 1917, the erstwhile undergraduate served in the field service with the French Army; but, upon the entry of the United States into World War I, he became a private, first class, in the United States Ambulance Corps, attached to the Thirty-Seventh French Division. "Men fall asleep when not supposed to," he recalls of that period, "as I twice did in the summer of 1918 while driving my ambulance back to the front after agonizing runs of sixty-two kilometers." He was decorated with the Croix de Guerre for his service in the Aisne offensive of 1918.

As a veteran "trying to make up for lost time in college," Weeks found himself suffering from insomnia (a condition which was to bother him for twenty-five years and inspire one of his articles in the *Atlantic*); this did not, however, deter him from winning the Meeker Scholarship at Harvard University and graduating with the class of 1922. Simultaneously with his senior year at Harvard, Weeks was a campus correspondent for the *Boston Transcript*. Awarded the Fiske Scholarship at Trinity College, Cambridge University, the twenty-five-year-old American student spent the next year doing graduate work in England, and acting as the Cambridge correspondent for the Associated Press.

For six months after he returned to the United States in 1923, Weeks was a manuscript reader and book salesman for Horace Live-

right's publishing company, whose staff at that time also included Beatrice (Mrs. George S.) Kaufman, Manuel Komroff, Bennett Cerf, and Richard Simon⁴¹ (later a partner in Simon and Schuster⁴²). An offer to join the staff of the *Atlantic Monthly* was among the letters he opened one day in 1924. Accepting the position enabled him to be married to Frederica Watriss the following year, even though his courtship was slightly impeded by the fact, he later said in *This Trade of Writing*, that her "elders regarded me as unnecessarily risky." This was not, Weeks explains, "because I was a two-bottle man or fond of stepping out late with the chorus; no, so far as I could tell, their suspicions centered chiefly on the fact that I had committed myself to a bookish career." (There were to be two children of this marriage: Sara Thomson, and Edward Francis.)

The prospects of the "bookish career" were not as insubstantial as they appeared at first, for, within four years after joining the *Atlantic*, Weeks was made editor of the *Atlantic Monthly* Press. From the manuscripts submitted to the Atlantic Prize Contests and from his knowledge of promising writers who had contributed to the *Atlantic Monthly*, he was able to develop a short, but flourishing, catalogue of books. The two hundred titles published during his editorship (about twenty books yearly between 1928 and 1938) included such best sellers as Walter Edmonds' *Drums Along the Mohawk*, Nordhoff and Hall's *Hurricane*, Mazo de la Roche's *Jalna*, Nora Wain's *House of Exile*, Hans Zinsser's *Rats, Lice, and History*, and James Hilton's *Goodbye, Mr. Chips*. The profits accruing to the Atlantic Press and its co-publisher, Little, Brown and Company, rose 129 per cent in the first eight years of Weeks's editorship, and from then on, the percentage continued to rise.

The functions of an editor of books, which the average layman usually considers esoteric and sometimes even unnecessary, are clarified by the description of Weeks's method of work given by *Publishers' Weekly*: "He saw far more in a publisher's job than the mere function of accepting or declining a manuscript. In the first place, he went out after books instead of waiting for them to drop onto his desk. In his personal equipment he had not only a wide acquaintance among writers but also very definite ideas about what the reading public wanted. The second step was to bring the author and the subject together, and the next, by the soundest of editorial advice and assistance, to make a good book a better book."

By reviewing current publications for the *Atlantic* department called the *Peripatetic Reviewer*, the book editor was able to keep abreast of discoveries and trends in the publishing field. Early in 1937 Weeks also assumed the acting editorship of the magazine, deputizing for Ellery Sedgwick, its editor in chief since 1908. Sedgwick's decision to retire was an "office secret" for a year, so that Weeks's name did not appear on the masthead as editor in chief until the July 1938 issue of the *Atlantic*. Besides the new editor, the *Atlantic*

Dorothy Wilding

EDWARD WEEKS, JR.

soon acquired a new owner, Richard Ely Danielson. Under its new editor and publisher, the *Atlantic* instituted a new policy, summarized by *Time* as "less literature for literature's sake, more issue-grappling articles." Within a short time the *Atlantic's* advertising and circulation rose steadily, and by 1943 its circulation was larger than that of any other magazine of its kind.

With the ninetieth anniversary issue of November 1947, the *Atlantic's* editor introduced a change of format (planned by typographical designer W. A. Dwiggins) and a campaign to increase the magazine's circulation and its advertising. Embellished by a four-color pastel cover, a new type-face, and varied typographic and decorative heads for each piece, the ninetyeth anniversary *Atlantic* featured the work of G. B. Shaw, Somerset Maugham, J. P. Marquand, Budd Schulberg, Albert Einstein, General George S. Patton, and hitherto unpublished material by Henry James and Mark Twain. Frederick G. Melcher⁴³ of *Publishers' Weekly* considered it "a wonderful issue [with] a miraculous collection of material," while, in his judgment, "the type page could hardly be bettered." In reference to his plans for heightening the promotion of the *Atlantic* in late 1947 and throughout 1948, editor Weeks said: "A magazine doesn't die; it either reasserts itself periodically or it disappears. Now we are reasserting ourselves, not in a single issue but straight on into the difficult months ahead."

Apart from his strictly editorial duties, which include the reading of almost twenty million words a year, Weeks has performed services for books and authors in other respects. As chairman of the Massachusetts Committee to Reform Book Censorship in 1929, 1930, and 1931 he attempted to force a reconsideration of that State's censorship laws.

WEEKS, EDWARD, JR.—Continued

"It is our duty," he wrote, "as citizens, to see that our laws relating to obscene—and other—literature are as just and discriminating as wisdom can provide." Weeks further castigated censorship laws as "erratic, ill-considered, and unjust." In analyzing the reasons which have prompted such legislation, Weeks brought out that "there is ample evidence to show that censors once placed in authority will rigorously prosecute their charge, if only to justify their appointment." The old blue law was changed in 1931.

Weeks has also provided the aspiring writer with a handbook of editors' "peeves" and publishers' idiosyncrasies, *This Trade of Writing*. Stephen Vincent Benét called it an "intelligent, candid, and illuminating book. . . . If the person-who-wants-to-write doesn't come out at the end of this book with a much sounder idea both of the problems that face every writer and the problems concerned with the merchandising of writing, he must be remarkably insusceptible to the impact of words." The care for precision and briefness emphasized by Weeks in *This Trade of Writing* is the common denominator of the twelve stories he selected for a volume entitled *Great Short Novels*, which he edited in 1943, and for *The Pocket Atlantic*, which he compiled in 1946.

During 1940 and 1941, the *Atlantic Monthly's* editor broadcast over Station WJZ, spinning yarns, reviving half-forgotten anecdotes about writers and manuscripts, and reviewing books. Interwoven with factual material was the sort of salty wit and philosophy ordinarily associated with New Englanders, which led one reviewer to remark that the Boston editor, as a radio personality, sounded more like Cheerio than Woolcott⁴¹. Audience response from the North American continent testified to his success in widening the public's interest in good literature. "Even in the future when radios are worn on the wrist and there are television screens in every parlor," Weeks declared, "there will still be Americans who will relish good reading and keep it alive." Another tradition that he has striven to keep alive is that of the *Atlantic's* friendliness to England and to English writers. During World War II Weeks was one of the American editors and journalists invited to England by the British Ministry of Information for a five-week visit. His reflections on Anglo-American relations inspired an *Atlantic* article and several commentaries in the *Peripatetic Reviewer*.

Articles by Weeks have appeared in the *Atlantic*, *Youth's Companion*, *The Bookman*, *House Beautiful*, and *Publishers' Weekly*. As a contributor to the *Harvard Graduate Magazine* and the *Harvard Alumni Bulletin*, he continues a service to Harvard publications which began in his undergraduate days when he was secretary of the *Harvard Advocate*. On lecture tours managed by W. Colston Leigh⁴², the *Atlantic* editor has discussed "Books in a Troubled World", "What Makes a Novel?" "An Editor Faces the Future," and the "Three Crises in Every Writer's Life." At college his Greek letter society was Zeta Psi. Since 1945

the editor has been an overseer (similar to a trustee) of Harvard College and a trustee of Wellesley College. His academic honors include Litt.D. degrees from Northeastern University (1938) and Lake Forest College (1939), and L.H.D.'s from Williams (1942), and Middlebury (1944), and the University of Alabama (1945); he is also a fellow of the American Academy of Arts and Sciences. In addition to the French Croix de Guerre, the Volunteers' Medal was awarded to him in recognition of his war service.

Other of Weeks's activities have been chairmanship of the speakers bureau of the Greater Boston Community Fund (1945) and of the Peabody Radio Awards. Three of his clubs—the Saint Botolph, the Tavern, and the Myopia Hunt—are in Boston or its vicinity, but he also belongs to the Century Club in New York. The *Atlantic* editor is an independent Democrat, and an Episcopalian. Five feet eleven inches tall and weighing 160 pounds, Weeks has gray eyes and dark hair. He is an enthusiastic golfer and fisherman (he is an advocate of the light rod for fishing). His son, and his spaniel Mickey, frequently accompany him on fishing excursions—both boy and dog have inspired pieces in Weeks's column.

WEST, KEITH 1893- Author

Address: h. Winderton Brailes, Banbury, Oxfordshire, England

The writing of romances concerning life in ancient China might seem, to some readers, more than a bit anachronistic in this atomic age. But the studies of the formal culture of an old civilization in transition by Keith West, novelist and student of Chinese life and lore, are also regarded as deft social commentaries from which certain ironic modern parallels may be drawn.

Keith West (Kenneth Westmacott Lane) was born in Oxford, England, in 1893, the son of Annie Elizabeth Graham (Westmacott) and Francis Dalrymple Lane. From Rugby School he entered Baliol College, Oxford, from which he received an M.A. degree. In World War I he served as a lieutenant in the Royal Artillery.

The interest of the author in China and Chinese culture began in 1919, a year after his marriage, when he became assistant government analyst at Hong Kong. In 1924 West returned to England and until 1945 was a science master at various public and secondary schools. He has traveled widely in Yunnan and South China. His early novels with that background have been published in England: *Bamboo* (1931), *Hanging Waters* (1933), and *The House That Chak Built* (1935). *Hanging Waters* also appeared in the United States; and a short story, "A Gentleman Repays a

Loan," was printed in *The Best Short Stories of 1932*.

It was the publication in 1944 of *Winter Cherry* that first brought him serious critical attention in the United States. The richly romantic and aristocratic cultural atmosphere of North China in the eighth century provided the background for this commentary on a way of life. Orville Prescott of the *New York Times* found it "an enchanting comedy . . . a romance in which formal dialogues embodying traditional wisdoms, personal philosophies, and extemporaneous verses appropriate to each occasion" were more important than the story itself. *Peony* (1946) concerned a sheltered, aristocratic young woman who nevertheless came into contact with the realities of life. According to Graham Bates, in *Peony* "the formal way of life of the old China is shown in transition, and the very modern personal reactions to people and situations take on added vehemence as they develop within the older, ritualistic outward forms." John J. Espey wrote the *New York Herald Tribune* review of the book; he said: "Mr. West puts a delightfully high gloss of wit and ironic humor on its telling. His characters speak in aphorisms and epigrams, but so effortlessly that . . . soon one begins to feel it the most natural thing in the world to improvise a few stanzas of verse in the course of a conversation."

A third novel in West's series about life in ancient China, *The Three Blossoms of Chang-an* (1946) prompted Orville Prescott to note: "One of them is a refreshing novelty; three are a surfeit. . . . Instead of the brilliant charm or suggestion of tragedy of the first two books, the third seems to emphasize selfishness, shallowness, and futility." Other reviewers, however, saw in this story of a young man and his three loves a delicate and engaging satire.

Some critics have observed that Keith West as a romantic satirist and stylist greatly resembles James Branch Cabell, whom West himself calls "one of the first living exponents of English style." He admires also the work of the late Stella Benson (who was his first critic), Witter Bynner, Sinclair Lewis, Thornton Wilder, and the late Don Marquis. West is also a faithful "whodunit" fan. In 1947 the author was working on "The Widows of the Magistrate," a sequel to *The Three Blossoms of Chang-an*.

The blue-eyed, gray-haired author is five feet eight inches tall and 170 pounds in weight. He has two sons, Kenneth and Douglas, who served in the British Army during World War II. West and his family live "right in the heart of England on an outlying spur of the Cotswolds, and fifteen miles from Stratford-on-Avon." It was there the author's grandfather practiced medicine and became mayor of the town, and where a more remote ancestor lent some money to William Shakespeare. The house itself "is a very old warm stone one with a thatched roof." One of those writers who have a study but do not use it, Keith West, according to his wife, "sometimes works down by the lily pond at the bottom of the sloping garden, other times in a very disreputable armchair in the sitting room. He is

KEITH WEST

happiest when wearing a dark red pullover with a polo collar and his oldest pair of corduroy trousers, but he can, when occasion demands, look like any other commuter catching the 8:30." He has a dachshund called Willi, and three cats, Maxi, Suki, and Clara. West plays chess seriously, and an occasional game of mahjong. He also likes fishing, especially in the summer evenings, and going to the theater at Stratford with a party. He owns a small collection of Chinese bronzes and embroideries and lots of books.

WIENER, ALEXANDER S(OLOMON) (wē'nēr) Mar. 16, 1907- Physician; hematologist; immunologist

Address: b. c/o Wiener Laboratories, 64 Rutland Rd., Brooklyn 25, New York

Among the medical discoveries made during the years encompassed by World War II, few received more attention in the lay press than those pertaining to blood transfusions and the Rh factor in blood grouping, the latter revealed to be in many instances the cause of death of infants and their mothers. Pioneer work in these fields was done by three men, the late Dr. Karl Landsteiner, Dr. Alexander S. Wiener, and Dr. Philip Levine⁴⁷, with both Wiener and Levine collaborating at one point or another with Landsteiner, but not with each other.

Alexander Solomon Wiener was born on March 16, 1907, in Brooklyn, New York, the son of George Wiener, an attorney who had emigrated from Russia four years earlier, and Mollie (Zuckerman) Wiener. In the Brooklyn public schools he was an outstanding student, being graduated in 1922 at the age of fifteen as a member of Arista, the high school honor society, and with a tuition scholarship to Cornell University and a Regents' (University

Camr-Arts

ALEXANDER S. WIENER

of the State of New York) scholarship. He majored in biology at Cornell and also carried over the interest in mathematics which had made him a member of the mathematics team and president of the mathematics club at Brooklyn Boys' High. As a Cornell freshman he studied advanced calculus, and, as an upper class student, vector analysis and relativity theory; and he contributed original problems to the *American Mathematical Monthly*. In 1926 he was graduated from Cornell with the degree of B.A. and accorded election to Phi Beta Kappa. The next semester he entered the Long Island College of Medicine, from which he received his M.D. in 1930. While still at medical school Wiener began research in the field which was to become his life study; as an assistant to Doctors Max Lederer and Silik H. Polayes of the Jewish Hospital of Brooklyn, he worked on blood groups and their transmission by heredity, and with them he published his first original findings in the *Journal of Immunology* in June 1929.

From 1930 to 1932 Wiener served his internship at the Jewish Hospital of Brooklyn, at the same time continuing the investigations he had begun with Lederer and Polayes in 1928. The second, third, and fourth papers of "Studies in Isohemagglutination" (the reaction of the red blood corpuscles to contact with other red blood corpuscles, as would occur in blood transfusion) were published in the *Journal of Immunology* in December 1929 and March and September 1930. In 1930 the young doctor's work up to that time was recognized by the Joseph Lewine cash prize. In 1931 his paper "Heredity of Agglutinogens of Human Blood, with Special Reference to Medicolegal Application for the Determination of Non-Paternity" won him a prize from the Phi Delta Epsilon medical fraternity. In 1932 he published a method for measuring linkage ("the tendency

for a group of genes in a chromosome to remain in continuous association from generation to generation") in human genetics. At the conclusion of his internship, Wiener was made head of the division of genetics and biometrics at the Jewish Hospital. That same year, 1932, he began private general practice in Brooklyn; but this was of short duration. In 1935 he opened the Wiener Laboratories, of which he is head and clinical pathologist, and thereafter he limited his nonhospital activities to laboratory work. In 1935 he was named head of the blood transfusion division of the Jewish Hospital, in 1938 serologist in the Office of the Chief Medical Examiner of New York City.

Although in 1936 Wiener propounded a theory on the factor of heredity in allergic diseases which is still (in 1947) accepted as the best explanation of this process, his principal investigations have been in the field of blood grouping. The history of his discovery of the important Rh factor, made together with the late Dr. Karl Landsteiner, goes immediately back to 1937 but ultimately back to 1901, when Landsteiner distinguished the four main classifications of human blood, A, B, AB, and O, for which work he received the 1930 Nobel prize in medicine. In 1910 two German scientists, Von Dungern and Hirzfeld, demonstrated that each of the groups A and AB was composed of two subgroups, and in 1928 Landsteiner and Levine discovered the existence of the additional identifying factors M, N, and P. Up to this time, when Wiener began his studies in blood grouping, and for some time thereafter, it was believed that blood transfusion would be a perfectly safe process so long as the Landsteiner blood types were observed in accepting donors. Instances of hemolytic reactions despite use of the correct blood type were reported from time to time, but there was no explanation for the phenomenon and no attempt was made to correlate one such case with another.

Then, in 1937, while investigating the evolution of the human blood factors M and N, Wiener and Landsteiner demonstrated the presence of M-like agglutinogens in the blood of anthropoid apes and Old World monkeys. This, Wiener has explained, led them to attempt immunizing rabbits with rhesus monkey blood and resulted in the production of potent anti-M immune sera. Suspecting that hitherto unknown factors differentiating human blood could also be discovered in this fashion, the two doctors began experiments involving human blood and the antisera prepared from the rhesus blood. In approximately 85 per cent of the cases involved, positive reactions to what was obviously a new agglutinin were obtained, and the Rh factor was named soon afterward from the method of its discovery. Not until 1940, however, after Wiener and Dr. H. Raymond Peters had encountered three cases of hemolytic reaction following transfusions with seemingly homologous blood, was it recognized that these findings were of clinical as well as academic importance, and the knowledge made public in the *Proceedings of the Society for Experimental Biology and Medicine*.

The report of Wiener and Peters in the *Annals of Internal Medicine* for March 1940 revealed that transfusion of an Rh-negative individual with Rh-positive blood will so stimulate the formation of Rh antibodies, or sensitize the individual to the Rh factor, that a subsequent transfusion with Rh-positive blood may cause a dangerous reaction. In one of the three instances reported, the result was death. Subsequently it was shown, by Wiener on the one hand and Levine on the other, that the same reaction could result in an Rh-negative mother pregnant with an Rh-positive fetus. Levine and his collaborators postulated the theory of transplacental passage of the Rh antibodies to account for the phenomenon and related it also to infant stillbirths and the blood disease of the newborn known as erythroblastosis fetalis. But Levine's work did not explain why, for instance, the mother's blood in such cases sometimes showed no sign of Rh antibodies, and it was not until after prolonged investigation and the devising of new tests that Wiener was able to demonstrate that this apparent paradox was due to the presence of Rh blocking (or inhibiting) antibodies, which turned out to be even more lethal than ordinary Rh antibodies. Later Wiener was able to demonstrate the existence of three varieties of the Rh factor, their determination of eight Rh blood types, and the inheritance of these types in accordance with the Mendelian laws. Between 1944 and 1946 he perfected one method of lifesaving exsanguination, whereby the damaged blood of an erythroblastic infant is completely replaced with new Rh-negative blood.

In addition to guaranteeing greater safety in the routine employment of blood transfusion and making possible a large reduction in the infant mortality rate, the discoveries about the composition of the blood stream have several wider applications. Since inheritance of blood types is in accordance with strict Mendelian principles and far more reliable to determine than inheritance of facial characteristics or even eye color, they are of especial value in disputed paternity cases, both those occurring by error in hospital maternity wards and those deriving from divorce and testamentary proceedings. A member of an A.M.A. medicolegal committee sponsoring blood test laws in all states and co-author of its 1935 report, Wiener was instrumental in the passage of the pioneer 1935 New York State law granting to the courts the right to require blood tests in disputed paternity cases, and in the period after 1935, together with his lawyer-father George Wiener, he assisted in the drafting of several similar bills which became part of the New York civil, domestic relations, and criminal codes.

Wiener is the author of *Blood Groups and Transfusions* (1935; third edition, 1943), the standard treatise on the subject, and of nearly two hundred papers in medical, scientific, and lay periodicals. In 1935 he became an associate editor of the *Journal of Immunology*; in 1944, a member of the editorial board of the *Journal of Parenteral Therapy*; and in 1946, a member of the editorial board of the *Revue d'héma-*

tologie. In 1946 he shared the Ward Burdick Award of the American Society of Clinical Pathologists with Levine, and was co-winner with Levine and Landsteiner of the Lasker Award of the American Public Health Association. One year earlier he had been given the Alvarenga Prize of the College of Physicians of Philadelphia. He is a fellow of the American Medical Association, the American Society of Clinical Pathologists, the American College of Physicians, and the American College of Pathologists, a diplomate of the American Board of Pathology, and a member of many of the other leading scientific and medical associations in the United States. Since 1938 he has been a faculty member in the department of forensic medicine of New York University.

Dr. Wiener and Gertrude (Rodman) Wiener, to whom he was married on June 15, 1932, are the parents of two daughters, Jane Helen and Barbara Rae. He is five feet nine and a half inches tall, weighs 170 pounds, and has brown hair and blue-green eyes. For recreation he plays the piano, attends the movies, or plays cards, in the summer adding the outdoor sports of tennis and golf. Continuing a lifelong interest, he also likes to read books on higher mathematics and modern physics.

WILBUR, RAY LYMAN Apr. 13, 1875-Educator; physician

Address: b. Chancellor's Office, P.O. Box D, Stanford University, Calif.; h. 548 Gerona Rd., Stanford University, Calif.

Ray Lyman Wilbur is outstanding in three fields: education, medicine, and political affairs. President of Stanford University for twenty-seven years, Wilbur now serves as lifetime chancellor of the California university, is president of the American Social Hygiene Association. Prior to his presidency of the Western university, he was dean of its medical school; to the medical profession Wilbur is known as the head of a number of medical societies, the recipient of honors, and a crusader in social hygiene and physical and social medicine. As associate of ex-President Herbert Hoover⁴³, Wilbur, for four years, was Secretary of the Interior in Hoover's Cabinet.

Descended from early American settlers, Ray Lyman Wilbur is the son of lawyer Dwight Locke and Edna Maria (Lyman) Wilbur. He was born in Boonesboro, Iowa, on April 13, 1875, and was reared in Iowa, in the Dakota Territory (North and South Dakota did not become States until 1889) and in California. His brother, Curtis Dwight, was to become a

RAY LYMAN WILBUR

judge and United States Secretary of the Navy (1924-29). At the age of seventeen (1892) Ray Lyman Wilbur was graduated from Riverside (California) High School. He entered Stanford University as a physiology major and, during his undergraduate years, worked to pay his college expenses. In 1896 he was granted a B.A. degree. While pursuing a year of graduate study, Wilbur served as an instructor in physiology at Stanford; he received his M.A. degree in 1897. Wilbur then studied medicine at Cooper Medical College (which later became Stanford Medical School) in San Francisco and in 1899 became a Doctor of Medicine; he remained at Cooper for another year as a lecturer and demonstrator in physiology.

In 1900 Wilbur was named assistant professor in physiology at Stanford University, in which he remained until 1903, when he went to Europe for graduate study in medicine at Frankfurt-on-the-Main and in London. Returning to the United States in 1904, he entered private practice. In 1909 Wilbur again crossed the Atlantic, to study at the University of Munich. At about this time Wilbur was named a professor of medicine at the newly created Stanford University Medical School, a post which he held until 1916. In 1911 he accepted an invitation to become the dean of the medical school.

Wilbur served as dean of the Stanford University Medical School until 1916. In that year he was installed as president of the university; he headed Stanford from 1916 to 1943. At the time of his retirement (1943), he was elected a lifetime chancellor. Wilbur has regarded the purpose of a university as "primarily . . . to bring the minds of the older generation in fertile contact with the minds of the new." Administration of a university, he asserted in 1919, "should be confined largely

to an orderly control of the mechanics of the educational processes, for control of force is vital if progress is to be made. . . . The problem of the university . . . is not to build up barriers within which to work, but to study out how it can best carry on its real purpose of stimulating new young minds, developing scholarship, and of holding intellectual leadership."

The educator has advocated the establishment of more junior colleges because these bid "fair to set free the American university from its present responsibilities . . . and to make it the place for advanced and professional study and for research." He reported in a 1928 article that Stanford thus had been able to reduce the number of students admitted for the first two years of college work and to admit more upper classmen to the university. The president of Stanford, in the same article, stated, "The Bachelor of Arts degree given at the completion of four years of college work . . . is no longer of significance. It may well be that time will show us that the Bachelor of Arts degree or some similar degree should be given upon the completion of the first two years of so-called college work." In March 1942, a few months before Wilbur's retirement, the establishment of a liberal arts college (the School of Humanities, which absorbed the former School of Letters) at Stanford was announced. On that occasion *Time* called Stanford "the most popular university in the West."

During World War I Wilbur had served as chief of the Conservation Division of the Food Administration, headed by Herbert Hoover, with whom he had attended college. (Wilbur was author of the slogan, "Food Will Win The War.") In 1929 Hoover, newly elected President of the United States, again called upon the educator, this time to serve as Secretary of the Interior. Many observers predicted that Wilbur, who had been granted an indefinite leave of absence from Stanford, would serve in the Department of the Interior temporarily, pending the establishment of a new department of education and of public welfare; others saw in Wilbur's appointment a reorganization of the existing Department. During his administration, which lasted throughout Hoover's term of office (1929-33), Wilbur effected some changes in the Department; no new Cabinet post was created, however. *Current History* (May 1929) reported, "Dr. Wilbur had not been on duty a week before his subordinates in the Department were referring to the 'executive buzz-saw' in the Secretary's office." One of Wilbur's early acts as Interior Secretary was to announce that no new leases for naval oil reserves would be awarded (except when mandatory by law); this was in keeping with Hoover's policy calling for conservation of oil.

Among the more controversial decisions made by Wilbur was his allocation of the power of the Hoover Dam (which has also been called Boulder Dam) then projected: Wilbur, interpreting the Federal Power Act, which had authorized the building of the dam, in a manner which caused some discussion, stated that, for the next fifty years (1930-80), the

power from the dam would be assigned to Nevada and Arizona (36 per cent) and to various agencies in California (64 per cent). Source of argument was his granting too much authority to private utility companies. As Secretary of Interior, Wilbur also favored the returning of public lands to the individual States: "It does not seem wise to me to have Federal supervision over too much of an area of any State. . . . There can be a degree of national help and considerable time can elapse as a period of adjustment, but in the long run State governments must accept responsibilities for the territory within their borders." Wilbur also reorganized the administration of Indian affairs so that the human problems (such as health, welfare, education) might be handled by a different office from that handling property matters. Believing that "to leave the Indian tied to the reservation for an indefinite period meant disaster," Wilbur was a strong advocate of establishing Indians among the general population "as participating and self-supporting American citizens."

Although no Federal department of education and welfare was established in the years 1929-32 (in a June 29, 1929, *School and Society* article, Wilbur opposed Federal supervision of education), the Department of the Interior called a number of conferences on education and welfare; among these were the White House Conferences on Child Health and Protection (1929-31) of which Wilbur was chairman, and the Conference on Home Building and Home Ownership (1931) of which he was co-chairman. In 1933, when Hoover's term expired, Wilbur returned to Stanford. He has since served with California governmental agencies.

Wilbur's work in the fields of education and government did not interfere with his interests in medicine. He abandoned private practice to serve as dean of the Stanford Medical School, but in 1923 he was one of the physicians attending President Harding when he died. In 1936 Wilbur became president of the American Social Hygiene Association. Founded in 1914, the association devotes itself to the preservation of family life by prevention and early treatment of social diseases, the encouraging of wholesome recreations and entertainments, and promoting education in marriage and family relations.

Wilbur was president of the American Academy of Medicine in 1912-13, of the American Medical Association in 1923-24. In 1928 Wilbur headed the Committee on the Costs of Medical Care, which made a five-year study of and published a series of reports on the methods of providing adequate medical care at a low cost. This study was financed by various foundations; it had as members representatives of the American Medical Association, Metropolitan Life Insurance Company, United States Public Health Service, and other foundations and agencies. The final report, approved by a majority, advocated organization along voluntary lines. Released as *Medical Care for the American People*, the report has been called a "classical

example of the way in which a social problem should be studied and reported upon." Wilbur is chairman of the Baruch "Committee on Physical Medicine, established in 1943 with a grant of more than one million dollars to promote the use of therapy through the application of cold, heat, light, water, electricity, massage, muscular education, and exercise; the committee's object is to establish a trained staff of physiatrists (a category of medical specialists officially recognized in September 1946) in the medical schools and large hospitals of the country. Among the other scientific organizations to which Wilbur belongs are the American Physio-Therapy Association, the American Association for the Advancement of Science, the Association of American Medical Colleges, the American Leprosy Foundation; he holds or has held offices or committee memberships in many of the associations. In February 1943 Wilbur received the William Freeman Snow Medal, awarded by the American Social Hygiene Association "in recognition of the outstanding work he has done to protect American youth from the ravages of social disease."

In 1924 Wilbur helped to found the Institute of Pacific Relations; he became its chairman in 1925. Since 1929, when his tenure as chairman ended, he has held other offices with the institute and its regional branches. In 1928 Wilbur was a United States delegate to the sixth Pan American Congress, held in Havana. He is also a member of the World Citizens' Association, a trustee of the Chinese Mass Education Movement in the United States, and a sponsor of the Japanese-American Citizens League. Included in the long list of magazine articles by Ray Lyman Wilbur in his several fields are a number on foreign affairs. In August 1941 Wilbur signed a manifesto deploring the Administration's "step-by-step projection of the United States into undeclared war. . . . Few people honestly believe that the Axis is now or will in the future, be in a position to threaten the independence of any part of this hemisphere if our defenses are properly prepared." In 1943 Wilbur, who after World War I had supported Harding's opposition to United States membership in the League of Nations (although he always favored the World Court), stated, "This world of ours is not ready yet for a world government. We have not as yet a thoroughly good government established in even the most enlightened nations."

Other associations to which Wilbur belongs are the Austin Riggs Foundation, of which he is a trustee, Motion Picture Reserve Council (he has been national president since 1935), Boys Clubs of America, Allied Youth, State Commission on Rehabilitation and Re-employment, Students' International Union, Inc., and the Newcomen Society. Wilbur is a member of the scholarship fraternity of Phi Beta Kappa, the scientific fraternity of Sigma Xi, and the honor medical society Alpha Omega Alpha. In addition to the Snow medal, Wilbur has received other honors. In 1920 he was decorated a Commander of the Order of Leo-

WILBUR, RAY LYMAN—*Continued*

pold II, and, in the same year, as a Chevalier in the French Legion of Honor (he is a director of the American Society of the French Legion of Honor). In 1925 he was awarded the Honor Cross of the German Red Cross. Wilbur holds eighteen honorary LL.D. degrees and two other honorary degrees. He has written several books: *Conservation* (with William Atherton Du Puy) in 1931, *Hoover Dam Contracts* (with Northcutt Ely) in 1933, *Construction of the Hoover Dam* (with Elwood Mead) in 1933, *Stanford Horizons* (a collection of his speeches) in 1936, *Hoover Policies* (with Arthur M. Hyde) in 1937, *March of Medicine* (speeches) in 1938, and *Human Hopes* (speeches) in 1940.

Wilbur's clubs are the University, Commonwealth, Bohemian, Pacific Union, and Family clubs in San Francisco, the Cosmos and the National Press clubs in Washington, D.C., and the Century and University clubs in New York. Tall (six feet four inches in height) and somewhat Lincolnesque in appearance, Wilbur weighs two hundred pounds, has hazel eyes and dark brown hair. Married on December 5, 1898, to Marguerite May Blake (who died in 1946), Wilbur has three sons, Blake Colburn, Dwight Locke, and Ray Lyman, Jr., and two daughters, Jessica (Mrs. Leonard Ely) and Lois Proctor (Mrs. Max F. Hopper). Wilbur's recreations are of field and stream—camping, hunting, and fishing.

WILDER, FRANCES FARMER June 29, 1897- Industrial relations expert; former radio official

Address: b. c/o Social Research, Inc., 2634 N. Beechwood Dr., Hollywood, Calif.

Responsible in part for the daytime programs of the Columbia Broadcasting System for three years (from June 1944 to September 1947) was Frances Farmer Wilder. Mrs. Wilder, whose series of programs promoting understanding of minority groups was the winner of a George Foster Peabody Award in 1943, had held CBS executive positions on the Pacific Coast. In September 1947 she was chosen director of the West Coast division of Social Research, Inc., a corporation dealing in problems of human and industrial relations.

Frances Farmer Wilder, née Frances Farmer, was born June 29, 1897, in California, to Hiram W. and Elzora (Belew) Farmer. Except for the period in which she lived near Lake Arrowhead, where her father, an engineer, was working on the construction of Little Bear Valley Dam, Frances was reared and attended elementary school in Rialto, her birthplace. She

received her high school education at San Bernardino High School, from which she was graduated in 1916. In that year she entered the University of California. She interrupted her undergraduate studies in literature to spend one year, during World War I, as a student nurse in the United States Army. Having returned to college, in 1921 she was awarded a Bachelor of Arts degree. Miss Farmer had been a corrector for the English department and, after her graduation, was awarded a teaching fellowship, which she held for a year. At about that time Miss Farmer became Mrs. Wilder. After her marriage, Mrs. Wilder lived in China with her husband, a Standard Oil Company executive. During her seven years residence abroad, she spent time in Shanghai, Mukden, and Harbin, and traveled across Siberia to Russia and other European countries. "It was during these travels," Mrs. Wilder has said, "that I developed an appreciation of intelligent guides who could accurately interpret some of the social forces and customs of the cities and countries in which I visited."

Mrs. Wilder was back in America in the '30's. (Shortly thereafter she obtained a divorce from her husband.) Remembering her impressions of foreign guides, she and a partner organized the Courier Service of New York. An outgrowth of this enterprise was the Guided Tour Service for Rockefeller Center, Inc., which remains the guide service for these buildings. During the summers of 1930 and 1931 Mrs. Wilder studied sociology at Columbia University. In 1938 she returned to California to organize tours of the new Los Angeles studios (KNX) of the Columbia Broadcasting System. At the same time she served as personnel director. A year later (1939) Mrs. Wilder was appointed director of education for the Pacific network of CBS.

While in the Pacific office of CBS, Mrs. Wilder prepared a series of six programs, *These Are Americans*, presented during 1943. Designed to improve relations between Mexican-Americans and Pacific Coast residents of other antecedents, the scripts were based on actual cases: the individual dramas dealt with sociological aspects of the problem, the contributions of Mexican-Americans, and problems of economic and cultural assimilation. Requests for electrical transcriptions and scripts came from educational institutions located in all parts of the United States. Letters of commendation from civic, social service, and artistic groups were followed by the awarding of the George Foster Peabody Award, the Variety Show-Management Award, and the Award of the Ohio State University Institute for Education by Radio, to *These Are Americans*. Subsequently a new series of programs, aimed at bettering relations with Negroes, was presented by KNX. Assistance in the preparation of these came from the Mayor's Los Angeles Committee for Home Front Unity and the Citizens' Committee of the Social Agencies. In May 1944 the War Writers' Board selected one of these scripts for release under a new title, *Is Fair Play Controversial?*

CBS Photo

FRANCES FARMER WILDER

On June 15, 1944, Mrs. Wilder's appointment to a newly created post, consultant on daytime programs, was announced by Douglas Coulter, CBS vice-president in charge of programs. "The creation of this post," Coulter said, "is part of our continuing effort to improve the quality of all Columbia programs." Interviewed after her appointment, Mrs. Wilder stated that she believed the daytime serials, which have been both sharply criticized and staunchly defended, could become thought-provoking dramas. A CBS survey had asserted that women who listen to the serial programs ("soap operas") were no less intelligent or well-educated than women who did not. According to the *Christian Science Monitor*, Mrs. Wilder's responsibility, in addition to working with sponsors and advertising agencies, would be to publicize the findings of the survey.

A few months before Mrs. Wilder assumed her new post, Harriet Van Horne, a New York radio critic, stated that CBS carried twenty-one daytime serials (two less than its largest competitor) and that, among these, only two were worth hearing. By 1947 the number of "soap operas" on CBS had dropped to ten (*David Harum*, *Rosemary*, *The Romance of Helen Trent*, *Our Gal Sunday*, *Big Sister*, *Ma Perkins*, *Young Doctor Malone*, *The Guiding Light*, *The Second Mrs. Burton*, *Rose of My Dreams*); three of these were serials which had originated since the beginning of Mrs. Wilder's administration; some had been transferred from other networks. Included in the Monday to Friday listing of programs were three other dramas: *Aunt Jenny*, *Perry Mason*, a mystery serial, and *Lone Journey*, classified as a "soap opera," but called by *Variety* (and others) "mature radio fiction." In the dramatic field, CBS had experimented with a daily half-hour program, *Joe Powers of Oakville*, each script complete in itself and not

following a plot formula or a straight format. Also included in the CBS weekday schedule early in June 1947 were seven audience participation shows—*Missus Goes A'Shopping*, *Grand Slam*, *Winner Take All*, *Hint Hunt*, *Give and Take*, *House Party*, *Hits and Misses*—five programs on which an individual personality was the most important feature (*Margaret Arlen*, *Phil Cook Show*, *This Is New York*, *Arthur Godfrey*, *Kate Smith*), three musical programs, and four news broadcasts. Conspicuously absent was any "breakfast" show. On September 1, 1947, Mrs. Wilder resigned from her post at CBS to become director of the West Coast division of Social Research, Inc., which specializes in problems of industrial and human relations.

In May 1947 Mrs. Wilder was elected president of the Association of Women Broadcasters. Founded by the National Association of Broadcasters, AWB is designed to give women broadcasters in the United States an opportunity to exchange ideas and improve broadcasting techniques. Mrs. Wilder's specific goal, *Variety* announced, would be to establish uniformity in the programming standards of the thousand women who are members of AWB. The same trade publication has called Mrs. Wilder "one of the keener minds among the femmes in the [radio] industry." "In her CBS capacity," *Variety* has written, "her exhaustive study into daytime programming contributed in no small measure toward new concepts in thinking among agencies and clients." Mrs. Wilder, who wears her light, wavy hair in gamin style, has been described as "youthful-looking" and "photogenic."

WILEY, ALEXANDER May 26, 1884—United States Senator from Wisconsin; lawyer
Address: b. Senate Office Bldg., Washington, D.C.; h. Chippewa Falls, Wis.

Legislation introduced in the Eightieth Congress pertaining to the Federal Courts, appointments to the Federal bench, immigration and naturalization, and other measures with juridical aspects must, before a Senate vote is taken, be considered by Alexander Wiley and his Judiciary Committee. The senior Senator from Wisconsin was elected to Congress in 1939 after two previous ventures into politics. A conservative Republican, he was named chairman of the Senate Judiciary Committee when his party gained a majority in Congress.

Alexander Wiley was born in Chippewa Falls, Wisconsin, on May 26, 1884, to Alexander and Sophia (Ekern) Wiley. In descent he is partially Norwegian. For two years (1902-04) he attended Augsburg College in Minneapolis, Minnesota. In 1904 he matriculated at the University of Michigan Law School; in 1907, after an additional year at the University of Wisconsin Law School, he completed his legal studies. That year he was admitted to the Wisconsin bar and entered into practice in Chippewa Falls. From 1909 to 1915 Wiley served as district attorney of Chippewa County; after completing three

ALEXANDER WILEY

terms he returned to private practice. Maintaining his interest in civic affairs, he was president of the Commercial Association of Chippewa Falls, and a member of the town's school board. He was also a director of the First National Bank there. In 1936 he won the Republican nomination for Governor; he was defeated for office by the incumbent, Philip La Follette, but gained about two hundred thousand votes more than the returns for his party in the previous election. Three years later he successfully ran for the office of United States Senator.

When Wiley took his seat in the Seventy-sixth Congress, the United States was deliberating its policy toward the situation in Europe which developed into World War II. Wiley's votes caused most observers to classify the new Senator from Wisconsin as an isolationist. He opposed the Selective Service bills, the Lend-Lease bills, and the various measures repealing provisions of the Neutrality Act. In 1943 was recorded Wiley's vote in favor of the extension of the Reciprocal Trade Agreements Act; in 1945, however, he opposed its further renewal. In 1945 Wiley voted for the Bretton Woods agreement; that same year he, "without reservation, and wholeheartedly and proudly," announced his vote in favor of United States ratification of the United Nations Charter. One of the eight Senators who debated for the charter, he said, "We Americans proclaim our willingness to discharge fully our world obligations to the ends of serving international justice, peace, and prosperity. We will not allow any other people to intrude in our way of life. Nor will we allow our own way of life to be radically changed in order to please any other government or people." The following year Wiley voted for the loan to Great Britain. As a Republican member of the Senate Foreign Relations Committee (to which he was named

in January 1945, after his re-election to the Senate), Wiley pledged his party's support of a bipartisan foreign policy. In the spring of 1947 Wiley voted in favor of the Truman proposal for military and financial aid to Greece and Turkey.

In 1942 the Wisconsin Senator had called for the establishment of a bipartisan committee on peace. A year later he had expanded this idea and urged the establishment of an executive department of peace. The duties of the new Secretary of Peace would be "to specialize and concentrate on the maintenance of world peace, on the elimination of sources of friction and misunderstanding between peoples." Both in the Seventy-ninth and Eightieth Congresses, Wiley has introduced bills to establish a Department of Peace; he has also specified that the United States representative on the United Nations Security Council be the individual given that Cabinet position. "No treaty covenant or other mechanism, however perfect," Wiley asserted in a *Free World* article, "can actually achieve high objectives unless there is, back of the spoken and written pledge, the active and continuing will, intent, and purpose of the contracting parties to live up to their obligations." In April 1947 Wiley introduced a resolution that the United States Government favor the establishment of a "United Democratic States of Europe," which would exclude Russia and her so-called satellites.

As a minority member of the Senate Judiciary Committee, Wiley voted for the defeated measure introduced by Senator McKellar⁴⁵ that Federal employees earning above a stipulated salary must be confirmed by the Senate. He also approved the Tidelands Oil bill in committee. The ranking Republican on the committee, the Wisconsinite was given its chairmanship in January 1947. At that time, Wiley issued a statement concerning future appointments to the United States courts: "The present political character of the membership of the Federal bench is . . . grossly lopsided on the side of Democratic Leftists. . . . Political considerations have too often dominated the appointment of Federal judges. So long as I am chairman of the Judiciary Committee full weight will be given to the recommendation of recognized and respected legal groups in contrast to those of political officials." Promising to see that "a fair representation of Republicans" is achieved, he told the United States Attorney General (according to a New York *Herald Tribune* item): "There must be a ban on the appointment of New Dealers to the Federal courts. . . . I am opposed to New Dealers because I believe their political philosophy is alien to our system of government."

Before the Eightieth Congress was convened, Wiley also announced the program of labor legislation he would sponsor. His stand, advocating curbs on labor unions, had been indicated in his past votes for the Smith⁴⁴-Connally⁴¹ antistrike act and the Case⁴⁶ bill. He has voted for compulsory fact-finding boards and for compulsory "cooling-off" periods; and he expressed himself in favor of outlawing

strikes for a six-month period or longer (this in the spring of 1946). Other points on his program have been the outlawing of jurisdictional strikes, of closed shops, of secondary boycotts, of mass picketing, and of union expenditures "for political purposes." He also wishes to require unions to make public their financial reports, to make unions liable to suits for breach of contract, and to suspend provisions of the National Labor Relations Act in case of a strike against the Government. In the Eightieth Congress, he reintroduced a measure to make arbitration compulsory in "key industries" after this had been defeated as an amendment to the Case bill. When a Federal district court ruling caused an onslaught of suits brought by unions for "portal-to-portal" pay, Wiley proposed a bill stipulating that no Federal court consider any suit for the recovery of wages or damages for time spent in other than "productive work." By agreement with Senator Taft⁴⁰, chairman of the Labor Committee, the Judiciary Committee was given jurisdiction of its chairman's bill. A revised bill to prohibit "portal" suits passed both the House and the Senate in the spring of 1947. Wiley supported the Taft-Hartley⁴¹ Labor Act, voting to override the Presidential veto of the measure.

Wiley has also introduced a number of other bills, resolutions, and amendments to legislation. A critic of OPA (he has voted for most measures allowing price increases), he amended, in 1944, an OPA-extension bill to allow a raise in wages without the approval of any Government agency; the amendment failed to pass the House. His interest in the welfare of small business was evinced in his proposal that an assistant secretary for small business be appointed to serve under the Secretary of Commerce; he himself has been a member of the Senate Small Business Committee. The Senator has proposed a number of measures to aid veterans: to supply an automobile to amputees, to give veterans in hospitals their full pension, and to authorize the Veterans Administration to supply a veteran-assistant to every Senator wishing advice on the problems of the ex-serviceman. Wiley also wished to see created a special Senate committee for the promotion of American activities which would be the upper chamber's counterpart of the House Committee on Un-American Activities. To eliminate the evils of "slush funds" in elections, he has proposed the prohibition of political expenditures by unions, national banks, or corporations. A Constitutional amendment, sponsored by Wiley, to limit the tenure of office for the President to two terms has been passed by the Senate. (In 1939 Wiley had suggested that the President be limited to a single six-year term.) Another Wiley-sponsored resolution would require an international agreement on atomic energy to be ratified by a two-thirds vote of the Senate, in the same manner as a treaty. Convinced of the importance of distributing American publications abroad so as to stem the communistic trend in Europe, Wiley proposed that all nations, including the United States, suspend tariffs on the import of

printed matter. He also suggested that the United States Government subsidize the air shipment of important magazines and newspapers.

In the Commerce Committee, Wiley voted against confirmation of the nomination of Henry Wallace⁴² as Secretary of Commerce and has led the fight against low tariffs. Appointed by the Republican Steering Committee to study the Presidential emergency powers and recommend a party policy on the issue, Wiley reported that such emergency powers must be revoked slowly, "in an orderly manner." "War leaves a bitter legacy of problems which exist for years and years. It is foolhardy to deny these problems and dangerous to assume that the mere end of shooting returns us to the peaceful world of pre-1939." In the Senate, Wiley has also been a member of the Naval Affairs, the Claims, and the Rules committees, and headed a Foreign Relations subcommittee to study legislation for the establishment of a St. Lawrence seaway development (a proposal of which he said he approved). In 1939 the Senator represented the United States Government at the Interparliamentary Union Conference, which convened in Norway; in 1946 he was American delegate to the British Empire Parliamentary Conference in Bermuda.

In 1933 he was governor of the Kiwanis International Wisconsin-Upper Michigan District; he still maintains membership in the Kiwanis Club of Chippewa Falls. He is also a Mason (thirty-second degree), an Elk, a Knight of Pythias, a Son of Norway. He participates in the activities of the American Bar Association, the Wisconsin Alumni Association, the Scandinavian-American Fraternity, and is a member of the United Commercial Travelers.

Wiley was married on November 25, 1909, to May Jenkins; their four children are Elizabeth May, Marshall Alexander, Rosemary (Mrs. Philip Durgan Bradley), and Winifred Jean (Mrs. Harold R. Wilde). The *New York Sun's* Delos Lovelace describes the Senator as "plump and pleasant." Aside from the articles he has written on political and business subjects, Wiley is the author of articles on religious topics, and continues to preside over a group of Senators who meet at a regular Wednesday morning breakfast to discuss public problems in the light of Christian ethics.

WILLET, HENRY LEE Dec. 7, 1899-
Stained glass designer

Address: b. c/o Willet Stained Glass Co., 3900 Girard Ave., Philadelphia; l. Willow Wadi Farm, Ambler, Pa.

The art of the stained glass window was not returned to the ecclesiastical structures, for which it had originally been designed, until 1905. During the Victorian era, stained glass

HENRY LEE WILLET

had been relegated to stairwell windows and small judas windows beside the entrances of houses. Without the enthusiasm of Ralph Adams Cram⁴², who initiated the Gothic Revival that provided a suitable framework for stained glass windows, and of William Willet, who sought out the technical secrets of medieval glass artisans, stained glass might have remained an archaic and half-forgotten art. Willet's work, on his death, was continued by his son, Henry Lee Willet, who, said *Time*, has "become one of the busiest artisans in stained glass in the U.S."

On his father's side, Henry Lee Willet, who was born in Pittsburgh, Pennsylvania, on December 7, 1899, is the descendant of Thomas Willet, the first English Mayor of colonial New York. While Henry's father was fostering the renaissance of stained glass art in the United States, his mother, Anne Lee Willet, assisted her husband in designing numerous widely known windows. "I have always claimed," says Henry, the only boy of a family of three children, "to have been in the business all my life, because as a baby my father used

me as a model for a series of studies of cherubs in the big Rose in St. Peter and Paul Cathedral, Pittsburgh."

When slightly older, the "cherub" was set to work in his father's studio: since he was still too small to do anything else, his father put him on the stool and let him assemble jigsaw pieces of glass for windows. The boy's academic education was provided at the Chestnut Hill Academy in Chestnut Hill, Pennsylvania, where he played football and soccer, edited the artwork in the yearbook, and sang with the glee club. After being graduated in the class of 1918, he studied at Princeton University for two years, but was unable to return there for his junior year because of the death of his father. Instead, he spent the following year at the Wharton School of the University of Pennsylvania.

For the next five years, Henry Lee was associated with his mother in the Willet Stained Glass Company. One product of their collaboration was the windows for the Cadet Chapel at West Point. Between 1924 and 1927, the young artist made three trips to Europe, in the course of which he studied glass in almost all of the cathedrals in France and England, and also spent a good deal of time in Italy. Besides visiting these three countries, he traveled in Holland, Germany, Hungary, Yugoslavia, and Greece. Meanwhile, he had established his own company. *Time* reported that the first window he submitted to Ralph Adams Cram showed "a young red-haired craftsman offering a sample window to a stern king with Cram's features." In a Spanish War memorial window commissioned by the widow of Secretary of War Russel Alexander Alger for the Grosse Pointe Memorial Church near Detroit (*Time* related), "Willet showed Theodore Roosevelt charging up San Juan hill. When he learned that Mrs. Alger did not like Roosevelt, he changed Roosevelt's face to Alger's."

Like his father, Willet is an enthusiastic medievalist and has been instrumental in reviving the old stained glass techniques that fell into desuetude during the seventeenth, eighteenth, and nineteenth centuries. Discarding both the "opalescent" glass of the Victorians and the almost baroque intricate mosaics of thirteenth century windows, Willet has turned for inspiration to the twelfth century, employing the large, primitively colored pieces of glass defined by a rhythmic outline of lead, that predominated in the stained glass work of that time. The complex red and blue patterns of the thirteenth century with their tendency to produce purple refractions are seldom found in Willet's work. "Purple addles your brain," he says.

Most of the glass used by Willet comes from English glassworks or from the William Benko factory at Milton, West Virginia. Rather than depend upon the mass-produced enameled glass of the type that came into use in the sixteenth century, Willet works directly with glass that, while still molten, has been coated with a thin layer of colored glass and "flashed" in the kiln, or else with glass covered with a "yellow stain", consisting of silver nitrate that has been spread on the surface of the glass before it is

put into the kiln. The first produces a delicately translucent effect, while the second increases the variety of colors. Two factors prevent modern glass from attaining the satin-like quality of medieval glass: the high silica content of contemporary glass (about 75 per cent to the Middle Ages' 50 per cent), and the absence of the wearing process of age, acid, and atmosphere.

Another concept that Willet has borrowed from the Middle Ages is that of the free-masonry of guilds. In tribute to the various trades employed in building the Universalist Church of the Restoration at Germantown, Pennsylvania, he designed a "workman's window" depicting iron workers, stone masons, carpenters, plasterers, and other artisans. At his own studios in West Philadelphia, he employed about twenty craftsmen. Their 1937 wage scale, as itemized by *Time*, was graduated, guild-style—apprentices earning \$12 a week, master craftsmen about \$85 a week, and mechanics (who might be considered the modern equivalent of the medieval journeyman) the union-scaled dollar an hour. The supply rooms of the Willet Studio contain thousands of colors and shades of hand-blown glass; from these (said the *Christian Science Monitor*), Willet himself selects each piece of glass to be used in a window. Before selecting the glass he visits the church where the window is to be installed and inspects "the hole to exploit" in order to determine how the light will play upon it at different times of the day.

Because he designs windows for churches throughout the country, Willet has traveled widely in the United States. In addition to the Rose Window at Westminster Presbyterian Church at Buffalo, New York, he has installed stained glass windows in Washington (D.C.) Cathedral, St. Paul's Episcopal Cathedral (Detroit), the Cathedral Church of Saint John (Wilmington), Saint Paul's Cathedral (Erie, Pennsylvania), the Co-Cathedral of Christ the King (Atlanta), the National Baptist Church (Washington, D.C.), First Unitarian Church (New Orleans), the chapels at Fort Myer and Randolph Field, the Church of Our Saviour (San Gabriel, California), and many others.

A prominent Presbyterian layman, Willet was a commissioner to the General Assembly of the Presbyterian Church of the United States in 1935 and 1943. At his prompting the Philadelphia Presbytery established a committee on social education and action, of which he is secretary; he is also a member of the Presbyterian Social Union. Because of his interest in interracial problems, he has been active since 1938 in the Philadelphia Federation of Churches, in which he is a member of the board of directors of the interracial department. Since 1944 he has been a director of the National Conference of Christians and Jews, and he is chairman of the board of managers of the Philadelphia Hostel. A Republican politically, Willet serves on the Board of Commissioners of Upper Dublin Township. Another of his civic duties, after 1940, was membership on the board of directors of the Ambler Public Library; in 1946, he became its vice-president.

His professional affiliations include membership in the American Institute of Architects, the Architectural League of New York, the T Square Club of Philadelphia, the American Federation of Art, Pennsylvania Museum of Art, the Fairmount Park Art Association, the Contemporary Club, and the Woodmere Art Gallery, and, since 1940, a directorship of the Philadelphia Art Alliance (of which he was, in 1946, chairman of the crafts committee).

Willet's family consists of his wife, the former Muriel Crosby, and their three children, E. Crosby, Ann Lee, and Zoe. A moderately tall man (five feet eleven inches) weighing 175 pounds, Willet has green eyes and red hair. According to *Time*, he has a "second generation ease with his materials which has enabled him to perpetrate many a monkish jest in solemn designs."

WILLIAMS, CLYDE E(LMER) Sept. 8, 1893- Research institute director; metallurgist
Address: b. c/o Battelle Memorial Institute, Columbus, Ohio; h. 1085 Urlin Ave., Columbus, Ohio

The assistant director of the Battelle Memorial Institute at the time of its founding in 1929, Clyde E. Williams, who was named its director in 1934, has supervised the expansion of this organization, which makes studies in chemistry, physics, engineering, ceramics, fuels, metallurgy, and allied fields. In the various Government posts Williams held during World War II, he was charged with responsibilities in the planning and supervision of wartime use of metals.

CLYDE E. WILLIAMS

WILLIAMS, CLYDE E.—*Continued*

Clyde Elmer Williams was born in Salt Lake City, Utah, on September 8, 1893, to Thomas J. and Ellen (Eccles) Williams. His early education was followed by a course of study in chemical engineering, leading to a Bachelor of Science degree, at the University of Utah. In 1915, the year that he received his degree, he was engaged as a chemist by the United States Smelting Company. Returning to the University of Utah in 1916, he was a graduate fellow assigned to study nonferrous metallurgy with the United States Bureau of Mines. He continued his work in commercial metallurgy, and in 1916 he became a chemist for the Santa Fe Gold & Copper Company. In World War I he undertook research in the development of ferroalloys, alloy steels, and refractories at the United States Bureau of Mines Cornell University laboratories. At the end of the war, in 1918, he became a research chemist for the Hooker Electrochemical Company, where he remained for two years. These early positions gave him practical knowledge of the production, properties, and uses of lead, zinc, copper, alloy steels, ferroalloys, and also industrial chemicals. William also became acquainted with the industrial problems connected with the use of these, knowledge which was to prove valuable later.

In 1920 Williams was appointed superintendent of the Northwest Experiment Station of the Bureau of Mines in Seattle, Washington. There he supervised research in iron and steel metallurgy, refractories, and on coal beneficiation and utilization. After four years of this work, Williams resigned to join, as a metallurgist, the commission to study the iron, steel, and fuel resources of Argentina. Returning to the United States in 1925, he became chief metallurgist of the Columbia Steel Corporation, later a subsidiary of the United States Steel Corporation.

When the Battelle Memorial Institute, a non-profit corporation in Columbus, Ohio, was founded in 1929 to conduct research for industry in metallurgy, fuels, and allied fields, Clyde Williams became its assistant director; five years later, in 1934, he was appointed director. Battelle's research is undertaken under three separate auspices: the institute may engage in research of its own choosing, using the funds from its endowment (this has increased from eighty thousand dollars in 1933 to four and a half million in 1944); it may cooperate in the research projects of other groups; or, as in the majority of cases, it may be called upon by an industrial concern, the Government, or other agency, to undertake a research project at the expense of the requester. This last function has enabled individual companies to engage in research without the expense of purchasing and installing equipment. Among Battelle's facilities are a general chemistry laboratory, smaller, private research laboratories, a physical laboratory, a photography department, carpenter and machine shops to build equipment that cannot be bought, and a three-story foundry with complete equipment for drying, pulverizing, and feeding coal into a specially designed combustion chamber. Battelle

has also utilized a two-hundred-thousand-pound tensile testing machine and an electron microscope. The cooperation of the divisions, all directly under Williams' supervision, is enlisted for each project, although one division or department may have actual responsibility for the work.

During Williams administration, the institute has discovered new uses for alloy steels, and developed new methods of finishing metals, a new type of furnace for treating steel, a stoker which corrects the hitherto unknown causes of corrosion, and new plastics and methods of plastic production. Williams' staff, which has grown in number from thirty to almost one thousand members in eighteen years, did research work, during World War II, for the National Advisory Committee for Aeronautics, the Office of Scientific Research and Development, the War Production Board, and the Army and the Navy. The institute received the Ordnance Distinguished Service Award for meritorious contribution to the war effort and a Chemical Engineering Achievement Award for its contribution to the development of the atomic bomb; individual members of the staff received awards for atomic research.

Williams himself was active in wartime research. In 1939 he was named chairman of the nickel subcommittee of the Mineral Advisory Committee to the Army and Navy Munitions Board, and a year later he became chairman of the committees on manganese and on reclamation of tin. For the War Production Board he was chairman of the Advisory Committee on Metals and Minerals; for the National Academy of Sciences and the National Research Council, he served as chairman of the War Metallurgy Committee; and for the National Defense Research Committee (which later was superseded by the Office of Scientific Research and Development), he was chief of the War Metallurgy Division. These assignments charged him with the responsibility for the establishment and supervision of all metallurgy research in the United States: the *Bulletin of the American Ceramic Society* noted, "More than any other man, Clyde E. Williams has his finger on the pulse of the metallurgical situation of the country at war." In 1945 Williams was a member of the National Engineers' Committee of the Joint Engineers' Board, which submitted to the Government a plan for the disarmament of the aggressor nations. He also served with the Technical Industrial Intelligence Commission of the Department of Commerce, which helped to organize technical missions to defeated Germany.

Williams is a specialist in the conservation of metals and minerals. He initiated Battelle's ceramic research in refractories, glass, enamels, pottery, whiteware, lime, cements, and heavy clay products. The patentee or copatentee of ten metallurgical, ceramic, and chemical processes, Williams is the author of numerous articles on these and other scientific subjects. He has received the Army Ordnance Association's gold membership emblem (he is a member of that group's Committee on Ordnance Research and Development) and was elected (while with the Bureau of Mines in Seattle)

to membership in Sigma Xi, honorary science fraternity. Williams also holds two honorary D.Sc. degrees: one from the Case School of Applied Science, and the other from the University of Utah.

In 1947 Williams was elected president of the American Institute of Mining and Metallurgical Engineering, on whose various committees he has served. He is also a member of the American Ceramic Society, the Mining and Metallurgical Society of America, the American Institute of Chemical Engineers, the American Society for Metals, the American Iron and Steel Institute, the Electrochemical Society, the American Railway Engineers Association, the American Refractories Institute, the British Iron and Steel Institute, the Newcomen Society of England, and other technical and scientific groups. He is a director of the Columbus (Ohio) Chamber of Commerce, a member of the science committee of the Ohio Post-war Planning Commission, and of other civic and social service organizations. The metallurgist also serves on advisory and administrative boards of the New York State College of Ceramics, the American Allergy Fund, the National Advisory Committee for Aeronautics, the National Research Council; he was formerly technical consultant to the Association of American Railroads and a former member of the research advisory committee of the National Association of Manufacturers.

In Columbus he is a member of the Rotary Club and the Columbus Club; he also belongs to the Cosmos, University, Engineers, and Mining clubs, and Sigma Chi. In 1919 he was married to Martha Barlow; their three sons are Clyde, Jr., Samuel, and Thomas. Williams enjoys out-of-doors recreation. For sedentary relaxation he is likely to listen to music.

WILLIAMS, TED Aug. 31(?), 1918-
Baseball player

Address: b. c/o Boston American League Baseball Company, 24 Jersey St., Boston, Mass.

"The Most Valuable Player in the American League in 1946" was the title given to Ted Williams by the Baseball Writers of America. The outfielder, who has played during all of his major league career with the Boston Red Sox, has been hailed as the greatest hitter in baseball, and, in the opinion of one expert, the greatest in the history of the game.

Theodore Samuel Williams was born in San Diego, California, the son of May and Samuel Steward Williams. Harold Kaese, in *Famous Athletes of Today*, says that the date of Williams' birth is August 31, 1918, but that he celebrates this anniversary at the end of

the baseball season on October 30, the date which appears in other biographical accounts. Williams' father, it has been reported by various authors, was a photographer, a jail inspector, or a "wanderer." His mother is a Salvation Army worker, "whose will," wrote John Chamberlain in *Life*, "is almost as imperious as that of her son; growing up under her nervous but fascinating spell would either make or break any kid." Ted early set out to become a great baseball player and constantly practiced batting with makeshift equipment. He attended Garfield Grammar School, Horace Mann Junior High School, and Herbert Hoover High School, all in San Diego. At his high school graduation (January 1937), he was awarded a silver statuette on which were inscribed the batting averages he had achieved while playing with the school team—.586 in 1935 and .403 in 1936. During his school career, he had played for the San Diego Market team and for the junior team of an American Legion post. At one time a scout for the New York Yankees offered the youth a contract, but Mrs. Williams refused to allow her teen-age son to sign.

At the age of seventeen Ted Williams played professionally for the first time with the San Diego Padres, a member of the Pacific Coast League. "The Kid," as he was later called, did not overwhelm either his teammates or his opponents during that initial year. Cleveland Amory (*Saturday Evening Post*) has described the ninth inning of the first game in which he was a pitcher (his first team assignment): "The first man singled, the second doubled, the third singled, and the fourth hit a home run." Within a short time Williams was transferred to the outfield where, said *Time*, "he was probably the worst outfielder ever to wear a glove." His first professional batting average was .271 (he had failed to hit a home run in his forty-two times at bat); his fielding average was .972. At the end of that year (1936), Eddie Collins, general manager of the Boston Red Sox, had exacted a verbal promise from the Padres' manager that the Boston American League club would have the first chance to buy Williams' contract should he fulfill his possibilities. At the end of 1937, Collins exercised his option: Williams had raised his average to .291 and had scored twenty-three home runs.

Ted Williams reported for training with the Red Sox at Sarasota, Florida, early in 1938. There, said Cleveland Amory, "he got in the hair of everybody," partly because of his self-assurance and one-mindedness about his batting, and partly because he "gave back" in kind some of the "riding" to which rookies are subjected. As a result, he was sent to the Minnesota Millers, the Red Sox's American Association "farm" team, and his major league appearance was delayed for another year. When that season (1938) ended, "temperamentally ready or not, he couldn't be kept out of the majors." He had led the American Association in four aspects of batting: batting average (.366), home runs (43), runs scored (130), and runs batted in (142). Soon after his return to the Red Sox for the 1939 season, he

Wm. C. Greene—N.Y. World-Telegram
TED WILLIAMS

was termed the "Outstanding Rookie of the Year," a title which he began to justify almost immediately. His average in 1939 was .327; the next year it had jumped to .344, the third highest in the American League for that year. In 1940 he scored 134 runs, more than any other American League player.

The year 1941 was a high point in Ted Williams' career. Early in the season he played in the All-Star contest between the American League and the National League (he had also been a member of the 1940 American League All-Star team). In the ninth inning, a dramatic situation arose: the score was tied and two men were out. Claude Passeau pitched a fast ball and Williams hit it with "a wallop which, for altitude, violence, and timeliness has never been batted by Babe Ruth⁴⁴, Lou Gehrig⁴⁰, Shoeless Joe Jackson or anybody in the history of the world." The American League won the game. At the end of the 1941 season, Williams' average was .406—he was the first player to exceed the .400 mark since 1930 and, at twenty-three, was the youngest ever to have done so. He also won a "triple crown" by leading the American League, not only in batting average, but also in home runs (37), and runs scored (135). His reputation as a powerful hitter caused pitchers to "walk" him more often than any other player in the league (he has held this distinction since 1941; in 1946 he came within twenty of the record made by Babe Ruth of 170 bases on balls). In 1942 Williams' average fell to .356 (also his lifetime average at that time), but he again achieved the highest average in the league; he also topped American League players in home runs (36), runs batted in (137), runs scored (141), and total bases.

During the years 1942-45 Williams interrupted his championship batting for service in the Marine Corps, where he scored the highest

student gunnery record in the Navy. Having passed the naval aviation examinations during the summer of 1942 (he had been deferred in the draft because he was the sole support of his mother), he entered Marine training that fall at Pensacola, Florida. Later he became an instructor. By the time he was discharged after thirty-eight months in the corps, he had earned the rank of second lieutenant and had flown eleven hundred hours.

Throughout the 1946 season there were so many newspaper and magazine stories about the "Splendid Splinter" (another nickname for Williams) that Joe Williams, New York *World-Telegram* sportswriter, noted that he "appears to be on his way to that estate in baseball which is known as an institution," while at the end of the season a *Newsweek* feature article humorously summed up the sensitivity of the Boston journals to every change in mood of Ted Williams. In July Williams was the "hero" of the All-Star game. "He wrapped it up for personal delivery with the greatest single performance ever made in an All-Star game—a perfect day at bat, two home runs, and five runs batted in." At that time Williams hit the first home run ever scored off a "Rip" Sewell "blooper" or "ephus" ball (the ball arches high when pitched and then falls very slowly). Williams equaled the record for All-Star games (Charlie Gehringer was the mark-setter) with an average of .500 for four games. As a result of Williams' performance in that game, sports writers were generous in their judgment of his hitting skill: Steve O'Neill, manager of the Detroit Tigers and of the American League All-Star team, asserted, "I call him the best hitter the game has seen. That means he's superior to Ty Cobb."

In a slump all during August, Williams saw his season's average fall to .342; his lifetime average fell to .353, but he still remained the highest of any batter in the major leagues and the fourth highest in the history of baseball. (Williams once estimated that it would take him two or three years to reach the form he had achieved before entering the service.) He was topped in home runs (Williams achieved 38) by Hank Greenberg, who, during the last few games of the season, was using one of Williams' bats.

If the All-Star game was the brightest event of the 1946 season for Ted Williams, his first World Series marked the lowest ebb. In the first World Series in which the Boston American League team has played in twenty-eight years, Williams, like the other star batters on both teams, was "handcuffed." He emerged with a series average of .200 in twenty-five times at bat. One reason for his failure in these games was the practice adopted by the victorious St. Louis Cardinals (it had been inaugurated by the Cleveland Indians earlier in the season) whenever Williams came to the plate. A left-handed hitter (he throws with his right hand), Williams hits his most powerful balls into right field. For this reason, the Cardinals allowed the left field to remain unprotected, moving all fielders as far to the

right as possible. This technique effectively prevented Williams from hitting successfully. In the 1947 season, Williams was developing his ability to hit into left field, but in September Arthur Daley (New York Times) reported, "Ted Williams let himself get upset for most of the season by the unorthodox overshifted defenses that the enemy set against him."

While sportswriters, during 1947, discussed whether or not Williams was in a slump, Williams received three-quarter of a million votes from the fans for a place on the 1947 All-Star team; this number of votes was third in the list of major-league players. He also established a record for Engel Stadium in Chattanooga, Tennessee, when he hit a 481-foot home run to please a nine-year-old boy. By the end of his "poor" season, Ted Williams had raised his batting average .001 (to .343) and led the American League on seven counts: batting, home runs (32), runs batted in (114), runs scored (125), extra base hits, total bases, and bases on balls. Chosen as a member of the Associated Press mythical All-Star team in both 1946 and 1947, Williams is the only player to be so honored twice successively.

Joe Cronin once told a *Look* interviewer that Williams' success as a batter was due to his eyesight (naval medical records give evidence that his vision is much better than the normal), strong hands, wrist, and forearm, and alertness. Quick wrist action, as well as his eyesight, enables Williams to wait longer before swinging at a pitched ball. Williams' fielding is not so good as his batting, but John Chamberlain judges it to be "good enough to be classed with the best." The outfielder himself says, "They'll never get me out of a game running into a wall after a fly ball." In 1946 his fielding average of .971 trailed the other American League outfielders. His highest average was .988 in 1942, and his lifetime average is .966. In 1946 the Baseball Writers of America voted Ted Williams "The Most Valuable Player in the American League" (for this honor he received a Kenesaw Mountain Landis plaque). (In 1947 the Red Sox player lost this title by one vote to Joe DiMaggio of the Yankees.) Williams has also won honors from *Sporting News*.

Ted Williams' name is signed to a sports column in the Boston *Globe*. While this daily feature is written by two "ghost" writers, Williams approves the copy before it is published. He wrote the foreword to Al Hirshberg's book, *The Red Sox: The Bean and The Cod*. The athlete is six foot three, his playing weight is between 175 and 180 pounds. He has greenish-brown eyes and brown hair. Casually dressed, he refuses to wear a necktie. Many comments have been made about Williams as a person. A perfectionist about his batting (he is constantly studying new techniques), he reflects a poor day at bat in his mood. He has a quick temper and will answer barbs from both fans and sportswriters. While he was in the Navy he was married to Doris Soule of Princeton, Minnesota. Their home is in Min-

neapolis, where he spends most of his off-season time in hunting and fishing.

WILLIAMS, THEODORE SAMUEL
See Williams, Ted

WILSON, CARROLL LOUIS Sept. 21, 1910- United States Government official
Address: b. c/o United States Atomic Energy Commission, Washington 25, D.C.

When Carroll Louis Wilson was appointed general manager of the United States Atomic Energy Commission at the end of 1946, *Business Week* called him "the atomic age's first management man." A graduate of the Massachusetts Institute of Technology, where he was trained in both engineering and business administration, Wilson has been associated with Vannevar Bush⁴⁷ in the administrative and business phases of that engineer's scientific research projects.

Born in Rochester, New York, on September 21, 1910, Carroll Louis Wilson is the son of Louis William and Edna (Carroll) Wilson. (This Carroll Louis Wilson is not a relative of the Carroll Louis Wilson born in Minneapolis. He is, however, a nephew of Frank J. Wilson⁴⁸, former chief of the Secret Service.) For his elementary and secondary education, the boy attended the public schools of Rochester. In the fall of 1928 Wilson entered the Massachusetts Institute of Technology, enrolling for the well-known "Course xv" in business administration and engineering, which trains engineers for executive positions. During his college years he was the manager of the cross-country and lacrosse teams. After receiving a B.S. degree in 1932, Wilson remained at M.I.T. as assistant to Karl T. Compton⁴⁹, president of the institute. "During his tenure," an official Atomic Energy Commission biography stated, "he had an extensive part both in the administration of the institute and in the reorganization and expansion of the activities of the institute which were then being carried on." His duties also included assisting Compton in his capacity as chairman of the committee on patent policy of the National Research Council. Wilson, at the time, was secretary of the committee on en-

CARROLL LOUIS WILSON

gineering schools of the Engineering Council for Professional Development.

In June 1936 Wilson became associated with Vannevar Bush, then vice-president and dean of engineering at M.I.T. (James Phinney Baxter 3d, has called Wilson "Bush's alter ego"). As Bush's special adviser, Wilson developed a plan for the administration of patents on inventions by members of the staff at the institute. By means of Wilson's program, the Research Corporation of New York took over M.I.T. patents. For that non-profit company, in 1937 Wilson took charge of the handling of patents of universities and scientific institutions.

When Bush, by that time president of the Carnegie Institution, organized the National Defense Research Committee in June 1940, Wilson joined the staff. The order establishing the committee read, "NDRC shall correlate and support scientific research on the mechanisms and devices of warfare. . . It shall aid and supplement the experimental and research activities for the creation and improvement of instrumentalities, methods and materials of warfare." In order that NDRC should not duplicate work of other committees, it was specifically prohibited from concerning itself with aviation, medicine, or food, or with research in which the Army and Navy were engaged. While NDRC drew upon scientists, many of whom were already engaged in research for schools or commercial firms, the equipment with which they worked (except necessary supplemental or special equipment) and their salaries were supplied by the original employer. Money for this project was obtained from the two-hundred-million-dollar defense fund placed at the President's disposal. For NDRC Wilson compiled a *Report on Research Facilities of Certain Educational and Scientific Institutions*, thereafter spoken of, by

those who worked with the report, as "the bible."

In 1941 the work of NDRC was placed under the Office of Scientific Research and Development, which also included a Committee on Medical Research. Bush was named director of OSRD, and Wilson became his executive assistant. Among the special missions in which Wilson participated was the Conant mission, headed by James B. Conant⁴¹, president of Harvard, which established a London office of OSRD. Thereafter Wilson "was responsible for coordination of the activities of the OSRD and had direct supervision of all liaison with the British and direct supervision of its Office of Field Service." Throughout World War II, Wilson worked with this group. Jack Beall, in a *Saturday Evening Post* biography, stated: "Dr. Bush gives Wilson a major share of the credit for the fact that there was no turnover in the civilian personnel of OSRD—a unique record in wartime Washington."

Wilson was given leave from OSRD in November 1945 to consult with the State Department on problems regarding atomic energy. A few months later he became secretary to the Board of Consultants, which, under the chairmanship of David Lilienthal⁴², formulated the *Report on the International Control of Atomic Energy*, subsequently known as the Acheson⁴³-Lilienthal report. The five main recommendations in the report called for complete control by a proposed international atomic development authority of world supplies of uranium and thorium, a monopoly of the mining of these ores, complete control over the construction and operation of plants making fissionable materials and over research, and a licensing system for the use of denatured fissionable material. After the work of the Board of Consultants was completed in March 1946, Carroll Louis Wilson became vice-president and director of the National Research Corporation of Boston, which was working to develop high vacuum processes for industrial use.

Wilson was again called upon to work with the problems of atomic energy in October 1946, when he became consultant to the United States Atomic Energy Commission. On the last day of that year, on the recommendation of Compton, he was named general manager, a post he entered upon on January 1, 1947, when the development and control of atomic energy passed into civilian hands. (Jack Beall has observed that "it's a peculiar fact that Wilson has never held a job in which he had a predecessor.") Carroll Wilson (his appointment was called as important as that of the AEC commissioners) was to supervise the work of 43,700 employees in eighteen States, working in plants at Oak Ridge, Richland, Los Alamos, and Chicago, and in colleges and university laboratories. Among the problems confronting the commission, while the five commissioners and the general manager were awaiting Senate confirmation (obtained after sharp controversy in April 1947), were plans for the mining and processing of ores, review of all contracts written during the war with a view to revising them, and study of research and de-

velopment programs. Three industrial relations counselors have been added to the staff of the AEC to aid in formulating labor policies; licensing provisions for the use of thorium as well as uranium have been announced, studies for peacetime uses of atomic energy are under way, and plans for new laboratories and plants have been completed. Some industrial corporations will take over the operation of atomic energy plants, under AEC control. An outgrowth of the huge industrial establishment and staff required to maintain them is AEC's supervision of three towns: Los Alamos, with a population of 8,000; Hanford (Washington), with 15,000; and Oak Ridge, with 30,000.

Wilson and Lilienthal are said to be eager "to induce industry to contribute its best thought to atomic energy." They are also seeking to make nuclear research industrially profitable. In connection with their interest in promoting private research on nuclear physics, AEC has made available heavy water for approved research, at the cost of handling and distribution. Foreign scientists, meeting certain requirements, may import radioactive isotopes for research, according to a September 1947 AEC decision. In Beall's opinion, Wilson holds "the most exacting and critical job in the United States, except those held by Harry S. Truman" and George C. Marshall"; "one of Wilson's knottiest questions is how to get private industry to cooperate—often without profit—with America's first industry which is a complete Government monopoly."

Carroll Wilson was awarded an honorary Doctor of Science degree by Williams College in 1947. In Washington Wilson belongs to the Cosmos Club and in Framingham, Massachusetts, he holds membership in the Millwood Hunt Club. Mrs. Wilson, who was Mary Bischoff when she was married to Wilson in April 1937, was born in England, became an American citizen in 1944. The Wilsons have four children. Wilson is comparatively thin (175 pounds, a six-foot-two frame), has "luminous brown eyes . . . somewhat magnified by heavy-lensed, shell-rimmed glasses." *Business Week* said that the administrator has "a flair for getting along with people"; the *Saturday Evening Post* confirmed this: "Carroll himself admits to never losing his temper, although he does get angry. He has the admirable failing of not being able to say a word when he is riled—just dries up." During his day's work, "the only breaks he permits himself . . . are for lighting cigarettes and for pouring glass after glass of water. By all odds he is Washington's leading hydrophile."

WOLTMAN, FREDERICK (ENOS) Mar. 16, 1905- Journalist

Address: b. c/o New York World-Telegram, 125 Barclay St., New York 7; h. 72 Barrow St., New York 14

The 1946 Pulitzer Prize "for a distinguished example of a reporter's work" was given to Frederick Woltman, investigator and staff-writer of the New York *World-Telegram*, for several series of articles dealing with Communist influence in America. The award, which reflected the prominent position Woltman had gained for himself in his special field, drew praise from some commentators, criticism from those who considered his exposés "Red-baiting."

Frederick Enos Woltman was born March 16, 1905, in York, Pennsylvania, to Enos Frederick Woltman, a druggist and former real estate man, and Ella (Strayer) Woltman. In Pittsburgh, to which the family moved when Woltman was a boy, he attended Peabody High School, and was graduated with high honors in 1923. That year he entered the University of Pittsburgh to major in political science and philosophy. He received his B.A. degree in 1927, *magna cum laude*, and in 1928 earned his M.A. degree, for which he wrote a thesis on the political philosophy of John Taylor. During 1928-29 he was a graduate assistant in the department of philosophy of the University of Pittsburgh, spending half his time teaching philosophy and the remainder studying for a

Al. Aumuller—N. Y. World-Telegram
FREDERICK WOLTMAN

Ph.D. degree. He did not complete the work for the doctorate, however.

In the *American Mercury* for December 1928 there had appeared an article written by Woltman and William L. Nunn which characterized the "coal and iron police" in Pennsylvania as "cossacks," in denouncing their actions during a coal strike. A second article, which appeared in the *Nation* for March 20, 1929, was entitled "Murder by Coal and Iron Police." The Governor of Pennsylvania, John S. Fisher, objected to having the author of the articles on the university's staff, and the institution revoked Woltman's appointment.

But these articles, together with several others written by Woltman, attracted the attention of Roy W. Howard⁴⁰, and in 1929 the young man was invited to become a cub reporter on the New York *Telegram* of the Scripps-Howard chain. (This became the *World-Telegram* in 1931 when the Scripps-Howard interests bought out the failing New York *World*.) From the beginning of his association with the paper, Woltman exercised his special journalistic detective bent. Much of his early career was spent investigating Tammany Hall, conditions in the magistrates' courts, and irregularities in organized labor, and writing exposés for the *World-Telegram*. In 1931, in collaboration with Joseph Lilly, he wrote a series of articles revealing the extent of the real estate mortgage bond racket, thereby saving large sums for bondholders and winning for the New York newspaper the Pulitzer Prize for "the most disinterested and meritorious public service for the year." Woltman investigated the leadership of the Motion Picture Operators' Union Local No. 306 and in 1933 saw the local's leader imprisoned for coercion of union members. This, it has been pointed out, encouraged other trade unionists to seek legal redress against other union

officials who were considered dishonest. When the Pulitzer awards were made for 1933, Woltman received honorable mention for "clear, exact, and understanding writing in reporting the status of various banks in suburban areas of New York after the national holiday."

At the same time Woltman was investigating Communist and "Red-front" movements. By working from extensive files built up day by day by the addition of clippings, letters, pamphlets, and lists of sponsors, and by correlating names and policies of organizations he suspected with those of known Communist groups and their publications, Woltman has named "Communist-front" groups. Through his efforts prominent persons reportedly have learned facts unknown to them about organizations which they have been sponsoring and have withdrawn their names. Others, learning from him that their names were being used without permission, have forbidden such use. Colleges, clubs, advertising agencies, Government bureaus, and other groups consult him frequently for information.

The award to Woltman of the Pulitzer Prize for the most distinguished example of a reporter's work in 1946 was made on the basis of several series of articles dealing with Communist activities in the United States, including three which attracted much attention. The first of these concerned National Maritime Union president Joseph Curran's⁴¹ repudiation of his Communist supporters. The second predicted Earl Browder's⁴² expulsion from the Communist party. The third charged that Gerhart Eisler, previously pointed out to Woltman as Hans Berger, an important figure in the Communist party, was the top agent of Moscow in the United States, which had been hinted at by Louis Budenz, former editor of the New York *Daily Worker*. (In June and August 1947 Eisler was convicted by separate Federal courts in Washington on charges growing out of his appearances before the House of Representatives.) In 1946, too, Woltman received honorable mention in the Silurian Award for the best editorial staff achievement by a New York City newspaperman. The following year Woltman was the recipient of two honors: the gold Americanism medal from a post of the American Legion and a medal from the Catholic War Veterans.

Congratulations on Woltman's receipt of the prize were received by the *World-Telegram* from such individuals and organizations as J. Edgar Hoover⁴³, Mayor William O'Dwyer⁴⁴ of New York, David Dubinsky⁴⁵ of I.L.G.W.U., the *Jewish Daily Forward*, and the Catholic War Veterans. Sharp attacks on Woltman's articles have come from the New York *Daily Worker* and *PM*, among others, challenging the evidence on which he based his conclusions. Woltman summed up his objective in an interview, when he stated that he was aiming only at Communists and "fellow travelers"; he has stated further that his concern with labor unions has been directed at any Communist influence in them.

One of the specifications for the Pulitzer reportorial award is that preference should

be given to articles written under deadline pressure. More than 75 per cent of Woltman's exposés, his newspaper has stated, are written under such conditions. A colleague, Robert C. Ruark, wrote of him: "He is the only man in the world who can talk on two telephones while simultaneously taking notes in pencil, playing the typewriter, smoking a foot-long cigar, and conducting a brisk argument about some aspect of the circus." The circus, incidentally, is one of Woltman's main interests—he is considered one of the country's best "big top" reporters. (He also wrote many of the *World-Telegram's* articles about the New York World's Fair of 1939-40.) Woltman has light hair and blue eyes, weighs 210 pounds, and is five feet nine inches tall. He and Virginia Russell, a literary agent, were married on October 26, 1940.

WOOD, JAMES MADISON Oct. 2, 1875-
Former college president

Address: b. c/o The Woman's Foundation,
10 E. 40th St., New York 16

During his thirty-five years in office as the president of Stephens College for Women in Columbia, Missouri, James Madison Wood has been responsible for building the junior college into an institution now known for its combination of "glamour, scholarship, and domesticity," and has put into practice his system of "personalized" education. The educator has been a leader in the development of the United States junior college system and is well known for his pedagogical innovations. Upon his retirement from the presidency of Stephens College in June 1947, Wood undertook to devote most of his time to the Woman's Foundation, an organization devoted to the educational, professional, and emotional problems of women.

James Madison Wood was born October 2, 1875, on a farm in the Ozark mountains near the village of Hartville in Wright County, Missouri. His parents, James Thomas and Mary Elizabeth (Smith) Wood, were devout people, and young James and the five other children in the family were reared in a deeply religious environment—the Woods were Baptists—in which the "ideals of a sound character and responsibility" were stressed. From his childhood James was accustomed to the rigorous work and the small recompense of farming in the hill regions. Although there was little opportunity for educational advancement, the youth procured for himself all the schooling he could. When he was fifteen he successfully took the county examination for a teacher's certificate. His teaching career began at that date: he was given a post in a grade school for six months of the year at a salary of twenty-seven dollars a month. Vacations from his rural school assignments saw him spending such free time as he had at

JAMES MADISON WOOD

secondary school and teacher-training institutes. This he did for six years (1890-96), finally obtaining a diploma from the Hartville High School.

After being graduated, Wood found a position in a school paying thirty-two dollars a month. In December of that same year (1896) the young teacher was married to Lela Raney of Hartville (one son, James Madison, was to be born to them). The couple decided to pursue their education further at the Central State College for Teachers at Warrensburg (Missouri): by budgeting their income they were enabled in 1901 to receive their Bachelor of Pedagogy degrees from the educational institution. Meanwhile, the Woods were teachers in a number of backwoods schools until they came to Greenridge in 1900, where James Wood was to serve as principal of the schools in the district.

The position at Greenridge was the first in which Wood was able to utilize the principles of "personalized" education which have since been the distinguishing factor in his pedagogical methods. He became personally acquainted with the pupils, visited their homes, and interested himself in their aspirations and in their difficulties. Many of his early pupils were even influenced to attend college. In 1904 Wood was appointed superintendent of schools in Edina in the same State, which he left in 1906 to hold the same position in Fredericktown (1907-10). Wood and his wife, after they left Edina, completed their studies in education at the university of Missouri; in 1907 he received the B.A. and B.S. degrees in education.

Wood's initial connection with college teaching came in 1911 when he became professor of education at Southeast Missouri State Teachers College in Springfield. He had by this time an M.A. degree from Columbia University for postgraduate work in his field (1911). Then, early in 1912 the educator was called to Ste-

WOOD, JAMES MADISON—*Continued*

phens College, a Baptist "female seminary" (established 1833), to assume the presidency. "He found a \$100,000 debt," wrote William F. McDermott in *The Woman* magazine, "ramshackle buildings, the college owing every merchant in town and not a student registered for the coming year." In order to attract students to the college, the Woods carried out an improvement program financed by their own funds and sought to reach prospective entrants through the mails. Fifty-two girls, some from "floorless mountain cabins," enrolled in September of 1912; and the Woods and the faculty managed to keep the school open, usually at the expense of their own wages. The following year, because of the plan by which each student would return with a friend, Stephens college had 104 pupils. From that time the college's student body has increased rapidly: by 1947 more than two thousand young women were entering the Missouri institution yearly, coming from all parts of the United States and its territories and from foreign nations, though a good number still are drawn from mid-Western towns. The original seven acres of campus ground has grown to 325 acres, and the college buildings to forty. Beginning in about 1947 the college is to undergo a twenty-five-year expansion program, during which a new chapel and a new hall of religion and the arts will be integral additions.

Almost from the beginning Wood was occupied with introducing new educational ideas into Stephens, changes which influenced schools with identical or almost identical problems. The primary change came when he, with A. Ross Hill and W. W. Charters, University of Missouri president and professor of education, respectively, converted Stephens into a junior college having a two- (freshman and sophomore) instead of four-year course of study. At first the courses at Stephens and in similar institutions duplicated the subjects required in the first two years of the regular colleges and universities, although throughout the second decade of the 1900's a movement was growing in junior colleges against this adherence to the accepted pattern of advanced education. Wood and a number of co-educators believed, as stated in an article by Stephens' president in the *Nation's Schools* (April 1945), that the "instruction given in the 'lower' division of the college should provide a broad general training rather than specialized training pointing toward specific vocational or professional work." This general education was the "heritage" of every young American whether he intended to complete college and even graduate school or not (*Junior College Journal*, May 1940). In the latter periodical Wood was also to enumerate all the general subjects—science, health, home, and community studies, business techniques, literature and the other arts, and religion—knowledge of or acquaintance with which he considered essential in preparing a student for intelligent post-school living.

The president's educational theories, applied to his students, helped bring about the next major change in the college: Wood in 1920

organized a department of research which was to formulate a more progressive curriculum in which there would be "recognition of a woman's right to a woman's education" and not to education through the "frozen molds of a masculine curriculum." Wrote the *Survey Graphic* (April 1939) about the main phase of the project: "Together, they [Wood and Charters, the research director] persuaded 305 college-bred women—spinsters, mothers of families, divorcees, business and professional women—living in thirty-seven states, to keep diaries over a period of three years. These daily records, revealing . . . how they used what they learned at college, and exactly what activities they felt college should have prepared them for, became the raw material out of which the new program at Stephens was shaped."

Under the new curriculum later adopted from these suggestions seven cores of study are emphasized and have a place in every girl's school work: communications, physical and mental health, aesthetics, social adjustment—classes in personal relationships, community and civic life, etc., economics from the consumer's standpoint, and religion, which includes ethics and philosophy (*Progressive Education*, January 1939). Some of the specialization fields are liberal arts, merchandising, secretarial courses, pre-medical, and radio. Most of the courses, however, are directed toward training the young women for the home. The Institute for Consumer Education, begun at Stephens in the late 1930's and financed by the Sloan Foundation, experiments in the economic aspects of home-making and furnishes research reports on consumer problems to educational institutions and women's groups. Because of Wood's belief in the necessity for religious and ethical convictions, these have always been important in Stephens activities. Its Burrall Bible Class is the largest Sunday school class in the United States—there are over three thousand members drawn from Stephens and the University of Missouri.

In late November 1946 president Woods announced that he would resign at the end of the school year. His retirement became effective on June 3, 1947. Homer P. Rainey⁴⁶, former president of the University of Texas, succeeded him. In the year 1946 James Madison Wood was selected president of Woman's Foundation soon after its inception; among its aims are the increase of educational facilities for all American women and assistance in women's adjustment to a changing world. Wood, too, has protested the scarcity of women in important United Nations posts. Asserted Wood in an interview with Margaret Elliott of the *New York World-Telegram* (June 17, 1947): "How can the United Nations write a successful international charter without women? Why, the basic difference between men and women is that men live in the present and women in the future!" (He explained, too, that "women of the world . . . have a common denominator in being mothers.") Wood also believes that men and women should work in cooperation to solve world affairs, because "all life is a partnership." In June 1947 the retired president of Stephens College made a trip to

Europe to discuss women's affairs with leaders in Great Britain, Sweden, France, and Switzerland. (In England he was also to visit three little English girls he had adopted during World War II.)

Wood's interest in educational trends and activities in his own State and in the United States has taken the form of affiliation with a number of educational organizations, the National Education Association among them. From 1916 to 1919 he was a member of the N.E.A. committee of courses and curriculum; from the year 1925 Wood has shared in the work of the committee on institutions of higher education; from 1931 to 1933 he was on the N.E.A. executive committee, and from 1931 on, of the standards committee. In 1917 he had been chosen to sit on the commission of higher institutions of learning of the North Central Association of Colleges and Secondary Schools, in which post he has since remained. From 1922 to 1924 Wood served as president of the American Association of Junior Colleges, founded in 1920 with his cooperation. Other organizations to which he belongs comprise the Association of School Administrators and the Missouri State Teachers Association, the honor fraternity Phi Beta Kappa, Phi Delta Kappa, the Masons (32d degree, Knight Templar), and the Union League (Chicago). He is the recipient of the LL.D. degree from Hiram (Ohio) College and from William Jewell College (Liberty, Missouri). Writings by the educator on various aspects of secondary and advanced education have appeared in a number of professional journals. In her article Margaret Elliott described the former junior college president as a "white-haired man with a store of wit and energy that makes him scorn any idea he is 'retiring.'"

WRINCH, DOROTHY (M.) Sept. 12, 1894— Mathematician; biochemist

Address: b. c/o Smith College, Northampton, Mass.; h. 81 Woodside, Amherst, Mass.

Divergencies between the biological and the physical sciences have, to a great extent, been reconciled in the work of Dorothy Wrinch, mathematician and biochemist, a former member of the staffs of Oxford and London universities who is now on the faculty of Smith College. This amalgamation of specialized knowledge has been described by Miss Wrinch: "By formulating its ideas in geometrical language, the science of biology comes of age. Just as geometry has shown itself powerful and comprehensive in physics and chemistry, so in biology also will it prove to be capable of directing our progress in the development of ideas." The scientist is the author of numerous papers in philosophy, mathematics, physics, chemistry, and biology, and has addressed scientific societies in Europe and America.

The daughter of Hugh Edward Hart Wrinch, an engineer, and of Ada (Souter) Wrinch, Dorothy M. Wrinch was born in Rosario, Argentina, on September 12, 1894. Most of her early childhood, before she went to London, was spent in Rosario. In England, she entered Girton College of Cambridge University, pursuing her studies there for the five years from 1913 to 1918. (There her specialties were philosophy and epistemology.) Her standing in the mathematics tripos—an honor examination—of 1916 won her the title of "wrangler," a distinction bestowed upon those placing highest in the examination. The following year she stood for the moral sciences tripos, an honor examination in philosophy, logic, and psychology. In the course of her years in England, she spent vacations in travel, in Iceland, the Scandinavian countries, Holland, France, Switzerland, and Italy.

Upon completing her courses at Cambridge, Dorothy Wrinch became a lecturer on pure mathematics at the University College of the University of London (1918-20). Two of her advanced degrees were obtained after working at the University and Kings colleges of that university—the Master of Science degree in 1920, and the Doctor of Science degree in 1921. Miss Wrinch remained at the University of London from 1920 until 1924 as a member of its research staff; in 1922 she also joined the faculty of physical sciences at Oxford University, to which she was attached for seventeen years. Her postgraduate studies were continued at Oxford, where she was granted a Master of Arts degree in 1924 and another doctorate in science five years later.

Much of Miss Wrinch's research work in the 1920's and 1930's was facilitated by the various fellowships she received. The Alfred Yarrow Fellowship for scientific research was awarded

DOROTHY WRINCH

to her by Girton College from 1920 to 1924, and another Girton fellowship, the Hertha Ayrton, was granted to her for the years between 1930 and 1934. With the latter and with a research fellowship bestowed by Oxford University from 1931 to 1933, she was able to study abroad: at the University of Vienna (1931-32) and the University of Paris (1933-34) and in Prague and Leyden. By means of a research fellowship from the Rockefeller Foundation for seven years (1935-41), Miss Wrinch was enabled to investigate her theories of the application of mathematical principles to the structural problems of biology (particularly those of chromosomes and proteins). Subsequent sponsorship of her work was undertaken by Somerville College of Oxford University, which, from 1939 to 1941, appointed her research fellow for the fund established by Lady Carlisle.

The first of Miss Wrinch's visits to the United States was made at the invitation of the Rockefeller Foundation in 1935, when she lectured on native proteins at Harvard, Princeton, Columbia, Yale, and other universities. She returned on scientific missions in 1938 and 1939. The latter year found her a lecturer in chemistry at Johns Hopkins University, where she taught until 1941. Her entrance into the United States on the quota from Canada took place in 1940, and she obtained her United States citizenship in 1943. Meanwhile, in 1941 and 1942, she had been teaching at Amherst, Smith, and Mount Holyoke on a joint appointment from those three colleges, introducing her series of lectures with three on the structural problems of biology, chemistry, and the medical sciences, and continuing with seminars in molecular biology. After 1944 she was associated with the physics department of Smith College. The previous year she had spent her summer at Woods Hole, Massachusetts, as a member of the corporation of the Marine Biology Labora-

tory, where she introduced courses in crystallography.

Mathematics and the allied studies of mathematical physics, methodology, and the theory of probability constituted Miss Wrinch's major field of inquiry in her early years of research. After 1934 she devoted herself mainly to the study of biological structure patterns, synthesizing the results of her work in the physical sciences with the biological. In connection with molecular biology, she evolved models of protein molecules, based on mathematical computations of constructional possibilities, which she presented at the 1937 meeting of the British Association for the Advancement of Science.

It was her research in genetics, particularly in the study of chromosomes, that had led Miss Wrinch to the study of the living protein molecule (previous chemical studies of the subject had mainly been confined to the inert proteins). Reporting on her work in the English scientific journal, *Nature* (December 22, 1934), she had urged (in 1934) the construction of a molecular model, "however inadequate," as a method of approaching a relationship between the known facts of protein structure and those of genetics and the properties of chromosomes.

Miss Wrinch was selected to deliver the Julius Stieglitz Memorial Lecture before the American Chemical Society in 1947. Choosing "The Structure of Proteins" as her subject, the biochemist spoke of the difficulty of fixing the structure of the protein molecule, which is highly frangible, and suggested that surface patterns of a new molecule could be molded on the surface patterns of an original molecule "just as a waffle's surface is molded on the surface of a waffle iron." This process might lead to significant discoveries in the field of virus diseases, which would not be feasible without more knowledge of protein structure. "While it is known that a protein functions in a living being through its atomic pattern, that pattern so far has defied discovery," she said. "Until it is determined, physiologists and pathologists and biologists in general must continue to grope in the dark."

In 1946 and 1947 Miss Wrinch also spoke before the American Cereal Chemists, the Crystallographic Society of America, and the American Society for X-Ray and Electron Diffraction. More than seventy-five of her articles have appeared in various scientific journals, including the *Philosophical Magazine*, the *Quarterly Journal of Mathematics*, the *Journal of the Royal Aeronautic Society*, the *American Journal of Mathematics*, *Nature*, *Science*, the *Proceedings of the Royal Society*, the *Proceedings of the Physics Society*, the *Journal of the American Chemical Society*, the *Journal of Genetics*, the *Journal of Chemical Physics*, the *Biological Bulletin* and the *Physical Review*. Her monograph on *Fourier Transforms and Structure Factors* was published in 1946 by the American Society for X-Ray and Electron Diffraction.

The societies to which Miss Wrinch belongs are the Physical Society of London and the mathematical section of the British Association for the Advancement of Science (in 1930

she was a delegate to its conference in South Africa; she was its secretary from 1932 to 1938). For seven years, from 1932 until 1939, she was a member of the International Commission of Teachers of Mathematics. Her marriage of sixteen years' duration to J. W. Nicholson, British mathematician, was dissolved in 1938. By this marriage she has one daughter, Pamela, in 1947 a student at the University of Michigan. In 1941 Miss Wrinch was married to Otto Charles Glaser, Harkness Professor of biology at Amherst College. A "tidy, calm-browed woman" (*Time* once called her), she has brown hair and green eyes. Music, tennis, and botany occupy her in her spare hours.

YIM, LOUISE Nov. 21, 1904- United Nations official; Korean political leader; educator

Address: b. c/o Korean Delegation, 9 Rockefeller Plaza, New York 20; h. Hotel Pennsylvania, New York 1

The United Nations delegate from Southern Korea is Louise Yim, who has been active in the American Military Government-established interim Korean Government and, before the liberation of Korea, in the anti-Japanese underground movement. Miss Yim is a founder and president of the Central Women's College in Seoul, Korea's capital.

Born at Kumsan in the southern part of Korea on November 21, 1904, Louise Yim received the Korean name of Yim Youngsin. She traces her descent from a Korean princess who married a Chinese envoy to the Korean Emperor seven centuries ago. Her father, Yim Ku, was early a Korean Christian (he was an elder of the Presbyterian Church) and a civic leader, as well as an educator and a farmer. Louise Yim is one of a family of twelve children, six boys and six girls. "I was four or five on the Day of Humiliation," she once told an interviewer. "That was August 27, 1910, when Japan took complete control of Korea. It was the first time in our 4,200-year history that Korea was not free. . . I knew something was wrong. When I was about seven, I found out what it was. . . I felt that even if I was a girl I could learn to fight the Japs." Until she was ten, Louise was able to surmount her father's antipathy to a girl's going to school (although during her last year she had to hide the fact from the townspeople). From her tenth to her thirteenth year she studied at home and then, with the aid of a three-day hunger strike and letters from an American missionary, she won permission to return to school.

While still in missionary high school, Louise Yim and three other students, disregarding the Japanese ban, copied by hand the four-thou-

Blackstone Studios

LOUISE YIM

sand-year history of Korea and its culture. In 1918, shortly after she had completed her training as a teacher, Miss Yim and eleven other Koreans formed their country's first suicide squad, whose aim was to kill Japanese officers and commit acts of sabotage. The following year, while she was teaching in a country grammar school, the Koreans conducted an unsuccessful uprising against their conquerors, following the March 1, 1919, issuance of the Korean Declaration of Independence. In this period, characterized by ruthless Japanese suppression of Korean Nationalists, Miss Yim was a messenger for the underground, which circulated news of the fighting to compatriots, and distributed copies of the Declaration of Independence. After her arrest by the Japanese authorities, she was imprisoned for six months and then released in "house custody" for three and a half years. During this time she was allowed to study at the Christian College in Hiroshima. An anti-imperialist Japanese professor helped her to get to the United States in 1925. When she arrived there, she delivered to Dr. Syngman Rhee⁴⁷, president of the Korean Provisional Government (established by underground leaders in 1919), photographic proof of Japanese atrocities.

Having completed six years of study in theology and political science at the University of Southern California, Miss Yim left college with B.A. and M.A. degrees. While studying, she had worked as manager of trucking, gasoline, and agricultural enterprises and had, reportedly, saved thirty thousand dollars. With this fund, and additional money contributed by her father, she returned to Korea in 1933 and assisted in the founding of the Central Women's College at Seoul. She became president of the college in 1934. "Almost under the eyes of the Japanese," she inculcated ideas of Korean nationalism and independence in her students.

YIM, LOUISE—*Continued*

During World War II, Louise Yim was the only woman in a group of three leaders of the underground movement. When news of the Cairo declaration, proclaiming that "Korea shall in due course become free and independent," reached the underground, they printed and distributed leaflets informing fellow Koreans of the pledge. When Japan was defeated, Korea was divided into an American zone (Southern Korea) and a Russian zone (Northern Korea). The Representative Democratic Council was formed in South Korea to act as an unofficial interim Government. Louise Yim, who is president of the Woman's Democratic party, became one of the twenty-eight executive members of the council. She also serves this Government as its representative to the United Nations General Assembly. In a plea for Korean independence, before the Overseas Press Club in December 1946, Miss Yim reviewed her country's history and called the division of Korea "an international mockery." She asserted, "Korea is a body that has been cut in two. . . . One half cannot live without the other." Reporting that she had consulted with other U.N. delegates, she insisted, "Not a one opposed Korean independence," and she warned, "Civil war will break out if Korea is not freed. It will be a war stirred up by political fanatics who today, in a democratic state, would comprise a political minority." It was not until September 1947 that the problem of Korean independence was placed on the agenda of the United Nations General Assembly. Miss Yim has proposed a time schedule under which a parliament might be elected and convened, and troops might withdraw.

Miss Yim was the organizer of the first YWCA in Seoul. She is adviser to women's patriotic associations and to the Korean Red Cross. She also serves as an executive member of the Korean Relief Association, and is a member of the Literary Association, the Alumni Association of the University of Southern California, the American Women's University Club, and the World Women's Party. While representing Korea at the U.N., she acts as correspondent for the *Donga Daily*, a Seoul newspaper, and is a contributor to other Korean newspapers and magazines. In 1947 her autobiography was in preparation. Her pioneering in the field of education has been acknowledged by a special citation and a silver cup presented to her by the Korean Educational Association in 1936; she is the first woman to be honored by a Korean award.

Tall, for a Korean, Louise Yim would be considered of medium or small stature in the United States: she weighs 130 pounds and is five feet two and a half inches in height. Her eyes are brown. A New York *Post* interviewer once wrote of Miss Yim, "Round-faced, black-haired and gracious, she generally wears Korean dress. . . . Her smile is charming, humorous, and frequent." Miss Yim enjoys a game of tennis as relaxation. When she is in Korea, at her small home in a suburb of Seoul, she spends her leisure hours in raising poultry and cultivating flowers.

YOUNG, ROBERT *See* Payne, P. S. R.

YOUNG, ROBERT R(ALPH) Feb. 14, 1897- Railway executive

Address: h. c/o Chesapeake and Ohio Railway Co., Terminal Tower, Cleveland, O.; h. "The Fairholme," Newport, R. I.

The chairman of the board of the Chesapeake and Ohio Railway Company is Robert R. Young, who loosed, from the Wall Street investment banks, some of their hold over the nation's railroads. He is known to the financial world as the "Daring Young Man of Wall Street" (the title of a *Saturday Evening Post* series of articles about him). Travelers and the public, generally, have learned of his name through the new ideas he has instituted in his railroad systems, and his advertising campaign for the modernization of the country's railways.

Robert Ralph Young, who bears the name of his maternal grandfather, was born February 14, 1897, in Canadian, a town in the Texas Panhandle. There his grandfather, a Scotch-English immigrant, had raised cattle, and later had founded the First National Bank of Canadian with his son-in-law, David John Young, who was Robert's father. Robert's mother, Mary Arabella (Moody) Young died when her son was ten years old. His school was the Canadian Baptist Academy in his home town; later he attended the George Clayton School in Denver, Colorado, and a Los Angeles high school. Matthew Josephson, in the *Saturday Evening Post* biography, told about Young's childhood: "He was smaller, skinnier, and, he always felt, physically inferior to the other boys of his age; therefore he tried to dominate them by his wit, imagination, and skill." Robert completed the last two years of his secondary education at Culver Military Academy in Indiana from which he was graduated in 1914, the winner of a scholarship to the University of Virginia. "Here [at Culver] he was marked down for a bit of devilish conduct . . . but as a student he wound up at the head of his class." At the University of Virginia, the "devilish conduct" was again in evidence, and, after failing to take his sophomore final examinations, he left college in 1916.

Young declined to join his father at the First National Bank at home. Instead, in 1916 he was hired to cut rifle powder at the E. I. du Pont de Nemours powder plant at Carney's Point, New Jersey. At the end of six months he was promoted to shift clerk, and within another year he was transferred to the mechanical department "as a sort of junior engineer." Before 1918 he had been assigned to the main plant in Wilmington as an employee of Du Pont's treasury department. Investing five thousand dollars (of the money inherited from his mother) in the Domestic Dehydrator Cor-

poration, a food-dehydrating firm, Young, in 1920, became its treasurer. Six months later the company failed. (Young subsequently lost the rest of his inheritance by selling "short" some stock in a Mexican oil company.) For a year (1921-22) Young was employed by the Allied Chemical Corporation. In 1922 he became a hundred-dollar-a-week statistician for the General Motors Corporation (at their New York offices); by 1929 he was an assistant treasurer. That year he resigned to become an assistant of John J. Raskob in the latter's personal enterprises. He served as treasurer of Equishares Corporation from 1929 to 1931. In 1932 Young and Frank F. Kolbe, also a former General Motors assistant treasurer, bought a seat on the New York Stock Exchange "at a bargain-counter price" and opened a brokerage firm.

Young and Kolbe had made a habit of buying seemingly worthless securities and reorganizing the firms for more efficient management, thereby turning the expected loss into profit. In 1933 they bought twenty thousand shares of the Alleghany Corporation, which controlled the almost worthless railroad empire of the Van Sweringen brothers. Four years later, that system of holdings, centralized in Midamerica Corporation, was sold to Young and Kolbe by George Ball, manufacturer of glass jars, who had bought the securities at auction a few years before. The silent partner in the transaction was Allan P. Kirby, son of a cofounder of the Woolworth chain, who contributed three million dollars for the purchase and who lent Young part of his share of the additional one million; four million in cash and almost two and a half million in a note was paid for the Midamerica company.

Although thinking he controlled the subsidiaries of Alleghany by his purchase of 90 per cent of its stock, Young found that he was mistaken when he tried to simplify the complicated holding company structure and to eliminate the Chesapeake Corporation, which controlled the Chesapeake and Ohio Railroad, then the only valuable asset in the Van Sweringens' former holdings. About 71 per cent of Alleghany stock secured that corporation's debts; the largest trustee was the Guaranty Trust Company of New York. By the terms of the indebtedness, Guaranty Trust under certain circumstances could vote the stock. In the past they had given their proxies to the Van Sweringens, but, because (according to Young) Young had promised a Senate investigating committee that he would break the hold of the banks over the railroads, Guaranty Trust now exercised that right. By the fall of 1939 Young had reached an agreement with the trustees whereby Alleghany could retire its debt; six months later the trustees assented to return the voting rights in the Chesapeake and Ohio Railway Company to Alleghany. By 1942 Young (who now had full control of Alleghany) was able to choose the president of the Chesapeake and Ohio, the Nickel Plate Railroad (New York, St. Louis, and Chicago) and of Pere Marquette (Alleghany holds controlling interest in all three railways).

ROBERT R. YOUNG

While Young was gaining his control of the C&O he was also keeping his promise to Senator Wheeler⁴⁰ to wrest control of the railroads from the investment banks. In 1938 C&O issued thirty million dollars' worth of bonds; bids were solicited from underwriters, and the handling of the bonds was finally awarded to an investment bank in Cleveland. *Business Week* noted: "There probably has never before in the history of the country been a major piece of railroad financing in which the eastern houses haven't been among the syndicate mergers." In the ensuing years Young continued to urge competitive bidding. As a result, the Interstate Commerce Commission, in 1944, ruled that all railroads must sell their bonds through sealed competitive bids.

Another fight which Young led was against the Stedman plan for the reorganization of the Missouri Pacific Railroad, a system which, bankrupt in 1933, was earning profits by 1942. Young, one of the junior bondholders who stood to lose a great deal of their investment, had by this time "identified the cause of the small, downtrodden investors with his own cause and, in all sincerity, could never separate the two in his mind." As a result of a Young-activated publicity campaign, Young and the Stedman committee, which represented the senior creditors, worked out a compromise in which both the junior bondholders and the stockholders might realize something from their holdings. When this plan was rejected by the ICC, Young requested Missouri Pacific security holders to vote against a substitute reorganization proposed by the commission. By the year 1943 Alleghany's debt had been greatly reduced. In establishing Alleghany's legal control over the C&O, the ICC in 1945 commended Young for fighting to win competitive bidding, for having cut the number of organizations in the holding company from 263 to 59, and for making Alleghany fi-

YOUNG, ROBERT R.—*Continued*

nancially solvent. At the end of 1946 Alleghany began to purchase shares in the New York Central Railroad. By April 1947 Alleghany owned 400,000 shares in that road (6.2 per cent), an acquisition which the New York *Herald Tribune* considered "working control." The corporation had also gained proxies for one million of the six million voting stock.

In the spring (1947) Young asked that the shares of the New York Central owned by C&O be taken out of trust and that C&O's holdings in Nickel Plate be placed in trusteeship instead (Young received permission from the ICC to dispose of C&O's ownership in Nickel Plate). Young and Robert J. Bowman, president of C&O, have also requested the ICC's permission to assume directorships of New York Central in response to an invitation by the latter road. Three men already on the Central's board are reportedly "Young" men. If Young and Bowman join the board, they will possess one vote short of full control. Young is believed to be planning, at some future date, to consolidate the Central and the C&O; he revealed some of his plans in a *New Republic* interview (September 8, 1947), and *Fortune* in May 1947 published an analysis of Young's present holdings and probable goals. In the meantime, Pere Marquette and C&O have been merged, and C&O's holdings in Nickel Plate will be distributed.

"A Hog Can Cross the Country Without Changing Trains—But You Can't" read the headline of an advertisement placed by Young's C&O in the first of a series of campaigns to modernize the American railroad system. This and other slogans were aimed at the elimination of the change of trains at Chicago or St. Louis necessary for one crossing the continent. Through train service was established in the spring of 1946. In May Young began a series of advertisements exposing the black market in railroad tickets, and in August advertisements called obsolete sleeping cars "rolling tenements" and promised to install new cars in C&O's own trains. Early in January 1947 C&O announced that tickets could be reserved by telephone and paid for on the train or charged to the purchaser. Another new service is "the train auto ferry service," by which a traveler's automobile may be carried on the same train. Young again attracted national attention when the C&O, in full page advertisements, charged the nation's freight lines with slowing down service. It has been said that Young writes his own advertising copy.

In the fall of 1946 Young charged that the Association of American Railroads "has now lobbied for three years for legislation to exempt it from the antitrust laws when its money and energies might better have gone to improve equipment and service, to fight for the billions in rail securities which are being unjustifiably squeezed in reorganizations, and to preserve a fair balance between wages and rates." The statement was made in a letter which withdrew C&O, Pere Marquette, and Nickel Plate from that railroad group. In February 1947 Young announced the formation

of the Federation for Railway Progress and invited shippers, labor, investors, and the general public as well as railroaders to join. On the advisory council were listed Edward R. Stettinius⁴⁰ as chairman, Admiral William F. Halsey⁴², Clare Boothe Luce⁴², M. Lincoln Schuster⁴¹, Charles Edison⁴⁰, Philip La Follette, and Albert S. Goss⁴⁵. By March the federation claimed nine thousand members. A presentation of the reasons for the establishment of the federation and of Young's concept of railroading appeared in an article by the executive in the December 1947 issue of *American Mercury*.

Robert Young is also interested in the motion picture industry. Part of the old Mid-America Corporation consisted of Pathé Industries, Inc., which, after several mergers, controls PRC (Producers Releasing Corporation) Films. Young and J. Arthur Rank⁴⁵, British film producer, have formed Eagle Lion Films (also under the control of Pathé Industries) to distribute Rank's films in the United States and American films in Great Britain. Once asked what he, as a motion picture financier, thought about the House Committee on Un-American Activities investigation of Hollywood, Young replied, "The American free enterprise system will suffer more from the so-called conservatives in Washington than it will from the so-called radicals in Hollywood. They should start their investigation of subversives in Washington." *Variety* reported that Young was reorganizing Eagle Lion's production program.

In accepting an award from *Financial World* for his 1945 report on the C&O, Young asserted, "What we need today is a Truth in Politics Act to match the Truth in Securities Act, clause for clause. . . . The standards for measuring the honesty of our public servants who ask us that we trust them with our liberties and our life certainly cannot be lower than those they themselves have laid down for the custodians of merely our money." On labor, Young, in a C&O advertisement on the December 1946 coal strike, wrote, "The public is being misled into believing that it is our labor leaders more than our politicians who are responsible for these and other layoffs. . . . It was the politicians who, for their own enrichment, put the power to restrain trade in any one of a half a dozen irresponsible hands. . . . It was they who passed the Wagner Act. . . . It was they who pressured the Supreme Court into unprincipled and Janus-like decisions." In two *Atlantic Monthly* articles (November and December 1946) Young advised capital to institute the social reforms that Congress had not, pointing out, "How much wiser capital would have been to accept unionization." He warned labor of the consequences of excesses, observing that capital, because of its past history, has been "hamstrung" by Government control. In a March 1947 article in the *Saturday Review of Literature*, Young urged that the United States reverse its trend toward "advantage-seeking diplomacy and recognize its obligation as a world influence and example" by introducing amendments to the U.N. charter that would in-

stitute general disarmament and provide for a system of rigid inspection. Young also dismissed the possibility of war with Russia on ideological and economic differences. "The establishment of arbitration and law between nations can be achieved," he asserted, "just as it can between capital and labor, just as it has been between individuals and corporations."

Young in 1947 received a citation from *Forbes Magazine* as one of "Today's Fifty Foremost Business Leaders." He has been awarded an honorary LL.D. degree from Bethany College in West Virginia. At the age of nineteen, on April 27, 1916, he was married to Anita Ten Eyck O'Keeffe, sister of Georgia O'Keeffe, the artist. Their only daughter, Eleanor Jane, was killed in an airplane crash in 1940. The summer home of the Youngs is "Fairholme" in Newport, Rhode Island; they spend their winters at "The Towers" in Palm Beach, Florida, where Young belongs to the Seminole Golf Club. "Close-up, Young neither looks nor acts like a fighting man," *Time* reported. "He is quiet and soft-voiced, shows anger only by a slight tightening of his lips, a slight glint in his pale blue eyes." "His body seems fragile" (he stands five feet six inches and weighs 135 pounds) and "he looks more than his age," according to the same magazine. His hair, once blond, is now white. He finds his recreation in reading (Mark Twain and Alexandre Dumas are his favorite authors), in writing poetry, or in taking long walks.

ZAFRULLAH KHAN, CHOUDRI SIR MOHAMMAD (zâf-rōol'lā kân chou'drē mō-hām'mād) Feb. 6, 1893- Pakistan Government official; United Nations delegate; lawyer

Address: b. Karachi, Pakistan

On August 15, 1947, the day it became the newest independent nation in the world, the Dominion of Pakistan applied for admission in the United Nations. Six weeks later Choudri Sir Mohammad Zafrullah Khan, chairman of the Pakistan delegation, affixed his signature to the instrument of adherence to the United Nations, and the green and white flag of the former territory in India was raised at Lake Success. Pakistan thus became the fifty-seventh

and latest country to be admitted into the world organization; and Sir Mohammad, president of the All-India Moslem League in 1931-32, lawyer, and a long-time Indian Government official, made it clear that the nation he represented would not take sides in controversies between the United States and Russia. Sir Mohammad was appointed Minister for Foreign Affairs and Commonwealth Relations in the Pakistan Cabinet at the end of 1947.

Choudri Sir Mohammad Zafrullah Khan was born in Sialkot in the province of Punjab in northwest India, on February 6, 1893. His father, Nasrullah Khan, the scion of a landholding family, was the leading attorney in that city. After graduation from the United Presbyterian American Mission High School in Sialkot in 1907, Sir Mohammad majored in economics and history at the Government College at Lahore, where he received a B.A. degree with honors. He took postgraduate work at Punjab University, Pakistan, and at the King's College of the University of London, receiving an LL.B. degree *cum laude* from the latter. (His parents, teachers, and religious environment had influenced him to make a career of law.) He was called to the bar from Lincoln's Inn, London, in 1914. Then, from 1914 to 1916, he served as an advocate in his home city of Sialkot, and from 1919 to 1924, a lecturer at the University Law College in Lahore. Sir Mohammad, who was "more interested in his studies than in athletics," also holds the honorary degree of Doctor of Laws from England's Cambridge University.

Afterward Choudri Sir Mohammad Zafrullah Khan practiced, in his country, at the Lahore High Court until 1935. He was Crown Counsel on the Delhi Conspiracy Case from March 1931 to June 1932. Sir Mohammad served as a member of the Punjab Legislative Council from 1926 until 1935, and in 1932 was Minister of Education for the Government of India. Between 1935 and 1941 he was a member of the Governor General's Executive Council, in charge, successively, of the Portfolios of Commerce, Law and War Supplies. For the next six years, until the Dominion of Pakistan was formed, he served as judge of the Federal Court of India. He was a member of the Round Table Conference on Indian Reforms, held in London in 1930, 1931, and 1932, and afterward a member of the Indian delegation associated with the Joint Select Committee of both Houses of Parliament on Indian Reform. He is (in 1947) the constitutional adviser to the Nawab of Bhopal.

Sir Mohammad represented India at a number of British Commonwealth and international conferences, and was chairman of the Indian delegation to the League of Nations Assembly in Geneva in 1939. In addition, he has served as president of the All-India Moslem League (1931-32), and from April to October 1942 was Agent-General for India at Chungking. Sir Mohammad's advocacy of dominion status for India was heard at the Conference of the British Commonwealth of Nations, which convened in London early in 1945. As leader of

Official United Nations Photo.

CHOU德里 SIR MOHAMMAD
ZAFRULLAH KAHN

the Indian delegation he proposed that the British Government should implement any agreed settlement of the then British-Indian deadlock that might be advanced on behalf of India within one year after the cessation of hostilities against Japan; if such a settlement could not be reached within that period, the British Government could place before Parliament proposals concerning a future constitution for India which would place India on a footing of complete equality with the Dominions. Then, in the summer of 1947, came the announcement that British rule in India would end with the establishment of the Dominions of India and Pakistan.

Pakistan was formally created on August 15, 1947. About 72 per cent of its seventy million inhabitants are Moslems; in population it is the largest Islamic nation. The country is composed of provinces of British India which are largely Moslem: eastern Bengal, part of Assam, western Punjab, Sind, the Northwest Frontier Province, and Baluchistan. Its interim capital is at Karachi, on the coastline of Sind. Pakistan was considered a new state by the United Nations and became eligible for admission to the U.N. Its sister nation, the Indian Union, was one of the chartered U.N. members and continued as an original member state.

On September 30, 1947, with only Afghanistan objecting, Pakistan was granted admission to the United Nations. On his arrival in New York from London, to head the Pakistan delegation, Sir Mohammad declared that the Moslem state would go to war against the country from which it had broken off if the United Nations failed to solve the problem of communal rioting in the Asiatic subcontinent. In his initial speech to the U.N. General Assembly, Sir Mohammad warned the major powers

that their failure to reach agreement was endangering man's "last chance of salvation"—the United Nations—and stated that Pakistan was pledged to try to achieve better understanding in the United Nations organization. Appealing to the Assembly to find ways to make the U.N. work "in the spirit in which it was founded," he went on to say, "Wars in the past had arisen from false notions of racial superiority, economic exploitation and intolerance of ideas among nations."

In the first major human rights case brought before the United Nations—concerned with the discrimination by the Union of South Africa against the Indian minority in the Union—Sir Mohammad supported a proposal to settle the dispute. He appealed to South Africa to repeal the laws that segregate different racial elements of the South African population. The case, he said, had provided a "glorious opportunity for South Africa to set an example to the entire world in the field of racial amity." Instead, the Pakistan leader pointed out, the South African Government pursued in the United Nations a negative policy that met the Indian charges of racial discrimination with "irrelevant, beclouding replies."

On October 7, 1947, in what was believed to be the longest speech ever delivered in a United Nations General Assembly committee up to that time, Sir Mohammad assailed the proposed partition of Palestine. He said the plan was wholly unjust to the Arabs—admission of Pakistan to the U.N. increased the Middle East "bloc" to ten nations—and suggested that the only fair solution was creation of an independent Arab state with full minority rights guaranteed to the Jews. Pakistan's delegate spoke in behalf of a subcommittee charged with putting into final form the proposals for an independent, unitary state in Palestine. When Alberto Gonzales-Fernandez, of Colombia, resigned as provisional chairman of the group, in protest because his country was the only non-Moslem nation among eight Moslem countries on the subcommittee, Sir Mohammad was elected to succeed him. With the other members of the Moslem bloc in the General Assembly, as well as with Afghanistan, Cuba, Greece, India, and Turkey, Zafrullah voted on behalf of Pakistan against the partition of Palestine into two separate states. A month after this vote was taken (on November 28, 1947), the Pakistan delegate was named to serve in the Cabinet of his country as Minister for Foreign Affairs and Commonwealth Relations.

Author of numerous newspaper and magazine articles on Indian, criminal, and international law, and editor of *Indian Cases, 1916-32*, Sir Mohammad's favorite relaxation is reading, particularly biography, religion, and poetry. The titles of Knight Bachelor and Knight Commander of the Star of India were conferred on Sir Mohammad in 1935 and 1937, respectively. The bearded diplomat is five feet ten inches tall, weighs 155 pounds, and has black hair and dark brown eyes. In April 1926 he was married to Badrunissa Begum, eldest daughter of S. A. Khan, Indian civil servant in Bihar and

Orisa. The statesman and his wife have a son, Amatul Hayy.

ZAHARIAS, BABE DIDRIKSON (ză-hă'r'i-ās) June 26, 1912- Athlete

Address: Lakewood, Colo.

Considered one of the outstanding all-round athletes in American sports history, Babe Didrikson Zaharias has held championships in many sports. As Babe Didrikson, she was an Olympic track and field champion; as Mrs. Zaharias she set new records in women's golf before turning professional in August 1947.

The sixth of seven children of Ole and Hanna Marie (Olsen) Didrikson, Babe Didrikson was given the prenames Mildred Ella. She was born in Port Arthur, Texas, on June 26, 1912. Her parents had emigrated from Norway, where Mrs. Didrikson had won skating contests. Ole Didrikson, a carpenter and cabinetmaker who had sailed around Cape Horn nineteen times in his seafaring days, put much emphasis on the physical training of his children. Also musical, Mildred, from her seventh to her tenth year, is said to have played the harmonica on weekly broadcasts over a local radio station. During her childhood she was called "Baby" by her family; this was shortened to "Babe," partly in deference to her home run hitting in baseball games. Although Babe Didrikson fought her way into joining the boys' games on equal terms, she could not win a place on the girls' school basketball teams until she entered the Beaumont Senior High School, after graduation from the Magnolia Grade School and the South Junior High School. (The Didriksons had moved to Beaumont when Babe was three.)

Two years later, playing forward in an inter-district basketball game at Houston, Babe Didrikson attracted the attention of Melvin J. McCombs, who coached one of the best girls basketball teams in the country, the Golden Cyclone Athletic Club of the Employers Casualty Company of Dallas. This was in February 1930. Sixteen-year-old Babe was soon put on the insurance company payroll as an office worker. By special arrangement with the school authorities, she left immediately, returning to Beaumont in June to take her final examinations and to be graduated with her class.

In the two years the athlete spent on the Golden Cyclone squad, she was twice selected All-American basketball forward; she captained the track team to second place in the national championship standings, winning most of the points herself; she established eight track and field records for the South and three for the nation, helped win seventeen loving cups, and personally won ninety-two medals, including prizes for records in lifesaving and figure skating. A sport dress she designed and made won first prize at the Texas

Wide World Photos

BABE DIDRIKSON ZAHARIAS

State Fair in 1931. Before the Olympic Games of July 1932 made her a national figure, the girl from Beaumont was already listed in *Famous American Athletes of Today* as the world's greatest woman athlete: she held the Southern A.A.U. record in every track and field event she had ever entered, she threw a baseball further than some major league outfielders (296 feet) and she excelled in every sport she had ever tried except table tennis.

The Los Angeles Olympics audience took the shingle-haired girl to their hearts as they saw her break four world records for women. In the javelin throw, her 43.68 meters, or 143 feet 4 inches, excelled the previous record of 132 feet 7 $\frac{7}{8}$ inches. In the eighty-meter hurdle race she smashed the 12.2 seconds record and then broke her own record with 11.7 seconds after being called back twice for jumping the gun. And in the high jump, although her best jump was disallowed because the judges objected to her style, she is credited with second place at 1.64 meters, or 5 feet 5 inches. "Not even the great Nurmi broke four world records in one Olympic," wrote Grantland Rice "4." "The Babe . . . is without any question the athletic phenomenon of all time, man or woman."

Rice, who made a short moving picture of Miss Didrikson in action, reported that she threw a completed pass of forty-seven yards while partially blocked. In baseball she hit three home runs in one game and made a 313-foot throw from centerfield to the plate, and in swimming she missed by one second the women's free-style record for one hundred yards. Babe Didrikson won the 1932 National Women's Track and Field Championship singlehandedly, taking thirty points, while a twenty-two-member Illinois team came in second.

After the Olympics, in August 1932 the nineteen-year-old Texan obtained a court order enabling her to transact her own business af-

ZAHARIAS, BABE DIDRIKSON—Cont.

fairs. Suspended by the A.A.U. in December because her endorsement was used to advertise an automobile, Miss Didrikson turned professional, despite the A.A.U.'s offer of reinstatement. She engaged a manager, signed contracts for syndicated articles, and later played as the only girl on the Babe Didrikson All-American Basketball Team and on the bearded House of David baseball team. Once she pitched for the St. Louis Cardinals. Miss Didrikson toured the country also in billiards exhibitions with Ruth McGinnis, and then in a vaudeville act of her own—"I did the things I knew how to do, like putting the shot, acrobatics, and playing the mouth organ."

During these years her name dropped out of the headlines because she rarely appeared in the larger cities, considering the smaller communities to offer a more profitable field for her exhibitions. In 1944 she told a columnist that she had earned forty-five to fifty-five thousand dollars a year barnstorming; she was able to support her parents, put her nieces and nephews through school, buy annuities to provide "three hundred a month coffee and cake money," and make some investments.

Having also saved enough to live on for three years, Babe Didrikson determined to devote those years to making herself a golf champion ("I'd done everything else"). She had a card of 92 in her first tournament in October 1934. In April 1935, having practiced under instruction six days a week, Miss Didrikson won the Texas Women's Golf Association championship by beating Mrs. Dan Chandler two up in a thirty-six-hole match; but the U.S. Golf Association, using its discretionary powers, refused to let her enter further amateur competition. She thereupon turned professional again, signing with a sporting goods company for a salary and royalties.

At the invitation of Gene Sarazen, leading male golfer, Babe Didrikson toured with him in 1936, playing exhibitions in the United States and Australia and making, she reported, six hundred to a thousand dollars a week. Always a favorite with the gallery, she developed a "smart line of patter" to accompany her playing. "It's a sort of lonely business, being a woman pro," said an *American Magazine* article under Miss Didrikson's signature in June 1936. "There's no Women's Open or Pro championships to play in." But she did take the Women's Eastern Open title that September, and the Western Open in 1940.

Five years as a professional would have debarred her permanently from amateur golf tournaments; but she left the field within the time limit. Two days before Christmas 1938, twenty-five-year-old Mildred Babe Didrikson had been married to George Zaharias, a 285-pound wrestler known as "the Crying Greek from Cripple Creek," whom she had met in a three-ball golf exhibition game at Los Angeles. Zaharias owned property in southern California, and for a time Mrs. Zaharias ran a women's sports clothes shop next door to her husband's custom tailoring establishment in Beverly Hills. Beginning in 1940, according to sportswriter

Al Buck, she took golf lessons five or six hours a day for eighteen months from Tommy Armour, who had heard of her golfing talent. Later Mrs. Zaharias began intensive tennis practice with leading coach Eleanor Tennant, but gave up the game when ruled ineligible for amateur tournament competition.

During World War II, when national tournaments were suspended, Mrs. Zaharias worked at her golf, and in January 1944 she was reinstated as an amateur. That June she took medal honors and again won the Women's Western Open, defeating Dorothy Germain 7 and 5. "Seldom were Mrs. Zaharias' rocketing drives out of the rough," wrote an Associated Press reporter, "and many of her long iron shots wandered into traps—but her recoveries left a gallery of some two hundred spectators gasping."

Before the June 1945 Western Open semifinals, Mrs. Zaharias was notified of her mother's sudden death. Unable to get immediate transportation back to Los Angeles, she went on with unaccustomed grimness to defeat Miss Germain 4 and 2 and become the first three-time titleholder. Two months later, playing with borrowed clubs because her own had been stolen after an exhibition match at the Utah Open, she shot an even par 154 for the thirty-six holes of the Western Amateur finals but lost one down to Iowa State champion Phyllis Otto—her first tournament defeat in seven years. Babe Zaharias won the Texas Open and Broadmoor Invitational tournaments and a seventy-two-hole challenge match with one-time champion Betty Jameson that season; and at the end of the year she was voted the woman athlete of 1945 by the A.P. poll of sportswriters.

The year 1946 found Babe Didrikson Zaharias the first three-time winner of the A.P. title (the first time had been in 1932); she had taken the Trans-Mississippi, Broadmoor, All-American Open, and National Women's Amateur golf championships, and retained some lesser titles. "The National Amateur is the one I wanted most," she said. In an open tournament in California, she shot an extraordinary 64 and 65 in successive rounds. However, Mrs. Zaharias lost the Western Open semifinals, and was eliminated by teen-age State champions in the Western Amateur semifinals and—a major upset—the first round of the National Women's Open. "I don't seem able to do my best unless I'm behind or in trouble," she has often said. To retain her amateur standing, she refused money prizes, including a five-hundred-dollar bonus for the record-breaking six-under-par 70 by which she qualified for the All-American.

When the 1947 golf season opened in Florida, Mrs. Zaharias won six tournaments in six weeks. In Georgia, on March 30, she topped them off by taking the Women's Titleholders championship with a medal play score of 304 for seventy-two holes of a difficult course, playing the last eighteen holes in a rainstorm. Earlier, in the qualifying round for the Doherty Cup, her card was a record-breaking 68, four under men's par and eight under women's

and she aroused comment by a 284-yard brassie shot from tee to green. Byron Nelson⁴⁶ estimated that only eight of the men professionals could outdrive her (George Zaharias sometimes did). Columnist Dan Daniel added: "She will outdraw the big majority of our male heroes and pull a gallery of twenty-five hundred any old time. . . . Playing from women's tees, she will equal men's par 60 per cent of the time. . . . Babe is the first woman golfer to pay any attention to showmanship. She will josh her rivals and kid with the gallery—and how the spectators love that sort of thing." They also loved to watch her "giant" husband follow her around the links, blow smoke from his cigar to show the wind direction, and reward victory with an enormous hug and kiss.

Mrs. Zaharias ran her string of consecutive victories up to seventeen, climaxed by the British Ladies Amateur title, which no other American had won. The *New York Times*, commenting editorially on the game, remarked, "There's never been anyone quite like her," and the *London Daily Express* wrote that there was "no end to her virtuosity." In August 1947 Mrs. Zaharias announced that she would not defend her amateur titles, but would accept what she termed "offers I could not very well refuse" to turn professional. She had already won every major amateur title. In October 1947 she set a record (293) for women in a 72-hole medal play tournament golf; she had played eighteen consecutive tournaments before she lost one. Having gained all women's amateur golf honors, she announced that she would attempt to qualify for men's open competition in 1948.

Sports followers, recalling Babe Didrikson as a shingle-haired "Muscle Moll" who scorned feminine wiles, were surprised to find Babe Didrikson Zaharias a slim, trim woman. Five feet six inches tall without heels, the tanned, gray-green-eyed athlete "carries 145 pounds gracefully." Her Texas origin shows when she speaks. Mrs. Zaharias lives in Lakewood, near Denver, where her husband manages wrestlers and promotes weekly matches. Late in 1947 she was occupied with the writing of several books, one on golf.

In July 1947 Mrs. Zaharias told a *PM* interviewer that she made all her own golf clothes, sweaters, and gabardine culottes, and had thirty-five pairs of the latter; with the help of a seamstress, she said, she also made four or five hundred pairs to order each year, at about fifty dollars a pair. She also likes to do the sewing and upholstering for her home, and to tend the thirty-three varieties of roses and other flowers she grows. The "super champion" has expressed annoyance at being considered a "muscle woman."

ZANDER, ARNOLD S(CHEUER) Nov. 26, 1901- Union official; public administrator; civil engineer

Address: b. c/o American Federation of State County, and Municipal Employees, 448 W. Washington Ave., Madison 1, Wis.; h. 175 Virginia Ter., Madison 5, Wis.

The international president of the American Federation of State, County, and Municipal Employees is Arnold S. Zander, "the only top union man with a Ph.D." Graduated from college with a civil engineering degree, Zander became interested in city planning and public administration. His employment with the State of Wisconsin led to his membership in the International Union of Public Employees. In 1936, after founding, he became head of the affiliated union.

Arnold Scheuer Zander and Anna (Scheuer) Zander were born in 1901, in Two Rivers, Wis. Their father, a skilled mechanic, was interested in discussing economic problems with his daughters and three sons (one of the six children). It was that Arnold attributes, in his life's work. After you graduated from Two Rivers in 1919, he attended the University of Wisconsin. Having majored in civil engineering, he was awarded a Bachelor of Science degree in 1924.

Zander's first position was as a draftsman for the Wisconsin Telephone Company (1924-25). In 1924 he received a position as a draftsman for the Baltimore and Annapolis Railroad, in Baltimore, Maryland, for two years (1925-27). He returned to the University of Wisconsin as a faculty assistant and graduate student. He completed the requirements for a Master of Science degree in city planning. He became secretary of the League of Municipalities, whose headquarters are in Madison, Wisconsin. Zander was named principal examiner for personnel of the Wisconsin State Department. He prepared, in 1931, a thesis, a city plan for Fort Atkinson, Wis.; in 1931 Zander was awarded a degree by the University of Wisconsin.

Two years later Zander was named secretary of the Wisconsin Employees' Union, in the founding of which he had helped. Through his a

ARNOLD S. ZANDER

Henry Ohl, at one time president of the Wisconsin State Federation of Labor, Zander became much interested in the labor movement among public employees. In 1935 the twenty organizations from five states composed of Government (State and local) employees and directly affiliated with the American Federation of Labor, met in Chicago to form the American Federation of State, County, and Municipal Employees. The new group was to be affiliated with the A.F. of L. through the American Federation of Government Employees. Zander was elected international president, a post he has maintained since 1935. The AFSC&ME was separately chartered by the A. F. of L. in 1936.

In 1937 Zander set forth the aims of the new union: to achieve job security, cumulative sick leave, "a proper system of transfer and promotion", "salary scheduling with equal pay for equal work." "The program of the federation," Zander wrote, "is the program of modern, properly established, and properly functioning public personnel agencies. . . . It recognizes that the use of the strike weapon would be fatal to accomplishment in public employee organizations." Throughout its existence, AFSC&ME has emphasized its disapproval of the use of the strike except in extreme cases. By early 1946 the union had seventy-five thousand members; it had more than one thousand locals. Zander told fellow A.F. of L. members (in an *American Federationist* article), "It must be said that many public officials have approached the matter openly, fairly, and intelligently . . . [but] we have had the bitterest kind of opposition, and every unfair labor trick used in years past by private employers has been used on us." Zander pointed out that, under the now inoperative Wagner Act, public employees were almost entirely excluded.

AFSC&ME maintains a research service and a public administration library, to which city officials as well as union members refer, and publishes *The Public Employee*, of which Zander is editor.

Zander's union has had particular difficulty in the organization of police department personnel. By July 1947 there were about sixty locals made up entirely of policemen and about sixty other locals which were composed of police and other civil service employees. In Duluth, Minnesota, the police department is 100 per cent organized; other locals are in New Haven, Portland (Oregon), Omaha, Atlanta, and Augusta (Georgia). In Boston, Detroit, Wichita, Los Angeles, and Jackson, however, city legislatures or mayors have refused to deal with police unions or have prohibited their employees from joining. A Mississippi Supreme Court has upheld the action of Jackson police officials in dismissing employees for AFSC&ME membership. When a local of police employees is chartered, the members must agree to a clause in which they pledge not to "call or participate in a strike or refuse to perform their duties as police officers." Police unions usually do not seek the same privileges as other unions do (check-off, union or closed shop). Zander has written, "Policemen are human beings. . . . Probably no group of workers has been more cruelly treated and is proportionally lower paid than the average American police officer."

Zander has served in a number of local and Federal Government posts. He was consultant to the national roster of scientific and specialized personnel of the War Manpower Commission and the United States Civil Service Commission, a participant in the National Conference on the Prevention of Juvenile Delinquency called by the United States Department of Justice, a member of the Labor Advisory Board of the National Youth Administration and of the Wisconsin Welfare Council. He was a fraternal delegate (for A.F. of L.) to the 1943 Trades and Labor Congress of Canada. In 1945 he served as A.F. of L. adviser to the American Workers' delegate at the International Labor Organization meeting in Paris. In May 1946 Zander went to Stockholm as a delegate to Tjänstemannens (public employee) Centralorganisation. Zander was chairman of the joint delegation of A.F. of L. and independent railroad unions, which went to Argentina early in 1947 to study labor conditions there. He was the A.F. of L.'s fraternal delegate to the British Trade Union Congress in September 1947.

Other conferences in which Zander has taken part have been Columbia University's March 1947 Press Seminar, the University of Chicago's Public Administration Clearing House Press Seminar, the National Municipal League Conference, the 1946 annual conference of the Government Research Association, the Consumer Cooperative Conference (he is chairman of the A.F. of L. standing committee on consumer cooperatives), and the Third National Forum of Labor, Agriculture, and Industry, held at the University of Wyoming in the

summer of 1947. He is a member of the Civil Liberties Union, the executive committee of the Madison Community Union and of the Madison YMCA, of the Wisconsin Alumni Association, the labor committee of the National Planning Association, the American Labor Education Service, the American Society for Public Administration, the American Political Science Association, the American Academy of Political and Social Science, the Civil Service Assembly of United States and Canada, the Academy of Political Science, and the Wisconsin Professional Engineers. He is president of the Eastern Labor Press Con-

ference, and vice-president of the International Labor Press of America.

Zander is a Shriner. He is two inches over six feet in height, weighs 190 pounds. His hair and his eyes are brown. Arnold and Lola Miriam (Dynes) Zander, who were married in June 1929, have three children, Ann, Karla, and Stephen. Zander enjoys outdoor sports—skating, swimming, tennis, and baseball.

CUMULATED INDEX—1940 - 1947

This is an eight-year cumulation of all names which have appeared in CURRENT BIOGRAPHY from 1940 through 1947. The dates after names indicate monthly issues and/or Yearbooks in which biographies and obituaries are contained.

Beginning with the 1946 Yearbook, the twenty authors' biographies presented in the WILSON LIBRARY BULLETIN during the calendar year have been reprinted in CURRENT BIOGRAPHY Yearbooks; these are indicated in this index by the abbreviation "WLB," which is followed by the Yearbook date.

Please note that three of the 1940 references are not to monthly issues of CURRENT BIOGRAPHY: "Jan-Feb" refers to the combined number which covered the first two months of that year; and since the June and December numbers were not published in monthly form, "Jan-Jun" refers to June material contained in that six-month cumulation, and "Yrbk 40" refers to December material contained in that Yearbook.
